NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 6TH, 1901.

BIRTHS.

At 251-A, Bluff, on Sunday morning, the wife of SIEGFRIED KOMOR, of a daughter.

On the 2nd instant, at 266, Bluff, Mrs. LE PREVOST, of a Son.

DEATH.

On the 24th of May, at his late residence in Los Angeles, Southern California, the Rev. GEORGE COCHRAN, D.D., in the 68th year of his age.

SUMMARY OF NEWS.

THE opening ceremony of the Nakagawa Steamship Company, took place at Mito on the 30th ult.

THE Empress will attend the general meeting of the Red Cross Society on the 9th instant at Ueno Park.

A *sendo* belonging to a junk bound for Tokyo fell into the harbour at Yokohama on June 30th and was drowned.

THE Akita Kisen Kaisha's steamer *Ugo Maru*, which was sunk some months ago in Sakata harbour, was floated on June 29th.

THE death is announced at the age of 82 of the Duchess of Cleveland, Lady Catherine Lucy Wilhelmin, mother of the Earl of Rosebery.

A COUPLE of slight earthquake shocks were felt in Yokohama shortly before eight o'clock and nine o'clock respectively on Sunday morning.

FIVE children were crushed to death and several persons were severely injured on June 29th by a panic which arose in a village theatre in Izu

because of lamps swayed by the wind setting fire to adjacent hangings.

It is reported that the well-known bridge of Togetsukyo at Arashiyama and several bridges in Kyoto were washed away by floods on July 1st.

AMONG recent victims to cholera at Bangkok was Captain W. Lang, formerly of the Siamese Navy, who was a resident of twenty-five years standing.

A LITTLE girl named Hatsu, daughter of Iwatsuki Tatsujiro, living at Honmoku, Yokohama, was accidentally drowned in a well on the afternoon of the 27th ult.

A WOMAN living at Higashimachi, Asakusa, Tokyo, while insane, set fire to her clothing on June 30th and sustained such injuries that she immediately died.

FOR committing an assault on a foreigner at Nagasaki on Thursday evening a beach-comber, named James Thomson, was sent to prison on Friday for ten days.

SEVERAL dead fish were found floating on the pond in Shiba park a few days ago. The authorities have placed a watch round the pond to keep people from taking the fish.

A YOKOHAMA police constable is reported to have found a leech in a faucet in Yoshihamacho, on the morning of the 28th ult. The matter has been reported to the authorities.

MR. NAKAJIMA TOSHIYUKI, who was a teacher of Japanese in a Chinese School at Peking, accompanied by 100 Chinese students, will arrive in Japan about the beginning of this month.

SOME fifteen cargo boats were capsized by a heavy wind in Moji harbour during the night of the 28th and following day. Four persons were drowned. The loss is estimated at 2,149 yen.

THE publisher of the *Yamagata Shinbun* has been sentenced to a month and fifteen days imprisonment for libelling the Governor of the Prefecture. The case against the editor was dismissed.

A WOMAN named Fukui Hide (17) living at Munehi-mura, Yoshino-gori, Nara Prefecture, murdered her uncle, a man named Kawaguchi Tsuzo, with a sickle on the 28th ult. She was immediately arrested.

THE graduation ceremony of the students of the torpedo school was held at Nagaura, on the 29th ult. The Emperor sent a Chamberlain to represent him and presented a silver watch to each successful student.

TWO meat dealers named Morikawa Shinzaemon, living at Ishikawa Nakamachi, Yokohama, and Shimazaki Sashiro, of Fujimicho, have been sent to a police lock-up for 5 days on a charge of selling tainted meat.

A COLLISION occurred between the *Ikuta Maru* and *Otaru Maru* near the breakwater in Otaru harbour on the night of the 27th ult. and much damage was caused on both sides. It is not known whether any one was hurt.

FOUR light-fingered boys named Iida Fusakichi, Narikawa Tsunekichi, Aoyagi Shimpei and Ikeda Chuichi, all 16 years of age, were arrested by the police on the 26th inst. on a charge of stealing articles from several houses in Yokohama.

A MAN named Iizuka Matazo, employed in a house at Takasaki, Gumma Prefecture, was relieved by a pickpocket, between Shinmachi and Fukiage, on the 25th ult., of a bag containing

five war bonds of the face value of 100 yen each, and two 50 yen notes, a gold watch, etc. He reported the matter to the Konosu Police.

A *sendo* employed in transferring coal to the steamer *Osborne* in Yokohama harbour on June 30th was struck on the back by a large piece of coal and fell from his junk into the water, sinking at once. His body was recovered the following morning.

THE *National Suisse* states that the Swiss financial year has closed with a deficit of fr. 1,724,121. This is the first time in the last decade that the national finances of Switzerland have shown a deficit. The Republic is said to be face to face with a financial crisis.

To all appearances, the insurrection in the Philippines is still far from being at an end. On the 10th ult. Lieut. Springer, of the 21st Inf. Vol., and Lieut. Lee, of the Engineers, were killed in an engagement at Lipa, Lieut. Lee receiving two bullets and expiring a few moments after.

A WOMAN named Uchida Waka (20) living at Miyoshicho, Shichome, Yokohama, was arrested by the Kotobukicho police on the afternoon of the 25th ult. charged with stealing an umbrella from another house. It is reported that the woman was engaged to be married that evening.

A LIVELY fight took place on Thursday evening in a saloon in Tokiwacho, Yokohama, between a couple of British sailors from the British cruiser *Isis* and three American bluejackets from the U.S. gunboat *Petrel*. The police interfered before any serious injuries were inflicted in the fracas.

AMONG the passengers by the N. Y. K. *Wakasa Maru*, which left at noon on Saturday for Europe, were Viscount Watanabe (former Minister of Finance) who goes on tour, and Commander Nakayama, I.J.N., who goes home with a crew to bring out the torpedo-boat destroyer *Akatsuki* now being completed in England.

THREE little girls, whose ages are 12, 6, and 3 respectively, were drowned in an excavation at Honmoku on Monday afternoon. The excavation was full of water owing to the recent heavy rains, and the children were beyond human aid when taken out. The youngest child was strapped to the back of the elder girl, who met her death by attempting to rescue the six-year-old maiden who had first slipped in.

A YOUNG woman named Kobayashi Ishi, employed as a servant at Shizukamura, Kita-Katsushikagori, Saitama Prefecture, has been arrested on a charge of attempting to murder a fellow-servant. It appears that these two women and their employers daughter slept in the same room and that early in the morning of June 30th, during the temporary absence of the last named Ishi inflicted a severe spot on her companion with a kitchen knife. No motive is assigned.

A JAPANESE, Professor Shirai, who has lately been staying in Berlin for the purpose of prosecuting his studies, on 22nd May set fire to the furniture in his lodgings, upon which he had previously poured petroleum. He then locked in his landlady and the latter's daughter, together with a bank official who stayed in the house for the protection of the women. Their cries for help attracted attention, and the fire brigade were soon on the spot and extinguished the flames. The Professor, who also attacked the bank official and others who interfered with a hatchet, has been pronounced insane and taken to a lunatic asylum.

POLITICAL PARTIES.

It is spoken of as not improbable that Count Itagaki may again enter the field of politics for the purpose of taking Mr. Hoshi Toru's place. The *Seiyun-kai* includes many able men in its ranks, but none of them possesses the qualifications that Mr. Hoshi had. Mr. Kataoka Kenkichi enjoys great confidence, but has not the necessary fighting qualities; Messrs. Matsuda and Hayashi are opposed by the Kwanto Section of the Party on account of their Tosa connexions; Mr. Ozaki Yukio has brilliant parts and might make an ideal leader were not his long alliance with the Progressists still fresh in the memory of the *Seiyun-kai*; Baron Suyematsu has much to recommend him but, like Mr. Kataoka, is not a fighter; Baron Ito Miyoji is recognised as one of the cleverest politicians of the era, but his attitude is somewhat indistinct. Thus, by a process of exhaustion, Count Itagaki is reached, and there can be no doubt that his return to political activity would be welcomed not only by Marquis Ito but by the nation at large. During twenty-four years the Count has been before the public as a political leader, and never in all that long interval has a breath of reproach rested on his reputation for integrity of purpose and purity of methods. He has been called the "Rousseau of Japan," and not without reason, since some of his views have been open to the reproach of being visionary. But he stands for everything that is upright and clean-handed, and his return to power would mean the letting-in of a flood of pure air into the noisome places.

The Kwanto Section of the Party recently held a meeting, which was attended by some 20 members of the Diet. This section is most directly affected by Mr. Hoshi's loss, for he was their immediate chief. No attempt was made by the meeting to elect a successor. They decided to carry on their business by a collegiate system, and, further, that as Mr. Hoshi had adopted and vigorously pursued the policy of making the *Kwanto-ha*'s interest paramount in Tokyo, that policy should be continued.

Mr. Arai Shogo is probably the most influential man in the *Kwanto-ha* at present. He held a conspicuous place in public eyes when the Diet opened for the first time, for he showed himself a speaker of extraordinary volubility, and his attacks upon the Government with regard to Treaty Revision and other matters were strenuous and implacable. Then, suddenly, like many of the men who made a mark in the Diet's opening days, he dropped suddenly out of sight, and nothing was heard of him again until some wag made him an object of laughter by giving him the nickname "red blanket" (*aka-ketto*) on account of a rumour that he had visited the house of Marquis Saigo in that disguise. He is undoubtedly a man of eloquence and ability though few would be disposed to credit him with qualities to be a party leader, and the politicians combined with him to form the *Kwanto-ha* are comparatively insignificant and unknown. In fact, this section of politicians owed their influence mainly to the leadership of Mr. Hoshi.

It may well be asked, what is the *raison d'être* of such an association as the *Kwanto-ha*. The question is puzzling, but there can be little doubt, we imagine, as to the effect produced by such divisions in the ranks of the *Seiyun-kai*: they tend to paralyse the action

of the Party as a whole and thus to postpone the advent of parliamentary government. It has always been a strong point in the Progressists' favour that they are free from these subdivisions.

Marquis Ito has been asked to nominate Mr. Hoshi's successor as leader of the Party in the Lower House. Meanwhile Mr. Matsuda Masahisa, formerly Minister of Education, has been appointed by Marquis Ito to take Mr. Hoshi's place as a member of the Permanent Committee.

Marquis Ito is to leave Tokyo on the 14th of July for the purpose of attending meetings of the *Seiyun-kai* at Hyogo, Okayama and Yamaguchi. He will be accompanied by Mr. Hara Kei. It would seem that the health of the Marquis is restored.

The *Asahi* says that people who represent the Kwanto Club as being in search of a head to replace Mr. Hoshi Toru, are ignorant. Already the Club has chosen its head, Mr. Tsuzuki Keiroku, and Marquis Ito's consent has been obtained. Mr. Tsuzuki is a man of conspicuous ability and great popularity. Moreover, he has the advantage of enjoying Count Inouye's full confidence, and of having the support of the Mitsui. The Kwanto Club have decided that he be asked to fill all the positions held by Mr. Hoshi, and it appears that he has consented.

The talk at present is that several influential members of the *Seiyun-kai* desire to see Mr. Ozaki Yukio raised to Mr. Hoshi Toru's position as head of the Party, but that Mr. Ozaki himself advocates the appointment of Mr. Hara Kei. With regard to the leadership of the Party in the Lower House, Mr. Matsuda Masahisa is confidently spoken of.

There have been rumours lately of the formation of a political party by members of the House of Peers, but it would seem that the story had its origin in the amalgamation of three of the existing sections and the probable addition of a fourth to their union; a measure not adopted for the purpose of definitely forming a party, but rather with the object of facilitating combined action. The House of Peers is divided into a number of coteries which have no intelligible *raison d'être*, so far as the general public can see, and whose very names are not always familiar. Thus in the newspaper accounts published with regard to the new grouping of sections, we find a *Koshi-kai* and a *Doshi-kai*, of which nothing had previously been known to outsiders. The truth appears to be that the members of the House form clubs mainly in connexion with personal considerations, and that the clubs are quite innocent of any political platform over and above the principle of obeying the indications furnished by their most influential members. It is certain, however, that the House, having recently tasted the sweets of performing a leading part upon the political stage, is becoming more alive to its own potentialities, and that it will have to be reckoned with, instead of being reckoned on, by future Cabinets.

CHINESE AFFAIRS.

Monday, July 1.

The Chinese Plenipotentiaries are said to have submitted to the Court at Hsian the final decision of the Foreign Representatives with regard to the Indemnity, and the Court has formally accepted it. Hence the preparations of the troops for leaving Chili are proceeding with renewed vigour.

It appears that the Foreign Representa-

tives have begun to be more than doubtful about the possibility of enforcing the veto as to the importation of arms and munitions of war into China. They are now discussing the advisability of restricting the operation of the veto to two years. Even that seems to us quite abortive. It is absurd to ask a Government to prevent smuggling when the Government itself is the smuggler. China would not have the least difficulty in getting all the arms and munitions she wants in spite of the veto, and there can not be any advantage in stipulating for an arrangement which must obviously be abortive in practice.

Tuesday, July 2.

The German troops are beginning to withdraw from Chili, a fact which, we presume, may be taken as indicative that not much importance attaches to the rumours recently circulated about a recrudescence of Boxer troubles.

It is reported that the officer commanding the French troops has proposed to send some Chinese to reconnoitre the doings of Tung Fuh-shang, and that the proposal has been endorsed by the officers of the other Powers. It is certainly most desirable that clear information should be obtained of Tung's doings, for so long as he remains an uncertain factor, the situation will continue to inspire uneasiness. From all that we have been able to learn about Tung's capacities as a general officer and a leader of men, we should imagine that he would have little chance of success were he confronted by the Yangtze Viceroy and Governor Yuan. But there is no assurance that he may not possess the sympathy of a considerable section at Court, and that the exasperation produced among the Chinese in Chili by the terrible harrasing to which they were subjected by the allied troops—or at least by a part of them—might not take an embarrassing form were encouragement given by the presence of Tung at the head of a considerable armed force. One can not think that the foundations of a reign of peace and good order have been very successfully laid in Chili.

It is expected that Mr. Komura will be able to leave Peking by the end of this month, for the purpose of taking up his duties as Minister of State for Foreign Affairs in Tokyo. Although he signified his willingness to accept the portfolio when the offer was made, he could not at once abandon his important duties in connexion with the conference.

Wednesday, July 3.

The Viceroy Liu and Chang having memorialized the Throne as to the necessity of recovering Manchuria, the Empress Dowager is said to have privately informed them that Manchuria is the birthplace of the Manchu dynasty, and that its loss would not only make Chili the boundary of the empire, but might also endanger the stability of the Throne. It is for the purpose of accomplishing the restoration of the territory that Her Majesty, in spite of her great age, is returning to Peking. She therefore bids the two Viceroy not to be needlessly anxious.

It is impossible to say how much truth, if any, this story may embody, but we can not forget that on the return of the Court to Peking Their Majesties will be more than ever under the influence of Viceroy Li, who certainly will not be very strenuous in his attempts to recover Manchuria. Li, we have no doubt, believes firmly that his policy of humouring Russia is the wisest he could adopt in China's interests. He is

fully entitled to that belief, but it is not a creed that will recover Manchuria.

Lieut.-General Baron Yamaguchi and his staff are to leave Taku for Ujina on the 7th instant.

Viscount Nagaoka has returned from China. He seems to have been very well received by the Chinese at Shanghai, Su-chow, Anhui and Kongchow, and the educational scheme on account of which he and his colleagues went to China as representatives of the *To-a Dobun-kai*, is said to be widely approved by both Chinese and foreigners. Our readers doubtless remember that the Viscount and his party attended the opening ceremony of the new school started by the Society in Shanghai.

One of the statements made by Viscount Nagaoka is that the rumoured insurrection of Tung Fuh-shang has probably no foundation. Apparently he gives no reasons for that belief.

The *Nichi Nichi Shimbun* again combats the unpractical suggestion that steps should be taken to convert Manchuria into neutral territory under the guarantee of the Powers. Nothing is less likely than that the Powers could be induced to give such a guarantee, and if they did give it, the difficulties of carrying out the arrangement would be insuperable. Our contemporary's programme is that the problem of Manchuria should be brought before the conference of Ministers in Peking on the basis of opening the whole district to foreign trade, without disturbing any convention already made with Russia. The arrangement should be made, however, with the Chinese Government as owner of the territory.

KOREA.

Monday, July 1.

Korean soldiers are said to be behaving with great violence to the Chinese inhabitants of Sôul. According to reports sent to Tokyo by Japanese correspondents, the fault is entirely on the side of the Korean soldiers, of whom there are no less than 8 battalions at present in Sôul, one battalion having been recently brought from Pyông-yang to increase the already large force. The Chinese constables, of whom a few are on duty in the Chinese quarter, have failed completely to restrain the lawlessness of the soldiers, and in the riots caused by the latter ten Koreans were wounded, all being cut or stabbed with bayonets. These men have been admitted gratis into the Japanese hospital. Meanwhile the Chinese Representative is reported to have applied to the Korean Government for satisfaction, declaring that his nationals had suffered severely in person and property, and asking in what manner the Government intended to recognise its responsibility. But, according to rumour, the Government returned a most unsatisfactory answer, taking no notice of the Chinese Representative's complaint and charging, by way of retort, that a Korean soldier was missing and that several others had been wounded. The correspondents sending this news naturally comment on the marked change that has come over Korea's attitude towards China. Even the petty little empire does not hesitate to flout the great country of which, a few years ago, it stood in reverent awe. Governor Yuan Shihkai, when these things reach his ears, will probably recall the days of his own unrivalled dictatorship in Sôul.

The McLeavy Brown affair has been satisfactorily settled, according to a telegram

from Sôul published by the *Jiji Shimpô*. The message says that the Korean Government has intimated to Mr. Brown that suitable buildings for his occupation and for the use of the Customs will be provided elsewhere, but that, in the meanwhile, he is to continue the occupation of his present quarters. Mr. Gubbins is to be congratulated on his skilful management of this difficult affair—difficult in the sense that British official authority could scarcely be openly exercised in Mr. Brown's behalf and that the Korean Government was certainly within its rights in the measures it proposed to take.

It is stated that the application made by the Japanese inhabitants of Fusan to have a part of Chôl-yong-do (Deer Island) appropriated as an increase to the settlement, which is now inconveniently small, has been emphatically rejected by the Korean Government, on the ground that portions of the island are already in foreign possession, and that its use for the purposes proposed might give offence to another Power. These reasons sound somewhat frivolous.

A correspondent of the *Jiji Shimpô*, writing from Sôul, sends to that journal a strong indictment of the French fathers. He declares that their appearance in any locality is the precursor of disturbance, that owing to the protection they extend to their converts, the ranks of the latter are swelled by bad characters of every description who thus find themselves guaranteed against the consequences of their crimes; and that the sentiments of the people towards the Roman Catholic converts is most bitter. That is the gist of the correspondent's letter, which adds that the Roman Catholic church is the most conspicuous object in Sôul and that it overlooks the Emperor's palace. The *Yomiuri Shimbun* has a letter of the same character which it embodies in a leading article, appending some strong comments of its own. Its correspondent sends an alleged copy of a report drawn up by a commissioner recently despatched by the Korean Government to investigate the charges against the Roman Catholics. The report is a long tissue of grave accusations. It represents the fathers and their converts in the worst possible light, and depicts a state of affairs which must be quite intolerable to the people. The *Yomiuri* appeals to the civilized world to put a stop to these abuses, and predicts that unless something is done speedily, the Quelpart riots in a more acute form will be duplicated in every one of the eight provinces of Korea. We entertain no doubt that these stories are exaggerated, but, on the other hand, it is impossible to suppose that there can be so much smoke without some fire, and we trust that the French Authorities and the Roman Catholic propagandists will adopt whatever measures of reform may be advisable.

Wednesday, July 3.

It is alleged that the Korean Government has suddenly asked Japan to close her post-offices in Korea and to withdraw the officials employed there, the ground of the demand being that the maintenance of such establishments is not contemplated by the treaties. Of course Japan did not establish post-offices in a fortuitous manner without any reference to the Korean Government. The work was undertaken in the sequel of a convention duly negotiated the year before last. Hence the *Asahi* and the *Jimmin*, in publishing this news, declare themselves unable to conjecture the origin of Korea's demand. They complain, however, that of late she has shown a

disposition to forget everything she owes Japan, and to let it be seen that if she could obtain the support of one or two Powers, she would turn the cold shoulder altogether on this empire.

MEETING OF PROVINCIAL GOVERNORS.

Saturday, June 29.

The annual meeting of Provincial Governors commenced its session in the Department of Home Affairs on the 27th ult. There was a time when these meetings occupied a large share of public attention, but the chief interest connected with them now is that the words addressed to them by the Minister President of State are looked to as containing an indication of the Cabinet's policy. On the present occasion, however, Viscount Katsura did not say anything that could be construed as an announcement of policy, however remote. He merely informed his hearers that the many important problems requiring official attention made it essential that there should be perfect accord between the central Government and the localities, and he urged the Governors to exert themselves to that end. His Excellency's speech extended to some length, but we can not discover that it contained any pregnant announcements.

From the speech of Mr. Utsumi, Minister of State for Home Affairs, and from the questions submitted for debate by the Governors, it appears that one of the principal points which the Cabinet desires to emphasize is the necessity of the communes exercising greater economy. Of late years the various local administrative bodies, both urban and rural, have shown a marked disposition to undertake numerous enterprises, without due regard to the resources available, and in order to carry out these works, the local taxes are raised to an onerous extent, the Treasury is importuned for assistance and private individuals are pressed for subscriptions, the localities also, in their corporate capacity, making grants disproportionate to the resources at their command. It is the desire of the Cabinet to check these abuses, and the matter is strongly recommended to the attention of the Prefectural Governors.

In this respect the Cabinet's procedure will meet with universal approval. They have undoubtedly put their finger upon one of the abuses of the era—an abuse to which the public, rightly or wrongly, attributes much of the corruption of the time. Administrative bodies in the various localities readily vote large sums of which their own nominees have the handling, for the prosecution of undertakings which serve mainly to put money into the pockets of a favoured few.

Monday, July 1.

Professor Kikuchi, Minister of Education, addressing the Council of Prefectural Governors, noted the fact that in 1899 the attendance of school-age children had been 72 per cent., and that doubtless it had increased considerably since then owing to the encouragement given in the various localities. On the other hand, there is a deficiency of no less than 32,000 in the establishment of regular teachers, which state of affairs demands strenuous efforts on the part of the Authorities with regard to Normal Schools and other means of obtaining instructors. His Excellency considers that, on the whole, the number of Middle Schools is sufficient. There are at least two in every Prefecture, and some prefectures have five or six. Many youths enter the Middle Schools without any definite object, and abandon their at-

tendence when the course is only half completed. It is very desirable that there should be established a class of institution which would enable such youths to obtain useful technical instruction without carrying their general education to such a high standard as that prescribed by the Middle-School course. Under the circumstances the Minister thinks it not improbable that applications for the establishment of additional Middle Schools may be refused. On the other hand, His Excellency considers it most advisable that no prefecture should be without a high school for girls, and he hopes that by the close of 1903 at latest the necessary steps will have been taken to secure that end. Since arrangements were made for granting assistance from the Treasury to technical schools, no less than 300 have been established. Many of them are agricultural schools which are often equipped in a very inadequate manner. Industrial schools are better provided, but even in their case there is much to be desired, and it would probably be better that some of those now in existence should be amalgamated so as to obtain stronger institutions. The establishment of libraries in the various prefectures is also a great desideratum, Japan being very ill-equipped in that respect.

Wednesday, July 3.

The Minister of Finance, addressing the meeting of Provincial Governors, said that unfortunately the country's credit, instead of improving, has been impaired of late. He did not enter into particulars, but he urged upon his hearers the importance of encouraging among the people a spirit of effective economy. Steps should also be taken, so far as such intervention is possible, to warn the banks against the courses that had led to recent failures. It was further to be feared that the agricultural banks, instead of devoting themselves to the purpose for which they were founded, had turned their attention to other matters, some of them even lending money to industrial banks. Mr. Sone referred to the desirability of persuading the people to turn their attention to productive enterprises, leaving his hearers to determine what course should be adopted to achieve that end. He further alluded to the subject which had been strongly discussed by the Minister President of State, namely, the rapid growth of the debts of the communes during recent years. In 1890 the total debts of these bodies—prefectures, towns and districts—had been only 720,000 *yen*, but they now totalled 36 millions. No doubt there were many improvements calling for extensive outlays, but such an increase of indebtedness could not fail to inspire uneasiness. The Minister also asked the Governors to adopt more efficient measures against the secret manufacture of *sake*, which, despite the heavy penalties prescribed by law, was still practised. In this context he alluded to scientific experiments now in progress at the High Industrial School in Tokyo with the object of discovering improved methods of manufacturing *sake*. Very promising results had already been obtained, and there was reason to hope that the cost of production would thus be considerably reduced. It would be the duty of the Governors to see that these new methods were fully explained to the brewers.

A fisherman has reported to the authorities that at a place called Zenisu, in Suruga Bay, a few days ago, he saw a tract, two or three *cho* in extent, of kerosene oil on the surface which he thinks comes from the foundered training vessel *Tsukijima Maru*.

THE HOUSE TAX.

"Jimen" has again taken up the subject of the house tax, and has succeeded in producing an argument which is at least novel. His former assertion was that the buildings constructed on a Settlement lot must have been included in the original lease because special provision is made therein for their confiscation by the Government in the event of the tenant's failure to pay his yearly ground-rent. To that we replied that it would be equally rational to assert that furniture is included in a lease of a house because the lessor has a right to seize the lessee's goods and chattels in satisfaction of unpaid rent. "Jimen" retorts by asking whether a man that lets a house has a right to demand an increase of rent on account of any furniture put in by the tenant. Truly we do not see the value of such quibbles. "Jimen" ought to observe that this very reason upon which he relies is fatal to his own contention. For if houses were an essential part of the property leased to foreigners, then there would not have been any occasion to insert a special provision about the confiscation of the buildings in the event of defaulting payment of land-rent, inasmuch as they would naturally revert to the owner of the property. The insertion of such a provision has a significance quite opposed to "Jimen's" allegation.

We may allude here to another argument—though in truth it was long ago disposed of—namely, that because foreign land-renters were required to erect edifices of some kind on the land, therefore all such edifices enjoy special exemption from imposts to which the would be subject were they Japanese property. In adopting such a line of reasoning it seems to be forgotten that the declared purpose of requiring the erection of buildings was to obviate the danger of non-resident speculators stepping in and acquiring extensive tracts in the new Settlement, with the intention of holding the land unutilized until it could be sold at a large profit. In short, the proviso was inserted solely in the interest of foreigners desiring to become *bona fide* settlers. It conferred no benefit of any kind upon the Japanese landlord, and it can not possibly be construed in the sense given to it by the opponents of the tax.

We find in *Jimen's* letter a repetition of the assertion that "the taxes foreigners are called upon to pay, including ground rent, house and municipal taxes, are more than the Japanese are called on to pay for similar property." Is that certain? In some cases the advantage is unquestionably on the side of the Japanese, but we believe that, according to careful official investigations, the average payment made by the foreigner on these accounts is less than the average payment made by the Japanese.

The sum total of the matter is that the day when foreigners are allowed to become actual land-owners will be very welcome. Then this clumsy and complicated system—much more complicated and difficult of application than even "Jimen" or "Verb. Sap." seems to recognise—will disappear, and native and alien alike will receive equal treatment.

Mr. J. F. Lowder has sent the amount of his house tax to the local tax authorities with a covering letter, dated July 1st, in which he says that he had delayed the payment of the tax owing to the question being under official debate, but that his own investigations having convinced him that the tax is a legitimate impost, he now encloses the necessary sum. It may fairly be asserted

that Mr. Lowder knows more about the law of this matter than any one else in the Settlement. As the opinion of an expert, therefore, his ruling is of much value. But it derives additional importance from the fact that it must have been formed in defiance of considerable unpopularity, inasmuch as very many of Mr. Lowder's fellow-residents consider the tax unfair. The *Asahi Shimbun*, from which we learn of Mr. Lowder's action, compliments him highly on the impartiality he shows, and observes that a lucid conclusion might have been expected from such an eminent barrister.

THE DEFAULTING TAX-PAYERS.

We are sorry to learn from the Tokyo *Asahi* that even among those who paid up their arrears of taxation on the 25th instant in Yokohama, there were some who accompanied their payments with letters of an exceedingly discourteous tone. One of the letters declared that the payment was made as a matter of necessity owing to the threat of resorting to legal processes of exaction; another asked whether the fact that the money had already been collected was forgotten, and whether this was a device to put coin into the pockets of the officials. The latter are said to be considering what steps they should take with regard to the writers of these letters. We recommend them not to take any steps at all, but simply to burn the epistles. The writers of such documents doubtless believe that they have a genuine grievance, and it would be bad policy to convert them into the martyrs which they imagine themselves to be.

Meanwhile the Local Authorities of Kana-gawa have been instructed by the Home Office that they must proceed against foreign defaulters just as they would against Japanese, and it is therefore not impossible that some unpleasant incidents will have to be recorded within the course of the next few days. We can only repeat that to withhold their taxes is a forlorn and useless device on the part of the objectors. They thus carry their case before a tribunal which has no competence to discuss it, and they exhibit a want of judgment which reflects injuriously on their cause. Their conduct is analogous to that of a man who resists arrest and invites the arresting constables to adjudicate upon his guilt or innocence.

THE VALUE OF HOUSES AND LAND IN TOKYO.

A calculation has been made by the staff of the *Fiji Shimpō* with regard to the value of house and landed property in Tokyo. The result reached is that the total figure may be put at 130 million *yen*. Of course there is no possibility of attaining absolute accuracy in making such an estimate, but we presume that the compilers of the *Fiji's* table have given full consideration to the matter. They arrive at the conclusion that real property has doubled in value during the past ten years, an estimate which certainly does not err on the side of liberality. At the commencement of the *Meiji* era, they say, land in Tokyo did not average more than a *yen* per *tsudo*, whereas the average to-day can not be less than 20 *yen*. Naturally the price is comparatively very high in the populous districts; the figure for Nihonbashi being 200 *yen*. But taken all round, 20 *yen* seems to them a fair average. As for buildings, they put the average at 50 *yen* per *tsudo* for structures of brick, stone or

plaster (godowns) and at 20 *yen* for wooden houses. This latter figure seems to us remarkably low. The commonest style of wooden house now costs more than 20 *yen* a *tsubo*, and the best kind runs up into the hundreds. However, without attempting to discuss the accuracy of our contemporary's methods, we note its figures as follows:—

	Number.	Area in <i>Tsubo</i> .	Value in <i>Yen</i> .
Plaster buildings (godowns)	20,268	323,374	16,667,350
Brick buildings ...	32,328	64,922	3,245,100
Stone	1,765	14,791	739,550
Wooden	218,550	3,324,652	66,493,040
Totals.....	272,911	3,727,739	87,145,040
Land.....		2,249,760	441,995,200
Total value...			132,140,240

It will be observed that the value of the buildings is approximately the double of the value of the land.

Our contemporary's reference to the price of land in Tokyo at the beginning of the *Meiji* era reminds us of facts to which we can bear personal testimony. In the Azabu district it was quite easy in 1871 to purchase for 5 *sen* per *tsubo* land which is now considered cheap at 15 *yen*. Here then we have to multiply the original price by 300. In Nagatacho, again, land which now sells readily for 30 *yen* per *tsubo* could then be bought for 30 *sen*. There certainly have been fluctuations—periods of alternative elevation and depression. But it can not be doubted that the termination of each successive period of depression has seen the market price of land higher than the figure ruling at the termination of the preceding period, so that, in one sense, the upward tendency may be said to have been permanent. A noteworthy fact is the great difference between the prices of small and large lots. Thus if a plot of land measuring one or two hundred *tsubo* can be sold for, say, 20 *yen* per *tsubo*, an adjoining plot of ten thousand *tsubo* will not command more than about 15 *yen*. That is especially true at present, for although the demand on the part of the lower middle classes for house lots is as keen as ever, and though the expansion of the city proceeds steadily, very few persons are willing to invest large sums in an enterprise which may give no return for several years.

"MAKE WAY FOR ME."

In its last issue the *Register* has an article entitled "Moves of Political Parties." The line of argument adopted is this, in brief:—There are no such things in Japan at present as genuine political parties. Instead of setting up a Cabinet of its own and standing or falling by it, each political party follows the Cabinet in power. The blame for this state of things rests with the Senior Statesmen, who failed to foster the formation of genuine political parties before they introduced the Constitution. The Senior Statesmen are thus proved incompetent, therefore let them be "shelved to make room for the Younger *Meiji* generation." "These seniors do not belong to us; they belong to the *Tempo* and *Manyen* periods and not to the *Meiji* generation, which should by right be the legitimate organizer and administrator of the present Japan." The main trouble with this *Register* article is that it is too short; the end is too near the beginning. The declaration that there are no political parties worthy of the name in Japan ought to have been separated by at least four or five columns from the pronouncement that the functions of Government should be

at once handed over to the political parties. Then perhaps the horribly contradictory character of the two assertions might have escaped the attention of an ordinary reader. Still, we would not have the article erased. It is so magnificently juvenile. The Senior Statesmen gave Japan a Constitution. Yet the Senior Statesmen belong to the *Tempo* and the *Manyen* eras. The Senior Statesmen made the *Meiji* era. Yet the Senior Statesmen do not belong to the *Meiji* generation. Make way, then, for the blooming adolescent. It is a species of journalistic *gaudeamus igitur*. The grave and reverend editor, learned in the law, was revisited by a glow of youth, and threw his literary cap into the air, splendidly confident that it would alight on some peg or other. His aim was dreadfully defective, but he has at least had his moment of effervescence, moments which unhappily come only too seldom.

FEMALE COSTUME.

It is interesting to us to find that our old and often repeated advocacy of the general adoption of the *hakama* by ladies in Japan, has been taken up—though not with any reference to our writing—by Mr. Kajita Hanko and the *Yomiuri Shimbun*. The latter is publishing designs from the pen of the former, and very pretty designs they are too. We need scarcely say that Mr. Kajita considers the question of foot gear also. He proposes a species of slipper with a sole of plaited straw and a leathern upper, the slipper retained in its place by a band buttoning over the instep. This seems a good conception, except that no support is given at the back of the foot. All foot-gear in the form of a slipper subjects the wearer to great disadvantage in ascending a hill. Some retaining device is needed at the heel. With a slight addition of that kind the proposed sandal would be serviceable and pretty. Very few Japanese ladies affect the abominable boot or shoe of the modern Occidental lady—a thing monstrous from every point of view and at least as irrational as the foot-gear of a China woman.

It is evident that the problem of head-gear has perplexed Mr. Kajita. He proposes a species of burnoose, made, apparently, of gauze-like material, and hanging from the head to the feet. That appears to us exceedingly unpractical. It would be an impossible piece of apparel in windy weather, and as no lady could adjust it or remove it without aid, it is open to obvious objections. We do not see that anything can be better for the head than a light hat, provided that it fits the head, instead of being pinned on the top, and provided that it shows a natural curve of outline instead of being crushed into shapes not seen in nature except as the result of disorderly accidents. We do most heartily wish success to these efforts of the *Yomiuri* and Mr. Kajita. The *hakama* as a garment for school-going girls has come into vogue largely during recent years, but its adoption by ladies of fashion remains in the future.

DISGRACEFUL JOURNALISM.

The *Nippon* is obviously without the slightest sense of journalistic responsibility. Its plain attempt to turn the assassin's dagger against Marquis Ito having been censured in strong terms by more than one of its contemporaries, it not only shows no contrition, but unblushingly continues its disgraceful course. We observe, indeed, that it prudent-

ly drops its original absurd charge as to the impropriety of a visit to the Palace by any one who had attended a funeral within the preceding three days. It now confines itself to the accusation that the Marquis did not change his mourning costume before repairing to the Emperor's presence, and it attempts to prove that there could not have been time for such a change. However, childish discussion of that nature is of small consequence. The point is that the *Nippon* now declares that such an act of disrespect towards the Sovereign would be a bagatelle to Marquis Ito, being entirely consistent with his usual line of conduct; and then goes on to suggest in the most unequivocal terms that if the Marquis saw occasion to offer an explanation in the present instance through the columns of the journals he commands, it was because he had been thrown into a state of alarm by recent events, and because he saw the consequences that attend such courses.

The re-appearance of the *samurai* crank of feudal days in the person of Iba Sotaro is a trifling matter compared with this writing in the columns of the *Nippon*. It would be impossible for Japan to have a worse enemy than the *Nippon*. That journal may think it a fine thing to direct the assassin's dagger against the breasts of the country's best statesmen, but we can assure it that the dagger is really directed against the throat of Japan's reputation, and that such incidents tend to destroy the fair fame her genuine patriots have won for her by years of patient effort. It is hard to know how the *Nippon* should be treated. The first instinct of every law-abiding citizen must be to desire the suppression of such a pestilential journal. But, on the other hand, it is not better in the long run to let these malodorous nuisances dissipate themselves in the open atmosphere? That is England's plan, though we are bound to say that we can not imagine a *Nippon* published in England, nor can we believe that even English complacency would suffer such writing.

If any journal deserves to be not only suspended but totally suppressed, it is the *Nippon*. It appears that, after the funeral of Hoshi Toru, Marquis Ito, having some matter of high importance to submit to the Emperor, returned to his residence, and having changed his mourning garb, repaired to the Palace. There was no manner of reason why he should not have taken that step. Had he been a near relative of the deceased, it would have been a point of etiquette for him not to visit the Palace for three days, but as he was no relative, there was not the smallest obstacle to his seeking an audience. The *Nippon*, however, works itself into a fit of spurious wrath over this insult to the Imperial Court, and charges Marquis Ito with having adopted such a course merely because he wanted to make a display of the exceptional position he enjoys. The *Nippon* concludes with these words:—"There are thinking *samurai* of strenuous loyalty in the empire. Is it to be supposed that Iba Sotaro alone can brandish a dagger in the sunlight? This Ito had better reflect with regret." (*Tenka chinfun no shishi ari hakujitsu hishu zo hiramekasu mono ani tada Iba Sotaro naran ya. Ito taru mono chozen shite hansei sezaruru beken ya*). If ever a plain incitement to murder was published by a newspaper this is a case. Nothing could aggravate such an offence, but we may add that the *Nippon* has not even the courage to father its own opinions. It falsely attributes them to an anonymous Court official. Unquestionably Japan is not ready for free-

dom of speech so long as journals like the *Nippon* find readers.

IBA SOTARO.

Iba Sotaro, interviewed by his nephew Captain Kanada Hidetaro, gave, in effect, the following explanation of his act:— I was born in the family of a *bushi* (*samurai*) and therefore belong to the highest class of the people. When the law is powerless to suppress wrong and when the moral condition of society shows equal incompetence to suppress it, there devolves upon the *bushi* a heaven-sent mandate to undertake the task. Hoshi Toru had been guilty of unlimited bribery. He was a corrupter of the time, and when such a man was suffered to intrude into the pure sphere of education, the hour had come for the *bushi* to fulfil his heaven-appointed duty. As for my manner of killing Hoshi Toru, it was not fortuitous. I followed the rule of the *samurai*, first striking him down and afterwards giving him the *coup de grace*.

Asked how he had himself received an injury on the head, Iba Sotaro declined to give any information. He said that the thing had happened subsequently to the killing of Mr. Hoshi, and that the wound was quite healed now. It is conjectured that his reticence is because he desires to avoid bringing trouble upon any one except himself, and the *Hochi Shinbun*, in publishing the above facts, highly applauds this last feature of the affair. In fact there is in some quarters an evident disposition to exalt the assassin.

A journal called the *Dokuritu Shinbun* (Independent) has been forbidden to continue the sale of its 22nd number—it is a newly established journal—and its editor has been summoned by the public procurator for publishing an article in Iba Sotaro's defence.

It is the opinion of the *Jiji Shimpō* that political assassinations were never sanctioned, still less recommended, by the creed of the *bushi*. The vendetta had its vogue in feudal times, but the ideal vendetta was when a man, tracking down the object of his vengeance, challenged him to open combat. To waylay an enemy or to strike him from behind was always regarded as an unworthy act. When Osada Tadamune killed Yoshitomo and brought his head to Kyomori, the Taira chief, instead of thanking the assassin who had thus removed the Minamoto leader, caused him to be executed for disloyalty to his own master. The political murderer made his appearance in the last days of the Tokugawa, and had his origin in the *jo-i* (barbarian-expelling) spirit, which aimed rather at embroiling the *Shogun's* government with foreign Powers than at removing this or that individual. It was essential to the political success of those deeds that their authors should remain unknown, in order to throw suspicion on the Bakufu. Old-time canons would not have approved such acts. Our contemporary thinks that the present system of education in Japan is faulty, inasmuch as youths are taught to assign a heroic character to men that perform acts of violence and bloodshed. It also condemns officialdom for encouraging these excesses by honouring their authors, but we do not understand this latter criticism, for we have never heard that political assassins received any sort of respect from Japanese officialdom. In the case of Iba Sotaro and Mr. Hoshi Toru the true character of the event seems likely to be more or less ob-

scured by the fact that a great number of persons were secretly pleased to learn of Mr. Hoshi's death. Partly owing to his own imperious ways, but chiefly because of the merciless attacks made upon his reputation by certain journals, the man was exceedingly unpopular, and those that hated him are not likely to regard his assassin with much umbrage. That feature of the affair will help to accentuate the danger which certainly threatens Japan—the danger that any man supposing himself a patriot is entitled to resort to the dagger for asserting his patriotism.

A friend of the late Mr. Hoshi Toru alleges that his library consists of a hundred thousand books, worth over fifty thousand *yen*. They include many works of rarity and value, and among them is a Buddhist Sutra of more than a thousand volumes. Whether Mr. Hoshi read many of them is another question. His friend thinks that he had something of the bibliomaniac about him, and that he collected books much as a woman acquires clothes or a dilettante buys objects of art. Still as he was able to read not only English, but also Latin, Italian, French and Spanish, and as he had recently taken to the study of German, it is evident that a wide range of books was open to him.

MEDITATIONS ON MR. HOSHI'S DEATH.

(CONTRIBUTED BY A JAPANESE.)

Hoshi Toru is dead! A pillar of Japan is gone, and the whole empire shakes! He may not be of pure gold, like the pillars of Solomon's temple. He may not be of pure white marble, like those of the Parthenon. He may after all be but a pillar of coarse granite, or even a pillar of hollow brass, but still a pillar and not a crotchet.

It was more than twenty-five years ago that I saw Mr. Hoshi for the first time. The very first thing which struck my eyes when I entered our large common class-room was his name. The wooden card was hung on the wall—Hoshi Toru, Primus of the Kaiseijo.

Some persons call him the son of a wealthy *samurai*, while others call him the son of a despised out-cast. But to my knowledge, he was neither a *motta* nor an *etta*, even in this world of *etta ga motta*. In fact, he was the son of a country physician of tolerable circumstances, living somewhere near Myoji village between Yamato and Wakayama.

We knew him as a studious lad. He would sit and study in his long chair days and nights, sometimes covering himself up with a *futon*. At that time, he was by no means a rich man, or strong in his constitution, but his iron will carried everything before him.

He, a poor lad, was once obliged to borrow eighteen *yen* to defray his expenses, from Prof. Kaneko, my old friend and benefactor, which he could not return for more than ten years! At last, he sent him back ten *yen*, over which they both laughed. He still remains a debtor for the enormous sum of 8 *yen*! Of course, they both had forgotten about it a long time ago; or to borrow a witty expression of Thackeray's with a slight modification: "Perhaps the debtor and his creditor would meet and settle the little account in Hades."

Be that as it may, he was a great statesman, the greatest that our school ever produced. But alas! he is no more! When shall we see his like again?

An obscure youth in the valley of Yama-to rising to be Minister of State and a foremost statesman of Japan, if not of the

century, was no small change. It was but yesterday that he could defy the whole nation, if not the whole world, but now where is he?

Can storied urn or animated bust
Back to its mansion call
The fleeting breath!

Even his remains stay not long above or below the earth. Soon, they will be eaten by the worms and swallowed up by the elements.

O what a rise and what a fall!
O what a fall was there, my countrymen!

T.T.S.

FORMOSA.

Dr. Goto, Head of the Civil Government of Formosa, speaking through the columns of the *Nichi Nichi Shinbun*, denounces as altogether false the statements recently made in a Hongkong journal to the discredit of the Formosan Administration. He declares that no discrimination of any kind has been made against foreigners in Formosa. They have been treated exactly as Japanese are treated, and if any have found the situation intolerable, the fault does not lie with the Japanese.

The fact seems to be that prior to the Japanese occupation of Formosa foreigners enjoyed a degree of liberty which some converted into licence. These persons naturally found that the restrictions which grew up under the rule of Japan were disagreeably irksome, and it is from such discontented individuals that adverse criticisms occasionally emanate. All complaints penned by foreigners find ready access to the columns of the local press in the Far East, and as the complainants generally have the field to themselves, they succeed in establishing a plausible case. It may be taken for granted that the Japanese have committed some administrative blunders in Formosa, but as to their impartiality in the treatment of their own nationals and foreigners, no experienced person can entertain any doubt.

Rumour continues to attribute to the Formosan Administration the project of starting a lottery to replace that of Manila, which has been abolished by the United States Authorities. We can not credit the statement. In the first place it would be necessary to alter the laws of Japan, and in the second the Formosan Authorities must see very plainly that such methods of obtaining money are not employed by self-respecting States.

THE PLAGUE.

The burning of certain buildings of the Imperial University for the purpose of destroying the plague bacilli supposed to have found a lodgement in the place, commenced on the 27th instant. It was originally supposed that the buildings would be burned as they stood, a zinc fence having been erected around them to prevent the escape of rats. But from the accounts published by Tokyo journals we learn that the condemned structures were first demolished, and their materials subsequently cremated in a big hole, under showers of kerosene. None the less, steps were taken to prevent the escape of rats, but a question is raised whether some of the animals may not have found refuge in the long grass or in the trees.

The number of rats slaughtered in Tokyo between the 12th and the 26th ult. was 209,062. Some of the slaughterers received 50 *yen* by way of reward. The Imperial University is doing the thing on a grander scale,

for it gives one *yen* reward for any rat captured within the "dangerous zone." Meanwhile the process of cremation is vigorously continued. The buildings to be destroyed, with all their contents, cover 406 *tsubo*—or one-third of an acre—and 40 *tsubo* were cremated on the first day.

The anti-pest operations of cremation were brought to a conclusion at the Imperial University on Monday evening. It was considered best to burn the floors of the condemned buildings *in situ*, but the superstructures were in every case pulled down and cremated in a pit. Only eight rats found a funeral pyre at the conflagration, and five of them were free from bacilli. The other three have still to be examined. Since the first discovery of an infected rodent, 303 rats altogether have been captured in and about the buildings, so that the colony may be said to have been practically extirpated before the last remedy was applied.

The number of rats killed and paid for at Singapore down to the end of May was 175,910.

The Governor-General of Formosa reported to the Home Department on the 29th ult. that pest returns Tainan on the 252 ult. showed 8 new cases and 11 deaths; at Taipei on the 26th 24 new cases and 10 deaths. From Jan. 1st to 26th June last there were 3,813 cases and 2,903 deaths, all males.

NOTES ON CURRENT EVENTS.

A fire occurred in Hiratsuka on the 28th June, destroying 40 houses. This fire, though the actual number of houses destroyed is small, probably did great damage, as a "house" in the case of a country town means all the buildings within an enclosure.

Mr. Shirasagi Seiai, President of the Boso Railway (from Chiba to Awa) appears to have been engaged in a singular transaction. In 1897 he borrowed a sum of two hundred thousand *yen* from the Mitsui Bishi Goshi Kaisha, promising to repay the money by the fall of that year. When his note matured, he obtained a renewal, and repeated the process subsequently, until, at the close of 1900, he paid back one half of the debt. Then he suddenly fell into a strange mood, and declared not only that he was under no obligation to redeem the note but also that he had no recollection of having issued it. Naturally the Bank has opened proceedings against him.

The emigrants from Japan last year aggregated 31,354, according to investigations conducted by the Foreign Office and quoted by the *Yomiuri Shimbun*. Of these, 26,161 were men and 5,193 women, or about 100 men to 12 women. Those that were sent abroad by emigration companies as contract labourers totalled 20,237, and the number sent without contracts, 1,278. Among the contract labourers, Hiroshima contributed the greatest number (8,448); Yamaguchi stands next with 4,572, Kumamoto third with 3,072, Fukuoka fourth with 3,028, Hyogo fifth with 1,882, Niigata sixth with 1,793, Wakayama seventh with 1,788, and the rest follow with numbers all below 1,000.

Six students of the First Middle School of Aomori Prefecture were attacked by a body of some thirty students on their way back from a religious fete at Hirosaki on the 24th instant. The assailants carried various weapons whereas the assailed were unarmed. One of the six students was killed, and the remaining 5 were so seriously injured that their lives are despaired of. No accurate

explanation of the origin of the trouble has yet been furnished.

The Sasuke Bank (so called from the name of its chief projector, Sato Sukegoro) has stopped payment and something like a panic prevails in the district of Sendai. It is stated that the Bank had lent money for the prosecution of various enterprises, and that the assistance rendered to it by the Yasuda Bank and others having been lately withdrawn, it became unable to meet its engagements.

Tables recently compiled by the authorities show that whereas formerly there used to be eight marriages annually per 1,000 inhabitants, the number has fallen to 6.78 since the promulgation of the new Civil Code. This change for the worse is attributed to the fact that the formalities connected with marriage having become much more complicated under the new law, there is a disposition to dispense with the ceremony, especially since, in the event of the birth of a child, it can be legitimized by subsequent marriage. On the other hand, the new law of divorce has produced a wholesome effect. Under its operation the number of divorces has fallen from 33 per 100 couples to 22.35. In other words, whereas formerly out of every three marriages one resulted in divorce, the ratio has nearly changed to one out of five. That is certainly a decided improvement. Some years ago, when the merits of the extrajudicial system used to be so loudly extolled, a well known "old resident" of Yokohama complained that when we passed under Japanese law we should be able to divorce our wives at will. The process is not now quite so easy as it was in the time of that most estimable gentleman, nor does it seem that there is any disposition among the foreign residents to avail themselves of such facilities as the law does offer.

There is a project to establish a free library in Tokyo, calling it the *Hoshi Bunko*. Its stock would be the books of the late Mr. Hoshi Toru, which are said to be worth forty thousand *yen*.

The death is announced of Mr. Martin Burchard, for several years honorary Japanese Consul in Hamburg.

It was believed that the Japanese scientific expedition, headed by Professors Hirayama and Saotomi, which went to Sumatra to observe the recent eclipse of the Sun, had proved a failure, that inference being suggested by a telegram to the effect that the weather at the time of the phenomenon was cloudy. But Professor Hirayama, who has just returned, says that the clouds did not prove an obstruction, being too thin to be visible to the naked eye, and that very successful observations were obtained.

According to the latest accounts, it is true that two collisions took place between torpedo-boats during the recent manoeuvres. One was on the 16th instant, and the boats concerned were Nos 40, 42 and 43. On this occasion no serious injury was done. The other was on the 23rd instant, between No. 9 and a boat not named in the reports. On this second occasion No. 9 was sunk, and steps are now being taken to raise her, but there was no loss of life. It appears that 31 destroyers and torpedo-boats were engaged in the manoeuvres, and that they experienced very foggy weather and dark nights.

It appears that the Emperor of Germany congratulated Prince Shimazu through Count

Wedel, the German Chargé d'Affaires, on having obtained the services of Miss Howard for the education of the Prince's children. Miss Howard formerly discharged a similar function in the Imperial German Household, and evidently won the high esteem of His Majesty. Certainly, while appreciating the value of such testimony on Miss Howard's behalf and the good fortune of the Shimazu family on having secured her services, we may be allowed to remark that these graceful and thoughtful acts on the part of the Emperor of Germany are deserving of all applause.

The Tokyo Municipal Council and the Tokyo Chamber of Commerce have held a meeting for the purpose of considering the propriety of giving a hearty welcome to the American Admiral when he comes to Japan to attend the unveiling of the Perry monument. Baron Senge, Governor of Tokyo, takes a very decided line. He says that they participated in the welcome to Field Marshal Waldersee, and that there are much stronger reasons for welcoming the American Admiral, seeing that he comes on a special mission connected with the commemoration of an event for which Japan must be permanently grateful. Baron Kaneko and Baron Shibusawa approve the idea, and it has been decided to seek the consent of the City Assembly. We may assume, therefore, that Tokyo will organise one of those fetes in which the soul of its citizens delights.

The question of conserving the old temples and shrines of Japan is taken up by the *Jiji Shimpō* in a very practical manner, though we imagine that our contemporary's arguments will provoke some criticism. Briefly speaking, the *Jiji* recommends that the lottery system be adopted for the purpose of obtaining funds to repair and maintain these art relics. It further urges that in selecting the buildings to which money is to be devoted, the artistic aspect of the case should be considered first, the reverend or learned aspect being relegated to a back place. In short, our contemporary regards the celebrated temples and shrines as places chiefly useful for attracting foreign visitors and thus earning money. There is, however, an almost shocking incongruity in the notion of supporting a religious edifice by means of a lottery. Public sentiment will scarcely reconcile itself to such a project.

Everybody must have observed the unusual quantity of rain that fell on Sunday during the day and the night—unusual even for the rainy season. The reports of the Central Observatory show that the quantity was 106 millimeters in 24 hours. Naturally there have been fractures of embankments and interruptions of railways in several places. The depression which was accompanied by this deluge, made its appearance originally in Formosa and reached Osaka on the 1st instant, but we have no intelligence of the route thereafter taken by it. The very heavy state of the atmosphere indicates that we have not yet emerged from the trouble, though the Meteorological Authorities seem to think that an interval of clear skies may be hoped for, and possibly their prediction will have become less difficult to credit before this paragraph is in print. The rainy season has come late this year. It ought to have commenced on the 12th of June, and the 11th of July is the orthodox date of its termination. But so much rain fell, unduly, in May that some disturbance of the usual order of things might fairly have been anticipated.

The 25th of June may be said to have inaugurated the wet season. Between that date and July 1st no less than five centres of depression travelled over the country. In some cases as much as from 70 to 90 millimeters of rain fell in an hour, and the total fall during the six days aggregated over 300 millimeters in each of four prefectures, namely, Kagoshima (399 mill.), Nagasaki (375), Saga (308), and Kumamoto (306). With a record of five depressions in six days, it seems somewhat ironical that the Meteorological Authorities should promise us an interval of sunshine between the fifth and its probable successor. Moji evidently fared worst in the recent disturbance. A furious gale raged there on the 28th of June, wrecking 11 or 12 coal barges and causing, it is feared, the death of several people.

Inundations are reported from various localities in consequence of the heavy and persistent rain of the past four days, but we do not learn that there have been any burstings of embankments or floods on a disastrous scale. Kobe seems to have sustained some damage through the storm.

Kagoshima reports 397 houses flooded by the recent rains in the city and 153 in the suburban districts. Three buildings were destroyed, one person killed and five injured. In Hioki district 4 houses were flooded and one person was killed; in Kawada district three lives were lost.

Mr. Hirata, Minister of Agriculture and Commerce, addressing the Local Governors, repeated the advice which has been officially uttered more than once, namely, that the purpose of industrial exhibitions does not appear to be fully understood by the people of this country. They behave as though the object in view was merely to display some *tours de force*, which they are not by any means prepared to duplicate at the prices affixed for exhibition purposes. This caution was uttered with reference to the exhibition which is to be held in Osaka next year. Our own observation convinces us that the mistake pointed out by the Minister has been recognised by the great majority of Japanese manufacturers, and that they now clearly appreciate the uses of an exhibition. But it will always be inevitable that men should regard such an affair as an occasion for displaying what they can do if they exert their full strength in competition. An ideal exhibition would be one at which the specimens took the form merely of samples, arrangements being made for supplying to a visitor without delay duplicates of any exhibit that took his fancy or satisfied his wants. But that rule could not possibly apply to the case of objects of art.

Mr. Yano, director of the Insurance Bureau in the Department of Agriculture and Commerce, speaking through a representative of the *Asahi*, has made some comments which we need not reproduce as their gist has already appeared in these columns. We may supplement them, however, by observing that the difficulties encountered by foreign firms in obtaining registration in Japan are by no means as formidable as those encountered under similar circumstances in other countries. Here the only trouble is that great and vexatious delay is caused by the necessity of having to refer to Europe or America for the information required by the registration officials, but a Japanese firm attempting to establish itself in New York according to law found that it would be required to lodge with the Treasury a sum of five hundred thousand gold dollars. That, of course, was prohibitive. Nothing of the kind is demanded in Japan, and we are

informed by experts that the difficulty of obtaining permission in this country is as nothing compared with the difficulties encountered in countries like Germany and Austria.

The Imperial University, having decided that the present is an unique opportunity for obtaining photographs of the architectural features of the Imperial Palace in Peking, has commissioned Mr. Ogawa to proceed thither for that purpose. Mr. Ogawa with three assistants starts to-day. This resolve seems to have been quickly taken and speedily executed. We should think that the results will be very gratifying, for the Palace at Peking may be taken as representing the highest achievement of Chinese architecture, apart, of course, from the temples. In Japan no comparison has ever been possible between sacred edifices—especially mausolea—and private buildings, from the point of view alike of architectural grandeur and decorative magnificence. The Taiko's "Palace of Pleasure" at Fushimi may have rivalled any temple of its time, but if so, it was the exception which proves the rule. It will be very interesting to see whether China's case is similar.

The *Jiji Shimpō* announces that it is organizing another picnic for children of poor parents. The picnic of last spring was a great success. Hundreds of children had a delightful excursion lasting over a week. Each child cost some 5 or 6 *yen*, and about 200 *yen* remained in the hands of the projectors. Our contemporary invites subscription for another outing.

DEATH OF AN EMINENT CHRISTIAN MINISTER.

The news of the death of Dr. Cochran will be learned with much regret. Born in Ireland, he was brought by his parents to Canada in his infancy, and there he got all the education that he derived directly from the schools. At an early age he was called to the work of the Christian ministry, and his name appears for the first time in the records of the Wesleyan Methodist Church in 1854. His talents and his genuine piety commanded respect from the very beginning of his public career, and he grew in favour with men through all his years till he was called away in the 47th year of his ministry. In Canada he rose steadily in public esteem till he was deemed worthy of the best appointments; but while in the pastorate of the Metropolitan Church of Toronto, than which at that time there was no better appointment, he was invited by the Board of Missions of the Methodist Church of Canada, to come to this country with Dr. Macdonald. At once he gave up all prospects at home, which were of the brightest character, and gladly came to this land to preach the gospel and build up a church. Success attended him from the very first. He speedily got hold of young men of character and promise. In each of them he became deeply interested, and drew them to himself with cords of sympathy and love. The late Mr. Nakamura, at the time the foremost Sinologue in Japan, persuaded him to give a little time to teaching in his school, and under Mr. Cochran's teaching professed Christianity. This was helpful to his work as it drew about him a still larger number of young men, numbers of whom became Christians and candidates for the Christian ministry. It was probably in the year 1877 that he laid the foundation of the Theological School, in which he was always the prominent figure so long as he remained in this country. His knowledge of the Book of Books, of general literature and of theological literature in particular was very extensive, and was at instant command. His conversations, lectures and sermons sparkled with literary gems. During the early years of his

residence here his gifts as a public speaker were called into frequent exercise in the advocacy of temperance and social reform. How faithfully and successfully he wrought from 1873 to 1879, how he identified himself with every object that had for its end the well-being of Japanese and foreigners, many of the readers of this journal know very well. He was early invited to share in the counsels and labours of those who were engaged in the translation of the Holy Scriptures, and his voice was listened to with respect by those who knew the vernacular and the Chinese languages vastly better than he.

In 1879 he returned to Canada, but not before he had deeply impressed himself upon the infant church in this land. He resumed the pastorate in the city of Toronto, and ere long was honoured with election to the Presidency of the Toronto Conference. During the five years that he was at home he was in labours most abundant. In 1884, at the earnest request of the Mission Board, he returned once more to Japan, took up his work as President of the Theological College, and devoted himself with great earnestness and success to the training of Japanese ministers for Christian work in their own country. This second sojourn in Japan was probably the most fruitful period of his life. It may be that his power of oratory were not so great as in early life, but he had acquired a width of vision, a broad impartial judgment, and a grasp of affairs, that more than counterbalanced the loss of fervid eloquence. It was in the first period of his residence here that the encomium was pronounced upon him by one of the most competent critics in Japan of being that best extemporaneous speaker of English in this country. But though the early glow of oratory had perceptibly faded, he was always in demand for public services of various kinds, and he always acquitted himself well and with advantage to the cause he advocated. In him, it was always felt, we had a fine specimen of a scholar, a gentleman and a Christian. His was a very catholic spirit. Far beyond the bounds of his own denomination, his presence was always welcome among the brethren of all denominations, and to all such gatherings he contributed his full share of "sweetness and light."

Perhaps his best work was in the Theological School of the Canadian Mission, for to it he gave his best thought and noblest effort. There are many in our ministry who regard him as their Teacher, Guide and Friend, and acknowledge that their debt to him is immeasurable. When for a time the two Theological schools of Aoyama and Azabu worked together, his services were highly appreciated by the sister denomination. On the Church here, of which he was one of the original founders, the impress of his moulding hands can be distinctly seen. On the foundation other than which no man can lay, he built not wood and hay and stubble—which may bulk largely to human eyes—but gold and silver and precious stones, for he wrought in the name of Christ and under the inspiration of love to God and man.

On account of the continued ill-health of Mrs. Cochran, which precluded the possibility of her return to Japan, and his own declining health, the Doctor found it necessary in the spring of 1893, though at the cost of much painful feeling, to sever his connection with the Japanese work and return to America. At the following Conference in June, 1893, the following resolution was moved by the Rev. Eber Crummy, seconded by the Rev. V. Hiraiwa, and unanimously resolved:—

"That this Conference desires at this time to place on record an expression of its affectionate regard for our retiring President, the Rev. George Cochran, D.D., whose recent return to America has prevented his meeting with us at this Session. During the twenty years that have elapsed since he first came to this country, he has held many positions of responsibility in connection with the work of the Christian Church here, of which he was one of the honoured founders, and has under God been enabled to build up the Church with labours abundant, and as efficient as diverse. But surpassing in power for good even these labours was that exalted type of Christian manliness which is bound to produce for years to come an abundant

harvest for good by impressing itself upon the character of the Church he aided in founding. This manliness, combined with his uniform kindness, has won our hearts, and we love him. All the Christian Churches in the country feel his departure a loss, but we most of all; and we would pray that, if it be the will of God, his years may be prolonged far beyond the common lot of man, and that during these remaining years the Spirit may crown his labours with fruit yet more abundant, until according to his own wish he 'cease at once to work and live.'

Returning to America he settled in Los Angeles, Southern California, where his family had been residing. "In a quiet but effective manner," says the *Los Angeles Times*, "he served as Congregational pastor at Santa Monica, as Dean of the MacLay Theological College, and for the past two years as Dean of the College of Liberal Arts of the University of Southern California, winning the affection and esteem of a wide circle of friends."

"The last year of his life," writes his son-in-law, Mr. C. I. D. Moore, "was filled with suffering, but in it all he was abundantly sustained by the faith that was always so precious to him. I have never seen pain borne with such patience. All his family were about him when the end came. His death was caused by a trouble in his head, something of a cancerous growth brought on evidently by catarrhal irritation."

The funeral took place on the 26th June, when the Methodists of Southern California paid, as the *Times* said, "the last fitting tribute to a noble man." A message from the dying dean was read to the students—a message of kindly encouragement. The Trustees of the University through their representative expressed their unbounded confidence in Dr. Cochran's judgment. Dr. MacLay, formerly of Tokyo, spoke of the great good Dr. Cochran had accomplished here. Resolutions expressing the highest appreciation of his services from the College and the students were read. As the last speaker, Dr. Cantine, arose to speak, the sun shining through the stained glass-window threw the shadow of an anchor and a cross on the wall with a beautiful halo of purple light about it. The orator deftly turned it to account as he spoke of the spiritual life of the saintly man who had just passed away with a quiet smile upon his lips in the anticipation of a joyful immortality.

He leaves behind him his mourning widow, Miss Cochran, Mrs. C. I. D. Moore, and Mr. George J. Cochran, for whom in their sore bereavement deep sympathy will be felt by all who know them.

Little remains to be said. The eulogy, pronounced by so many since the news of his lamented death reached us, that he was a very good man, was well deserved. He was a human being, and therefore not faultless, but probably there are very few men in any land, in any profession, free from blemishes and flaws than he. Goodness shone out conspicuously in his whole life and conversation. As he himself said of a deceased friend here in Tokyo, at his funeral, we may emphatically say of him: "He wore the white flower of a blameless life." For such is our confidence in his genuine worth that we may challenge the world:

"Whatever record leap to light,
"He never shall be shamed."

G. M. MEACHAM.

GOVERNMENT RAILWAYS.

Traffic receipts on Government railways (Tokaido, Hokuriku, Shinyetsu, Ou, and various other lines), during the ten days ended on the 11th June are reported by the *Nippon* to have decreased by 64,667 yen approximately, in comparison with the figures for the corresponding period of the previous year. Below are the details:—

	This year.	Last year.
Passengers	735,552	811,537
Goods (tons)	44,860	52,141
Receipts from passengers (yen)	286,643	341,953
Receipts from goods (yen)	106,600	115,903

LAW CASES.

In the Yokohama Ku Saibansho on Friday before Judge Tanuma, the hearing was resumed of the suit brought by Mr. W. F. Page against Mr. T. H. Box. Plaintiff claimed from defendant the vacation and delivery of the premises at No. 114 Yamashitacho covering 72 *tsubo* of land.

For the plaintiff it was alleged that he is the owner of the building in question and that as to the land on which it stands he holds a perpetual lease. Plaintiff has never leased either the building or the land to defendant, though the latter continued to occupy them since August 1st, 1900.

Defendant contended that the building was leased to him by Mr. Peterson (to whom it was mortgaged) for two years from Aug. 15th, 1900, with the stipulation that the lessor must give three months' notice in the event of his wishing defendant to vacate the premises.

Mr. C. D. Moss gave evidence as to the usage in regard to the leasing of land and buildings in Yokohama.

After hearing counsel the Court reserved judgment.

Capt. E. Prior Bishop has lost his case against the Maples Hotel, Ltd., Judge Matsuda, of the Yokohama Chiho Saibansho, finding for the defendant. Capt. Bishop sought to recover yen 3,200 with interest at the rate of 12 per cent. per annum.

The *Japan Gazette* Company are suing Mr. J. H. Ranger in the Local Court to recover the sum of yen 88.47 and interest, the value of certain advertisements and printing done for the Maples Hotel, Limited, at the order of defendant. Defendant denied liability and it was arranged that Dr. Munro and Mr. P. B. Clarke should be called as witnesses.

In the Yokohama Ku Saibansho on Monday, the Singer Manufacturing Company sued Mrs. Endo Fuji, No. 160, Yokohama, to recover a certain sewing machine which she had had attached. Plaintiff hired the machine to a Mr. M. Eugene, No. 129, Yokohama on the hire-purchase system, but the latter failed to make the necessary payments and the plaintiffs endeavoured to take back the machine. When they did so, they found that defendant had obtained an attachment upon it, together with other articles, Eugene owing her money. Defendant now urged that the machine was the property of Mr. Eugene and declined to recognise plaintiffs' claim. After evidence had been heard, the case was adjourned to the 5th July.

Judge Yasuda on Tuesday delivered judgment in the Yokohama Chiho Saibansho in the case brought by Hoshina Bunjiro against Messrs. Ahrens and Co. The plaintiff sought to have 15 cases of alcohol delivered to him, but the Court dismissed his case with costs.

In the case in which Mr. A. M. Apar sought to recover yen 568.75 and a monthly rent of yen 81.25 from February 1901 until June 1903 from Mr. J. B. Bhesania, the Yokohama Chiho Saibansho on Tuesday found for defendant, dismissing the plaintiff's case.

In the Yokohama Chiho Saibansho on Tuesday, the case in which Messrs. Cornes and Co., seek to make Akashi Tokutaro, of Asakusa, Tokyo, take delivery of 15 cases of plush and pay the storage, insurance, and other charges thereon, was advanced a stage. A witness named Kobayashi Sakichi, of Asakusa, Tokyo, was examined on behalf of the defendant. He deposed to having inspected the goods after their arrival and said that he was informed by an interpreter of the firm that if the quality of the article differed from sample the price would be decided upon by referring the matter to the arbitration of foreigners, as stipulated in the contract. Defendant objected to this arrangement and proposed as an arbitrator a Japanese living in Yokohama. This was agreed to.

The hearing was then adjourned till the 12th Sept. at 1 p.m.

The Yokohama Chiho Saibansho has dismissed

the case brought by Mr. Page against Mr. T. H. Box, plaintiff being cast in costs.

Judgment has been delivered in the Kobe Chiho Saibansho, in an action brought by Mr. Fukazawa Takanari against Mrs. Smithers for an increase of the ground-rent on certain property in Nakayamate-dori. Judgment was entered in favour of the defendant, and the Court ordered the plaintiff to bear the costs.

The hearing of a case in which G. Framjee claims from Washio Chozo payment of damages amounting to yen 105 arising out of a match transaction was resumed in the Kobe Chiho Saibansho on Thursday. A settlement out of Court had been tried, but the negotiations fell through. Plaintiff's counsel applied for the attendance of a witness, Wada Ko, to give evidence as to the quotation for matches in Bombay, in order to prove the damage sustained by his client. The Court granted the application and adjourned the case to 2nd July next.

In the Yokohama Chiho Saibansho on Wednesday, before Judge Kano, Messrs. Lowder and Akiyama sued M. N. Gohhai and Co., to recover yen 263.44. Plaintiffs in their pleadings stated that on May 21, 1900, they were instructed by defendants to recover payment of yen 5,286.83, the value of a promissory note issued by Suzuki Toyosuke, of Otamachi, Yokohama. Plaintiffs succeeded in recovering the money and now claimed 5 per cent. commission on the collection. Defendants refused to pay the sum although the 10 per cent. originally fixed had been reduced to 5 per cent. at the application of defendants.

Mr. Sato, who appeared for defendants, said that his clients had instructed Mr. Lowder to write two letters to Mr. Suzuki and they were willing to pay a reasonable sum for such service, but yen 263.44 they thought an extortionate charge.

Judge Kano suggested that the suit had better be compromised out of Court, and meanwhile adjourned the case until Sept. 25th.

FIRES.

The explosion of an engine boiler occurred near Futagawa station early on the morning of the 26th inst. Trains were stopped for two hours until another engine could be brought from Hamamatsu. There was no damage to life or limb.

Fire broke out in a coal mine of the Toyokuni, Tagawagori, Fukuoka Prefecture, on the 29th ult. and is believed to have caused some loss of life. The Himeji and other mines were closed by flooding.

Fire broke out at Yagenbori, Nihonbashi, Tokyo, shortly after 12 o'clock, on the morning of the 1st inst. Three houses were destroyed and one damaged.

Shortly after one o'clock on Saturday morning fire broke out at Kanagawa, and one house was destroyed.

NEWS OF THE WEEK.

H.M.S. *Plover* left Nagasaki for Wei-hai-wei on the 1st instant.

The Russian men-of-war *Rossia*, *Navarin*, and *Pollava* arrived at Nagasaki on the 1st inst. from Port Arthur.

The workroom of a factory in Kyoto collapsed at 5 a.m. on July 2nd, and eight women were hurt.

Owing to her absence at Chuzenji the Hon. Mrs. Beethom Whitehead will not be receiving again until September.

The French papers state that M. Klobukowski, at present French Consul-General at Calcutta, is almost certain to receive the appointment of Minister at Bangkok.

Detailed reports from Shimoda show that by the recent theatre accident in that locality seven

men had died up to the 2nd and seventeen had been found to be injured.

Mr. G. T. How, manager of the Hongkong and Shanghai Bank, at Penang, who has been seriously unwell for some time past, has been ordered home by his medical advisers.

Among the passengers on the O. & O. steamer *Gaelic* bound for Hongkong is the Honourable Mrs. Wu Ting-fang, wife of the Chinese Minister to Washington—a former well-known Hongkong Chinese resident.

A coolie named Tanaka Takichi, a native of Chiba Prefecture, was arrested by the Tobe police on June 30th. He had entered two houses and stolen a number of articles, stabbing a man who attempted to oppose him.

A telegram has been received at the Hongkong and Shanghai Bank at Singapore from the French Consul at Colombo, that stolen notes to the value of \$258,000, have been recovered there; they were shipped in a case by French Mail of 26th May for Pondichery.

The American gunboat *Marietta*, Commander J. V. B. Bleeker, arrived at Singapore on June 13th from Manila and anchored in the roads. After exchanging salutes with the port she saluted the German Admiral's flag. She was expected to leave for Boston, Mass., U.S.A., on June 15th.

Jack McAuliffe, the light weight champion, and Slavin, the Australian pugilist, brother of the famous Frank Slavin, have arrived in Singapore from Rangoon, where they recently gave an exhibition that drew a tremendous crowd of sporting spectators.

An office-boy in the employment of Messrs. Frazar and Co., who was entrusted with *yen* 100 the other day wherewith to pay postage stamps, absconded with the money and spent it in a riot of debauchery. He gave himself up to the police at Kagacho on Monday night.

The Navy Estimates in the new French Budget amount to f.312,000,000, which seems at first sight a reduction of f.15,000,000, but, the colonial troops having been transferred to the War and Colonial Offices, there is really an increase of f.11,000,000. Of this sum, f.6,000,000 is due to the building of new ships, and f.3,000,000 to the new plan of armament.

Real estate at Tientsin is still on the rise. The site of the former premises of the Tientsin Trading Company realised the very high price of Tls. 6,468 per mu the other week. The purchasers were the Yokohama Specie Bank. The price is all the more striking as the lease from the British Government has only some sixty years to run.

A jinrikisha man named Yenomoto Seizo, living at Mannocho, Shitaya, Tokyo, was arrested by the police on the 27th inst. He drew a man named Murase, of Fujimicho, Yokohama, from Yoshinocho to Ryogoku on the night of the 10th inst. Murase left his tobacco pouch, valued at 80 *yen*, in the jinrikisha and Yenomoto instead of giving the article to the police sold it to another man on the 26th.

An official despatch received at Hongkong from Manila states that Commander A. Marix, captain of the port of Manila, issued a notice to mariners on the 11th ult. the substance of which is as follows:—Mariners are notified that typhoon signals will hereafter be shown day or night, as occasion requires, at San Fernando de la Union. The mast is 80 feet high and stands 250 feet east of the wharf. Signals can be seen with glasses from outside of the reef.

We are asked to state that our version of Mr. John Lindsley's evidence in the Yokohama Chiho Saibansho as to the suit by Mr. Yoshida against Mr. W. K. Wilson, of Browne & Co., was not quite accurate. Speaking of the methods of notifying consignees, he stated that there were three methods used for notifying consignees of the arrival of goods, viz., by advertising in the newspapers, by express notices, and by sending out a circular;

that of the three methods he considered advertising in the newspapers the most important.

A burglar entered the station-master's room at the Tatakawa Station, Kōbu Railway, on the night of the 28th ult., secured a cash box and carrying it into a rice field, broke it open and stole some money.

The *Fudo Maru*, a Japanese junk belonging to Takahashi Ichiei, of Chiba, laden with 70 boxes of dynamite and other ammunition, and in charge of two *sendo*, left Yokohama for Tokyo, on the morning of the 26th inst. When near No. 6 fort, Shinagawa, the junk foundered but the two *sendo* and 48 boxes of dynamite were rescued. Two fishermen of Shinagawa found the missing 22 boxes of dynamite and the police returned them to their owner.

A bone-dealer named Nakada Tsurukichi, living at Nishi-hamacho, Minami-ku, Osaka, placed some old bones in a dry well about four years ago. On the 24th inst. when he entered the well for the purpose of recovering the bones he was overcome by the noxious gas which had collected at the bottom. Another man at once went to his assistance and was also overcome, and then three men down together, only to faint. Eventually all were brought up, but the first two have since died.

Mr. Fisher Unwin has just published in his Colonial Library Mrs. Amelia E. Barr's new romance "Souls of Passage." Eden Philpott's new novel "The Good Red Earth" has just been published by Mr. Fisher Unwin in his Colonial Library. Two characters claim particular attention, that of Johnny Fortnight, a unique canting, oily-tongued hypocrite, who beguiled the natives of a Devonshire village into making him their pastor at sufficient salary to enable him to discontinue his trade of pedlar, and the silent Mary Gilbert, a great type of womanhood and wifehood. The story is humorous, often its scenes are dramatic, and its ending is unhackneyed, and breathing through the whole romance is the scent of the orchards and the breath of the country.

The British steamer *Tartar*, says the San Francisco *Bulletin*, made the run from Yokohama to Vancouver in just 14 days, including a detention of six hours in quarantine. The *City of Peking* left Yokohama for San Francisco three days ahead of the *Tartar* arriving one day later, making a difference of four days. But the *Tartar* came straight across, while the *City of Peking* made a detour to Honolulu, where she discharged and received freight. Where time is a consideration with Oriental travellers and shippers, vessels that make the most direct route from the point will have the preference. In order that San Francisco may stand on a more even keel with Northern ports, one or more steamers every month should cut Honolulu. The northern is the shortest and has the cheapest fuel—a further advantage. When the big steamers now building for the Pacific Mail company are placed on the route, and the fires in their furnaces are fed with California oil, and Honolulu is left off the schedule, things will be much more evenly balanced than now on the China route.

The following is the statement given out at the White House on June 11th in which President McKinley expressed his intention not to "run" a third time for President:

"I regret that the suggestion of a third term has been made. I doubt whether I am called upon to give it notice. But there are now questions of the gravest importance before the Administration and the country, and their just consideration should not be prejudiced in the public mind by even the suspicion of the thought of a third term. In view, therefore, of the reiteration of the suggestion of it, I will say now, once for all, expressing a long settled conviction, that I not only am not and will not be a candidate for a third term, but would not accept a nomination for it were it offered me. My only ambition is to serve through my second term to the acceptance of my countrymen, whose generous confidence I so deeply appreciate, and then with them to do my duty in the ranks of private citizenship.

(Signed) WM. McKINLEY.
Executive Mansion, Washington, D. C., June 10th, 1901."

AMERICAN TOPICS.

Mrs. Annie Digs, the prophetess of the People's party of Kansas, has had an accession of the "divine afflatus" which enables her to declare that "Tom L. Johnson will be the next President of the U.S."

More than 300 tons of smokeless powder was accidentally ignited at Vallejo, Cal., on June 5th, and before the fire was put out a loss to the extent of \$600,000 was sustained by the Government of the United States.

According to a decision of the United States Supreme Court, corporations that have extended their mining shafts under the city of Leadville must pay for the privilege of working them, and it is estimated the royalty will amount to \$2,000,000 a year. Leadville should do without taxes for the future.

Chancellor F. H. Snow, who has been at the head of the University of Kansas for eleven years, has tendered his resignation. It will be accepted and the retiring scholar will be given the chair of natural history. Chancellor Snow's health broke down a year ago following the death by drowning in the harbour at San Francisco of his son, a newspaper reporter, who had gone out on a tug to receive news from a transport bringing soldiers from the Philippines.

The first "agnostic" marriage in the U.S. occurred at Cincinnati on June 2 and formed the closing feature of the Agnostic Sunday-school that has been established there. The principals were Frederick Federle and Martha Seaman. Justice Alexander Koobling performed the legal part of the ceremony, after which both the principals made their pledges, including one not to resist divorce proceedings. The bride also repeated the words:—"Should I discover that we are uncongenial or mismatched, I hereby pledge that I will not bear children that are not born of affection."

According to Dr. T. J. Vaughn Rys, the Aleutian Islands are soon to be included in the known gold-bearing region of Alaska. Dr. Rys believes that gold discoveries will soon be made on Shumagin, or other of the Aleutians, which will cause a rush of gold seekers thither similar to that to Cape Nome. Two years ago Dr. Rys prospected Unimak Island to see if sulphur deposits there could be profitably worked. He found sulphur in abundance, but could not ship it, as the island had no harbour. At that time several seal hunters and fishermen found placer mining profitable and he was told by other prospectors that the Aleutians contained both placer ground and gold-bearing quartz. Most of the islands have good harbours, which are open the year round, a great advantage in case Dr. Rys' prediction comes true.

Having conferred with many of the most eminent pathologists in the United States as to the best method of setting on foot an original scientific research into the problems of medicine and hygiene, Mr. John D. Rockefeller has placed at the disposal of a body of prominent medical men \$200,000 to be available for immediate expenditure by an association incorporated under the name of "The Rockefeller Institute for Medical Research." The home of this institute, with such laboratories, staff and equipment as may be necessary, will be located in New York. The list of officers is as follows:—Dr. William H. Welch, professor of pathology at Johns Hopkins University, president; Dr. T. M. Prudden, professor of pathology at Columbia University, vice-president; Emmett L. Holt, clinical professor of children's diseases at Columbia University, secretary; Dr. C. A. Herter, professor of pathological chemistry at the University of New York and Bellevue Hospital and Medical College, treasurer. The directors are:—Dr. J. H. Biggs, director of laboratories for the Board of Health of New York city; Dr. Theobald Smith of Boston, professor of comparative pathology at Harvard University; Dr. Simon Flexner, professor of pathology at the University of Pennsylvania, Philadelphia.

One of the worst cases of lynching ever known

in California occurred on May 31st at Lookout, twelve miles from Alturas, in Modoc county, when an old white man named Calvin Hall, 72 years of age, was hanged by a mob of forty masked men, together with his three sons and a friend, Dan Yantis. Hall formerly lived with an Indian squaw, and by her had three boys aged 26, 19 and 16 years. The family was worthless and lately had been suspected of many petty thefts. Finally a constable went to the house with a search warrant and found hay forks, harness, barbed wire and other things that had been recently stolen. All were arrested, but the old man was released on a charge of simple theft, while the sons and Yantis were kept in custody on charges of burglary because they could not furnish \$300 bail. The neighbours evidently determined to rid the county of the worthless gang, but instead of tarring and feathering them they took all five out at midnight, and, without giving them any chance for defence, hanged them to Pitt river bridge. The Governor of the State has offered a reward of \$5,000 for information that may lead to the arrest of the ring leaders.

A Vancouver telegram of May 31 says—Robert Nixon, a contractor, had a fearful ride, for a time travelling at the rate of a mile a minute, down a water sluice this morning. The recent floods at Nelson carried away the dam from which the city electric light works obtained its power, and repairs were being made to-day. Cottonwood river is a perfect cataract at this point, for it descends 700 feet in a mile-and-a-half run to Cottonway lake. The water power sluice for this distance runs with lightning speed. Nixon was superintending the work of repairs, standing on a suspended timber, when it slipped and he fell backward into the sluice. He went down with the water like a shot and was carried a quarter of a mile almost before his companions realized what had happened. A third of the way down the sluice a log had jammed across, and it was this which saved Nixon's life. He was thrown into an eddy, and, catching hold of the projecting log, hung on until the men arrived and rescued him. Even then he did not dare to let go until two ropes had been thrown around him, and he was hauled out of his dangerous position. Had he gone another half mile he would have dashed over the falls and would undoubtedly have been lost.

THE BANK ROBBERY AT SINGAPORE.

It is perhaps not premature to say that the mystery of the Hongkong Bank robbery is now practically solved (says the *Free Press* of 12th June). The partners in the act appear to have been (1) the Chartered Bank Kling tamby who stole the Hongkong bank reserve duplicate keys deposited at the Chartered Bank for safe keeping; (2) the second Kling tamby of the Hongkong Bank, a man of 25 years good service; (3) the head Kling tamby of Behn Meyer & Co., who acted as go-between and tempter between the first and second parties.

It is ascertained that the Hongkong Bank tamby who took leave to visit his friends in India the other day, has carried off with him the whole bulk of the missing \$50 notes up to about \$250,000 in value. He will arrive alone at one of the Madras ports to-day and will be duly met on arrival by the Indian police. A telegram to this effect may arrive any moment. The steamer in question is the B. I. *Zaida* which left Singapore on the 4th inst. for Penang, Madras, Karikal, and Negapatam. A number of minor Hongkong bank notes and Government notes to the value of about \$15,000 had been deposited with a money-changer in Market Street, a friend of the Hongkong Bank tamby. He in turn placed a small portion, some \$2,000, in charge of another money-changer at the end of Malay Street. The wife of the latter was curious over the sudden accession of capital, and talked. Thus the affair came out.

It is a dramatic detail that in the small hours of the morning Mr. J. D. Taylor and Mr. Hughes of the Hongkong Bank, accompanied by a Malay detective, and a Kling detective, and acting on the confession of one of the implicated, disinterred from a Kling burial ground along the Serangoon Road over \$2,000 of small notes, and a smaller gold bar, formed out of some of the missing sovereigns.

It is an immense satisfaction to the Bank authorities and to the public at large that a robbery framed on so ambitious a scale should terminate by what will prove the virtual restitution of nearly the whole of the lost notes to the Bank.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Shin Bukkyō* we find a concise account of the Buddhist magazines circulating in Tōkyō, which we transcribe here. We have never been able to get at the end of the Buddhist organs published in different parts of the country. Their number has always astonished us. The *Shin Bukkyō* now informs us that they amount to several hundred, and adds that it is not in a position to give anything like an exhaustive account of them, so it confines itself to metropolitan publications, which it proceeds to describe as follows:—Among the magazines that may be designated unsectarian Buddhist organs (1) the *Bukkyō* is the most conspicuous. Mr. Washio Junkei is the editor. It advocates radical reform and devotes itself at the same time to publishing a large amount of historical material. Lately its issue has become irregular and occasionally it skips a month, a sign, we fear, of declining strength.

(2) The *Tsūzoku Bukkyō*, as its title implies, devotes itself to popularising the creed and providing material that can be understood and appreciated by the uninitiated. The editor belonging to the Shin sect, the magazine is coloured accordingly in its editorial pages, but the matter it publishes is so varied and entertaining that the magazine has a large sale. (3) The *Bukkyō Maishū Shimbum* (The Buddhist Weekly) aims at amalgamating old and new Buddhism, but it has not been in existence sufficiently long to show how this end is to be realised. (4) The *三寶叢誌*, *Sambō Sōshi* is some 14 or 15 years old and at one time was a most influential organ, but in recent years the articles contributed by such writers as Shimaji Mokurai and Higashi Kanichi have been quite out of date. It is the organ of the Higashi Hongwanji. (5) The *Chuō Kōron* is a sociological organ with a distinct Buddhist tone, of which Mr. Sakurai Gichō is the editor. As a magazine it is far away ahead of its contemporaries. Mr. Kaai Kiyomaru's *Daidō Soshi* and Mr. Shaku Unshō's *十善寶窟 Jūzen Hōkutsu* are both making valiant efforts to keep life in that doomed system known as ancient Buddhism. Their earnestness excites both pity and admiration. Among purely sectarian organs the Otani-ha organ the *精神界*, *Seishinkai*, which receives contributions from Mr. Kiyosawa Mitsuyuki and many talented young writers, holds the very first rank among Buddhist magazines. The *Tsūzoku Bukkyō Shimbum* (quite a different organ from the *Tsūzoku Bukkyō*), though very conservative in tone, has a large circulation among devout Buddhists. Among sectarian organs, for downright progressiveness of spirit the *Jidō Kyōhō* has no equal. The *加持世界*, *Kaji Sekai* is a Shingon organ, tinged very strongly with neo-Buddhist teaching. The *Kyōyū Zasshi* and the *Nishū Shimpō* are both very feeble Nichiren publications, and are quite eclipsed by the organ of the same sect known as the *Nishū*. The *Myōshū* (Nichiren), published at Kamakura and edited by Mr. Tanaka Chikaku, for brilliancy of style has no rival among Buddhist magazines. The Sōtō Sect's *Shūhō* confines itself to publishing scraps of news. The *和融誌* *Wayūshi* issued by the same sect is extremely controversial in character, despite its title. Besides these, belonging to various sects, are the *Hokkyō*, the *Shinkō* (the Awakener) the *Hōwa*, the *Tōkō* (Eastern Light), and the *Zeshinshu*. The last of these publishes sermons and expositions. The *Zen*, though somewhat heavy, is a well conducted organ. The *政教時報*, *Seikyōjishō* must not be omitted. It is the organ of the Bukkyō Dōmeikai, and publishes the views of young men principally. At one time it attracted a good deal of attention, but its power seems to be on the wane.

Mr. Matsumura Kaisei, in his organ, the *Keisai*, from month to month never wearies of holding up to view what he conceives to be the weaknesses of his fellow-countrymen. Not long ago he published an article entitled *Shihyō sono hito wo motomu* (Wanted a man to act as a model), in which he argues that there is always something

deficient about Japan's great men. He thinks that the greatest Englishman that has ever lived was Nelson, in whose life Mr. Matsumura, owing to his ignorance of certain well known facts, discerns no weakness or imperfection whatever. It would be a profitless task to reproduce all that Mr. Matsumura has to say about the Japanese whom the nation loves to honour. The gist of it all is that no Japanese is absolutely perfect and that the ideal life has never been lived in this country. Mr. Matsumura thinks that he is serving the cause of morality and religion by picking to pieces the models that his own countrymen have set before them for imitation and by preaching the superiority of Nelson to them all. On this point not a few Japanese writers divide issues with him. The appearance of leeches in the Tōkyō waterpipes furnishes Mr. Matsumura with a text for a long sermon on *kōtoku* (public virtue), or rather its absence in this country. Much of what Mr. Matsumura says on this subject is doubtless true, but as the topic has been repeatedly dwelt on in extracts which have already appeared in these columns, we omit further reference to it. Many people weary of Mr. Matsumura's jeremiads. To this writer the appearance of leeches in the Tōkyō waterpipes is a sign of the downfall of the nation: *Suidō tekkan kara hiru ga deta wa Nihon no horobi ni kizashi wo tsuguru mono nari, &c.*

In the *Kyōiku Kōhō* (No. 248) appears a very long report of a speech of Dr. Inoue Tetsujirō's on "Bushidō and Future Morality," which is of considerable interest from several points of view. As is doubtless known to many of our readers, it was Dr. Nitta that first gave wide publicity to the notion that the Bushidō is a suitable basis for present day morality. Dr. Inoue does not altogether agree with Dr. Nitta in the estimate the latter forms of the value of the Bushidō as material for constructing a new system. We proceed to set down the salient points of Dr. Inoue's speech. What is known as Bushidō, or the "Warrior's Way" is in no way connected with the assertion of the principle that physical strength is superior to all other kinds of strength. The term *dō*, or *michi*, indicates a system of morals or religion, and the term Bushidō is to be understood only as the *samurai's* standard of conduct. Now it is important to note that though warriors had the honour of giving a title to a special code of rules of conduct and etiquette, the system of morality called Bushidō was borrowed largely from Buddhism, Shintō and Confucianism. It may be said to represent our distinctively national moral ideas modified by the teaching of the three above-named creeds. There is nothing in the West that precisely resembles it. The stoical principles practised in ancient times in many parts of Europe and the rules of chivalry perhaps approach nearest to it, though the position assigned to woman by the latter constitutes an essential difference between it and the Bushidō. There are those who argue that the Bushidō can be traced back to the mythological age, but as known to us to-day it may be said to have begun in the Ashikaga times and to have reached its fullest development under the Tokugawa Shōguns. Though the despotic government with which it was so long associated has ceased to exist, the national regard for the rule of life known as Bushidō is still very deep, as has been exemplified in our recent wars. The moral sentiments expressed in the Imperial Rescript addressed to the Army on May 5th, 1882, are essentially those of the Bushidō and the Japanese warrior is still controlled by this system of morals and etiquette. If it be asked who was the founder of the Bushidō, the reply is that the system was not founded by any one man as is the case with all the great religions. But to Yamaga Sokō belongs the honour of having given permanent shape to, and organised into a body, moral sentiments that had hitherto floated loosely in men's minds. Yamaga was a disciple of the famous Hayashi Razan, but Yamaga went beyond his master in the extent of his research and studied Shintō, Confucianism and Buddhism with a thoroughness that was rare in those days. While well versed in religion, he was a high authority in military science, and his

superiority in this line was never questioned in the Bakufu age. The Bakufu in his day in all educational matters followed the teaching of the Chutz school of philosophers. In this Yamaga maintained they were quite wrong and published a book on the subject, which brought the authorities down on him. He was banished and his first work was suppressed. He issued a second entitled 配所殘筆, *Haisho Zampitsu* (Lit. the pen, or writing, left in my place of exile) and managed to escape the consequences of such a piece of effrontery. Ako was the place of his banishment, and there he founded a school of thought that lives to this day. His principles were imbibed by the Forty-seven *Rōnin* and by hundreds of other warriors of those times. In later days the famous Yoshida Shōin proclaimed himself to be the disciple of Yamaga. Yamaga was also the author of a work called 武教小學, *Bukyō Shōgaku*, in which the defects of Japanese elementary education are pointed out and the principles of the Bushidō are explained and also of a book called 中朝事實, *Chūchō Jijitsu* (Facts about Japan), in which he condemns the tendency of the Japanese to study foreign books rather than those of their own country. In this work too there is much about the Bushidō. We may say then that no single writer did as much as Yamaga to give permanency to that standard of morals known as Bushidō. In a sense he is its founder. Connected with the Bushidō system there is what is known as *shisetsu*. This refers to the time of death. Yamaga taught that we ought to live in constant expectation of death. When leaving the house we should always act as though we never expected to return to it. The practice of making wills he discouraged, maintaining that the *samurai* who lives as he ought has no need to state in so many words what his wishes are. His every act should declare them. This reminds us of what Kant said about words, acts and rules of conduct being one and the same. His ideal was an extremely noble one; according to which no event in life, however apparently trifling, is without its significance and its bearing on life as a whole. It is the importance that he attached to short periods in life that has led people to speak of his system as *Ichinichi no oshiyē*—"The one-day teaching." The system of education which he advocated was far in advance of his age and contained many excellent characteristics. The Bushidō teaching, he maintained, was as much needed for women and children as for stalwart warriors. He forbade the perusal by women of such purposeless and contaminating works as the *Genji Monogatari* and *Ise Monogatari*, and by this teaching of his he produced a new set of mothers in this country, women who were permeated with the spirit of the Forty-seven *Rōnin*.*

There are writers (Dr. Nitta, for instance) who advocate the revival of the Bushidō and its use as a moral system to-day. This can never be done. We no longer approve of suicide nor of the vendetta. The Bushidō in its old form could never be resuscitated without doing harm to

* This remark of Dr. Inoue we believe to be abundantly justified by facts recorded in Japanese history. Several of the mothers of the Forty-seven *Rōnin* were most remarkable women. The mother of Sugino Harufusa killed herself by biting her tongue, in order to set her son free to join the band led by Oishi Yoshio. And Yukishige's mother followed the same course, having thus spoken to her son before she died:—"And now it does my heart good to hear that you are laying down your life in the discharge of those duties which loyalty to our late lord demands. I rejoice that your name will be enrolled among the faithful who from ancient times have sacrificed their lives in a similar cause. Why should I mourn over such an event? My only regret is that I have not known it before. Hitherto I have not looked on you as one who was cherishing such a noble ambition in his mind, and therefore I have not treated you with the profound respect with which I now regard you." Shortly after she was found lying in a pool of blood. She had died by her own hand. Inscribed on a piece of paper that lay by her side were these words, "As you make the existence of an old woman like myself a reason for not exerting yourself to the full in a righteous cause, I die, and leave you to serve your native province by killing the enemy of your lord. I pass on before you and your brave associates to the world of spirits, not caring to be behind you."—(WRITER OF SUMMARY.)

morality, but its spirit—this can be utilised to any extent. The spirit of the Bushidō is the old national spirit, which should never be allowed to die out. With this spirit as a basis we ought to be able to build up a system of morals that shall meet the requirements of the times. The Bushidō is a system of general rules or principles. For theoretical application to cases actually arising in daily life the system is deficient. Hence it needs to be replenished and to be developed afresh, in order to serve as an effective means of control in this 20th century life of ours. In the enormous importance it attaches to practical morality the Bushidō is not surpassed, if it is equalled, by any other system of morality.

Mr. Fukuzawa shortly before his death in a series of articles entitled *Yasegaman-no-sensu* accused Count Katsu of having acted contrary to the Bushidō when he handed over the castle of Edo to the enemy.* In our opinion Mr. Fukuzawa's interpretation of the events of that time was a wrong one. We think that in a deeper manner than Mr. Fukuzawa dreamt of Katsu was acting up to the knightly code known as Bushidō. But was not Mr. Fukuzawa guilty of doing precisely what he accused Katsu of performing? In the matter of moral teaching did not Mr. Fukuzawa hand over the nation's castle to foreigners? Was not the system he recommended essentially Occidental? If he thought that there were points in our system that needed altering, why did he not set about altering them instead of abandoning the citadel altogether? This is precisely what Dr. Inoue says here: *Kare (Fukuzawa) wa Seiyō no dōtoku shugi ni sesshite, tadachi ni Nihon yōrai no dōtoku shugi no shiro wo ake-watashi, tachinachi kare (seiyōjin) no shugi ni utsurite, Nihon no dōtoku wo kusatte oru, furui, to iute kōgeki shita, kore Fukudō wa ichido mo tatakaquazu shite jōo no shiro wo ake-watashita.* In this as in so many other things Mr. Fukuzawa's view was superficial. It was only in appearance that Katsu transgressed. Thus we see how important it is to distinguish between the real spirit of Bushidō and its numerous outward forms of manifestation. The point I want to insist on is that the national spirit embodied in the system which I have discussed is still strong to-day and that it should adopt whatever forms of manifestation best suit the age.

Mr. Shaku Mushō is the author of a small book on "The Fundamental Principles of Buddhism" which, though it only covers 100 pages and sells at the Hakubunkan for 10 *sen* per copy, strikes us as a remarkably clear and concise account of the distinctive doctrines of the creed. To any one in search of a comprehensive and lucid explanation of the scores of technical terms to be met with in Buddhist treatises this little tract would prove invaluable. In the introduction, Mr. Shaku justly observes that so many of the works published by Buddhist sects do no more than give the special meaning attached to terms by each sect. But what it is important to make clear is the historical and universal signification of such terms, for instance, as 覺者, *Kakusha*, 正覺, *Shōkaku*, 正知, *Shōchi*, 無自性, *Mujisei*, 天理, *Tenri*, and the like. Towards the end of the *Bukkyō Daigenri* Mr. Shaku deals very adroitly with the argument that it is wise to admit that certain parts of a religion are false and quite unscientific, but still to retain even what are known as superstitions for the sake of the benefits derived by certain people from a belief in them. He absolutely denies that in Buddhism there is any dividing line between *chi* and *toku*, knowledge and virtue. Any information that reaches the mind that is contrary to reason is to be regarded as *jachi*, false intelligence. There is no road to virtue or to high religious attainment of any kind except through the intellect. Mere blind ignorant faith is not true faith at all, *chi naki shin wa makoto no shin ni arazu*. That Buddhism is an irrational superstition can only be asserted by those who know nothing of its real

* The whole of the *Yasegaman* controversy was reproduced in these columns at considerable length at the time of the appearance of the articles referred to by Dr. Inoue.—(WRITER OF SUMMARY.)

nature. To the well-informed Buddhist the notion that Buddhism is a superstition, an allowable pious fraud, is no less ridiculous than repulsive. We hold that lies and deception of any kind can never promote virtue, says Mr. Shaku. . . . It is said that men's character is derived from three sources. (1) It is partly inherited from parents. (2) It comes from prevailing customs and usages. (3) It is derived from education. This is only true of certain people. The exceptions are numerous. Wise parents beget foolish children. Carefully educated lads go to the bad. No customs are strong enough to restrain the wilfully vicious. But the system of cause and effect explained by Buddhism* embraces three worlds and traces back all these apparently abnormal phenomena to causes hidden in the remote past. The theory that, just as our present circumstances are the result of a life lived in the past, so all our present acts will carry with them consequences in the distant future gives to this human life a significance it would not otherwise possess. The acts of our life are like so many ideographs written at night before the lamp is put out. The light goes out (we die), but the characters (the various acts of life) remain to all time ineffaceable.

The Rev. E. Schiller, of Kyōto, has lately published a short tract entitled *Kami no kwanen to Kinsei Tetsugaku* (The idea of God and Modern Philosophy). Mr. Schiller observes on the first page of his work that philosophy is confined to no one country and goes on to observe that there is no reason why any special authority should be wielded by one school of philosophers as against all others. Oriental philosophy and Occidental philosophy differ in many respects, and theories current in the West should be received here only after due examination. Mr. Schiller then proceeds to give a concise account of the teaching of some of Germany's greatest thinkers in reference to the idea of the Supreme Being, whose existence is assumed, reaching the conclusion that the monotheism preached by Christianity is in the main supported by the great leaders of German philosophic thought. Mr. Schiller's little book is issued by the *Shinrishā* and sells at 5 *sen* per copy.

Dr. Inoue Tetsujirō is no less at issue with Dr. Katō Hiroyuki than with the late Mr. Fukuzawa on ethical and philosophical questions. We must confess that after reading a great deal that Dr. Inoue has written we have failed to discover precisely what his standpoint in philosophy and religion is, and we find that we are by no means alone when we confess to being perplexed by the multitude of apparently irreconcilable assertions he has made on these subjects. But as it is our business to reproduce and not to discuss theories in these summaries, we will now turn to Vol. II. of Dr. Inoue's *Tetsugaku Sōsho*, which has already been reviewed in these columns, and extract from it what Dr. Inoue has to say on Dr. Katō's learned work entitled *Dōtoku Hōritsu Shinkeiwa no Riji*. Dr. Katō's fundamental principle, says Dr. Inoue, is distinctly utilitarian, but since somewhat objectionable meanings are apt to be attached to this term, Dr. Katō speaks of the basis of his ethical system as 利他心 *Ritashin*, or Altruism, and thus follows in the wake of Bentham and Mill. In Vol. I. of this series of philosophical essays, I have already pointed out what are the objections to this theory, but there are one or two points dwelt on by Dr. Katō that call for further comment. In the preface to his work Dr. Katō says, since the origin of man can be traced back to animals, there is nothing specially sacred about his nature. This seems to me a very superficial and partial view of man's nature to adopt. Much of man's development has proceeded from the nature of his mind. He has been no mere passive receptacle of external influences, but has himself initiated many of the processes of

* Technically called the *Sanze ingwa ôhō*, Cause and effect, reward and punishment connected with three worlds (the past, present, and future).—(WRITER OF SUMMARY.)

† For a full notice of this work vide *Japan Weekly Mail*, Aug. 25th, 1900, Art. entitled "Dr. Katō on the Evolution of Morality and Law."—(WRITER OF SUMMARY.)

development by which he has benefited. No history of evolution that fails to take note of the mental development which man has undergone is complete. The ceaseless activity of man's mind and his many desires for things he does not possess are factors in his progress of the highest importance and no one who has examined the wonderful working of the human mind can fail to stand in awe before the mysteries which enshroud its working. When the whole field of mental phenomena is seriously surveyed, it does not seem to me going too far to say that there is a sacredness about mankind not found in animals. Then Dr. Katô uses some very strong language about the evolutionary character of morality, going as far as to say, *Ware wa tetsu tetsubi shinkwa suru dōtoku aru wo shirite, sensen shinkwa sezaruru rinri naru mono wo shirazaru nari*. But surely there are moral principles in abundance that never change. Even the principle of utility that Dr. Katô advocates is it not essentially unchangeable? So that to say that he knows of no ethics that do not change is only giving one aspect of a subject that has many sides. . . . Dr. Katô is a follower of Hobbes, Shuntz and Sorai, and the system of morals that he advocates lacks the elements essential to render it a great reforming agency. What actual moral good in the world have the Utilitarians effected? What reforms have they inaugurated and carried out? As one among many philosophical explanations of the motives which guide men in actual life, Utilitarianism has its merits, but when it tries to play the rôle of a moral teacher or reformer, as Dr. Katô attempts to make it do, it signally fails, lacking as it does a thoroughly effective motive power for moral action.

* * *

One of the secretaries of the House of Peers, Mr. Kanayama Shōshi, has furnished to the *Taiyō* an account of the Trappist settlement near Hakodate. The Trappists he calls the "Silent anchorites" (*mugon no gyōja*). A short history of the sect and its objects was, some months ago, furnished by L'Abbe P. Ligneul in a little book noticed in these columns at the time of its publication. But Mr. Kanayama gives us the opinion of a Japanese man of the world on the life these monks are living. He first informs us that the settlement near Hakodate consists of 7 Japanese, 9 Frenchmen, 1 Dutchman, 1 Italian and 1 American, who are all comparatively young men in the vigour of health and strength. Part of their time is spent in religious services and part in agricultural labour. The farm produce is sold in Hakodate and thus the little settlement is rendered self-supporting to a large extent. Mr. Kanayama thinks that productive austerities of the kind practised by the Trappists are infinitely superior to the forms of austerity resorted to by Japanese monks and hermits. What he says about the devotion of the Trappists it would be superfluous to transcribe here, as the history of the sect is no doubt well known to our readers. Mr. Kanayama says it is quite evident to all observers that these men are all living for the next world and their self-abnegation cannot but arrest the attention of the careless.

* * *

In that part of the *Taiyō* which is devoted to the discussion of religion there is an article entitled "Humanity and Religion," in which reference is made to the utterances of Mr. Wu Ting-fang, the Chinese Minister to the United States, on the difference between Confucianism and Christianity in the methods of propagation followed, published in American newspapers. Confucianism spread to Korea and to Japan and exercised enormous influence in both countries without the use of special missionaries and without the use of the sword. No trail of blood marks its quiet contest. Its extreme rationality and utility were enough to recommend it. It has never claimed for itself the right to be tolerated, not has it forced itself on unwilling minds. Though Christianity itself is not to be blamed for all that has occurred in China during the past 12 months, says the *Taiyō*, since the nations which have been taking the lead there all boast that they are Christian nations and as such assume a certain amount of superiority to non-Christian countries

like Japan, it is certainly wholesome for them to be reminded that their action in China has gone far to make people hate Christianity. Religion has been dragged in the dirt and made subservient to all kinds of unworthy political designs. When Japan, for very good reasons, hesitated to despatch an army for the relief of Peking, she was accused of lacking the feeling of humanity which Christianity alone is supposed to supply. But take the events that followed the relief of Peking as a test of the amount of humanity possessed by the various nationalities. Have not Christians good reason to hide their heads in shame at the doings of the modern crusaders? Europeans and Americans must not be surprised if they find that they have alienated the feeling of Japanese and Chinese alike by the manner in which they have seen fit to vindicate their religious rights. Though on many points we differ from Mr. Wu Ting-fang, continues the *Taiyō*, yet we think that in the main he is right and the use of force with the object of facilitating the propagation of religion is absolutely indefensible. For the Christian religion to be figuring before the world robbed of the humanity which has always been its mainspring, is indeed an anomaly which calls for the serious consideration of all persons connected with Missions.

Mr. Tomonaga, B.A., writes in the *Taiyō* on the lack of respect in Japan for what may be called impersonal authority. As long as a command or a precept is backed by a great name all bow before it, but principles and precepts are not valued for their own sake. He further adds that there is far too much fuss made in this country over isolated extraordinary acts such as that which specially made Kusunoki Masashige famous in Japan and Wan Tien-shing (文天祥) renowned in China. It is not the accomplishment of one or two heroic actions as much as a life full of goodness that should be held up for public admiration. Both in the treatment of existing evil and in the promotion of virtue, exaggerated language is to be avoided, says the writer we are quoting. Though some people represent the country as on the verge of ruin and social morality non-existent, actual fact tells another tale. The sensational style of writing should be abandoned and the state of morality be described more as it really exists.

* * *

The following analysis of religious belief in Japan we find in the *Chūō Kōron*. Taking the Upper, Middle and Lower Classes separately and speaking generally, the order of preference given to the three prevailing religions in this country may be thus shown. I. *The Upper Classes*. (1) Buddhism, (2) Shintō, (3) Christianity. II. *The Middle Classes*. (1) Christianity, (2) Buddhism, (3) Shintō. III. *The Lower Classes*. (1) Buddhism, (2) Shintō, (3) Christianity. I. Among noblemen Buddhism is greatly in favour, the Nichiren Sect having the greatest number of adherents, the Shingon, Shin and Jōdo sects standing next. Shintō is observed more from a national point of view than any other, and Christianity occupies a very insignificant position, though there are a few Protestant professors among noblemen. II. Among the middle classes Christianity bids fair at some not very distant day to be on a level with Buddhism. The Buddhists of this class are mostly attached to the Shin sect. Christians are far away ahead of Shintoists. III. This class representing the mass of the nation is largely Buddhist, the Shin sect having by far the most adherents. Among Shintō sects the Tenri Kyōha and the Remmon Kyōha are the most popular. The order of popularity of Christian Churches is (1) Roman Catholics, (2) Greek Church, (3) Protestants.

CORRESPONDENCE.

AT ONE ON THE HOUSE TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me simply to reply that I am glad to know that your present opinion on the above tax seems to be in harmony with most other foreigners who think that there are valid reasons for not paying it.

While it is a long time since I quit the special study of English grammar, yet if a careful examination of your demonstrative adjectives, pronouns, and plural and singular forms don't leave one pretty free to put my interpretation upon your remarks I am very much mistaken. However, a technical question of grammar is of little moment when the parties are agreed. The important point is that the inhabitant of the foreign settlement is going to be taxed unjustly if he is compelled to pay the house-tax in addition to the land tax. As the question is now under diplomatic discussion the essential points should be clearly brought out.

Very sincerely,

SIGMA.

Tokyo, June 27th, 1901.

[It must indeed be a long time since "Sigma" abandoned intelligent reading if he can construe our remarks in such a sense. We really don't know what grammar has to do with the question, except on the principle that what makes cats disagreeable when they get on the roof at night is not their noise but the bad grammar they use.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—From our past correspondence on the above subject I had about concluded that we were at one on the house tax being unfair towards residents in the foreign concession. From your editorial of today, I fear my conclusion was a little premature.

There, after referring to *finen's* statement, that the buildings must have been included in the original lease since special provision is made in the lease for their confiscation for unpaid ground-rent, you reply that it would be equally rational to assert that furniture is included in a lease of a house because the lessor has a right to seize the lessee's goods and chattels in satisfaction of unpaid rent. More lame logic, Mr. Editor. Deceptive comparison. Did the stipulations in the imaginary lease of a house require that furniture be put in, and does it make special provision for confiscating this furniture in case of failure to pay rent? If so, you have failed to fill out the comparison: if not, your comparison fails. So in either way your contention fails.

Again, you say, "We believe that, according to careful official investigations, the average payment made by the foreigner on these accounts [ground rent, house and municipal taxes] is less than the average payment made by the Japanese."

Where is the proof of this bold, deceptive statement? And where is the man who can explore the catacombish system of taxation in Japan? If you, Mr. Editor, are the man who can do this, you ought to give an intelligible reason for the faith that is within you. It has been my misfortune to be incapable of understanding the matter "according to careful official investigations." I made as careful official investigations as I could (that is, I investigated officials), and I was unable to understand why contiguous lots, apparently the same in physical, social and chemical conditions, should differ so in taxation. Also I have never been able to work out 12 classes and 18 grades of houses in Tokyo; nor to comprehend why a *tsubo* under some houses should be taxed as 3, 6, and even 10 *tsubo*. I live in hopes, though I should die in despair.

I do not positively deny that your assertion might be proved by making a critical analysis of the scientific system of adjustments in force here,—at least proved to the acute intelligence of experts. But these experts pay no taxes; and such proof is of little avail to the plain man who does.

I am glad to conclude my remarks with the thought that we agree that the difficulty will be removed when foreigners are allowed to own land anywhere in Japan.

Very sincerely,

SIGMA.

Tokyo, July 1st, 1901.

LATTER NOTES ON THE CHINESE QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL"

MOTTO:

Was ist aber die grosse aufgabe unserer zeit? Es ist die Emancipation. Nicht bloss die der Irlander, Griechen, &c., sondern es ist die Emancipation der ganzen Welt, absonderlich Europa's das mündig geworden ist.

HEINE "REISEBILDER."

To many people, no doubt, what is called the Far Eastern question means merely the immediate future of the Chinese Empire. But any one who will give a moment's serious thought to the subject, cannot fail to see that the question does not end there. For, rising far above mere economic questions of trade and finance and political questions of peace and war arising out of international disputes over material interests, there is involved in the Far Eastern question also a moral issue; an issue immensely more serious and perhaps more real than the political future of the Chinese Empire.

In the history of the first Christian Crusade in Europe we are told that "at the second Council held

at Clermont in France, the Pope (Urban II.) himself delivered a stirring address to the multitude and as he proceeded, the pent-up emotions of the crowd burst forth and cries of *Deus vult* rose simultaneously from the audience. "To us now the emotions of that crowd seem very inexplicable. Indeed, the Christian Crusades, when we look now with the light of this century at the foolish, religious, and narrow political objects for which they were undertaken, appear to have been extravagant and infatuated enterprises on the part of the people of Europe willfully to disturb the people of the East. But when we study the intellectual and moral development of the people of Europe, we cannot help admitting that the Christian Crusades, wilful and infatuated expeditions of fanaticism and cupidity though they were, had nevertheless a serious moral design and function to fulfil in the civilisation of the human race. There was truly a veritable *Deus vult* (God's will) in that movement, apparently of bigotry and greed. For the eventual result of the Christian Crusades of the middle ages, was, as we know now, the first means of breaking up the then strict monastic civilisation of Europe. After the Crusades, came Martin Luther and the Protestant Reformation. "The final result of the Crusades," says M. Guizot in his History of Civilisation, "was a step taken towards the emancipation of the human spirit."

Looking now at the present movement of the European nations to the Far East, which in Germany is called *Kolonial Politik*—who can doubt but that the Modern Crusade of this Nineteenth Century, although apparently a movement with only grossly material and selfish objects of trade in view, has also a moral design and function to fulfil in the civilisation of the human race. The scene at Kiel in Germany and the strangely mediæval language of the German Emperor when he solemnly pronounced the *Deus vult* upon the modern Crusade, reminded one very strangely of the scene at Clermont in France in 1095. Who knows, then, if the eventual result of the modern Crusade called "*Kolonial Politik*" may not, like the Middle Age Crusades of Christendom, end in modifying, if not entirely changing, the civilisation and structure of society in modern Europe. It was this thought, rather than any idea of the probable future aggressiveness of the yellow race, which inspired the apparently last of the mediæval Emperors of Europe to paint his famous picture of the Yellow Peril (*das gelbe gefahr*).

But, truly, to any one who takes the trouble to study the moral culture and social order of the people of the Far East, it is really inconceivable how the civilisation of the yellow race can in itself be a source of danger to the people of Europe. To Europeans, and especially to unthinking practical Englishmen, who are accustomed to take what modern political economists call "the standard of living" as the test of the moral culture or civilisation of a people, the actual life of the Chinese and of the people of the East at the present day, will no doubt appear very sordid and undesirable. But the standard of living by itself is not a proper test of the civilisation of a people. The standard of living in America at the present day, is, I believe, much higher than it is in Germany. But although the son of an American millionaire, who regards the simple and comparatively low standard of living among the professors of a German University, may doubt the value of the education in such a University, yet no educated man, I believe, who has travelled in both countries, will admit that the Germans are a less civilised people than the Americans.

In fact, standard of living may properly be taken as the condition of the civilisation, but it is not the civilisation itself. To take a physical illustration. Heat is the condition of life and health in an animal body; but the degree of heat in the body is not in itself a true and absolute test of the fineness or coarseness of the structure and organisation of that body. An animal body of really fine structure and organisation may from abnormal causes become very cold. In the same way the standard of living among a people may from economic causes become very low; but that in itself is not a proof that the moral culture or civilisation of that people is a low one. The failure of a potato crop in Ireland and a long period of continued trade depression in Great Britain may very considerably lower the standard of living in those countries, but one would not, judging from that alone, say that the Irish or the British people have become less civilised.

But if mere standard of living is not civilisation—what is civilisation? It is really as difficult to define what civilisation among nations is as to pronounce what real education is among individual men. I will, however, illustrate what I mean by civilisation by a concrete example. Captain Basil Hall, R.N., visiting Korea in 1816, thus gives his impression of an old petty Korean magistrate:

"The politeness and ease with which he accommodated himself, were truly admirable; and when it is considered that hitherto, in all probability, he was ignorant

even of our existence, his propriety of manners would seem to point not only to high rank in society, but also to a high degree of civilisation in that society not confirmed by other circumstances. Be that as it may, the incident is curious as showing that, however different the state of society may be in different countries, the forms of politeness are much the same in all. This polished character was very well sustained by the chief, as he was pleased with our efforts to oblige him and whatever we seemed to care about, he immediately took an interest in. He was very inquisitive, and was always highly gratified when he discovered the use of anything which had puzzled him at first. But there was no idle curiosity, no extravagant outbursts of admiration, and he certainly would be considered a man of good breeding and keen observation in any part of the world."

Now what I mean by civilisation is this. Any state of society that can produce such a type of humanity as Captain Hall in the above describes, is a civilised society. If the above account gives the type of character of the educated or upper classes of society under the civilisation of the people of the Far East, the following description of the characteristics of the Chinese by the late Dr. D. J. Macgowan may serve to show the influence of that civilisation upon the common people:—

"In the foregoing survey of the industrial and mercantile life of the Chinese," says Dr. Macgowan, "the one notable feature to be observed in this people is their capacity for combining, which is one of the chief characteristics of civilised men. To them organisation and combined action is easy, because of their inherent reverence for authority and their law-abiding instincts. Their docility is not that of a broken-spirited enervated people, but results from habits of self-control and from being long left to self-government in local communal or municipal matters; as regards the State, they learn self-reliance. Were the poorest and least cultured of these people placed by themselves on an island, they would as soon organise themselves into a body politic as men of the same station in life who had been tutored in rational democracy."

From the above accounts of the civilisation of the people of the Far East, it should be abundantly evident that such a civilisation cannot in itself possibly be a source of danger to the people of Europe. Nevertheless it must be admitted that there is undoubtedly a conflict of civilisation going on at present between Europe and the Far East. The conflict, however, it seems to me, is not a conflict between the civilisation of the yellow race and the civilisation of the white race. It is rather a conflict between the civilisation of the Far East and what may be called the mediæval civilisation of Europe.

Any one who has given any attention to the study of the spirit of modern institutions in Europe can not have failed to observe that for the last hundred years there has been growing up in Europe under the general name of what is called Liberalism, the consciousness of a new moral culture and notions of a new social order quite distinct from what may be called the old mediæval culture and social order. At the end of the last century, just before the first French Revolution, a Frenchman, Du Clos, said:—"Il y a un germ de raison qui commence à se développer en France." Indeed it is now generally recognised that the ideas and notions of what is now called Liberalism were first properly understood and promulgated by the French philosophical writers of the last century. But it is curious that it should hitherto have remained unrecognised and unsuspected how much the French "philosophers" owe to their study of Chinese books and of Chinese institutions, the knowledge of which was then brought to Europe by the Jesuit missionaries. Any one now who will take the trouble of reading the works of Voltaire, Diderot, and especially *L'esprit des lois* of Montesquieu, can see for himself what an impetus that knowledge of Chinese books and institutions gave, if not to the rise of the "germ de raison" spoken of by Du Clos, at least to the rapid development and expansion of what are now called Liberal ideas. That "germ de raison" developing into Liberal ideas finally, as we now all know, brought about the "culte général" or general breaking-up of the mediæval institutions of Europe in the last century.

What an irony of Providence, I cannot help remarking here, that the Roman Catholic missionaries who came out to China to convert the heathen Chinese, should themselves have been the means of carrying the ideas of the Chinese civilisation to Europe, ideas which were the means of breaking-up that very mediæval civilisation to which those missionaries spent their lives in trying to convert the Chinese!

I have been a long way—but now we have come to the subject of my essay. This conflict of civilisation, or rather the conflict of modern Liberalism and ancient Mediævalism, is the Moral Problem of the Far Eastern question. It is not a conflict of the white race with the yellow race, but it

* Lord Clarendon's letters.

is rather a struggle on the part of the people of Europe to free themselves completely from their ancient mediæval civilisation. It is, in one word, what the Germans call the *Kulturkampf* of the present day.

The source of the mediæval moral culture of Europe is the Christian Bible. The Christian Bible taking it as a book of what Goethe calls world literature (*Welt-Literatur*), like the Iliad of Homer or Æneid of Virgil, is a very grand book and will never be wholly lost to the world. The moral grandeur of the Old Testament and, as Mr. Mathew Arnold points out, the prepossessingness of the personality of Jesus Christ and the directness and simplicity of his teaching in the New Testament—all these have gone into the bones, so to speak, of the best types of humanity which Europe has produced. What is more, it will always remain of permanent force and value to those upon whom Goethe's *Welt-Literatur* can exert an influence. But it is not so with ordinary men. For the average men of Europe, in order fully to feel the force of the Christian Bible, they must be in the same intellectual state as the people who produced the Bible. But now it is, I think, generally admitted that the "germ de raison" of Du Clos has greatly changed the intellectual state of the average men of Europe. For such men the Christian Bible becomes difficult of understanding, if not altogether unintelligible, and as a consequence must cease to be a source of true moral culture. The late Professor Huxley said once at a school board meeting in London that if these (British) Islands had no religion at all, it would not enter into his mind to introduce the religious idea by the agency of the Bible.

In one word, we believe the true moral culture of modern Liberalism, if not so strict perhaps, is a much broader one than the mediæval culture of Europe derived from the Christian Bible. The one appeals chiefly to the passions of hope and fear in man. The new moral culture on the other hand appeals to the whole intelligent powers of man's nature: to his reason as well as to his feelings. The theory about man's nature in the old culture was: "all men are born in sin," i.e. human nature is radically bad. The theory of the modern moral culture is that man's nature is radically good and if properly developed and appealed to, will of itself produce moral well-being and social order in the world. The method of the old culture began with "The fear of the Lord is the beginning of Wisdom." The method of education of modern culture says: "A course of higher education consists in bringing out (*educere*) or developing the intelligent powers of man's nature."

[NOTE.—From the *Ta Hsin*, or the Method of Higher Education by Dr. Legge, and known to foreigners as the Book of the Great Learning. The language of the old culture derived from the Christian Bible is figurative language: language of pictures, symbols, and metaphors. The language of modern moral culture is concrete language: the language of science. In the language of the one it is said: "To him that ordereth his conversation aright shall be shown the salvation of God." In the language of the other it is said: "He who would have good government in his country must begin by putting his house in order, and to do that, he must begin by attending properly to his personal conduct."—*Ibid supra*.]

The above then is a summary of the difference between the old mediæval moral culture and what we have called the modern moral culture of Europe in the theory with regard to human nature, in method of education and in language. The effects of the old and modern cultures of Europe upon the life of the people and their social and civil institutions will, we believe, also be different. The effect of the one upon the people is blind, passive obedience to power and authority. The effect of the modern moral culture will be what Dr. Macgowan, speaking of the characteristics of the Chinese, says, "self-reliance on the part of the people as regards the State." The result of the mediæval moral culture of Europe, in one word, was Feudal Government. The result of the modern moral culture which goes under the name of Liberalism will be what Dr. Macgowan calls "national democracy" i.e. government by free institutions.

Now, European writers are accustomed to speak of the higher Christian civilisation as compared with what is called the Confucian civilisation of the people of the Far East. The object of the two civilisations no doubt is the same: the moral well-being of man and the keeping of civil order in the world. But if what I have said of the old and modern moral culture of Europe is true it must, I think, be admitted that although perhaps the civilisation founded upon a moral culture which appeals to the passions of hope and fear is a stronger and even a stricter civilisation, yet surely the civilisation founded on a moral culture which appeals to the calm reason of man, is if not a higher, yet a broader civilisation, one

more difficult to attain and once attained, more enduring and permanent.

In fact, it seems to me that it is really the difficulty of attaining the new modern moral culture on the part of the people of Europe, and not the civilisation of the yellow race which is at present the real danger not only to the people of Europe, but to the destiny and civilisation of the human race. The population of Europe, having for the most part lost the sense of the force and sanction of their old medieval moral culture and not having sufficiently attained to the modern moral culture to use it as a restraining force for keeping civil order, have now to be kept in order not by any moral force at all, but by sheer physical force of police or what is called Militarism. "The state of modern Europe," said Carlyle "is Anarchy plus a constable." A French writer put it better:—"C'est la force attendant le droit."

But the enormous cost necessary for maintaining this immense scale of militarism in modern Europe is becoming ruinous to the economic well-being of the people. To escape from this ruin, the people of Europe, it seems to me have two courses open to them: either to struggle hard for the attainment of the new modern culture or to return to medievalism. But back to medievalism the people of Europe will never consent to return. "Wir gehen nicht nach hanoesser" the great Prince Bismarck has said. Indeed, the people of Europe, even if they are willing, cannot now get back to the true medievalism of the past. The people of Europe in trying to return to medievalism will only arrive either at the extravagances of the Salvation Army or the jugglery of the Ultramontanism of the Jesuits.

Now if any one would like to know what a force destructive of civilisation and all true moral culture, the extravagances of the Salvation Army may one day become in Europe, he should read the history of the last Taiping rebellion in China. The Chinese Christians of that rebellion losing their national moral culture appealing to reason, went back to the moral culture of medieval Europe which appeals to the passion of hope and fear in the hearts of the multitude, and the result was devastated provinces and the sacrifice of a million lives.

As for the Ultramontanism of the Jesuits, it is even worse than the extravagances of the Salvation Army. The intellectual jugglery of Ultramontanism is an outrage upon human nature. The reaction against such an outrage will be, as Carlyle has pointed out, "widespread suffering, mutiny, and delirium; the hot rage of sansculottic insurrections, the cold rage of resuscitated Tyrannies; brutal degradation of the millions, the pampered frivolity of the units; that awful spectacle 'the throne of Iniquity' decreeing injustice by a law."

In plain language the practical outcome of Jesuitism may be defined as the Gospel, to use a vulgar expression, of knowing on which side your bread is buttered. The social order founded upon such a mean and base mental habit cannot last. After Louis Napoleon of France came *La Débâcle*, the commune of Paris. Who knows what is in store for the people of Europe if they were to go back to medievalism and succeed only in arriving at the ultramontanism of the Jesuits?

I have said that the civilisation of the yellow race can never be a danger to the people of Europe. The danger lies rather, it seems to me, in the ignorant and the wanton way in which the "pampered units," of Europe are urging their governments to deal with this civilisation. The press in Europe, and especially in England, which is the mouthpiece of the "pampered units," unites in urging what is called the gun-boat policy in China and writes with equanimity upon the partition of China. But I wonder if it ever occurred to anyone to calculate how much it would cost the nations of Europe to restore order and police the four hundred million people of China when once the rule of the mandarins is broken up and the population becomes rabid like the people lately in Armenia, in Turkey. The late General Gordon said: "Remember this: an unsatisfied people mean more troops." Whatever may be said of the helplessness and abuses of the rule of the mandarins in China at the present day, their rule is a moral and not a police rule. Militarism is necessary in Europe but not in China. The foreign gun-boat policy has done and will only do harm to the interests of all concerned, foreigners as well as Chinese. In my opinion, the establishment of an International School for the higher study of Chinese history and literature in Shanghai and at the same time the sending of a large number of Chinese students to Europe and America will do more to foster even the interests of foreign commerce than the most powerful fleet the European nations can send out. But if once Militarism becomes necessary in China, the Chinese will have to become a military power or will have to be kept down by military power from outside. In either case the whole world will have to pay for this added military burden of the world.

Militarism is necessary in Europe because the people are unsatisfied. Militarism is the knight or protector of Civilisation—*C'est la force attendant le*

droit. Its true function in the medieval language of Tennyson, is

"To break the heathen and uphold the Christ," i.e. to keep down rowdiness, savagery and anarchy. But the militarism of Europe lately is being made use of, not against anarchy and rowdiness, but against true civilisation, against the good government of the Chinese people. The more the militarism of Europe is thus misused, the more the burden of its cost will increase.

The only possible way therefore for the people of Europe to escape from the ruin resulting from the burden of their militarism, is to struggle for the attainment of what we have called the new moral culture, which now lies under the general name of Liberalism. How long it will take for the people of Europe to attain this, it is impossible to say. Indeed it seems to me that the Liberalism of Europe at the end of this century has retrograded. Lord Beaconsfield, speaking of the Liberalism of the England of his time, said that he was astonished to find that it had become an oligarchy. The Liberalism of Europe to-day, it seems to me has become also an oligarchy: an oligarchy of "pampered units." The Liberalism of Europe of the last century had culture, but the Liberalism of to-day has lost its culture. The Liberalism of the past read books and understood ideas. Modern Liberalism reads only newspapers and makes use of the great liberal phrases of the past only as catch words and cant phrases for its selfish interests. The Liberalism of the last century fought for right and justice. The false Liberalism of to-day fights only for rights and trade privileges. The Liberalism of the past battled for humanity. The false Liberalism of to-day only tries to further the vested interests of capitalists and financiers. If we can imagine one of the great Liberals of the last century who had to do the cruel work of killing kings and almost destroying kingship, rise from the dead, what he would say to the false Liberal of to-day would be in the language of Shakespeare's Brutus:—

What, shall one of us,

That struck the foremost man of all this world
But for supporting robbers, shall we now
Contaminate our fingers with base bribes
And sell the mighty space of our large honours
For so much trash as may be grasped thus?
I had rather be a dog and bay the moon
Than such a Roman.

But we will not be altogether hopeless. I believe the immediate result of the present movement called Kolonial Politik will be a revival of true Liberalism in Europe. M. Guizot, in his lectures on European civilisation, speaking of the design and function of Middle-age Christian Crusades upon Christendom in Europe, says:—

"To the first chroniclers and consequently to the first Crusaders of whom the former were but the expression, Mohammedans were only objects of hatred and contempt; it is evident that those who thus speak of them do not know them. The historians of the later Crusades speak quite differently, it is clear that they look upon them no longer as monsters; that they have to a certain extent entered into their ideas; that they have lived with them; that relation and even a sort of sympathy have been established between them." Thus the kinds of both, M. Guizot goes on to say, but particularly of the Crusaders were delivered from those prejudices which were the offspring of ignorance. "A step," he says finally, "was thus taken towards the enfranchisement of the human spirit."

This modern Crusade of Europe called Kolonial Politik will eventually complete the enfranchisement of the human spirit in Europe and America. The complete enfranchisement of the human spirit will at last produce a universal true Catholic civilisation; a civilisation founded not upon a moral culture appealing merely to the passions of hope and fear in man, but upon a moral culture appealing to the calm reason of man, deriving its sanction not from any power or authority outside, but as Mencius put it, from the innate love in man's nature for mercy, for justice, for order, for truth and for truthfulness.

Under the new civilisation freedom for the educated man will not mean liberty to do what he likes, but liberty to do what is right. The serf or the man not yet civilised does not do wrong because he fears the knout or the policeman's baton in this world and hell fire in the next. But the freed man of the new civilisation is he for whom neither the knout, nor policeman, nor hell fire is any longer necessary. He does right because he loves to do right; and he does no wrong, not from motive or of abject or craven fear, but because he hates to do wrong. In all matters in the conduct of life, he makes the rule not of authority from without but of reason and conscience from within his one rule to follow. He can live without rulers, but he does not live without laws. Therefore the Chinese call an educated gentleman a 君子 Koen zu (君 Koen is the same word as German Koen-ig (or King) a Kinglet or a little king of men.

The American Emerson, relating an incident of his visit to England when he and Carlyle together visited Stonehenge, the oldest monument in that country, says:—

"On Sunday we had much discourse on a rainy day. My friends asked whether there were any Americans:—Any Americans with an American idea. Thus challenged I bethought myself neither of causes nor of congress, neither of presidents nor cabinet ministers, nor of such as would make of America another Europe. I thought only of the simplest and purest minds. I said, 'Certainly, yes; but those who hold it are fanatics of a dream which I should hardly care to relate to your English ears, to which it might be only ridiculous, yet it is the only true.' So I opened the dogma of no-government and non-resistance. I said, 'it is true that I have never seen in any country a man of sufficient valour to stand up for this truth; and yet it is plain to me that no less valour than this can command my respect. I can easily see the bankruptcy of the vulgar musket worship and 'tis certain as God liveth, the gun that does not require another gun, the law of love and justice alone can effect a clean revolution.'"

The future civilisation of the world lies as a "germ de raison" *qui commence à se développer* as Du Clos said of the modern Liberalism, in this American idea of Emerson. What is more, this American idea of Emerson lies at the bottom of the Chinese civilisation, or rather what may be called the Confucian civilisation of the people of the Far East. Herein then lies the moral problem of the Far Eastern question. The solution of that problem does not lie entirely with congress nor with parliaments, neither with emperors, presidents, kings, nor with cabinet ministers. The solution lies, to use Emerson's words, with the simplest and purest minds that are to be found in Europe and America. The poets have sung the hymns of this new civilisation. The German Heine, who calls himself the Knight of the Battle for the Emancipation of the Human Spirit (Ritter des Menschheit-Befreiungs-Kriege's) sings,

Ein neues Lied, ein besseres Lied,
O Freunde, will ich euch dichten:
Wir wollen hier auf Erden schon,
Das Himmelreich errichten.

The Scottish Robert Burns sings,

Then let us pray that come it may,
As come it will for a' that,
That sense and worth; o'er a' the earth,
May bear the gree and a' that:
For a' that, and a' that
It's coming yet, for a' that,
That man to man, the war! o'er,
Shall brethren be for a' that.

Lastly, the French Béranger sees as in a vision what he calls the holy alliance of the people (Sainte alliance des peuples) and sings,

J'ai vu la Paix descendre sur la terre,
Sement de l'or des fleurs et des épis;
L'air était calme et du dieu de la guerre
Elle étouffait les fondres assoupis.
Ah! disait-elle, égaux par la vaillance,
Français, Anglais, Belge, Russe ou German
Peuples, formez une sainte alliance
Et donnez-vous la main. M.M.

THE LATE MR. W. W. TILL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you accord me the courtesy of your columns for expressing on behalf of Mrs. Till her grateful thanks to the many friends in Japan from whom she has received letters of sympathy and condolence in her recent loss.

Mrs. Till begs that the kindness shown her, be, if possible, extended to accepting this brief message as an acknowledgment to all.

Thanking you in advance for the privilege of this insertion,

I am Sir, Yours faithfully,

A. G. MOREY WEALE.

Yokohama, July 3, 1901.

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

	Air	Temp.	State of	Remarks in
	Max.	Min.	Lake. Weather.	General.
Sunday, 23rd	73°	59°	71°	Fine...
Monday, 24th	72°	60°	71°	Fine...
Tuesday, 25th	60°	61°	71°	Fine...
Wednesday, 26th	68°	60°	71°	Fine...Rain 3:30 p.m.
Thursday, 27th	68°	60°	72°	Rain...
Friday, 28th	71°	62°	72°	Fine...Rain 3:30 p.m.
Saturday, 29th	74°	60°	72°	Fine... till 4 a.m.

FOREIGN TRADE OF JAPAN FOR 1900.

By MR. ARTHUR HYDE LAY.

The lamentable occurrences in China and the continuation of an unsettled state of affairs have acted as a check upon the rapidly expanding export trade of Japan, and her manufacturing industries have suffered in consequence. Moreover, the silk crop, upon which this country in the main relies to adjust the balance of its commerce with foreign countries, was a disappointment. With regard to the import trade, the indications in the autumn of 1899 were that the ensuing year would offer splendid opportunities for business. The result was that large quantities of goods were ordered from abroad which appeared in the returns for 1900, and the year opened with a feeling of over-confidence in commercial circles. It soon became apparent, however, that the outflow of specie, which had already begun, was likely to increase, and that the large arrivals of commodities expected would find an increasingly stringent money market. These are some of the factors which have operated unfavourably upon the trade of Japan.

The scarcity of money available for mercantile purposes, with the high rate of interest, was much felt during the year under review. It may be pointed out here that unproductive expenditure, or expenditure on works only remotely productive, continues to bear an abnormally large ratio to the wealth and resources of Japan. It is true that a large part of such expenditure takes the form of wages paid within the Empire's own borders. The Japanese wage-earner, however, probably saves at present very much less, even in proportion to the amount of his income, than the European and American worker, and but little of the large wage expenditure in connection with defence works, armaments, railways, &c., goes to form capital in aid of production. Under these circumstances the tendency to an excess of imports over exports and consequent drain of specie must continue to exist, and an adequate cash reserve can be maintained only at a sacrifice of ease in the money market, by prudent limitation of the Government bank note circulation and of credit facilities. The flotation of foreign loans can only afford temporary relief in this respect, and bearing in mind the improbability under the most favourable circumstances of any but a quite gradual increase in wealth derived from resources at present undeveloped, it is evident that the palliative of borrowing is one which should be resorted to with the greatest circumspection.

For the whole year the excess of imports amounted to the large sum of £8,455,751. But everything points to a considerable diminution in imports in 1901. Of the goods which are accounted for in the customs returns, however, no small proportion, though sold on contract, have not been paid for, or else, having been brought out on speculation, have, in view of unfavourable markets, remained without purchasers. A considerable accumulation of goods at the open ports has resulted.

OUTFLOW OF SPECIE.—The exodus of gold coin and bullion was so extensive as to revive the financial anxiety entertained with regard to the reserves in 1899, and even to occasion doubts as to whether the Bank of Japan would be in a position to maintain the convertibility of its notes.

Exports of treasure exceeded imports by £4,175,779. The movement of specie and bullion during the past two years was:—

Year.	Exports.	Imports.	Total.
	£	£	£
1900.....	5,791,128.....	1,175,779.....	6,966,907
1899.....	1,141,113.....	2,058,357.....	3,199,470

Gold coin and bullion were exported to the value of £5,283,998, while only £915,402 worth was introduced into Japan in 1900. The outflow has been for the most part to India and the United States. At the time of the disturbances in North China, Shanghai also took a considerable quantity of gold yen.

TOTAL TRADE FOR 1900.—Foreign trade for 1899 had reached the highest figures recorded since Japan first had commercial dealings with other nations. That record, however, was in its turn surpassed by the result revealed by the returns for the year just ended. In 1900 the value of imports was £19,324,646, of exports £20,868,895, giving a grand total of £39,193,541. Japan continues to make constant progress in all directions, and the trade of the country keeps pace with the advancing place, and with the accompanying growth in the national requirements. One is, therefore, led to the conclusion that when the unpropitious conditions at present existing—many of which are in their nature transient—are removed, a great and lasting expansion of the foreign trade of the Empire can be hoped for with confidence, until Japan attains in the commercial world a position more commensurate with the rank she has gained in the sphere of international politics.

IMPORTS.

Under the circumstances which tended to the decrease of imports during the early months of 1899—the taking effect of the new tariff among other causes

—it is but natural that nearly all the principal articles of import, more particularly finished products, should have increased in 1900. Cotton manufactures, woollen manufactures, metals, machinery, dyes, sugar, coal, kerosene oil, flour, meal and starches, and rice all contribute substantially to the increase in volume of the import trade. Raw cotton and wool are exceptions to the rule, and the same is true of beans, peas, and pulse. Locomotive engines and railway carriages show a comparatively slight falling-off in value. The duty of 250 per cent. on alcohol and the Government monopoly of leaf tobacco have caused the returns in the former case to dwindle to less than the proportions they had in 1894 before the abnormal growth in the importation of the spirit commenced, while the returns of leaf tobacco have fallen to less than one-tenth of the sum they represented in 1899. Imports for 1900 exceeded those for the preceding year by £6,825,283. The year under review had an import trade exceeding that of any preceding year with the single exception of 1898, when, when a percentage of 15 per cent. to cover freight, &c., is added to the figures then attained by the imports, still remains the record year.

THE GOVERNMENT IRON FOUNDRY at Yuwata Village, Onaga District, Fukuoka Prefecture in Kyushu, did not commence operations at the contemplated time, namely, July, 1900. Nor has work yet been begun, though the undertaking is well on its way to completion. A trial working of the smelting furnace was made in February with satisfactory results. One reason given for the postponement of initial operations is the scarcity of workmen available in consequence of the great demand for Japanese labour in connection with the Chinese crisis. So it seems likely that it will be well on in 1901 before the foundry will be actually in working order and engaged in the manufacture of rails and sheet-iron. It naturally takes a long time to set in motion the machinery of an establishment of so extensive a nature, and the training of workmen will involve a considerable period. But once it is rightly started experts consider that there is no reason why it should not prove a great success. Twelve Germans are employed on the works, and all the machinery for use there came from Germany. When completed it is expected to give employment to 1,500 or 1,600 workmen.

Provision is made in the Budget for the financial year, commencing on April 1, 1901, for the establishment of works, intended to be supplementary to those just referred to for the manufacture of iron and steel plates in connection with the Naval Arsenal at Kure. The object is, of course, of a military and not of a commercial nature, and the establishment is not necessarily expected to be a financial success.

MACHINERY.—A substantial increase is to be observed in the case of machinery and steam boilers, and engines. The reason for this is that the importation of machinery of all kinds decreased in a significant manner in 1899, owing to the paucity of the contracts entered into the preceding year.

SUGAR.—Interesting as an illustration of the pronounced demand for luxuries which nowadays exists in Japan, is the very large increase in the importation of articles which are classified as such by the customs. The wide-spread consumption of sugar is a case in point. The importation of sugar in 1900 was much greater than in the preceding year, but somewhat short of the returns for 1898. From Hongkong and Germany the supplies, which had greatly diminished in 1899, rose again though not to their former level. Most notable was the large quantity imported from Austria, which practically supplied no sugar to Japan in 1897-98, and about £60,000 worth in 1899. In 1900 that country sent sugar valued at £316,856 to Japan.

FOREIGN FOOD-STUFFS are more and more becoming a necessity for Japan. The yield of agricultural produce, while it fluctuates, does not undergo much permanent change, and the requirements of the people are growing. In 1900 the land under cultivation for wheat and barley was less than in the preceding year, but the harvest was a good one, owing to favourable weather conditions. Flour, meal, and starches, fresh eggs, condensed milk were all imported in much larger quantities in 1900 than during the preceding year.

INDUSTRIES in Japan languished in 1900. Practically no new undertakings were set on foot, and from those interested in already existing ones the complaint of lack of cheap capital was heard. When, as frequently happens, a company has to pay as much as 14 per cent. for money to carry on affairs, it is small wonder that difficulty in continuing in existence is experienced. The great desideratum is the investment of moderately cheap foreign capital in Japanese enterprises, and many attempts have been made to secure or to offer foreign financial co-operation. So far, however, with one or two exceptions, nothing on a large scale has been done in the matter. As individuals many foreigners are naturally holders of shares in Japanese companies, but concerted foreign investment has been rare. But schemes for the introduction of capital from abroad

for various purposes are on foot and may lead to the success of many Japanese industries.

CUSTOMS DUTIES.—Certain classes of goods are now exempt from import duty when imported for the purpose of improvement, provided that they are re-exported within one full year from the date of their importation. The idea is said to be to import, for example, plates from France and have them decorated so as to resemble Kutani ware, and watches from the United States to be enamelled at Nagoya and re-exported.

ABOLITION OF CONVENTIONAL TARIFFS.—A suggestion that the Treaty Powers interested should be approached with a view to the immediate abolition of the conventional tariffs in spite of their comparatively recent conclusion, was made by a journal of much weight in Tokyo. In exchange it was proposed to grant to aliens the right to own real estate in Japan. Until these tariffs were done away with it was felt that Japan had not in reality recovered tariff autonomy, nor could an increase of revenue be obtained at will from customs dues. From what has transpired it can be gathered that the attitude of public opinion in Japan is favourable to a higher customs tariff than is now in force.

EXPORTS.

The export trade of Japan for the year 1900 was larger than that of all preceding years with the single exception of 1899. Considering the abnormal conditions it had to face, this result cannot, therefore, be deemed altogether unsatisfactory. The chief reasons for the decrease in exportation as compared with the year before are the inactivity in the raw silk trade, the set back to the cotton spinning and manufacturing industries, for which the Chinese crisis was largely responsible, bringing down as it did the returns of manufactured products, and the indifferent rice crop of 1899-1900 which left a comparatively small surplus for foreign consumption. The principal remaining articles which show a falling-off are ginseng, matches, seaweed, and European umbrellas. On the other hand, silk, tissues, camphor, copper, sulphur and timber, as in 1899, contributed to swell the volume of exportation, and porcelain and earthenware, lacquered ware, coal, tea, straw plait, silk handkerchiefs, fans, cigarettes and beer were all exported in much larger quantities.

THE CAMPHOR MONOPOLY in Formosa was offered for public competition in March, 1900. The contract was to run for three full years from the date on which it took effect, and the question of its renewal and the future terms were to be decided at least six months prior to its expiration. The quantity to be disposed of was estimated at between 3,968,319 and 6,613,865 lbs. a year. The Government selling rate was to be £9 14s. per 132.27 lbs. for Class A and £8 13s. 7d. per 132.27 lbs. for Class B. Security to the amount of £193,958 in all was to be furnished, £183,750 as security for the contract price and £10,208 as guarantee for the due performance of the contract. The contract was secured by a British firm, Messrs. Samuel and Co., of London and Japan. Camphor exported from Japan in 1900 represented a considerable increase in quantity and in value, the latter being especially noteworthy.

THE COTTON-SPINNING INDUSTRY in Japan has been in an embarrassed condition for the past three and-a-half years. The evil results of the tendency to over-expansion after the China-Japan War, above all lack of sufficiently large capital funds, are acutely felt. 1900 was in particular a very bad year for cotton-spinning in a country which finds the principal outlet for its yarns in China. The difficulties induced by dear cotton and absence of demand for Japanese yarns found a climax in the closing of the North China trade. Manufacturers were able to carry on work only at a loss and strong companies alone could face the situation. It must not be forgotten too that the Japanese mills have been running for some time and that their machinery is becoming worn out. A German company is rumoured to have been formed with a capital of 5,000,000 yen to engage in cotton-spinning in Japan.

COAL.—While the dullness in the manufacturing industry caused stagnation in the coal market at home the great demand for coal for the numerous men-of-war and transports assembled in the Far East by reason of the expedition to China stimulated the exportation of the mineral from Japan. Indeed, the coal industry alone may be said to have profited by the situation in China. About the end of the year the stocks at Moji were estimated at not more than 250,000 tons. Hongkong, British India, China, and the Philippine Islands were the chief consumers of Japanese coal in 1900. But the quantity actually taken by China proper was less than in the previous year.

DIRECT TRADE.—The proportion of the trade, more particularly in the case of exports, which is done direct by the Japanese, is all the time increasing. Imports and exports in the hands of Japanese merchants in 1900 amounted to £18,999,615 in value, as against £30,228,335 worth of commodities imported and exported by foreign merchants. The balance

represents imports by the Government. The figures as regards the export trade were £7,490,939 and £12,727,943 respectively.

NATIONAL TRADE PARTITION.

DISTRIBUTION OF TRADE was in the following proportions:—

Country.	Imports.	Exports.	Total.
British Empire—	£	£	£
United Kingdom	7,313,068	1,149,764	8,462,832
Hongkong	1,088,193	3,999,365	5,087,558
British India	2,400,627	888,566	3,289,193
Australia	250,710	258,325	509,035
Canada	32,326	301,213	333,539
Total	11,084,924	6,597,233	17,682,157

China 3,058,492 3,253,556 6,312,048
France 826,448 1,954,938 2,781,386
Germany 2,980,803 362,968 3,343,771
U.S. of America ... 6,406,872 5,366,153 11,773,025

BRITISH TRADE.—The value of the import trade which fell to the share of the United Kingdom was larger in 1900 than in 1899. Figures show an increase in it of 59 per cent. Cotton yarns, shirtings and cotton prints, cotton satins and cotton velvets, Italian cloths, woollen cloths, machinery and engines, locomotive engines and railway carriages, iron, bar and rod, rails, iron and steel (other), and paper are the chief imports in which we are interested.

The Japanese railway companies with few exceptions have discarded American locomotives in favour of those of British manufacture, merely using up but not replenishing their stock of the former, as they have experienced so much trouble from their boilers. It is only by one or two of the smaller railway companies and the Hokkaido Railway that orders for locomotives are still placed in the United States, and for two reasons, cheapness and despatch. While it is probable that those required for future use will be constructed in Japan, the United Kingdom will benefit by supplying the fittings, such as wheels, sole bars, buffers, and springs, which are not made here. The Formosan Railway last year ordered six locomotives from the United Kingdom to be delivered at Kelung, and steel and other materials for bridgework. To save duty the bridges are made at Osaka, and thence sent on to the island.

GERMANY sent to Japan a large quantity of rails in 1900, and her imports of iron, bar and rod, and other iron and steel, showed a considerable development. More than twice as much paper came from Germany as during the preceding twelve months, and a striking growth is to be noted in what is perhaps the most important branch of trade in which that country is interested in Japan—namely, the importation of sugar.

That the import trade from France is seen to be flourishing is accounted for by the very large and increased quantity of mousseline de laine supplied to Japan.

The United States continue to encroach on spheres of trade which were formerly considered under the exclusive control of the United Kingdom or other nations. American competition is now a permanent feature of the import trade of Japan and is worthy of the careful attention of British manufacturers. The geographical situation of the United States with regard to Japan and the eagerness with which American manufacturers are seeking a market in this country will make her a competitor more and more formidable as time goes on. In 1900 Americans again secured a number of valuable contracts for the delivery of goods in 1901, including one for rails which was estimated at £72,000. Among the reasons for the very large figures to which the import trade from the United States into Japan rose in 1900 was the fact that the extensive orders, the execution of which was undertaken there in the preceding year, included 20,000 tons of rails, which at the high price then prevailing would account for, say, £160,000. A large quantity of electrical machinery for tram-lines and electric lighting and bridge work and wire, as well as flour, are also included in the returns. Telephone cable was at one time a United States monopoly, but now German makers are fulfilling large orders for it. British manufacturers, owing to the high prices asked for, have so far been unsuccessful in obtaining any contracts for this material.

TRADE WITH CHINA.—During the past few years there has been a remarkable growth in the trade between Japan and China, occasioned for the most part by the opening up of markets for Japanese manufactures in the neighbouring Empire. While the exports thither in 1895 amounted in value to £989,636, in 1899 they had risen to £4,109,573. Till May, 1900, the trade preserved its customary expansion. Cotton yarns, cotton tissues, matches, European umbrellas—in particular the first-named—are the manufactures of Japan which most readily find purchasers in China. Hence the crisis in China, which almost put a stop for a time to the commercial intercourse of the two countries, was a blow felt in an especial manner by those industries. Imports from China, too, naturally diminished in some cases,

though the sum of them was greater than in 1899. The labour market in Japan was also affected by the withdrawal of numbers of coolies for service, not only with the Japanese troops but also with the forces of more than one foreign nation.

GENERAL.

Yokohama has regained its old position of having a larger foreign trade than any other single port, Kobe (Hyogo), having taken the lead both in 1898 and 1899. But taking the ports of Hyogo and Osaka together, as has always been done in these reports, Yokohama only comes second on the list.

Shimonoseki and Moji exhibit signs of growing commercial activity. The Government iron foundry is only six miles from Moji. Wakamatsu Harbour close by is being dredged, and it is likely to become a busy place in three or four years' time, and may affect the prosperity of Moji. At present vessels of only 12 feet can go alongside the wharf, but by means of dredging it is expected that vessels of 20 feet or so will suffer no inconvenience there before long. Wakamatsu has now one steam crane, handling 1,000 tons a day, a hydraulic crane, handling 1,500 tons, and a coal-loading machine (hydraulic), loading 2,500 tons a day. Two Brown's patent coal-handling machines obtained from the United States are being erected: these will deal with 6,000 tons of coal in ten hours. In view of the important position now occupied by Shimonoseki and Moji a British Consulate is to be opened shortly at the former port, while the office at Hakodate is to be reduced to a Vice-Consulate.

The increase in trade in the case of the Hokkaido ports has also been marked.

SHIPPING.—Japanese shipping is now composed of 846 steam vessels of 528,321 tons and 3,280 sailing vessels of 304,161 tons, 4,126 vessels with a tonnage of 832,482 tons in all. A continuous steady increase is taking place in the numbers and tonnage of vessels flying the Japanese flag, and the Japanese are showing unflagging zeal in the development of their mercantile marine. The leading steamship lines appear as usual to be in a flourishing condition, to judge from the reports presented to the shareholders and the dividends declared. The dividend of the Nippon Yusen Kaisha, for example, was at the rate of 12 per cent. per annum for the second half of the last business year.

BRITISH SHIPPING shows an increase of 133 vessels, 499,559 tons, as compared with 1899. The Peninsular and Oriental Steam Navigation Company have sold their two steamers which used to run between Hongkong and Yokohama carrying passengers and cargo, and, at times, mails. The *Rosetta* and *Rohilla* are now in Japanese hands. It would appear as if the company had found themselves unable to compete with the heavily subsidised German, French, and Japanese mail lines, and had, in the meantime at least, abandoned a struggle which they had for some time carried on at a disadvantage and with little success. Passengers wishing to travel home now by a British mail line must proceed first to Shanghai or Hongkong, either by the "intermediate" vessels of the Peninsular and Oriental, or by vessels belonging to some other line. It is regrettable that the British Mercantile Marine is not better represented in these waters. An inquiry addressed to a passenger intending to proceed to Europe *via* India as to the line he will travel by elicits the almost invariable response "by German mail." The Norddeutscher Lloyd continues to own the most commodious and best appointed vessels on this route.

TRUSTS IN JAPAN.—There was some talk in 1900 of the formation of "trusts" in Japan to control some of the more important fields of industry, such as cotton-spinning, clock and watch making, coal production, &c., but in most cases the proposed combination was not found to be feasible. A Tokyo journalist, commenting on the subject, has given it as his opinion that trusts are a failure in Japan for three reasons. In the first place they are not founded on a strong basis; in the second, they suffer from lack of capital; and lastly, the credit of their promoters is unsound. In the case of coal, however, an exception is furnished to the rule, for the colliery owners signed in November a provisional agreement binding them to fixed rates for the sale of their coal.

FOREIGN CAPITAL.—One of the schemes whereby the Japanese are seeking to attract foreign capital is the granting to aliens of permission to hold shares in Japanese railway companies. It has been decided that there is no objection to the purchase by foreigners of such shares provided that there exist no proviso to the contrary in the bye-laws of a railway company, and the Department of Communications on June 5, 1900, informed eight of the private railway companies, by whom it had been approached on the subject, that they might if necessary alter their bye-laws so as to open the door to foreign co-operation. Many of the Japanese railways have been built in sparsely-populated districts more apparently with a view to military contingencies than with the prospect of adequate return for the outlay. In such of the railways, however, as traverse populous areas and

connect towns of commercial importance the investment of foreign capital would be mutually beneficial, more especially if the foreign shareholders were able to exercise their influence in the direction of greater efficiency of service and the reduction of useless expenditure.

That FORMOSA does not offer many attractions, commercial or otherwise, to foreigners may be gathered from the small number of foreign residents in the Island. The latest statistics place the number at 90. Chinese inhabitants, who are Japanese subjects, are reckoned at 2,625,709 souls, and there are 1,202 Chinese from the mainland there in addition. The principal industries being the subject of Government monopoly, the field for private enterprise is restricted. Railway work in the island is making progress. The line between Tako and Tainan, 40 miles in length, was finished and opened towards the end of 1900. Financially, Formosa improves year year.

CRICKET.

MR. F. E. WHITE'S TEAM V. MR. P. B. CLARKE'S TEAM.

Saturday was a day of blazing sunshine with little or no breeze to temper the heat; it was therefore scarcely surprising that the team which went in to bat last were a trifle languid after a busy afternoon's leather hunting. Still the disparity in the performances of the respective teams is rather pronounced and we hope that next week the "pick-up" may result in a little more evenness of form, both in batting and bowling. E. W. Kilby made the top score of the day with 119, which included twelve boundary hits, ten 3's, and eight 2's; the next best score being compiled by Fradgley, who made 40 before putting himself out by hitting his own wicket. The bowling was not particularly brilliant, and the fielding at times was anything but brisk. Score:—

MR. F. E. WHITE'S TEAM.

Mr. E. W. Kilby, c. Bluet, b. Philip	119
Mr. A. R. Firth, l.b.w., b. F. O. Stuart	7

YACHT RACES TO URAGA.

Eight large racing yachts and cruisers started on Saturday to race to Uruga, for two prizes presented by the Yokohama Yacht Club. Alternative handicaps were provided, one for a northerly and another for a southerly breeze, and a strong south-westerly wind was blowing when they got away at 1.15 p.m., a quarter of an hour after the 21-raters. It was a very close start, the order being as follows:—*Mosquito*, *Spray*, *Sranhill*, *Daimyo*, *Mary*, *Surprise*,

Haidee, Kingfisher, and not more than 15 seconds separated the first and last boats. They passed the Lightship in this order:—*Haidee, Kingfisher, Mary, Spray, Daimyo, Swanchild, Mosquito, Surprise*. They all tacked inshore, to avoid the flood tide apparently, and *Mary* set her gafftopsail and jibtopsail shortly after two o'clock, going very well in the lightening breeze. Down the bay the wind quite dropped and the leaders lay becalmed for some time off Uraga, *Mary* only getting in at 6.21.00, *Spray* at 6.27.04, the latter, of course winning first prize easily on her time allowance. The others got in at all hours, some as late as ten o'clock. A trip had been projected to Misaki on the following morning but the weather was not inviting and *Spray* alone undertook the passage. The others left Uraga for home in the course of the forenoon and the first-comers began to show-up about half-past one before a strong south-easterly breeze and a moderate following sea. The weather was rather miserable, rain falling heavily.

The 21-raters, four in number, were started at 1 p.m. and got on pretty well in the earlier stages of the race, but the calm caught them far from their destination and it would hardly serve any purpose to give their times, except in the case of *Edna*, which arrived first at Uraga about ten o'clock. A good deal of "yuluing" and paddling had to be done, the latter a most dispiriting and fatiguing occupation. *Vixen* was towed home by *Mary*.

LEVIATHANS FOR THE PACIFIC.

"Surveyor" writes to an English paper with reference to the construction of the two vessels for Mr. Hill's Pacific line which will be larger than the *Celtic*. Incredible as it may seem to our notions of running a big undertaking, yet it is a fact that Mr. Charles R. Hanscom, the president of the Eastern Shipbuilding Company, contracted for these vessels, the largest in the world, before he had a yard to build them in or even a plot of land decided upon as the site of his new shipyard! "I think that the signing of a contract involving well-nigh a million pounds for the construction of such tremendous vessels by a competent shipbuilder, as the first contract for his new shipyard—at that time only visionary—is a remarkable and, in British shipbuilding circles, an unheard-of event. Within a few days of signing the contract, Mr. Hanscom had decided upon the location for his works. It is located at the old Groton terminus of the New York, New Haven, and Hartford Railway, and covers an area of about 40 acres. The railway facilities are ideal, the water frontage, about a mile in length, is unrivalled, for, as the works are situated within two miles of the mouth of the Thames River, a channel with a minimum depth of 65 ft. approaches them. I never saw a more ingenious arrangement for handling material over the building ways than is that in use at the New London Yard. I am not at liberty to describe it in detail, but I may say that the scheme consists of a series of steel spars, each supporting a yard about 200 ft. long, a series of cable ways running upon the yards allowing of the distribution of the material to any part of the ship. As the vessels are classed in "Lloyd's Registry," both workmanship and materials are sure to be of the best. The dimensions are:—Length, 630 ft.; breadth, 73 ft.; depth, 55 ft. The main hull is divided into 26 watertight compartments, and the double bottom into 28 more. The vessels are designed to travel at 14 knots, and will be propelled by twin-screw triple-expansion engines, taking steam at 250 lb. pressure from 16 Niclausse water-tube boilers. Each vessel will carry 200 first, 100 second, 200 third, and about 1,000 steerage passengers, as well as about 20,000 tons, dead weight, of cargo. The bunkers will hold 5,000 tons of coal, and there is provision for 3,000 tons of water ballast."

Messrs. Barber and Co., New York, who for some years have regularly loaded and despatched chartered steamers from New York to China, recently decided to build a fleet of large steamers for the trade, and some six vessels are in hand, each with a deadweight capacity of some 6,500 tons. The first of these steamers, the *Satsuma*,

has recently left Sunderland for New York, whence she was to sail about the middle of June for the Straits, China, and Japan. These steamers will fly the British flag, although they are really owned by Americans.

DEATH OF SIR WALTER BESANT.

Sir Walter Besant died on June 9th at his residence in Hampstead, to the north of London, of influenza, with which he was attacked a fortnight before. Sir Walter's death was unexpected and he had been invited to speak at the Atlantic Union dinner on June 10th on the English-Speaking Communities.

Sir Walter was born in 1836, the year before the accession of the late Queen, and was therefore 65 years of age at the time of his death. He was one of the best known and widest read of any of the literateurs of the latter end of the nineteenth century, although he did not commence his novel writing, which gave him his fame, until after thirty years of age. He was pre-eminently a man of letters and as such his fame must rest, with the notable exception of the People's Palace at the East End of London.

He was diffident of his own powers as a novelist and his first works, which sprang instantly into prominence, were undertaken in collaboration with Mr. James Rice. After the death of his literary partner, Mr. Besant, afterwards created Sir Walter, wrote on by himself and by many the idealistic works he then produced are preferred to such powerful novels as the "Seamy Side" and the "Golden Buttery," which came from the joint pens of the collaborators. Indeed it was one of the latter novels, "All Sorts And Conditions Of Men," which gave him a world-wide fame among the people of the proletariat.

Struck with the dead level and mean sameness which characterized the east end of the great metropolis in which he lived, and seeking for a means of an amelioration which should not be charity but should be self-helpful and which at the same time would bring the worker under the higher influences of modern culture, Sir Walter wrote his powerful novel treating of the East End and showing how much could be done to uplift the struggling masses by the building of a palace for the people in which they should have their own entertainments, their music and their recreations, and which at the same time should serve as a museum, a library, an art and a picture gallery and which should be run by themselves for themselves.

This was thought to be a socialistic dream, but was taken up by practical men and has long been an accomplished fact in London, and has been copied in many other European and British centres of population.

It will therefore be safe to say that few men of letters ever exercised the same influence over the toiling millions as did the deceased novelist, although he was never known to exploit their affection. It is more than probable that his funeral will be attended by hundreds of people of all classes of society, despite the fact that Sir Walter never said more of himself than that he was an onlooker and not a worker.

AMERICAN NOTES OF TOWN AND COUNTRY.

These are the happy days when one who has lived in Japan, long enough to have photographs of its lovely scenery impressed upon his memory, is very glad of it. At every springtime, such a memory becomes a fountain of pleasure, for then the flowers native to the island empire bloom afresh in American gardens. Within a yard or two of my study window, is a wistaria vine trained and outspread in the Japanese style. It has bloomed luxuriantly during the last fortnight and held its superb colour in spite of the protracted rainy weather. As its glory begins to pale, "the showers which do not fall from the skies" cover the grass with a temporary carpet, over which the robins hop and chirp in delight. The record of 1901, for continuous cold weather and rain, is something which has not been made in this region for many years. Yet strange as it seems to the common observer, who has become so used to the daily companionship of umbrella and rubber over-shoes that on a sunny day, he feels quite lost without them, it is declared by the scientific that the actual amount of rainfall is not greater than in other years, when perhaps more moisture has fallen during the night and less during the day.

The robin red-breasts that are so abundant in our State and enliven our gardens and streets, being protected by law, all the year round, seem to be well able to hold their own against the English sparrows that have succeeded in driving away most of the other song birds from town and village, besides multiplying their kind to a marvellous and annoying degree. The consensus of opinion is against this sparrow.

Men who are not yet old, remember when this bird did not exist on the American continent. Now the English sparrow has filled all the Atlantic coast cities, towns and villages, and has even advanced westward and is beyond the Mississippi. Without any protection of law he multiplies with amazing rapidity and is able to stand our cold winters, at which time robin red-breast and the fifty or more species of song birds migrate southward.

But though robin red-breast has such a good reputation in the North and is therefore so well protected, his behaviour during his southern hibernation shows that he has a double character, almost suggestive of the story of Dr. Jekyll and Mr. Hyde, for among the southern cane brakes, he partakes of what are called "China berries," and, becoming literally intoxicated, behaves in a most reprehensible manner, losing all that dignity and decorum which he shows at his diet of worms, when in more northern regions. Furthermore, the negroes of the South entering his haunts at night, with lanterns or torches, beat down to death hundreds of his fellows to make "robin pie." In factually, however, and with apparently undiminished numbers, the robins arrive in our latitude in March, and by the time the wistaria purples, the robins' fledglings are out of their nests and well able to find their own food.

The wistaria, already a common ornament of our rural gardens and well known as a vine trained on the walls of many of our churches and public buildings, hides fair, in its new environment in America, to become a tree. In Boston, at the Massachusetts Horticultural Society's new and splendid building, recently opened, there was a small group of trees, the trunks of which ranged from two to four inches in diameter, from which hung thick luxuriant clusters of purple fragrant flowers. Some of the visitors could hardly believe the testimony of their eyes and noses, for usually they had seen these plants clinging, and not standard. Almost invariably in our country, as in Japan, the wistaria grows on a vine, which is trained round a pole or tree, and made to spread out on a framework. But under the patient care of Prof. Charles S. Sargent, these wistaria trees are so strong, hearty, and completely set to their new form, that most visitors have to walk around and examine them carefully in order to believe their own eyes. The triumph represents thirty or forty years of patient care. Probably no other horticultural society in America has done so much for the enrichment of our gardens with exotics from Japan as the Massachusetts Society. It seemed thoroughly appropriate at the opening of the new building (which, instead of being on Tremont street in the very heart of old Boston, is now in the "Back Bay," at the corner of Massachusetts and Huntington avenues), that Prof. Sargent's great collection of azaleas, which is known to specialists all over the world, should occupy the main exhibit hall. Some of these glowing masses of colour were four or five feet above the ordinary shrubs. In the central space were twenty-seven giant plants, the conical bushes being fully six feet high. The azalea is one of the most popular of our importations from Asia, though there are many native varieties. While speaking of Boston, I may say that with the new subway and newer elevated railways, one scarcely recognizes parts of the older city, or even that of the "nineties" of the 19th century, when the trolley line was in its development.

The mantle of Asa Grey, the great botanist of Harvard University, who first studied the collection of plants brought home by the Perry Expedition showing the wonderful likeness between the flora of Japan and the eastern or Atlantic coast of America, seems to have fallen upon his pupil, Prof. Liberty Bailey, whose position at Cornell University has enabled him to do so much for the improvement of horticulture and farming in the Empire State. His great cyclopaedia of all that relates to the vegetable world has just been completed in four imposing volumes, and to his various books, which range from the most elementary to the most profoundly scientific, he is to add editorship of a new magazine to be issued in the autumn entitled *Country Life*. The publication of such a serial, by a firm that is among the leaders in discerning popular taste and feeling, is a sign of the times; for, although it is true that population tends to mass itself in the cities, it is also true that the elect and prosperous love more and more to own rural property and to enjoy the pleasures of the garden.

The publishers will tell you that the average novel, even when it is launched with a splash and moves on gaily amid all the waving flags of advertisement, sailing down the steam with an amazing number of admirers, is very apt to founder and sink with a startling suddenness. The copyright law which went into force several years ago has made a market for American fiction, which tempts both the writer and publisher. Within five years past the sale of a number of novels has risen above the hundred thousand, and one came very near the half million mark. Yet the sudden stoppage of sales of the novel that at first takes the public by storm, is one of the surprises of the trade. One publisher in New York was left a

short time ago with a "remainder" of 40,000 copies, and "there is nothing deadlier than a dead book," as a certain bookseller declared. On the contrary, publishers will tell you that a good book on nature sells every day in the year. It is astonishing to note the large number of titles in publishers' announcements and the vast variety of books on the counters in the book shops which treat of plants, animals, birds, fishes and every phase of outdoor life.

Along with this marked change of taste, undoubtedly for the better, proceeds apace the love of sport of every sort and kind. Not only do our newspapers give up a large space of their daily and weekly issues to reporting the games on field and wave, not only are the magazines full of articles on such general subjects, not only are special periodicals devoted to golf, to the bat, the oar, and to whatever through the use of muscle amuses, but social and religious life are profoundly modified by this desire of the average American to be more out in the sunshine and oxygen. Certainly the churches feel it, and Sunday is rapidly becoming a day to be spent in unwallied spaces. The bicycle has not yet had its day as a means of enjoyment, though the fad and the fury are over, but with improvement in construction and equipment and lowering of the price, it is more used than ever as a vehicle of business. It seems to have taken its place along with the necessities rather than the luxuries of life, while the automobile steadily increases in use and number.

We have had our biennial race on Lake Cayuga, when Pennsylvania, Columbia and Cornell Universities entered their "second" crews for a race of four miles. This, the gem of the "finger" lakes of central New York, is superbly fitted for such exhibitions of skill, being long and deep without shoals or islands. The race was rowed so close to the shore that the "observation train," of forty long freight trucks fitted up with tiers of seats, could carry thousands of people to see every foot of space passed over and every minute of strain and skill. Cornell won by over two boat lengths, Columbia coming in second, and Pennsylvania lagging still further behind. Nevertheless Pennsylvania will send her "first" crew across the sea to the Henley races, while Cornell, as usual, will enter her shell and picked eight for the race on the Hudson river. Then the Universities of New England as well as of the Middle States will join for the greatest aquatic event on inland waters during this first year in the new century. Still further off, in public view, is the race for the international cup to take place on the Atlantic between the *Constitution* and the *Shamrock II.* late in August. As the *Constitution* was dismantled in a squall last Tuesday in her trial spin, it cannot be said on either side of the Atlantic that "luck" is either for or against one or the other—British or American.

It is unfortunate in the eyes of the veterans of the Grand Army of the Republic, and also of the organizations known as Sons of Veterans that all sorts of athletics, sports, and general amusements occupy the once sacred Decoration or, as it is now called Memorial Day, and a general movement is now being made toward having the last Sunday in May appointed as Memorial Day. Hard as it is for the rapidly passing generation of the heroes of the civil war to see this beautiful American festival, now observed all over the world, lose something of its original character, the cool student can but see history repeating itself. It is impossible that the new generation can see or feel like the men of another era. To most of those living in the United States to-day, the civil war is decidedly "ancient history,"—a matter of "the last century." Nevertheless, it is believed that while the form changes, the substance will remain. It is also more than probable that the grand example of the people of Scotland and England, that keep alive the memory of their heroes, while uniting more earnestly for new issues and a better national life, will be followed in America. I doubt not but that in the national capital, there will, within a decade or two, stand a statue of the great Confederate leader Robert E. Lee. Doubtless, also, we that once wore the blue and shouldered the musket to drive back Lee's legions will, in laying the wreath and lifting the cheer, be none the less loyal to the Constitution and the best principles taught by the fathers of the republic. W.E.G.

Ithaca, N.Y., June 10th 1901.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

BRITISH ARMY REFORM.

Shanghai, June 27.

Lord Raglan, Under Secretary of State for War, speaking in the House of Lords during the Army debate, said that if the present recruiting inducements proved in-

sufficient, the Government would not hesitate to submit proposals necessary to secure an efficient Army.

LANGUID LEGISLATORS.

The Ministerial supporters latterly, relying on the largeness of the Government's majority, have been very slack in their attendance at the House of Commons, resulting in narrow majorities for the Ministry. The Government whips accordingly threaten to issue a "black list" containing the names of absentees.

MR. KRUGER.

Mr. Kruger, who has been visiting Rotterdam, has received a great ovation.

TROUBLES IN SPAIN.

The anti-clerical movement in Spain is growing in violence.

RUSSIAN MINISTER AT PEKING.

Shanghai, June 28.

It is stated at St. Petersburg that M. de Giers will be recalled from Peking on the conclusion of peace, and that he will be succeeded by M. Lessar, who was concerned in the Afghan Settlement of 1885.

THE CORONATION.

Shanghai, June 29.

King Edward has issued a proclamation announcing that his coronation and that of his Consort will take place in June next.

THE BOERS IN CAPE COLONY.

Commandant Malan, with a large force, attacked the town of Richmond on June 25th. The fighting lasted from dawn till dark. The Boers retired on the approach of reinforcements.

THE COAL TAX.

A later telegram states that the House of Commons has agreed to the Coal Tax.

THE YUNNAN RAILWAY.

The French Chamber of Deputies has adopted the Yunnan Railway Bill.

HEROIC DEFENCE OF RICHMOND.

The Town Guard and the Staffordshire Militia heroically defended the town of Richmond. They twice refused to surrender, though the Boers captured sangars in various parts of the town.

There are now 80,000 mounted men in South Africa.

TO HONOUR BRAVE SAILORS.

Shanghai, June 30.

The King has approved of the institution of a decoration to the called the Conspicuous Service Cross, to be conferred on Naval non-commissioned officers who have performed distinguished service in the face of the enemy.

THE KING'S OATH.

The Committee of the House of Lords has reported in favour of the amendment of the Accession Oath by inserting a declaration affirming the King's disbelief in transubstantiation and declaring the adoration of the Virgin Mary to be contrary to the Protestant religion.

BRITISH ARMY REFORM.

Later.

During a debate in the House of Lords, Lord Lansdowne said that the Government did not intend introducing in the British Army compulsory service beyond the sea. If any increase of pay was necessary it should be in proportion to the length of service.

M. DE GIERS.

M. de Giers, Russian Minister to Peking, has been transferred to Munich.

ATHLETIC RECORDS.

Shanghai, July 1.

At the meeting of the London Athletic Club, the American athlete, A. C. Kraenzlein (Chicago), won the 120 yards hurdle race in 15½ seconds, beating the previous British record of 15½ seconds. The American Baxter won the high jump with a jump of 6 ft. 2 in.

[Note.—The English hurdle race record was held by G. B. Shaw, who covered the 120 yards in 15½ secs. on grass; but A. C. Kraenzlein, running at Chicago on cinders, on July 18, 1898, accomplished the same in 15½ secs. The High Jump amateur record is held in America by M. F. Sweeney, who in 1895, at Manhattan covered 6ft. 5½ in. In England, P. Heahy holds the High Jump record with 6ft. 4½ in.—Ed. J.M.]

AUTOMOBILES AND INTERNATIONAL AMENITIES.

There has been a great motor-car race from Paris to Berlin. It was won by the Frenchman, M. Fournier. The automobilists received a warm reception everywhere in Germany. A remarkable banquet was given by the German Automobile Club at which the Duke of Ratisbor, toasting President Loubet, referred to the great and gracious French nation.

THE PRO-BOER PROPAGANDA.

Shanghai, July 2.

Attempts to organize Pro-Boer meetings throughout the country have been unsuccessful. Violent scenes took place at Leeds, where the speakers were escorted home by the police and followed by huge disorderly crowds.

A NOTABLE TRIAL.

The trial of Earl Russell for bigamy will take place in the Royal Gallery of the House of Lords on the 18th of July, under the Presidency of the Lord High Steward (the Earl of Pembroke).

SOUTH AFRICAN NEWS.

Fouche's commando, seeking remounts, has entered Transkei, which has hitherto been tacitly excluded from the sphere of operations by both sides in consequence of being a native possession.

(RECEIVED AT THE LEGATION OF FRANCE.)

YUNNAN RAILWAY.

Saigon, June 29.

The French Chamber has adopted the project for a railway from Haiphong to Yunnan-sen.

MARQUIS DE LUR SALUCES BANISHED.

Saluces has been condemned to 4 years' banishment and has been conducted to the Belgian frontier.

FRANCE AND THE RELIGIOUS ORDERS.

Saigon, July 1.

The French Chamber has adopted by a vote of 312 to 249, the project of law upon Associations as modified by the Senate.

THE RELIGIOUS CONGREGATIONS.

Saigon, July 2.

The *Journal Officiel* publishes to-morrow the Law of Associations and a notification of M. Waldeck Rousseau ordering that Congregations seeking authorization must submit their statutes and a statement of their personnel and property.

CHESS.

(All communications should be addressed to the Chess Editor of the Japan Mail, No. 55, Main Street, Yokohama.)

SOLUTION OF PROBLEM No. 527.

WHITE. BLACK.
1—B to Kt 5. 1—Any move
2—Q, R, B, Kts, or P mates.

PROBLEM No. 529.

By W. PAULY of Bucharest.
Black—Two Pieces.

White—Seven Pieces.

White to play and mate in two moves.

GAME No. 643.

The following game is from the Anglo-American cable match:—

GIUOCO PIANO.			
WHITE.		BLACK.	
White—E. M. Jackson.	Black—S. W. Hampton.		
1 P K4	P K4	29 Q Q3	B K5
2 Kt KB3	Kt QB3	30 Q QB3	B K5
3 B B4	B B4	31 Q Q3	B K5
4 P Q3	Kt B3	32 Q QB3	Q Q4
5 P B3	P Q3	33 Q B5	R Q3
6 Q Kt Q2	Kt K2	34 QxQ	RxQ
7 Q Kt3	Castles	35 R R7	RxP
8 Kt Bsq	P B3	36 R K2	R K5
9 P Q4	PxP	37 R Q17	P Kt5
10 PxP	P K3	38 P R4	R (K3) Q3
11 Kt Kt3	P Q4	39 K B2	R B5
12 PxP	Q Kt xP	40 R K7	P B4
13 Castles	P KR3	41 Kt xB	PxKt
14 B K3	B K3	42 R (K7)xP	RxR
15 Kt K3	Q K2	43 RxR	R Q7ch
16 P OR4	OR Ksq	44 R K2	RxRch

26 QxRP	P QKt4	54 P R6	PxP
27 Q R3	R Kt3	55 K B2	KxP
28 K B2	Q KB2	56 K Kt2	Draw.

There is nothing special in this game except the ending, which is highly interesting and instructive, beginning with White's 35—R to R7, giving up his isolated Pawn. This part of the game was played in Mr. Jackson's customary style, and the ending will appeal to the connoisseur.

April 29.

It was feared after Friday's *séance* that the trophy, gained last year by the sister Universities, would cross the Atlantic. We started on Saturday, play being resumed at three o'clock, with two lost games from the previous day, and had only one game on the first board to counterbalance this loss. There was no perceptible advantage upon any of the other boards—the positions being as nearly as possible equal.

The unexpected, however, as on previous occasions, happened at a fairly advanced hour, when the American on board No. 5 gave Davidson a chance of equalising the score. Defeat being thus averted, the other boards took matters easy, and kept the draw in hand. America made a final spurt on the last board, Keeler, the reserve man, making a spirited attack; but the Cantab repelled it, so that shortly before the hour fixed for the close of the match a proposal for a draw was cabled simultaneously—the messages crossing each other. The following is the score:—

AMERICAN UNIVERSITY.	
1. C. R. Perry (Columbia).....	0
2. K. G. Falk (Columbia).....	½
3. F. H. Sewall (Columbia).....	1
4. C. T. Rice (Harvard).....	1
5. J. B. Hunt (Princeton).....	0

Brown Canton	5.00 to 7.00
White Java and Penang	7.10 to 8.60
White Refined	9.10 to 10.45

EXPORTS.

RAW SILK.

Statistics for the season just closed show that the export reached 66,597 bales (68,220 piculs) the largest ever known. Quotations refer to new crop and are more or less nominal in the absence of business. Doubtless a reduction could be had with firm offers in hand. Reports as to the extent of our new crop are as usual conflicting; nothing definite can be said at the moment; but the general feeling is that we shall not have such a bumper crop as we did in the season just closed. The country wants money and growers will have to market every bale they can produce. No genuine Shinshu filatures have yet come down; the chops at present on offer are reeled from Iushu cocoons.

QUOTATIONS.

Filatures—Extra, Fine	—
Filatures—Extra, Coarse	—
Filatures—No. 1, Fine	Y. 930 to 940

NOW READY!

THE WORKS OF GOD.

STORIES OF REMARKABLE CONVERSIONS and other INCIDENTS in Connection with the WONDERFUL REVIVAL Meetings in Tokyo, May and June, 1901, with an INTRODUCTORY NOTE giving a brief account of the Origin and Development of the TWENTIETH CENTURY FORWARD MOVEMENT in Japan. Also an APPENDIX giving Statistical Reports of the Churches, Evangelistic Bands, Ministers, &c., engaged in this Union Movement in Tokyo, Tracts and other Printed Matter used in the campaign, amount of money collected, Attendance at Meetings and number of Converts and Seekers whose names were recorded in the several churches.

This little booklet will doubtless be desired by every missionary and friend of Missions in Japan, and will be of great value for distribution among friends in America and Europe. As the work is likely to be in wide demand, judging from the number of advance orders, those wishing to order should be prompt and thus make sure of having their orders filled before the edition is exhausted.

PRICE.

Where less than 10 are ordered	10 sen each.

CUTICURA

REMEDIES

THE SET

Consisting of CUTICURA SOAP, to cleanse the skin, CUTICURA Ointment, to heal the skin, and CUTICURA RESOLVENT, to cool the blood, is often sufficient to cure the most torturing, disfiguring skin, scalp, and blood humours, rashes, itchings, and irritations, with loss of hair, when the best physicians, and all other remedies fail.

Millions of Women Use Cuticura Soap

Exclusively for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations, inflammations, and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sanative antiseptic purposes which readily suggest themselves to women, and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world. Sold throughout the world. "All about the Skin," post free of Aust. Depot: R. Towns & Co., Sydney, N. S. W. So. African Depot: LERSON LTD., Cape Town. POTTER DRUG AND CHEM. CO., Sole Props., Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 13TH, 1901.

BIRTH.

On the 6th inst., at No. 1, Yokohama, the wife of HENRY KESWICK, of a Son.

DEATH.

On the 8th inst., at Anping, Formosa, FRIDA, the beloved wife of Mr. R. N. Ohly, and daughter of Mr. and Mrs. Matsuno. The date of the funeral is not yet fixed.

SUMMARY OF NEWS.

THE Royal visit to Singapore cost the Colony \$44,418.24.

IT is reported that there are 14 foreigners in the Nagasaki prison.

THE *Kawahiraki* festival will take place on the Sumida river on or about the 20th inst.

THE French barque *Nantes* has made a record run from Cardiff to Nagasaki of 105 days.

A MAN named Ataka Ujuro (35), living at Sekado-mura, Kasuyagori, Fukuoka Prefecture,

shot two of his younger brothers on the 5th inst. after a quarrel which arose about the division of some property.

A LANDSLIP occurred at Ojika-mura, Shimo Ina-gori, Nagano Prefecture, on the 4th inst. and two men were buried.

MR. NAKABASHI TOKUGORO, President of the Osaka Shosen Kaisha, will leave for China about the end of next month.

FIFTEEN gamblers were arrested by the Nihonbashi Police on the 4th inst. in a house in Kaki-garacho Ichome, Tokyo.

MR. NAKAJIMA, with twelve Chinese students arrived at Shimonoseki from Peking on the 9th, and left for the capital at once.

A BOILER exploded in a paper mill, at Omiya, Fuji-gori, Shizuoka Prefecture, on the 2nd inst. and several persons were injured.

THE fourth number of a magazine called the *Shonen Shiso*, published in Yokohama, was suspended by the authorities on the 5th inst.

THE Iyo Steamship Co.'s steamer No. 5 *Shiikawa Maru* has been purchased by the Hokkaido Iwanai Steamship Co. The price was yen 76,000.

A DYE worker named Kakuta Gitei, living at Hanazakicho Shichome, Yokohama, who has been mad since last November, hanged himself at his house on the 6th inst.

THE roof of the Buddhist temple Jomanji, Tsurui-mura, Shimoge-gori, Oita Prefecture, fell suddenly on the afternoon of the 5th inst. One man was killed and eight wounded.

A SHAMPOOER named Taichiya Genroku, living at Yoshioka-cho, Yokohama, attempted to commit suicide by drowning at Yamabuki-bashi, on the night of the 3rd inst. He was rescued.

AT a meeting on Friday evening the Kobe Rowing and Athletic Club decided by 32 votes to 13 to raise the subscription from 15 to 24 yen per annum and the entrance fee from 10 to 15 yen.

A BALLAST train of the O-U Railway was derailed at Chitose-mura, Higashi Yamagori, Yamagata Prefecture, on the 3rd inst. Five coolies were badly and several slightly injured, while one is not expected to recover.

A FORMER *soshi* actor named Honda Kametaro living at Zaimoku-cho, Asakusa, Tokyo, murdered another man named Kitsuko Yoshiteru, on the afternoon of the 6th inst. The murderer was arrested by the police.

Two young men named Fujishiro Masakiyo and Hoshimi Saji, of Tokyo, employed by the Vedo-bashi Post Office were arrested by the Nihonbashi Police on the 4th inst. charged with stealing several cheques from letters.

A MAN named Yenomoto Kinjiro (22) living at Sakuragicho Ichome, Yokohama, committed suicide by drowning at Okagawa, near Nagashima-bashi, on the night of the 3rd inst. The body was found the following morning.

WE reported last week that a body tied up in straw had been found in the Atsugi river. The Kanagawa authorities have now learnt that the corpse was that of a rich man named Niimura Bungoro, Tochigi, for information regarding whom a reward of yen 1,000 was advertised in all

the Japanese newspapers. He has been missing for some time. His wife Michi and his brother arrived at Yokohama on the 9th inst. to identify the remains.

A MAN named Uge Shoji ran amok with a drawn sword at Izumochi, Oura, Nagasaki, on the night of the 5th inst. Three police constables were injured before the man was arrested. He subsequently died from self-inflicted wounds.

A MAN named Yagi Utanosuke, a native of Hyogo, was arrested by the Kotobuki-cho police on the morning of the 6th inst. and charged with stealing yen 60 and a gold watch belonging to his father. The man fled to Yokohama on the 6th ult.

THE *Gaulois* learns from Russia that the Imperial Academy of Sciences has organised an expedition to bring to St. Petersburg a mammoth which has been found in Siberia in a perfect state of preservation. Measures are to be taken to preserve the internal organs, as well as the flesh and the hide.

BISHOP FOSS has appointed the Rev. Horace McCartie Eyre Price, M.A., to be Archdeacon in the Diocese of Osaka in the room of the late Archdeacon Warren. Mr. Price, who has served in Japan for eleven years, is now Secretary of the C.M.S. Mission for the diocese, and is also Principal of Holy Trinity Divinity College in Osaka.

A STOKER named Robert Campbell was drowned while bathing from the British cruiser *Terrible* at Kobe on Sunday afternoon. A plucky attempt to rescue him was made by H. Plomer, another stoker, but Campbell slipped from his grasp just as the boat came up to them. The deceased, who had been married but was divorced, was a native of Scotland.

THE British cruiser *Iris* left in somewhat of a hurry on Tuesday morning at daybreak in order to meet the *Terrible* at Kobe and put some of her ship's company on board. The *Iris* goes to Hongkong to refit and once there, of course, by reason of the plague, midshipmen or other officers detailed to other vessels would find difficulty in taking up their new posts.

THE Nippon Yusen Kaisha's tow-boat *Hanvei Maru*, towing eight junks, left Yokohama for Tokyo about 5 o'clock on Sunday morning. Messrs. Jardine, Matheson's steamer *Indravelli*, from Hongkong, was making the entrance of the harbour at the time and she struck one of the junks, which sank at once. The crew was saved. The junk was laden with 983 boxes of herrings and 19 tin boxes. Half this cargo was salvaged.

A TEACHER named Okura Risaburo, living at Midoricho, Honjo, Tokyo, drove in a jinrikisha towards Mr. Mogi Yasuhei's villa, at Oimatsucho, Yokohama, on the afternoon of the 9th inst. The jinrikisha struck a small boy at Nogemachi, Shichome, and the fare was thrown from the vehicle, striking his head on a telegraph post. The police sent the injured man to Noge hospital at once, but he died the following afternoon.

A MAN named Kondo Shozo, Vice-Manager of the Togane branch of the Chiba Shogyo Bank, was arrested by the police at Ishinomaki a few days ago and sent to Chiba on a charge of embezzling nearly yen 10,000 belonging to the Bank. He absconded and taking with him a girl from a Chiba restaurant proceeded to Ishinomaki by steamer. There they attempted to commit suicide by drowning but being able to swim he rescued his companion and they returned to their hotel where the police arrested them.

bond system. But the surplus would be quite insufficient to satisfy any other additional claims, were such put forward. It may be taken for granted that Japan, having hitherto loyally subverted her whole policy to the preservation of union among the Powers and to the restoration of peace, will not now insist on pressing a pecuniary demand to the prejudice of those great objects. But her position is undoubtedly very hard. Not only did she base her demand for indemnity on an honest and accurate calculation of the expenses actually incurred by her in prosecuting the campaign, but she also based it on the supposition of a ready-money payment. When, therefore, she is asked to accept bonds which she can not hope to convert into ready money without incurring a loss of 15 or 20 per cent., she certainly becomes entitled to ask for a commensurate increase of the face value of the bonds. It is not a friendly policy on Russia's part to resist such an obviously just demand. Russia herself might fairly ask for some consideration on the same ground. She, too, will be unable to sell her Chinese bonds without suffering a loss. But it will be a very small loss; not more than 2 or 3 per cent. at most, a bagatelle from Russia's point of view. Besides, if strict justice to herself were her only object, she should have proposed the division of the surplus Indemnity between herself and Japan in sums proportionate to the losses they will probably suffer in selling the bonds. We can only hope that the version of this affair reported to Japan may be modified by subsequent events.

Thursday, July 11.

It is reported that the Chinese Plenipotentiaries have received orders from the Throne to entrust the duty of quelling the Lien-chuan-hui to Governor Yuan Shih-kai and another General, and that these two officers are making preparations to despatch a force for the purpose. The chief of the Lien-chuan-hui is said to be a man of considerable literary distinction, and the insurgents are supposed to be acting in collusion with Liu Tien-ling in Hsian and Tung Fuh-shang in Kiang-su. In fact many of Tung's soldiers are said to be enrolled in the Union's ranks. The flags of the Lien-chuan-hui bear the legend "Save China; expel the foreigner."

No one can be surprised that this rising has taken place. The letter sent to *The Times* by its special correspondent removes all doubts as to the shocking barbarities perpetrated by the foreign troops in the Chili campaign. If the Chinese have any of the sentiments possessed by human beings the world over, they must be boiling with indignation and thirsting for revenge. It is scarcely credible that such things should have happened in the 19th century.

Certainly England ought now to enjoy a respite from the malicious jeers of continental journalists who pretend to be shocked because steps are taken to burn the farm of a Boer after he has violated his oath and taken advantage of British clemency to murder British subjects. Farm burning is a mere bagatelle to the deeds that were wrought in China by the soldiers of the nations which have made themselves most conspicuous in their condemnation of British methods in South Africa. The Anglo-Saxon race comes out of the Chinese trouble with a very bright reputation, and we are glad to think that the Japanese are to be included in the same category.

What is official looting? That is a ques-

tion which calls for consideration at present. It has been freely charged against the Japanese that they did not escape the fever of looting in Peking since their soldiers marched to the Government's treasury and granaries and took everything they found in the shape of grain or specie. Is that looting? Certainly it is, in one sense, but it is looting which still receives the highest sanction. The British are doing it all the while in South Africa, and it has been done in every war recorded by history. The property of belligerent governments has always been regarded as the legitimate spoils of a victorious army. It is when the property of private and peaceful citizens is stolen by soldiers that looting, properly so called, really takes place.

The Imperial Court, having been convinced, it is said, that Tung Fuh-shang is actually moving towards Hsian with rebellious aims, has taken measures to check his progress. The guards available in Hsian, however, are not sufficient for the purpose, and a levy of troops has been invited, with the result that great numbers have flocked from Shensi and Honan to answer the call, and some fifteen or sixteen battalions have been organized. There is a difficulty, however, about arming these troops, and the business of the moment is to collect weapons wherever they can be found.

Friday, July 12.

The *Petit Marseillais* publishes an interview with M. du Chaylard, French Consul at Tientsin, who has just returned home by the transport *Nive*, in the course of which he is represented as expressing the fear that the negotiations with China will not be soon concluded. "One has never finished with the cunning of the Chinese Mandarin, and no one can be blind to the fact that this cunning can be exercised with great effect in presence of eight Powers whose demands are necessarily conflicting. As for the future, what I am about to say will appear paradoxical. Nevertheless, it is true. The Boxer revolution has awakened the sentiment of patriotism among the Chinese and has excited among them fierce hatred of the foreigner. Notwithstanding what certain writers may have thought, that hatred did not exist formerly in the Chinaman in an absolute manner. It interested him to trade with foreigners, and it did not appear to him that the national integrity could be endangered by International trade. The Boxers, who in the first instance constituted nothing but a sect, have aroused a spirit of territorial preservation, which has been all the better understood because it was propagated with fanaticism."

Admiral Seymour, at the farewell dinner given to him at Government House, Hong-kong, made the following reference to the two Viceroy's who have done so much to preserve the peace in the Yangtze regions:—"I cannot sit down without just alluding to the two Chinese Viceroy's of the Yangtze upon whom His Excellency has commented. They are both well known to me, and I have the greatest regard for them. They are honourable gentlemen, and the term patriotic is, I consider, the most suitable that could be applied to their ruling. Such patriotic ruling is to the benefit of China, and will tend to the preservation of peace and that good feeling and harmony which ought to exist."

MR. HOSHI'S LIBRARY.

It is stated that Mrs. Hoshi Toru has decided to present the library of her late husband to the Tokyo Municipality. These

books are the principal asset left by the deceased, but his widow feels that she would be acting contrary to his wishes if she converted the library into cash, though she knows that her husband spent some seventy or eighty thousand yen on its acquisition. This is all the more honourable to Mrs. Hoshi as she is not understood to have been left in affluent circumstances. If Mr. Hoshi derived pecuniary advantage from his political opportunities, as there seems to be little doubt that he did, he never attempted to enrich himself, preferring to divide the money among his followers.

Tokyo journals devote much space to Mr. Hoshi's history. All agree that he was born in extremely humble circumstances, his father having been a plasterer or workman of some kind. Great hardships are said to have been endured by his mother, whose struggles for her son's sake were heroic. She finally succeeded in amassing a sum of 50 ryo, and this enabled her to purchase the child's adoption into a samurai's family, which was almost the only available means within reach of a *heimin* for gaining admission to the ranks of the military class.

"THE SPOKEN LANGUAGE OF JAPAN."

Mr. T. Kuroda, of whose "Petit Cours de Japonais" we have already had occasion to speak in high terms, has now published a volume for affording assistance to English and American students of the language of this country. His method is to give a number of progressive phrases and dialogues, each constructed on a model sentence of which a literal translation is prefixed to each dialogue. We are not prepared to say whether a learner gains much by adopting such a method. Of course it is necessary to understand the construction of a Japanese sentence and to be familiar with the proper order of the words, but we are inclined to think that a lucid verbal explanation ought to accompany object lessons designed to convey that information. Mr. Kuroda does, indeed, add verbal explanations, and they will undoubtedly prove of much assistance. What we think, however, is that he might have extended them with advantage to learners and without making his book too bulky. One very strong recommendation possessed by this little volume is that the dialogues are admirably chosen. Every phrase is of a nature likely to prove useful in daily intercourse. If they are open to any criticism, it is that the English renderings are occasionally not perfectly consonant with their Japanese originals. We do not find what could be called an incorrect rendering, but we do find that a student would sometimes be perplexed to connect the precise words of the English sentences with their Japanese equivalents. For example:—*Ita mo doyo desu ga kore demo kutabirete oru toki ni wa kinu no yagu yori mo kekko ni omowaremasu*, is translated "It feels like a board, yet when one is tired out, one can sleep better on it than on silk ones under more fortunate circumstances." The English words we have italicised do not occur in the original, of which the exact rendering is:—"It is like a board; still when one is tired one can think it finer than even silk bed-clothes." Again, *Kono ichi yen wo korowashite kite morainasho* is rendered "Here is a dollar. Go and have it changed for me," which, though it gives the meaning, can not be acquitted of inaccuracy. A little more care would have made this an admirable book, and even as it stands it can not fail to prove of great assistance to students.

KOREAN NEWS.

Saturday, July 6.

It is reported from Korea that Li Yong-ik, who seems to be generally regarded as pro-Russian and anti-Japanese, has memorialized the Throne in the sense that the small arms purchased by Korea from Japan are not effective weapons. The consequence of this representation is said to be that the Emperor has forbidden the arming of the guards with the Japanese rifle. One might have hoped that such matters would remain outside the eale of political intrigues, but Korea is evidently fated to be a centre of strife.

Monday, July 8.

Li Yong-ik appears to be continuing his intrigues in Söul very vigorously. He is said to be now endeavouring to obtain the post of president of the judicial department in order that he may be in a position to order the arrest of Cho Pyong-sik, who made himself conspicuous in opposing the Yunnan loan.

The original arrangement with regard to the Söul-Fusan Railway was that the Korean Government should buy up the land required for the line, and should hand it over to the Company. But the Korean Government experiences some difficulty in carrying out that arrangement owing to lack of funds. The present idea, therefore, is that the Company should lend the necessary money to the Government. Probably the sum would not be large as the price of the land is estimated at only 360 yen per acre. The company will decide, it is thought, to deal with this question in a resolute manner, as it would be regrettable should such an impediment postpone the building of the line.

France's doings in Korea seem to be attracting some attention in Japan. The *Yomiuri Shinbun* has a strong article on the subject. It charges France with assuming a degree of political activity which can not conduce to the maintenance of peace in the peninsula. Russia is looking on and encouraging France, for Russia does not want anything more than a good harbour in Korea, and she knows that France's influence can not be other than helpful to her in achieving that purpose. But she avoids any open association with French doings, her purpose being to take advantage of them if they succeed and to repudiate them if they fail. The *Yomiuri* bases this estimate of France's activity on the Quelpart affair, the Yunnan loan, and the proceedings of the Roman Catholic Missionaries, but it does not attempt to demonstrate that French statesmen have shown themselves at all aggressive or unreasonable in these cases. It thinks, however, that France allows herself to be made a mere cat's-paw by Russia, and that she will suffer in the long run.

Wednesday, July 10.

Major Nozu, who is credited with an intimate knowledge of Korean affairs, alleges, speaking through the columns of the *Chiuo*, that the Yunnan Syndicate loan may be regarded at an accomplished fact. The chief of the Syndicate has the agreement in his pocket and is now engaged trying to obtain the money in Shanghai. That view is borne out by the last issue of *The Korea Review*, where we read:—"There seems to be little doubt that the French loan will become an accomplished fact. That very many of the highest officials are desperately opposed to it can not be denied, but the Government is in great need of funds, and the pressure brought to bear has been enormous." As for the uses to which the loan will be put, Major Nozu pre-

dicts that the money will be wasted, and that Korea will presently be found as impecunious as ever. He mentions that Li Yong-ik, the chief advocate of the loan, whose pro-Russian proclivities are proverbial, wields great power in Korea, being practically at the head of the finances and of the army. The Koreans, he also declares, are making rapid strides in military matters. They have an excellent school of officers where some 500 students are being trained, and they have fifteen thousand troops in the provincial districts and eight thousand in Söul. Their system of tactics is not in strict accord with that of any foreign country, being, in fact, a modification of their own old methods, but apparently Major Nozu thinks highly of it.

The *Korea Review* gives the following "free translation" of the report sent to the Government in Söul by Yi Cha-ho, the Quelpart Magistrate, in whose district the recent riots took place:—

The difficulty arose from two causes; for two years the tax-collectors have been levying excessive toll on the people of the island and in the second place the Roman Catholic adherents have been playing a very high hand. If the excesses of the tax gatherers, such as plundering houses, seizing fields, binding and beating the people, be not stopped, and if the Roman Catholic adherents be not restrained from forcing people into the Church matters are sure to get beyond control. On May 14th (28th of 3rd moon) the people congregated at a point ten li south of the town of Che-ju and conferred together about their wrongs. Soon two French priests appeared on the scene with 300 armed followers and attempted to scatter the crowd. In this attempt one of the crowd was severely wounded in the leg. The leader of the crowd was seized with five others and carried captive to the Church. The Magistrate forthwith went out of the town and ordered the people to retire. While this was going on the Church party entered the town, seized all the arms and ammunition, barred the gate of the town and terrorized the people by firing upon them and killing one and wounding three others. By this time the people were thoroughly aroused. The sight of blood had made them quite reckless. They called in all the hunters that could be found and attacked the Roman Catholic position, killing eight or nine of them. They forced their way into the town and released the men whom the Church faction had seized. The latter seeing that things were likely to go hard with them scattered and the two French priests by the aid of Kim Heui-ju made their escape.

The people thereupon wrote a circular letter to every town and village and large numbers of Catholic adherents were seized and killed. Forty or fifty a day were massacred and on the 27th of May 250 Roman Catholics were killed. These were men who had scattered throughout the country trying to find a hiding place. Two men, Chang Yun-sun and Ch'oe Sun-hyang, who had been banished to the island, and had joined the Church, were pursued. The former was caught and killed and the latter escaped by boat to the mainland, and sent a telegram from Mokpo to the French Legation in Söul. One hundred soldiers of the Kang-wa guard accompanied by Mr. Sands, of the Imperial Household Department, and one hundred of the Kwang-ju guard went to Quelpart on a French man-of-war and on June 2nd the soldiers landed and were welcomed by the authorities. A second body of 200 troops was sent later but by this time the revolt had been put down and everything was quiet.

Our readers will remember that Cho Pyong-sik was reported originally to be a strong supporter of the Yunnan loan, whereas he subsequently changed his mind and opposed it. We can not discover in the columns of the *Korea Review* any evidence of such a change. Cho Pyong-sik is there represented as "sternly opposed to the floating of the loan." The *Review* confirms the report received in Japan a few days ago that the Korean officials interested in the transaction are endeavouring to have Cho arraigned before the Courts. It sounds strange in modern ears that a statesman should be exposed to criminal prosecution because he opposes a financial transaction which he deems injurious to his country's interests.

The *Osaka Asahi* publishes the following statistics showing the number of Japanese residents in Korea at the end of last month:—

	Males.	Females.	Total.
Inchhon	2,455	1,977	4,432
Söul	1,332	1,034	2,366
Wönsan	831	652	1,482
Mokpho	526	370	896
Yunsan	296	190	486
Chinnampo	253	143	396
Masan	172	79	251
Pyongyang	105	65	120
Joshin	30	21	51
Total	6,000	4,531	10,531

Friday, July 12.

A Korean General is said to have proceeded from Pyöng-yang to Wiju, taking with him 600 stand of rifles and fifty thousand rounds of ammunition.

The Russian Representative in Söul is reported to have waited on the Emperor of Korea on the 6th instant, and to have informed His Majesty that although Russia was adopting vigorous measures to suppress the outbreak in the Antung district, it was not impossible that the insurgents might cross the border into Korean territory. His Majesty would therefore be well advised to adopt efficient measures for the protection of the frontier.

THE LAMA.

It appears that the Lama who has arrived in Japan is not the Dalai Lama of Thibet, as was originally reported, but the high prelate of the Yung-ho-kung, the chief Lama monastery in Peking, which is under the protection of the Imperial Court and is regarded as a distinguished seat of learning, being, in fact, a species of theological seminary of Lamaism. The arrival of this dignitary with a considerable following of priests is welcomed by the Japanese as an unequivocal evidence that ancient prejudices are disappearing. There is a close resemblance between the doctrines of Lamaism and those of the Shingon (true gospel) sect of Japan, and persistent efforts have been made by disciples of the latter to gain access to Thibet and study the scriptures preserved at Lassa. Failure has been the result in every case, and it is naturally thought that the coming of the Peking Lama may lead to a more liberal attitude on the part of the Thibetan brotherhood. In the suite of the Lama there is a Japanese priest, Mr. Teramoto, who proceeded to Peking some years ago, and, failing to obtain a passport for continuing his journey to Lassa, returned to Shanghai and attempted to achieve his purpose *via* Szechuan. He encountered terrible hardships and had to return *re infecta*. We may remark, *en passant*, that the coincidence of a Tibetan religious mission to Russia and the coming of the Yung-ho-kung Lama to Japan is at least interesting.

PLAGUE.

The Municipal Authorities of Tokyo are evidently determined not to relax their precautions against the plague although no signs of its invading the city are apparent. They have just obtained the City Assembly's permission to commence a new crusade against rats, this time by a system of rewards instead of by paying so much per rat. They offer one prize of 100 yen; eight of 50 yen; eight of 20 yen, eight of 10 yen, forty-eight of 5 yen and four hundred of 1 yen. These prizes will be allotted after the total number of rats captured reaches 200,000.

MR. KONDO REMPEI.

Mr. Kondo Rempei, President of the Nippon Yusen Kaisha, speaking on the 5th instant at the meeting of the Japan Club in the Nobles' Club to an audience of about 50 persons, including many distinguished names, dwelt on the truth of the old Chinese saying that to be liked by one's neighbours one must begin by liking them, and in order to obtain profit from one's neighbours, one must endeavour that they also shall profit. He had been reminded of this by the remarkably kind treatment he received at the hands of foreigners during his recent trip to Europe and America. To mention some instances. When crossing the frontier into Canada, the customs officials began to turn out the contents of his trunks in a very rough manner. Observing his annoyance they asked for his card, and on seeing who he was, they immediately apologised and allowed him to pass without further examination. He happened to be in London at the time of the Queen's funeral, and as his hotel was favourably situated for viewing the procession, most of the Japanese in London assembled there. It chanced, however, that the Consul and Mrs. Arakawa were late in arriving, and in order to reach the hotel it became necessary for them to cross the line of procession, an almost impossible feat owing to the enormous crowds. An English gentleman observing their fruitless efforts, went and spoke to the Colonel commanding the troops that guarded the line of route, and that officer at once made arrangements to pass Mr. and Mrs. Arakawa. It was impossible not to contrast such treatment with that which foreigners used to encounter if they attempted to pass a Japanese procession in former times. In Russia, too, Mr. Kondo met with the greatest civility and kindness. He had expected difficulties, but his passport carried him everywhere without the slightest friction. He happened to be travelling by train on the birthday of the Emperor of Japan, and he invited his fellow-passengers into the dining car to drink the health of His Majesty, a toast to which they responded with the utmost enthusiasm. Wherever he went he experienced only kindness and courtesy. His countrymen talked much of the introduction of foreign capital, and no doubt there were many foreigners who regarded Japan as a promising field of enterprise. But when these foreigners attempted to carry their ideas into practice, they found that their motives were misconstrued and their proceedings looked at with suspicion by the Japanese. The introduction of foreign capital would be of the highest value not to individual Japanese only but to Japanese companies and to the country at large. To induce capital to come, however, it was essential that the people of Japan should show a different mood.

It is much to be desired that Mr. Kondo's shrewd and sensible views should find many expounders. If we were asked to name the principal obstacle to Japan's material benefit at the present time, we should have no hesitation in pointing to her people's failure to recognise and act upon the commercial truism that no transaction can be really successful unless it confers benefit upon both the operating parties.

POLITICAL NOTES.

We can not agree that a Japanese Cabinet is very blameworthy now-a-days if it pays a good deal of attention to the mood of political parties, nor do we think that the

leader of the Progressists is in a position to pronounce that criticism, as Count Okuma is represented to have done, speaking to a member of the *Nippon's* staff. Certainly onlookers see plainly enough that the stage has been occupied over long by party interactions and personal adjustments. The audience is growing weary, and public applause would surely be won by a Ministry which, casting away all thought for the permanence of its own tenure of power and for the temper of the Diet, set its hand resolutely to the plough of reform. But we recall two things: first, that the Progressists themselves have always been the most implacable enemies of the Senior Statesmen and have been mainly instrumental in teaching the latter the hopelessness of attempting to administer affairs without political support; secondly, that when the Okuma-Itagaki Cabinet was in power, its useful potentialities were conspicuously hampered by party influences. The time has not come, therefore, for the Progressists to sit in judgment upon that phase of contemporary history.

After all, no one can deny that there has been substantial progress in the political world of Japan during the past ten years. The day has gone when opposition was tolerable merely for opposition's sake. Could the tumult and turmoil of the early parliamentary era be repeated now? Would the country endure the spectacle of a Ministry baited and bullied merely because it is a Ministry? Scarcely, we think. Men have learned now that if they desire a respectable combat, they must have a comprehensible reason, not a mere lust, for fighting. That is something. One consequence is that the present Cabinet will probably remain undisturbed for a longer period than could have been possible had it taken office under similar circumstances a few years ago.

We reported recently that it was proposed to put forward Mr. Tsuzuki Keiroku as successor to Mr. Hoshi Toru for the position of member of the City Council and President of the City Assembly. Mr. Tsuzuki, however, declined to endorse the project, and Marquis Ito then nominated Baron Kaneko as the *Seiyun-kai's* candidate for the two positions. Baron Kaneko showed much reluctance to agree, apparently because he has never approved of the intrusion of party politics into municipal affairs. His scruples were at length overcome, however. There can be no doubt, it is said, that the City Council will nominate him to Mr. Hoshi's position, but the choice which the City Assembly may decide to make is an open question. There is believed to be a strong disposition to elect as president Mr. Suyeyoshi Tadaharu, who has served for many years as a member of the Assembly and whose reputation for integrity is beyond all reproach. Whichever of these two candidates be elected, the system of "boss" politics will come to an end in the affairs of the Tokyo Municipality.

The Hokkaido branch of the *Seiyun-kai* held a meeting in Sapporo on the 5th instant, when addresses were delivered by Messrs. Kataoka Kenkichi, Ozaki Yukiyo and Yokoi Tokiyo. We may remark, *en passant*, that Mr. Yokoi, formerly President of the Doshisha, is now a prominent figure in the world of politics. The meeting passed many resolutions, some being of the stereotyped kind—administrative reform, financial adjustment, and so forth—but others pointing to a vigorous policy for developing the resources of Hokkaido by reclaiming new districts, building railways, constructing

harbours, amending the fishery system, changing the mining laws, establishing a Hokkaido University, organizing a Hokkaido prefectural assembly, and so on.

The *Seiyun-kai's* candidates have been successful at both the municipal elections in Tokyo. Mr. Suyeyoshi Tadaharu having been elected to be president of the City Assembly in opposition to Mr. Shiro Kazuma, the Progressist candidate, and Baron Kaneko having been chosen a member of the Municipal Council in opposition to Dr. Takagi.

The Opposition journals find in this incident an opportunity to charge Marquis Ito with inconsistency, for whereas he has habitually denounced the abuse of importing party politics into local administrative affairs, he nominated Baron Kaneko as a candidate for the Municipal Council. It appears to us that this is a very shallow accusation. There is all the difference in the world between contending, on the one hand, that local administrative interest should not be subserved to the squabbles of political parties and, on the other, that no man connected with a political party should take a share in local administration. The former, as we understand the matter, is Marquis Ito's argument; the latter is what the proposition of his critics means when pushed to its logical conclusion. If all party politicians are to be excluded from the local administrations, it is not easy to see what material would be available. Marquis Ito has certainly never been so extravagant as to allege that association with a political party disqualifies a man to be a member of a municipal council or president of a local assembly. His contention is that party politicians should not allow their party connexions to blind them to interests which have nothing to do with parties. It was left for his critics to display precisely the confusion of mind which shows how necessary his warnings have been. The belief of the journals now attacking him would seem to be that every member of a political party must carry party prejudices and party passions to the discharge of every duty he undertakes.

THE MOVEMENTS OF TUNG.

It is reported that a secret messenger from Tung Fu-shing has been apprehended, and that according to information obtained from him, he was on his way to Tien, the leader of the Lien-chuan-hui, carrying a statement of Tung's plan, which was to set a large army in immediate motion for Tai-yuen. This design has been interrupted by the rainy season, but has not been abandoned, and will be carried out with all expedition so soon as an opportunity offers. The Chinese Plenipotentiaries, Li and Ching, are represented as having expressed the opinion that this capture of a so-called "secret messenger" is a device to obtain a reward from the Throne. Further details are therefore awaited before placing credence in the report.

THE BREITSCHUCK-MARQUARDT CONCERT COMPANY.

We learn that Herr Johann Marquardt, the talented violinist, and Madame Alexandra Breitschuck-Marquardt, the no-less gifted harpist, are on their way to Japan and will arrive on the P. M. steamer *China*, due here on July 17th. They have been playing in Australia and come last from Honolulu on their way home. The lady, it may be noted, is daughter of the celebrated harper, Mr. Herman Breitschuck. Both are written of in eulogistic terms.

THE COMMAND-IN-CHIEF IN CHILI.

The Special Correspondent of *The Times* confirms what has already appeared in Japanese journals, namely, that the only foreign troops which really acted under the orders of Field Marshal Waldersee were the British and the Japanese. The Russians took the practical course of withdrawing their forces from Chili; the Americans from the outset openly declined to recognise the Field Marshal, and the French, though not equally explicit, never pretended to be under his orders. Thus the British and the Japanese alone remained. The correspondent justly points out that in agreeing to place its soldiers under the command of a foreign officer, the British Government ought to have stipulated that the troops of all the Powers should be on the same footing. But no such condition was imposed, and thus the curious spectacle was witnessed of an English force taking its orders from a German General while the French, the Americans and the Russians acted independently. Further, it appears that the Field Marshal construed his appointment as chief in the most literal sense. Although the British effective force was as numerous as the German—namely, 14,000 in the fighting line—the Field Marshal's Staff was composed exclusively of Germans, and he did not consider it necessary to hold any consultation whatsoever with British officers as to the operations he projected. It was thus that, when he made preparations for a general advance at a moment of hesitation on the part of the Chinese negotiators, Lord Cranborne had to admit in the House of Commons that he knew nothing whatever about the intended movement. Naturally this apparent neglect of their position left some soreness in the minds of the British officers. It should be observed, however, that *The Times* correspondent is careful not to prefer any charge against the Field Marshal. He writes:—"I must disclaim at the outset any intention of disputing the construction which Field-Marshal Count von Waldersee has placed upon the powers with which he believed himself to be invested when the British Government agreed to his appointment. The prestige of his rank and reputation remains unchallenged, and the personal tactfulness and friendly spirit with which he has discharged his duties, as he conceived them, towards the British force placed under his command are universally recognized. I wish equally to avoid, as far as possible, saying anything that might offend the legitimate susceptibilities of a great military nation with whom it may be hoped we shall long continue to co-operate on mutually satisfactory terms in China as in other parts of the world."

ENTERPRISES IN ECHIGO.

Count Okuma has been lecturing the people of Echigo upon their thoughtless excitement over the oil question. Every inhabitant of the province thinks he has an oil well in his garden or under the floor of his kitchen. Even were such the case, it is plain that to work that source of wealth successfully, some kind of organization is necessary. The teaching of experience is uniform in such matters. What is too much for the strength of the individual, the family undertakes; what is too much for the family, the company undertakes; what is too much for the company the trust undertakes. But the ideas of the Echigo folks do not

extend beyond individual effort. Every man works for his own hand, the only result being debilitated effort and ruinous competition. Finally the eagle swoops down and carries off the prey. If a great enterprise is to be really successful, the profit of the nation must be considered as well as the profit of the individual.

There is a certain element of obscurity in the Count's utterances as reported by a Tokyo contemporary, but the conclusion formed by his audience, we imagine, is that they were urged to combine against the International Oil Company. Now the International Oil Company is by no means a purely American concern. It is a combination of Japanese subjects and American citizens. It is, indeed, precisely the kind of association which may be regarded as an efficient instrument for developing Japan's resources in the most rapid and successful manner. How many years must have elapsed, we wonder, before unaided Japanese strength would have done in Echigo what the International Company has done in a few months? Japanese business capacity has never struck us as very remarkable, but we have a better opinion of the common sense of the Japanese people than to suppose that they will fight against foreign assistance in conducting enterprises which without that assistance are beyond their strength.

THE WEATHER.

Saturday, July 6.

The chief centre of depression which invaded Japan on the 25th of June, and after deluging Kiushiu, travelled northward via the Kansei districts, seems to have reached Hokkaido on the 2nd of July, so that the north of Japan enjoyed a downpour of rain not less violent and persistent than that experienced in Kiushiu. In the central regions, however, a spell of dry though cloudy weather succeeded the weary days of rain, and on Thursday morning Tokyo saw the sun once more. But the Meteorological Authorities will not suffer us to live in a fool's paradise. They announce that another barometrical depression appeared in Formosa on the 1st instant. Its centre has not been located at this moment, but its vicinity was quickly acknowledged by the mercury in Kiushiu, which fell to 75.2 m.m. on the 2nd instant, and once more the rain descended in floods. Whether this new disturbance will travel along the West of Kiushiu and thence make its way to Korea, or whether it will have the bad grace to shape a course over the mainland of Japan, remains to be seen. In either case the Meteorologists of Tokyo are disposed to think that we must look for more rain.

Monday, July 8.

The rain of Saturday and Sunday resulted from a small depression which appeared in the Sea of Japan on the morning of the 6th, and passed thence to Sado Bay. This is not the Formosan depression from which such bad things were anticipated. The latter seems to have taken a route innocuous to Japan, so that the rain of the 6th and 7th did not visit the south and west, being confined chiefly to the eastern coast. It is therefore expected that we shall soon see clear skies again. The quantity of rain that fell in Tokyo from the 30th of June to 2 p.m. on the afternoon of July 6th was 119 millimeters, being considerably in excess of the average fall during the wet season.

A HIGH-COLLAR SUIT FOR LIBEL.

Mr. Matsumoto Kumpei has lost his suit for libel against the *Asahi Shimbun*, and very sincerely we regret to have to record the fact. The *Asahi* published a most insulting and libellous paragraph, in which it charged Mr. Matsumoto with various doings which, though none of them was criminal, were all inconsistent with the conduct of a self-respecting gentleman. The newspaper made it quite plain that the origin of its animosity was Mr. Matsumoto's predilection for foreign ways. It described him as one of the chiefs of the "High Collar Party," and it strenuously endeavoured to render him an object of public ridicule and contempt. The judge of the District Court nevertheless ruled that the acts attributed to Mr. Matsumoto could not be regarded as falling within the category of *akuiji* (wickedness) or *shūkō* (disgraceful conduct) described by the law of libel, and that his suit must fail. Truly that is a remarkable judgment. Apparently newspapers are to be free in Japan to pen any insults they please against private individuals. We do not know whether Mr. Matsumoto Kumpei occupies a responsible position at present, but we are very sure that he could not possibly hold any such position if a leading journal with a large circulation like the *Asahi* were permitted to intrude into his private affairs and to represent them in a disgraceful light. The result of such judgments is easily foreseen. If men can not obtain from the law courts protection against the unbridled licence and insolence of newspapers, they will inevitably take the law into their own hands.

We observe with much satisfaction that the *Fiji Shimpō* takes the same ground as we did ourselves with regard to the judgment of the Court in the libel suit brought by Mr. Matsumoto Kumpei against the *Asahi*. The *Kokumin* also translates our comments. It is permissible to hope that the efforts of these influential journals will result in obtaining some protection for private individuals against journalistic licence.

The Public Procurator has appealed against the judgment of the Tokyo District Court in the action for libel brought by Mr. Matsumoto Kumpei against the *Asahi Shimbun*. The details of this case have already been published by us.

THE PERRY MONUMENT.

The papers state that as the accommodation available at Kurihama is very limited, it has been decided not to admit to the ceremony of unveiling the Perry monument any persons except those that have subscribed 10 *yen* or upwards. In Yokohama a celebration is to take place in the Oriental Hotel, under the auspices of the Governor. The admission will be 15 *yen*. In Tokyo there will be a similar affair at the Imperial Hotel, Governor Baron Senge presiding.

The *Kokumin Shimbun* has a long and most sympathetic article on the subject of the Perry monument. It notes that the Emperor gave *yen* 1,000, Colonel Buck *yen* 300, the American Trading Company, *yen* 500, the Mitsui Company *yen* 500, and so on, showing that Japanese and Americans have exhibited equal interest in promoting this affair. The United States Government, it is said, is

sending its Admiral on this station and the Governor of the Philippines, to take part in the ceremony, while the Japanese Government is arranging for the presence of the *Hatsuse* (line-of-battle ship), the *Fuso* (2nd class line-of-battle ship), the *Kongo* (3rd class coast-defence ship) and the *Amaki* (2nd class gun-boat). The idea of selecting these vessels is to show the oldest ships of the Japanese navy, the *Amaki*, the *Kongo*, and the *Fuso*, side by side with one of the newest and finest ships not only in Japan but also in the whole world, the *Hatsuse*. The demonstration has become essentially a display of international good-feeling. Our contemporary dwells much on the uniform friendliness shown by the United States to Japan. Its article shows that America's good offices, commencing with Commodore Perry and continuing through the days of Mr. Townsend Harris to the return of the Shimonoseki Indemnity and the attitude of Washington towards Treaty Revision, are duly appreciated by the Japanese people, and that they regard America as their best friend among the nations.

The Governor of the Philippines reached Nagasaki on the 9th inst. and, after a delay of one day, continued his journey to Kobe, whence he will proceed by train to Yokohama in order to be in time for the ceremony of unveiling the Perry Monument on Sunday next.

It is understood that a number of the missionaries have protested against the holding of this ceremony on Sunday. Their protest is intelligible from their point of view, but they can scarcely expect that the principles of strict Christianity should be respected in Japan. In this case, too, we may add the qualifier "Anglo-Saxon Christianity," for in no country of continental Europe would such a ceremony seem improper on the Sabbath.

In connexion with the subject of the Perry Monument, the *fiji Shimpō*, while according to America the full credit of having opened Japan and inaugurated the country's new career of progress, observes that had not Japan's mood been already more or less prepared for the light of Western civilisation, even Perry's coming must have proved comparatively abortive. Who then were the pioneers of that preparation? They were Mayeno Ryotaku and Sugita Gempaku, who, on the 18th of April, 1771, obtained possession of the corpse of a criminal executed at Senju-no-Kotsugahara, and having dissected it, found that the structure of the human body was exactly as described by the Dutch scientists in a book which Sugita had obtained at Deshima. Of course this verification was not a matter of a moment. Mayeno, Sugita and their fellow-students had to render the book into Japanese before they could fully assure themselves of its truth, and the labour of making that translation without the aid of a dictionary and with the knowledge that to be discovered at the work meant imprisonment, if not death, is a record of which the Japanese may reasonably be proud. Doubtless the plates in the book furnished the first indication. The work of comparison and translation was commenced on the 19th of April in the dwelling of Mayeno within the compound of the Okudaira Yashiki at Teppozu (Tsukiji), and the result was a volume called *Rangaku Koto-hajime*, which is preserved to this day in the Okudaira family. The *fiji* suggests that these brave students, the real pioneers of Western civilization in Japan, who commenced their labour just 130 years ago,

deserve some national recognition of their work, and that as the place where they met to conduct their investigations is clearly known, and the original volume which they translated is kept among the treasures of the Okudaira family, a monument should be erected at the spot and the book should be placed under it.

The following is the programme of the ceremony which is to take place at Kurihama on July 14th:—

7.45 a.m. The guests will leave Shimbashi by special train.

8.32 a.m. They will arrive at Yokohama station, whence they will be conveyed at once by junks to the Custom-house Pier.

9.00 a.m. The *Hakui Maru* will leave the Pier with the guests.

11.00 a.m. She will arrive at Kurihama.

The Chairman and members of the Memorial Committee will receive the guests at the entrance of the enclosure where the unveiling will take place.

The guests will take their seats in the enclosure.

The Memorial will then be unveiled and an address given by the President of the Hei-yu-Kyokwai.

Congratulatory addresses will be given by

The United States Minister.

A Minister of State.

The Commander of the United States Squadron.

The Governor of Kanagawa-Ken.

Rear-Admiral Beardslee, U.S.A.

Presenting of arms by the Rifle corps sent as

Guard of Honour from the Japanese Men-of-war.

Refreshments will then be offered.

Music and a display of fireworks will be given in the course of the proceedings.

At 3.00 p.m., the *Hakui Maru* will leave with the guests for Yokohama.

THE LAW COURTS.

Evidently the intention of altering the organization of the law courts is gathering strength. The judges, with one solitary exception, are apparently in favour of a radical change, and Baron Kaneko, when he held the portfolio of Justice, strongly advocated some reform. Several plans are under consideration. The first and simplest is to modify the collegiate system, by reducing the number of judges for the trial of a case in the Court of Cassation from 7 to 5, and in the Courts of Appeal from 5 to 3, while in the Local Courts a single judge, or two or three judges, might adjudicate according to the nature of the case. The second project is either to reduce the number of Courts of Appeal or to equalize the districts over which they exercise jurisdiction. It appears that the jurisdiction of the Nagoya Court of Appeal extends to only three districts, whereas that of the Osaka Court extends to no less than eleven, the result being that the Osaka judges find it impossible to discharge their business within reasonable limits of time, whereas the Nagoya officials are not fully occupied. If it be not possible to equalize the extent of the various jurisdictions, the advocates of this change advise that some of the Courts of Appeal should be abolished altogether. The third plan is the least drastic: it recommends nothing more than the abolition of certain local courts which are now superfluous in practice. Another suggestion is to change the present system of emoluments. Judges and public procurators are now divided into 16 classes and a man's salary depends on the class to which he belongs, the difference between each class being 100 yen annually. It is affirmed that the effect of this system is to make judicial officials over-anxious to rise from class to class, and that the better plan would be to equalize the salaries of all judges and all public procurators. Another criticism is that the judges of the District Courts are too young to discharge the functions of conciliation. There used to be in each District Court a section called the *Chian Saiban-*

sho (Court of Conciliation), charged with the duty of effecting arrangements between suitors before they carried their case into Court. This has been abolished, and the judges now sit for such purposes in chambers, when occasion offers. But litigants are not willing to accept the mediation of such youthful juris-consults, many of whom have only just left college. Therefore it is recommended that special judges of age and experience should be appointed to undertake the work of conciliation, as the number of matters actually coming up for litigation would thus be greatly reduced.

It will be observed that nearly all these proposals are influenced by a desire to expedite the course of justice. Undoubtedly the law's delays are serious at present. There recently came under our own observation a case of a man arrested last fall for pawning and selling goods entrusted to his care. His case has not yet been disposed of, though no further evidence was required, or is sought for, than that collected at the preliminary examination. We are disposed to think that though the present system has its advantages, it has also the drawback of disposing the judges to attach undue importance to the preliminary examinations. A judge shows great reluctance to take up a case with the details of which he has not been acquainted from the first, and one result is that if the judge who has hitherto had charge of the matter happens to fall sick, proceedings are suspended until his recovery. In the Local Courts three judges form a panel, and it is therefore necessary that all three should remain in sound health and at their posts from first to last if a trial is to proceed without interruption. Perhaps that is a defect incidental to the collegiate system rather than to the cause we are here assigning, but at any rate it is a defect which unduly impedes the course of justice. After all, the basic fact is that the number of available judges is insufficient.

THE LOCAL TAXES.

Tokyo journals announce that the recalcitrant land-renters of Yokohama have, for the most part, paid their taxes, and that only some thirty defaulters now remain, against whom the local authorities are preparing to take resolute measures.

In connexion with this incident a curious illustration is furnished of the loose methods of Japanese journalism. On the 3rd instant the *Asahi* published a paragraph describing how Mr. J. F. Lowder had paid his house tax, sending with the money a covering letter in which he frankly declared his conviction that the tax was legally leviable. This action was highly applauded by our contemporary, and referred to as an example of the impartiality of a first-class English barrister. But on the 4th instant—that is to say, in its very next issue—this same *Asahi*, announcing the fact that the Yokohama defaulters had paid up, described Messrs. J. F. Lowder and C. K. Martin as the ringleaders of the recalcitrants. That is certainly a quaint example of inconsistency.

We desire to enter a protest against the assault made upon Mr. Lowder by the *Japan Herald*. Our contemporary condemns Mr. Lowder in vehement terms for paying his house tax, and even goes so far as to accuse him of extreme "self conceit and impudence" in "putting himself in direct opposition" to the Law Officers of the British Crown. Such an accusation sounds strange in the context of the complaint with which

the *Japan Herald* prefaces its article, namely, that this community's reluctance to engage in controversy in the correspondence columns of the local journals betrays a marked deficiency of public spirit. Undoubtedly the community does make little use of the local journals' correspondence column, but is not the cause of that reluctance made evident by the *Japan Herald* itself? If to take a bold stand with regard to any question is to expose oneself to attacks such as that penned by our contemporary against Mr. Lowder, is anything but reticence to be expected? That, however, is a minor point compared with the *Japan Herald's* deliberate and avowed attempt to convict Mr. Lowder of unworthy motives. It attributes his views about the house tax, not to any honest sense of their justice, but to "petty jealousy" of a professional rival who takes the opposite view, and to a desire to "earn the goodwill of the Government whose pensioner he is." Nothing is to be more heartily deprecated than this search for motives and their substitution for logical reasoning. It is a contemptible and disgraceful method of controversy. And in Mr. Lowder's case the injustice is doubly flagrant, for it is matter of public knowledge that could he have sacrificed his convictions to his interest, he would have been entrusted with the very business which he is now accused of grudging to a rival.

PRINCE MICHI.

The little Prince Michi was carried to Count Kawamura's house in Igura on the 7th instant. Great ceremonies attended the affair, and the three districts of Shiba, Azabu and Akasaka were decorated with flags in honour of the occasion. Marquis and Marchioness Saigo received the baby at the entrance of Count Kawamura's house, and conveyed it to the upper storey. A considerable party of Court officials attended the ceremony. It appears that the Count's family have removed elsewhere, and that only he and the Countess remain at Igura to superintend the rearing of the little Prince. It need scarcely be said that a large staff of physicians and other attendants will have their quarters in the house. An addition is about to be built at the Count's Numazu villa for the occasional accommodation of the baby boy. Japanese newspapers, describing the arrangements, mention that the lady who has been honoured with the appointment of nurse will always be obliged to have her face covered when she gives nourishment to the Prince.

The Emperor and Empress paid a visit to the Prince and Princess Imperial at the Aoyama Palace on the 6th instant, to congratulate Their Imperial Highnesses on the birth of Prince Michi. Prince Michi has hitherto been nourished partly by his own mother and partly with preserved milk. He is said to be a very lusty baby. But it has now become necessary to provide a wet nurse. The Prince and Princess Imperial and the little Prince are expected to proceed to Nikko on the 24th or the 25th instant. The Princesses Tsune and Kane are to spend this summer at Hakone, and the Princesses Fumi and Yasu will go to Miyanoshiba.

TOKYO ACADEMY OF MUSIC.

The graduating exercises of the Tokyo Academy of Music took place at the Music School, Ueno Park, on the afternoon of the 6th instant. We append the programme. The musical items were excellently rendered, reflecting much credit

upon all concerned. In the matter of individual performers, the laurels of the day were carried off by Miss Mayeda, whose violin solo with pianoforte accompaniment received much applause. All the pieces, however, gave evidence of careful and conscientious preparation, and several of them rose much above the level of ordinary graduation performances.

PROGRAMME.

PART I.

- I.—Report.
- II.—Songs by the graduating class.
- III.—Presentation of Diplomas.
- IV.—Vocal duet by the members of the graduating class.
- V.—Address to the graduating class by Riusci Watanabe, Director of the Academy.
- VI.—Address by His Excellency Dr. Kikuchi, Minister of State for Education.
- VIII.—Song by the students of the Academy.

PART II.

- I.—ORCHESTRA :
LargoHändel.
Graduates and others.
- II.—CHORUS :
a. Der alte BarbarossaSilcher.
b. Der Soldat "
Members of Preparatory Course.
- III.—ORGAN SOLO :
Andante Tranquillo (Aus der Sonata III.)
S. Saito (graduate). Mendelssohn.
- IV.—VIOLINS :
a. SarabandaBach.
b. Bourée "
Misses Mayeda, Amano, Yasui (graduates).
- V.—FEMALE CHORUS :
a. Gesang aus Ossian (Fingal)Brahms.
b. Der Gärtner (Eichendorff) "
Students of the Academy.
- VI.—VIOLIN WITH ORGAN :
Adagio CantabileNardini.
Misses Yasui and Wada (graduates).
- VII.—PIANO SOLO :
Menuet a l'antiquePaderewski.
Miss Sakurai (graduate).
- VIII.—CHORUS WITH STRING ORCHESTRA & ORGAN :
Elegischer GesangBeethoven.
Students of the Academy.
- IX.—VIOLIN SOLO :
ConcertinoSitt.
Miss Mayeda (graduate).
- X.—CHORUS WITH ORCHESTRA :
HallelujahHändel.
Students of the Academy.

NOTES ON CURRENT EVENTS.

The *Asahi* declares that Mr. Schilling's talk of tramping all round the world on foot without once riding on horseback or in a train is all "bunkum." He has been travelling freely by train in Japan, the only precaution taken by him being to enter and leave the carriage at some out-of-the-way station. Our contemporary mentions a number of instances of this kind. The matter is not of much public interest, but inasmuch as this person was more or less lionized in Yokohama and Tokyo, these facts deserve a paragraph.

Steps are being taken to arrange for a parcels post between Japan and the United States. It will be a great convenience when this matter is settled. At present, people wanting to send parcels by post to Europe must choose the Canadian route only, to say nothing of the service to the United States itself.

It is believed that Mr. Kurino, now Japanese Representative in Paris, who is in Tokyo on leave, will succeed Mr. Komura as Minister in Peking, and that Mr. Uchida will retain his position as Vice-Minister of Foreign Affairs. The Legation in Paris will probably fall to Viscount Okabe. These changes are not expected to be announced until Mr. Komura actually leaves Peking to take the portfolio of Foreign Affairs.

Mr. Otani Kabei thinks that the formation and successful working of the tea trust would

have the effect of greatly economizing expenses connected with the tea trade. It would, for example, obviate the necessity of sending men every year from Japan to the States to book orders, and on that account alone there would be a saving of some twelve to fourteen thousand yen. It would also enable a very large reduction to be made in telegraphic outlays, which now total from thirty to forty thousand yen annually. He further thinks that under the trust there might be material economies in the cost of preparing, transporting, storing and financing.

The *Fiji Shimpō* strongly advocates the opening of court-martial proceedings in Japan to the public as is the case in England and France, and has become the case even in Germany. Our contemporary's arguments seem to be directly inspired by the recent collision between ships of the Navy, but it discusses the question on broad grounds. We need not follow it into details.

A pamphlet has been published containing the comments of the Berlin press on the performances of the *geisha* who recently visited that city. The brochure's frontispiece is a list of the eight *fraulein* forming the company, and we need scarcely say that all the journalistic notices are highly complimentary. In fact these young girls made quite a sensation in the German capital. They are depicted on the cover of the book, each and all striking most lackadaisical attitudes.

Telegrams from Nagasaki show that the heavy rains have caused considerable damage to embankments and roads in Kiu-shiu. There do not seem to have been any serious inundations, however, nor was there any loss of life.

There is something like a panic at Isezaki in Joshiu, an important centre of sericultural industry. The immediate cause of the trouble is the bankruptcy of Mr. Kogure Eizaburo, head of the Silk Guild of that district. His liabilities are 66,000 yen. Mr. Tomioki, another member of the guild, has also failed.

His Excellency Colonel Buck was received in audience by the Emperor on the 5th instant in consequence of his return from leave. The new Mexican Minister, Mr. Lima, had audience on the same day, and subsequently these diplomats, together with Mrs. Buck and Mrs. Lima, were received by the Empress.

Marquis Ito has returned to Oiso. He is to leave that place on the 11th instant for the purpose of attending meetings of the local branches of the *Seiyū-kai*.

The Foreign Language School of Tokyo held its graduating ceremony on the 6th instant. Among those present were the Minister of State for Education, Marquis Nabeshima, Professors Uyeda and Wadagaki and other distinguished persons. There were 92 graduates, 54 in the regular course of 3 years, and 38 in the special course of two years. Divided according to languages, the numbers were:—Graduates in Chinese 28; in English 16; in German 13; in French and Russian, 12 each; in Spanish and Korean, 5 each, and in Italian 1. The number of graduates in Chinese and Russian is a sign of the times.

The *Nippon* publishes a statement that through the efforts of Viscount Aoki a Belgian Syndicate has agreed to lend a sum of thirty million yen, the rate of interest

being 4 per cent. and the selling price of the bonds, 80, but for what purpose the money is to be given our contemporary says nothing.

A curious disturbance is reported from Shibukawa in Gumma Prefecture. The villagers made a demonstration in force against the police station on the ground that one of the leading residents, suffering from dysentery, had been allowed to enter the ordinary hospital instead of being segregated. These Shibukawa folks have decidedly advanced views.

News comes from Sokotori in Shinano Prefecture that, owing to the heavy and long continued rain, an embankment connected with the local water-works gave way, causing the death of two persons and the injury of seven. Two others are missing.

Prince Konoye has chosen the dog-days to make a trip to China. It is evident that his industry as a public man is independent of times and seasons. A farewell entertainment was given in his honour at the Maple Club on Saturday (6th) under the auspices of the *Kokumin Domo-kai*. Several distinguished publicists not connected with that Society were also present. Mr. Suzuki Shigetō spoke on behalf of those assembled. He dwelt on Japan's close relations with her neighbour, and said that although the two countries had fought last year, Japan's sentiments were thoroughly friendly, and it was her determination to assist in preserving the integrity of the Chinese empire. Prince Konoye replied briefly to the effect that he was about to visit China in his private capacity, but that he hoped to promote the aim which he always advocated, and to establish closer touch between his own fellow-thinkers in Japan and those in China that shared their views. The Prince leaves Tokyo on the 12th, and will visit Chefoo, Tientsin, Peking, Shan-hai-kwan, Newchwang and Korea, returning in the middle of September.

It is a striking fact that the United States appropriates every year a larger sum for the payment of pensions than Japan devotes to the whole of her national outlays. In the year ended June 30th, 1900, the sum paid by the Washington Treasury to pensioners was 1.41 million dollars (gold), approximately, or 282 millions of *yen*. It is also a growing expenditure. Twenty years after the conclusion of the civil war, that is to say, in 1885, the pension list stood at 56 millions of dollars. During the next fifteen years it nearly trebled. America is enormously wealthy. She can afford these wholesale outlays. At the same time, when the small cost of her naval and military services is compared with the heavy burdens borne on these accounts by European nations, it must not be forgotten that she pays on account of an old war more than Germany spends on her army.

The Japanese tea-merchants have compiled a statement of the conditions which they require to have guaranteed by way of preliminary to their joining the projected Tea Trust. Mr. Otani Kakei announced these conditions to a meeting of the tea-men on the 3rd instant. The principal points are that since the main objects of the trust are to promote and protect the Japanese tea-trade and to increase the sale of Japanese tea in Canada and America, it shall be competent for the Japanese associates to break up the trust should they detect any symptoms of a disposition to neglect or defeat those objects. Also that there shall be three, not two, Japanese members on the

managing committee, and that the present Japanese offices of the Central Tea Guild, two in America and one in Canada, shall continue to be employed for the purposes of the trust. These conditions have been transmitted to America, and unless they are accepted in their entirety, the Japanese will not join the trust.

The story of the Chinese in Hawaii, as told by the *Honolulu Republican*, shows that there is at least one signal exception to the rule that Chinese immigrants remain always Chinese in manners and customs and never work with any object except that of returning to China. There are 25,700 Chinese in Hawaii and only 5,979 of them are employed on the plantations, the rest being engaged in trade, manufacturing or agriculture. They have proved themselves not merely good merchants—that was to have been expected—but also skilful and enterprising farmers. Large tracts of land previously regarded as unfit for cultivation and extensive reed-covered swamps have been reclaimed by them, and are now producing fine crops, especially of rice. Industry, however, is not the specially remarkable feature of the record. What is more surprising is to find that the Chinese have, for the most part, adopted Anglo-Saxon modes of life, and that they have their schools, their churches, and their hospitals, all organized and conducted on Occidental lines. They have, in fact, become thoroughly Americanized, not even a baseball team being deficient in their equipment. As tax-payers they are decidedly profitable, for in 1899 the returns showed that \$134,218 was collected from 20,292 persons, or an average of \$6.60 (gold) per head.

Here is a significant paragraph which we take from *The American Silk Journal* for June:—"Years ago already highly educated and intelligent Japanese manufacturers and others holding positions of great honour in their own country were wont to appear in Paterson occasionally (usually escorted by the Japanese Consul at New York), with request to be shown over the principal silk mills. The result of such inspection has been seen in the improved products from Japanese looms, which were either purchased here or made after patterns of those so purchased. Paterson newspapers are telling now of recent visits of Japanese silk workers to the silk mills for the purpose of noting later improvements in machinery and appliances, and proceed to remark: If the rumours concerning the visit here of native Japanese manufacturers are correct, up-to-date machinery will be shipped across the Pacific and installed in the factories in Japan. Prosperous-looking Japs were noticed in town during the week, and it was stated that they were here to inspect the machinery used in the various processes of silk manufacture. They also visited New York and cities 'down East,' and at each place improved machinery was looked at and liberal orders will be given for machinery by the foreigners. Ribbon and broad silk looms, throwing machinery and every other kind of appliance used in the manufacture of silk has been carefully examined."

Baron Shibusawa, speaking at the twentieth anniversary of the establishment of the Meiji Law School on the 6th instant, entered a strong protest against the unpractical tendency of modern laws and their interpreters. With reference to the fact that barristers did not enjoy a high social position in Japan, he reminded his audience of the humiliating

position assigned to merchants under the old regime, and he said that, in his opinion, many people still associated the practice of the legal profession with the ways of the *doshin* and the *yoriki* in Tokugawa days. Those officials, little better than police constables or bailiffs, exercised great power in the law courts, and their assistance could be secured on payment of a small sum of from 3 to 5 *bu*. Further, there was the unfortunate fact that owing to divergent interpretations of the present laws, the plain man of business never knew where he stood. In an age of intellectual progress differences of jurisprudential views were inevitable, but if the disputes of the lawyers continued to distract the people, the latter would end by heartily disliking the former. What was wanted was that practice should take precedence of theory. A case alluded to by Baron Shibusawa as illustrating his point deserves brief reference. The law requires that a promissory note shall have inscribed on its face the place of ultimate payment. But in drawing up these notes the citizens of Tokyo have been in the habit of omitting the word "Tokyo," and writing simply "such and such a street of such and such a ward and such a such a number." The courts of law recently ruled that the omission of the word "Tokyo" invalidated a note. The decision has raised a shout of derision and protest among business men. They ask whether the object of the law is to hold men to their solemn engagements or to provide quibbling pretexts for evasion.

There is now a "tea-gown kimono." It is a new creation, we are told by home journals, but at the same time these writers add that it is "made on the lines of the ever-popular national dress of the women of Japan which their sisters among the Anglo-Saxon and French races have made an important part of their wardrobes." Possibly this will be novel intelligence to some of our Japanese readers. We were not ourselves aware that the Japanese *kimono* had obtained so much vogue in Europe and America. And indeed it must be frankly confessed that the tea-gown *kimono* has not much in common with any Japanese garment known to us, unless it be the *uchikake* of old times, and even there the resemblance is defective since the tea-gown *kimono* reaches only a little below the knees whereas the *uchikake* trailed on the ground. However, both have long sleeves.

Some terrible statistics were recently published in America. They show that during the five years ended in 1900, no less than 651 persons were lynched in the United States, being an average of over 130 yearly, or nearly 12 per month. Out of that appalling total, the white victims numbered 147, the black 504. The statistics reveal something more, too. It has generally been pleaded in excuse for the lynchings of negroes that the latter are punished for brutal assaults upon young girls and women, and that, owing to the black man's extraordinary proneness to commit such crimes, nothing short of the swift stern penalty of lynching can deter him. But the records show that out of 504 negroes lynched within the above period of five years, only 96 had been guilty of rape. Murder was charged against 179, and the remaining 229 were not accused of anything worse than violating contracts, being unpopular, testifying in court or shooting at rabbits. In some instances the records show "no offense," or "offense unknown." It is justly pointed out by American critics that nearly one-half of this

shocking total of lynchings must be set down to race prejudice, pure and simple. The history of the 19th century contains nothing more disgraceful.

We take the following from an exchange:—

The Bishop of South Tokyo, in a recent letter home, says:—"Much that is really ridiculous in the talk about the 'Yellow Peril,' and as mischievous as it is ridiculous, is due to nothing but this—that the people who give expression to such things hardly ever know anything worth speaking about Japan of the present, though they may be acquainted with Japan of the past. That the leaders here are absolutely settled and consistent in their intention that Japan shall be a Western, not an Eastern Power, in its methods and associations, and, so far as Western ideas are good, in its ideas also, seems to me about the most certain and stable fact in Japanese politics. But if this is so, then if Japan were to lead China, which does not look very likely at present, it would only be by regenerating China, and this would be done according to Western ideas except so far as these are deliberately altered for the better by the infusion of what is thought by Japan to be best in the Eastern. I do not think the probability of any such movement on a world-affecting scale likely in the near future, but if it did come, and Japan with China became a leading influence in the world's thoughts and government, it would only be so because Japan, by taking out of its treasures things Eastern and Western, things new and old, had become the best leader for the next stage of human progress. If this is at all a true estimate, then the policy of trying to nip in the bud any such movement, or to prevent by force, and through a scare as to what may come of it in the matter of leadership in the world, the growing influence of Japan, is just the Boer policy of preventing the Uitlanders from having any privileges. The selfishness of such a policy may be excused on the plea of self-preservation, but the meanness of its sacrifice of all the future to one's own vested interests is deplorable."

It appears that there was a very unfortunate display of racial prejudice on the part of the Germans and the French in China. Writing with reference to the Indian troops, *The Times* special correspondent says:—"That they did excellent service in the field during the advance upon Peking is universally admitted. They looked like everybody else during the short period when looting was allowed by the British authorities—a period unduly prolonged in the case of certain other contingents: but, with that exception, their discipline has been admirable and their treatment of the defenceless Chinese population not only humane, but genuinely kindly. They are themselves satisfied—and not without reason—that they could give a good account of themselves if they were ever called upon to meet some of their present allies in the field. But the fact nevertheless remains that our gallant Indian soldiers are better fitted to stand face to face with Continental troops than to rub shoulders with them. Even the German soldiers, in spite of the strictest orders given by the Field-Marshal, have frequently treated our Indian soldiers in a way in which they would never have dared to treat British soldiers; and such is the inherited influence of racial prestige that Indian soldiers hesitate to assert themselves as they properly might and should do in the presence of white soldiers. One of the most serious aspects of the recent troubles in Tientsin was the deliberate course of insult to which our Indian troops were subjected by some of our Continental allies. Taunted day after day with opprobrious cries of "Coolie, coolie," the blood of our Indian soldiers, many of whom are fighting men and gentlemen in a sense which a raw French or German recruit can hardly be expected to understand, was rising rapidly, and many competent judges are of opinion that an explosion was only averted by the prompt despatch of Australians from Peking and Marines from Taku to relieve the Indian guards from a position in which they were

being persistently goaded into acts of retaliation. Such a condition of things it may have been difficult to foresee; but if ever circumstances should again require the co-operation of a British force with Continental contingents, the experience we have acquired in China will have to be borne in mind, and provision at least made for a larger proportion of white troops in combination with our Indian soldiers."

It was stated some time ago that the Nippon Kairiku Hoken Kaisha (Japan Land and Sea Insurance Company) having failed to comply with the requirements of law as to its reserves, had been ordered to bring them to the proper figure at once or to dissolve. The directors then applied for permission to arrange the manner of dissolution at their own discretion. The Company had a branch in London where it did considerable business, and of course the English policy-holders were not a little perturbed on receipt of such news, especially as difficulties were experienced in recovering sums payable by the Company under the circumstances. Finally the policy-holders in London sent out a representative who is now in Kobe. His arrival seems to have roused the directors. They are said to have held a meeting, and to have decided that the assistance of the law must be invoked to compel the payment of calls by shareholders. That seems to be the whole cause of the trouble. If the shareholders paid up, the reserves would at once be carried to a proper figure.

The new naval station at Maizuru is approaching completion and will be formally opened on the 11th instant, according to some journals, but apparently the 11th month is the correct date. This station will have maritime jurisdiction over a length of coast measuring 1,055 miles. The Director of the station is to be Vice-Admiral Tsunoda. The works at Muroran are also said to be progressing rapidly.

The Government, it is said, will submit to the Diet next session a bill for amending the system of State Savings Banks so as to attract small depositors. Nothing seems to be definitely known about the details of the scheme, but the principal idea is reported to be that the rate of interest will depend upon the time for which a deposit is made, and that there will be prizes determined by lottery, as is the case in the Industrial and Commercial Banks.

The time was, not very long ago, when the news of Japan's concluding a new treaty with any Western Power excited a great deal of interest, but probably our readers will not be much concerned to learn that the treaty with the Argentine Republic has now reached its final stages and that the draft is to be submitted to the Privy Council to-day.

The Government's restriction upon emigration is to be removed from August 1st, so far as Hawaii is concerned. This restriction was imposed in consequence of abuses that disfigured the practice of the emigration companies. The companies thereupon formed an union, and drew up a code of regulations which, if strictly observed, can not fail to check the abuses complained of. In consideration of that action, the Authorities have agreed to relax the veto with regard to Hawaii alone.

The Privy Council has approved the draft of the Argentine Treaty. This treaty was concluded between the late Mr. Hoshi Toru,

when he represented Japan in Washington, and the Argentine Minister in that city. It is said to be virtually identical with the Chili Treaty, which also was Mr. Hoshi's work.

The trade returns for the first half of the present year show that the volume of Japan's foreign commerce fell by ten million *yen* as compared with the corresponding figure for last year. This result is regarded with satisfaction by Japanese economists, who consider that it indicates a return to sober business from speculative inflation. Moreover, there are clear indications that the balance between exports and imports is likely to be restored before long. Much comfort is derived from this latter fact, taken in conjunction with the news that the silk crop in France, Italy and China is likely to be short, and that the market price of silk fabrics in America shows an upward tendency. The second half of the year is usually the period of large exports, whereas imports flow in during the first half. Hence the figures for the six months ending June 30th are considered specially gratifying, and as some thirty million *yen* worth of imports are still lying in the godowns at the open ports, it is thought that there will be no further payments on account of foreign goods for some time, and that specie will begin to flow back to the country.

SCHOOL OF THE MORNING STAR.

The annual *Distribution Solennelle Des Prix* was held at the School of the Morning Star in Tokyo on the 10th instant. We append the programme. All the items were performed in a manner reflecting high credit on the methods of the teachers and the diligence of the students:—

PROGRAMME.

Kimi-ga-yo.
Lecture du Rescrit impérial.
Chœur: La Victoire, par Kariwoda.
Here She Goes, There She Goes—
Characters: Allwise Ph. Heege.
Bill the tramp P. Eastlake.
Tom E. Drummond.
Robert, Son of Allwise Ch. Oberlein.
Mike G. Charlesworth.
John the Servant F. Stone.
Doctor Killenquick D. Cameron.
Piano Solo—Allegro de Clémenti R. Brinckmeier.
Yōnen Gakutai, (La jeune Bande).
Distribution aux élèves du Primaire.
Ein schmeres Mort (Dialogue)—
Düfel K. Hahn.
Reife K. Anthor.
Violins—I Pifferari Jean Conte.
1^{er} Violon: J. Brinkley, K. Peacock, E. Andreis.
2^e Violon: L. Sardaigne, F. Stone, A. Irwin.
3^e Violon: J. Mitchell, S. Hornstein, Ch. Oberlein.
Piano: A. Andreis.
Le Sourd ou l'Auberge pleine, par Desforges—
Personnages: M. d'Oliban L. Sardaigne.
d'Orbe D. Corvisart.
M. d'Anières J. Weil.
Legras, aubergiste S. Yamamoto.
Pierre, garçon d'auberge S. Hara.
Un valet d'écurie H. Yoshioka.
Piano Solo—Rondo de Hummel A. Andreis.
Distribution aux élèves des cours préparatoires et du Commerce.
Au Coin du Fen Koehler.
Chanson souabe.
Violons: E. Andreis, F. Stone, A. Irwin, J. Mitchell, Ch. Oberlein.
Piano: R. Brinckmeier.
Yume-bukuro (Sac à Songes)—
Shujin N. Shimaya.
Tarō-kaja S. Oi.
Baku M. Toyama.
Piano à 4 mains—Rondo de Diabelli
A. Andreis and G. Charlesworth.
Chœur: Le Couvre-Feu, par Halévy.
Distribution aux élèves du lycée.

GERMANY IN SHANGHAI.

IT was all very well for the peace-makers to tell us recently that English newspapers were quite unreasonable when they expressed surprise because Germany had suddenly conceived the project of stationing a battalion of troops in Shanghai. A truism often proves useful if it is uttered sufficiently sententiously, and these apologists doubtless satisfied themselves and their audience when they dismissed the matter by saying that Shanghai is not England's property and that she has no title to complain if other Powers make themselves at home there. But the light in which the act should be interpreted by outsiders depends very much upon the light in which the Germans themselves regard it, and we have a guide to that light in the language of the *Ostasiatische Lloyd* of Shanghai. That journal declares not only that Germany has now gained equal rights with England in the Yangtze Valley and that the German acquisition is publicly acknowledged, but also that the German garrison in Shanghai is the guardian of the open door on the Yangtze, and that the maintenance of that garrison is "a sign of particular political shrewdness on the part of the German Government." Englishmen, we are glad to think, are seldom disturbed by bluster. They understand that some of their German friends are suffering badly from the complaint of swelled head, and as the British have been themselves afflicted with more than one epidemic of the same kind, they are disposed to sympathise with sufferers from the malady rather than to rail at them. In all gentleness, therefore, we would point out that these various contentions of the Shanghai German newspaper betray a very un-German-like want of analytical capacity. As to the claims which Germany is now attempting to assert in China, it is easy to understand the difficulty that even the most "patriotic" German must experience in setting them forth. Germany never made her appearance in any character upon the Chinese stage during the half century when England was engaged in opening the Middle Kingdom to the trade of the world, and when, assisted occasionally by France, she bore all the brunt of Chinese conservatism and resistance. Germany had no hand, act, or part in the doings of those times. She can not derive from the past any sort of right to a voice in Chinese affairs. If she has gained equal rights with England in the Yangtze Valley, as the Shanghai journal says, it is not because of anything she has achieved there, but simply by England's sufferance. And when we come to consider the instrument under which Germany claims to have acquired those rights, their assertion seems still stranger. For the instrument was a convention pledging its signatories to abstain from all aggressions against Chinese territory. No reader of ordinary intelligence or ingenuousness could construe it in any other sense. Yet the German journal of Shanghai, and

several journals in Germany, allege that the purpose of the convention was to confer on Germany rights in the Yangtze equal to those possessed there by England. If any significance whatever attaches to such rights, their practical assertion would be directly opposed to the avowed purpose of the convention, which is to preserve the integrity of the Chinese empire. It thus follows that the German interpreters of the document assign to it a meaning entirely subversive of its declared intention. Nor have they ever ventured to pretend that England entertained any such idea when she put her name to the convention. They have stopped short of that attempt, for they could not fail to understand the futility of alleging that England, while pledging herself conventionally to abstain from all aggressive designs in China, really regarded the pledge as an engagement to promote the prosecution of such designs by another Power in conjunction with herself. Every German assigning such a significance to the document must be fully sensible that he is endeavouring to commit England to a purpose wholly foreign to her real object in negotiating the convention. That is a kind of trickiness which will never be endorsed, we are persuaded, in German official circles. It appears to be wholly forgotten, too, by the Shanghai journal that all the other Powers were invited to adhere to the Convention on identical terms, and that several of them actually did adhere. Are we to suppose that the invitation extended to them included some occult reservation in Germany's favour, and that while the document conferred on her certain special rights in the Yangtze Valley, it withheld those rights from all other parties to the agreement? That would indeed be a novel way of interpreting a plain, unequivocal, international engagement. Moreover, we are now told that the German garrison in Shanghai is intended to guard the open door on the Yangtze. To guard it against whom or what? England's invariable and uniform policy has been to throw the door open to every one. She has always admitted all nationalities to an equal share of any commercial or industrial privileges secured either by her diplomacy or by her arms. Can the same be said of Germany? There is only a brief record from which to draw inferences in Germany's case, but it is an eloquent record so far as the Far East is concerned. Her officially avowed policy in Shantung has been to secure for herself a monopoly of all railway-building, mining and industrial concessions throughout that large region, to the exclusion of every other nationality. England's formal protest against such a policy has been presented, but as yet is only a protest on paper. And it is this Germany, the open adopter of a strictly exclusive programme in the one region of China where she exercises any authority—it is this Germany who undertakes to post a garrison at Shanghai for the purpose of guarding the open door to the Yangtze Valley. Of course we have no manner of

title to protest against every legitimate effort on Germany's part to make herself great and powerful. On the contrary, we wish her every good fortune, and we sincerely admire the remarkable ability and perseverance of her people. They deserve success. But is it too much to ask that they should climb without needlessly trampling upon the faces of other folks? England is quite ready to walk hand in hand with them, but she expects that they will not take advantage of that juxtaposition to administer kicks and cuffs to their comrade.

THE IMPERIAL UNIVERSITY.

The graduation ceremony of the Tokyo Imperial University took place on the 10th instant. There were 345 graduates, the greatest number (106) being from the College of Law. Engineering and Science had 94 and 98 respectively, Literature 71, Medicine 40, and Agriculture 15. A special prize in the form of a silver watch was given by the Emperor to the nine most distinguished graduates.

THE FOURTH OF JULY.

The American National Holiday was, much to the surprise of most people, graced by splendid weather. Up to a late hour on Wednesday evening the weather was very unpromising, and it seemed to be too much to hope that the clouds would break and afford sunshine for Thursday. But all was changed during the night, and the Fourth opened most propitiously with a nice breeze and not too much heat. American houses were generally closed, and some of other nationalities followed suit as to half the day, though of course the departure of the *Empress* mail kept many at their desks who would otherwise have been at the baseball game or aloft with the yachts. The French cruiser *Friant* from Nagasaki arrived in the harbour during the forenoon, and, after anchoring, dressed ship and took part in the salute that was fired at noon, the U.S. *Petrel* leading, and the British cruiser *Lis* joining in. A number of the ships in the harbour were also decorated with bunting. In the course of the afternoon the schooner yacht *Yamato Damashii*, bearing the flag of the Commodore of the Yokohama Yacht Club (Mr. G. H. Seidmore) returning from a short cruise, sailed round the British and French warships and saluted them, both ensigns being duly dipped in acknowledgment. Next to the fireworks, probably the most generally observed feature of the day's events should have been the yacht racing, but though the boats got away before a fine south-easterly breeze, by about three o'clock it had fallen to a calm and thenceforward the yachts attracted little attention till another breeze from about the same direction sprang up and brought the 21-raters home in good time.

There were bands at all the hotels—Grand, Oriental, and Club; the Grand Hotel had two; and the first gun of the noon salute was the signal for quite a burst of national music, in which the strains of the "Star Spangled Banner" predominated. All the hotels were decorated with flags and lanterns and the Oriental and Grand were largely frequented during the day by people desirous of listening to the music and of, incidentally, quaffing the usual bumpers in honour of the day. In the evening also the verandahs were crowded, (as was that of the Boat-house) by spectators while the fireworks lasted. The Bund was as usual packed with sightseers—chiefly Japanese—who greeted the various pyrotechnical displays with appreciative if impartial approval, the hand-clappings and roar of applause betokening popular interest in the exhibition. In the early part of the evening the police had very considerable difficulty in getting these people to "circulate" freely. Jams were frequent

and often it was all but impossible to gain access to the front of the hotels. In time, however, by stationing constables in the centre of the roadway and so regulating the traffic, the pressure was eased and it became possible to move along the Bund with comfort. The Japanese crowds were of course perfectly good natured and orderly, and it also seemed as if the foreigners celebrating or assisting in celebrating the day took their pleasure with more good feeling and less proneness to occasional differences of opinion than we have witnessed in the past on similar occasions. Of course the fine weather resulted in the bars being less resorted to than would otherwise have been the case.

There was as usual a display of day fireworks about noon and in the evening a very effective exhibition was given off the Bund and the Grand Hotel. There were two set pieces, one being an eagle with elevated wings and the other a design consisting of the American and Japanese flags crossed. The first was rendered almost invisible to most of the spectators by reason of the dense volumes of smoke which, issuing from it, was blown shoreward. When, however, the second piece was set alight the treacherous gale had backed round and blew at nearly right angles to its former course, so permitting those previously shut out to have a good view of the illumination. The air was moist and dense; the smoke from the fireworks hung about, despite the strong wind blowing and many bombs, bursting high above the smoke-clouds were only partially revealed. On the whole, however, the show was quite up to former attempts and was greatly appreciated by practically the whole of Yokohama.

BASEBALL.

A baseball match took place on the Cricket ground in the forenoon between a nine from the Y.C. and A.C., and a team from the U.S.S. *Petrel*. The sky was almost cloudless and the heat intense, — a damp heat unfortunately — nevertheless the game was brisk and was followed with interest from start to finish by a fairly numerous assemblage. The first two innings produced nothing for either side, the fielding being smart both at first and third bases. In the third innings Yokohama piled up three runs, Thorne being the first to get home for his side. He was followed in quick succession by McChesney and Edwards. The fourth innings was a maiden for both teams, but in the fifth five runs were made, three by Yokohama and two by the visitors. Swan, Merri-man and Blake were the scorers for the home nine. In the sixth innings, Swan made a home run hit deep into right field, bringing in Thorne, McChesney and himself, but the side achieved nothing further. The seventh innings saw the *Petrels* put on two runs, owing mainly to errors in the field and some wild throwing-in. In the eighth innings Edwards and Swan both managed to get home, while the visitors made a single. The last man to score in the game was Thorne, in the ninth innings. He had got down to second when a wild overthrow from the *Petrel* pitcher enabled him to make third and then get up to the home plate. The game thus resulted in a substantial victory for the home-side by 12 runs to 5.

Mr. W. S. Stone was umpire. Score:—

Petrels.	R.	1st B.	Y.C. & A.C.	R.	1st B.
Harrington, 2b.	0	3	McChesney, 1f.	2	3
Kearse, 3b.	0	1	Edwards, 3b.	2	4
Kearney, 1b.	0	1	Swan, c.	3	5
Eckhardt, p.	1	1	Merriman, 2b.	1	1
Fuller, s.s.	0	2	Blake, p.	1	2
Hardy, 1f.	1	1	Onderdonk, s.s.	0	2
Murphy, c.f.	2	2	Crowther, c.f.	0	1
Lange, c.	1	1	Kibby, 1st	0	1
McGee, r.f.	0	1	Thorne, r.f.	3	3

Yokohama C. & A.C. 0 0 3 0 3 0 2 1 = 12
U.S.S. *Petrel* 0 0 0 0 2 0 2 1 = 5

YACHTING.

Two races were arranged to take place on the Fourth, the 39-raters being started to sail round the Tsurumi mark, the Lightship, the Kita-Nakane Buoy and back for a first prize presented by the United States Minister and a second prize, while the 21-raters competed for a silver cup presented by Messrs. Goldman and Tucker. The large boats went away at 1, and the others at 2 p.m.

The weather promising fairly well at first. But early in the afternoon the wind fell and the boats lay any way. *Kingfisher*, *Haidee* and *Spray* gave up and came home, but *Maid Marion* and *Mary* stuck to it, coming home in the dark before a rattling breeze. *Mary* got in about 8.20 p.m. and the *Maid* about 9, the prizes falling to them in that order.

The new 21 rater *Edna* seemed to have the heels of her class and was round the Lightship with her handicap well in hand, but when the calm came she stopped and lay motionless while *Sodeska*, bringing up a breeze, walked away with a long lead to the Widow buoy. Thence *Sodeska* was never touched, winning easily. following were the times:—

	h.m.s.	h.m.s.	h.m.s.
<i>Viven</i>	6.19.43	—	6.19.43
<i>Edna</i>	6.20.01	—	6.20.01
<i>Nandeska</i>	Gave up	8.00	—
<i>Sodeska</i>	5.56.20	8.00	5.48.20
<i>Abunai</i>	6.20.42	8.00	6.12.42
<i>Molly</i>	Gave up	13.40	—

Sodeska thus won easily the handsome silver Cup presented by Messrs. H. Goldman and W. Tucker, gaining also two record points, while *Abunai* took second prize and secured one record point.

THE "ISIS" CONCERT.

The disagreeable weather no doubt prevented many from attending the *Isis* smoker on Saturday night, but those who went saw and heard a good show. We give below the programme, but by way of comment on the entertainment it may be said that the best item was the Clog Dance, which was not really a clog dance, but a very clever variation of the exercise beloved by the "man from Sheffield" — and elsewhere. Phillips, A.B., stepped capably even without the music and if his ship returns to this port we shall be glad to see him again. The singing was very good, but perhaps the best number was "The Forty-two," which was given as an encore. Also "The two Nobby Regulars" went splendidly. There is no gainsaying the fact though, that "Jack" is tremendously fond of sentimental songs boasting of plenty of verses and eke long choruses, and those ballads which appealed most strongly to his melodramatic instincts were the ones which the gallery — packed to its limits by the "boys in Navy blue" — trolled rightly lustily on Saturday whenever it had a chance to assist, which was pretty often, and thus the programme tended to be long-drawn-out. The tableau "Our lads in Navy Blue" was very effective. It would not be right to omit from a notice of the affair the performances of the flautist, the shrill instrument being served with conspicuous skill and capacity of execution seldom met with out here. The programme was as follows:—

PART I.

Song (descriptive)
"Break the News to Mother" Knight, A.B.
Song, "Saved by a Stroke of the Pen" Elison, P.O.
Song and Dance
"Fagans the Irish M.P.s" Donnelly and Phillips, A.B.s.
Song (comic).... "15 of 'em on the Parlour Floor" Weller, 2nd Ye. Sig.
Song (comic).... "A Little Bit off the Top" H. Robey.
Song, "The one word, Mother" Fox, A.B.
Song (comic).... "Our Stores" The Unknown Double.
Sketch: "50 Dollars and the old Gymnasium."

PART II.

Song (comic).... "He's never been there before" Clarke, R.M.L.
Song, "Farewell, Regions of Gold" Fox, A.B.
Song (comic).... "There's hair" H. Robey.
Clog Dance Phillips, A.B.
Song, "The Midnight Mail" Knight, A.B.
Song (comic).... "Down Fell the Pony in a Fit" Weller, 2nd Ye. Sig.
Song (descriptive).... "The Football Match" Donnelly, A.B.
Song (comic).... "The Washerwoman" Dan Leno's Unknown Double.

Song (comic)
"The two Nobby Regulars" The Two Macs.
Tableau: "Our Lads in Navy Blue."
God Save the King!

SEQUEL TO THE BLAGOVESTCHENSK MASSACRE.

From an unimpeachable source the *Nagasaki Press* learns that General Gribski, the military governor of Blagovestchensk and districts, committed suicide a few days ago as he was approaching the above city on his return from St. Petersburg.

General Gribski, it will be remembered, was in charge of Blagovestchensk in August, 1900, when that city was attacked by Chinese bandits from Aigun, who from the opposite side of the Amur fired on the Russian city. The presence in their midst of a large body of peaceable Chinese was regarded by the Russians as a grave peril, and instructions were asked from St. Petersburg.

The now historic telegram "Fling Chinese across Amur" was wired from St. Petersburg, and, during the temporary absence of General Gribski, the message was literally interpreted by the Chief of Police, whose Cossacks gathered the Chinese together, men, women, and children, to the number of nearly 5,000, and literally flung them into the water, none of the Chinese escaping.

General Gribski was subsequently recalled to St. Petersburg to explain matters to his Imperial master, and there is reason to believe that he was returning to Blagovestchensk in disgrace and so decided to take his own life. Such is the story now told.

YACHTING.

Three races were fixed for Saturday but the 12-raters did not start, owners wisely considering that the fun derivable from exposure in an open boat to rain and cold was hardly worth the hardships incurred.

The 39-raters went, however, three of them, and made a fairly good race of it in the strong nor'easterly breeze that prevailed. *Mary* tried to change topsails but something must have gone wrong as she sailed great part of the race under lower sail, and *Kingfisher* finished first with comparative ease. The times were:—

	Finish.	Handicap.	Corrected.
<i>Mary</i>	4.26.40	—	4.26.40
<i>Kingfisher</i>	4.19.00	—	4.19.00
<i>Spray</i>	4.24.10	6.30	4.17.40

Spray thus wins the first prize and two record points, *Kingfisher* taking second place with one point.

The 17-raters raced for the Bonito Cup and a second prize, *Wetting* winning the first easily, *Devonia* second.

FIRES.

Fire broke out in the factory of a confectionery store kept by Suzuki Hikotaro at Chojamachi Kuchome, Yokohama, early on the morning of the 6th inst. Three houses were destroyed and seven damaged. The fire was the result of an accident.

Fire broke out in a house occupied by Suzuki Niichiro, at Kogami-mura, Kita Tamagori, Tokyo, early on the 9th inst. One house and a godown were destroyed. One servant was burnt to death.

Fire broke out in a house occupied by Nakazawa Tonehachi, at Mukoyanagiwara, Asakusa, Tokyo, on the morning of the 10th instant. It seems that an employe named Kanbe Setsuji was cleaning the lamps when he spilled some kerosene on the floor. Having been remonstrated with by his employer for similar acts of carelessness, the boy thought to remove traces of his clumsiness by burning the oil. Unfortunately the flames spread to a tin of oil, which exploded. Kanbe was badly injured and has been removed to a hospital, but he is not expected to recover. The owner of the house was seriously burnt about the head and face in putting out the fire.

There were one hundred and twenty-nine cases of dysentery among eight hundred and eighty-five troops on board the American transport *Meade* which arrived at Nagasaki on the 10th instant. She was sent into quarantine at once.

AMERICAN TOPICS.

The fire loss of the United States and Canada for the month of May, as compiled by the *Commercial Bulletin*, shows a total of \$22,380,150.

Mrs. Mary Baker Eddy, founder of the Christian Science movement, has voiced the statement that the succession to the headship of that prosperous church after her translation shall be vested in a man.

Miss Ruth Hanna, daughter of Senator Hanna, has accepted an invitation to christen the cruiser *Cleveland*, now being built at Bath, Me. The *Cleveland*, it is understood, will be launched within a short time.

The *New York Journal of Commerce* computes the aggregate capitalization of new companies in New Jersey, New York and Delaware during May at \$177,980,000, against \$215,000,000 in April. The latter figures do not include the capital of the United States Steel Corporation.

An illustration of the increasing liberality of thought is provided in Albany. The congregation of Trinity Methodist church, Troy, N.Y., whose edifice was recently destroyed by fire, is holding its Sunday services in the Jewish Temple Beth Emeth, on the invitation of the officers of that synagogue.

It is represented that in Greater New York over 1,000,000 incandescent and over 30,000 electric lights are burning every night. It is estimated that not less than 200,000 horse-power is employed in their production. This is more than the combined power equipments of the entire Navy of the United States.

The Armour Institute in Chicago has recently received two gifts from Mrs. Armour and her son—\$1,000,000 from the latter and \$250,000 from the former—which, added to the original gift made by the founder, the late Philip D. Armour, represents a total endowment by the family of \$3,900,000. It is designed to make the institute the best school of engineering in the United States.

Canada has granted railroad subsidies up to date amounting to \$88,884,557 and 39,725,130 acres of land. The provinces have also granted \$31,310,170 and the municipalities \$15,884,542, making a grand total of \$136,079,269 of public money in addition to the land. Of this amount the Canadian Pacific's share of the Dominion subsidy amounted to \$62,742,816 in money and 25,000,000 acres of land.

Major O. Wood, Artillery Corps, U.S.A., chief commissary of the Department of California, has been appointed military attache to the United States legation at Tokyo. Major Wood served in Cuba during the Spanish-American War as lieutenant colonel and chief commissary of the Seventh Army Corps, and as chief commissary of the Division of Cuba. He made for himself an enviable record.

The *Street Railway Journal* says:—"There are 905 companies operating electric, cable and horse railways in the United States. The total mileage of single track is given at 20,442 miles, and the total number of cars is 62,918. The aggregate of capital stock for 1900 is \$1,066,196,460, an increase over the previous year of \$75,183,698. The bonded debt of all roads for 1900 was \$866,818,673, an increase over the previous year of \$83,895,202."

A cable to the *New York World* from London says:—"It is reported here that J. Pierpont Morgan is engaged in arranging for the establishment of a great Anglo-American bank with a capital of one billion. It is proposed to abolish all of the principal financial agencies and banks already engaged in the Anglo-American business. The proposed institution, it is said, will be the principal agency for the already vast and rapidly growing banking transactions between Europe and America.

Governor Sanford, of Alabama, died at Tuscaloosa, aged 54, on June 11th. He had been ill since before his inauguration as Governor,

but it was believed immediate danger was passed. While in Tuscaloosa, however, his illness returned with renewed violence, and he became so dangerously sick that the physicians feared to remove him to Montgomery. Governor Sanford was a native of Alabama. He served in the State Senate and in Congress; was a member of the Constitutional Convention of 1875 and held other important public offices. He was elected Governor in August of last year and inaugurated December 1st 1900. Mr. W. D. Jolks, President of the State Senate, will succeed him as Governor.

Russia's oil trade with India is rising rapidly to enormous proportions at the rate of about 40 lakhs of rupees a year. Last year the imports of kerosene from Russia were valued at 280 lakhs of rupees. The American oil trade, on the other hand, is falling away with equal rapidity, and in the last two years has dropped from 59 lakhs to 28 lakhs of rupees.

The will of George Q. Cannon, the dead Mormon leader, is an interesting document to the resident of the Far East. The will provides for the four wives of the dead Mormon and gives to each one of his thirty-three children a small portion of his farm of 33,000 acres. After taking care of the offspring in further manner and making sundry bequests of various importance, the residue of an exceedingly valuable estate is placed at the disposal of the George Q. Cannon association, which is composed of the thirty-three children of the decedent, along with some others, near of kin, who have been included. The estate is to be managed by the association for the profit of the members for a series of years.

Dunning by postcard is now illegal in the United States. The owner of some property in Minneapolis sent to a tenant a postcard, on which was written:—"Your rent for this year is past due. It was the same last year. I ask you to be more prompt this year. If I do not hear from you soon the note will be placed in the hands of my attorney." The postal authorities refused to carry the card, and the United States Attorney-General instituted a prosecution. After an argument, in which it was admitted that the card was a usual "hurry-up postal," the Court convicted the defendant. The ground of the conviction was that the law provides very ample means for the recovery of debt: that the post-office is not established for that purpose; and that it is an abuse of postal facilities so to use it.

Returns just completed by the U.S. Geological Survey show that all records were broken in the production of coal in the United States in 1900, and the United States still leads the coal-producing countries of the world. The total output of coal in 1900 was 267,540,000 short tons, an increase over the preceding year of 13,800,000 tons, or a little over 5 per cent. The value of this product was \$297,920,000, an increase over 1899 of \$41,845,000, or about 16 per cent. The value of the coal product in 1900 was equal to nearly one-third of the value of the total mineral product of the United States in 1899. Prior to 1899 Great Britain was the leading coal-producing country of the world, but in that year the United States took first place. The production of Great Britain in 1900 amounted to 225,170,163 long tons, or 252,190,573 short tons, compared with which the United States has a lead of 15,300,000 short tons, or just double that of the preceding year.

According to a story in the *New York Herald*, the gold mine of San Luis d'Anna, located in Venezuela, south of the Orinoco river and near the southern boundary, has been relocated by George Gage, a New Yorker. For a number of years prior to 1811 the mine produced four millions in gold yearly and became the great support of the Spanish city of Ayma, founded as a mission by Capuchin monks in the latter part of the eighteenth century. In 1811 Bolivar began the revolution which culminated in 1817 with the destruction of Ayma and the massacre of scores of monks by the natives whom they had held in bondage for years. The ruin of Ayma was complete, and the mine ceased to be worked and was forgotten. Gage got his first clue from French en-

gineers in Yucatan in 1890. They learned of the old mine from Spanish archives in Madrid. A party was organized and kept up the search unceasingly. Gage claims they discovered, less than six months ago, a mountain three miles from Ayma in which they have every reason to believe the famous lost mine is located.

The U.S. Coast and Geodetic Survey has made plans for charting the harbours and coasts of the Philippine islands. It is expected that active work will begin this month and that sufficient data will be collected before the close of the year to make it practicable to publish charts of all the large harbours among the islands. The work, however, will not be confined to the most important ports, but many of the minor harbours that serve as points of distribution for the inter-island trade will also be charted. A considerable number of the small harbours, for example, are known as "the hemp ports" because they are the collecting and shipping points for this unique article of Philippine commerce. As approaches to these harbours are little known, the work of the Coast and Geodetic Survey will be of great usefulness to navigation and commerce.

A chart published by the Geological Survey gives a summary of the mineral products of the United States for the past ten years. The aggregate values have increased by more than one-half in that period, and the figures for 1899 are greater than in any previous year, footing up the enormous total of \$976,000,000. The value of the metallic products of the year is given at \$527,218,084 and of the non-metallic at \$447,790,862. The latter class includes, of course, the coals—\$168,000,000 in bituminous and \$880,000,000 in Pennsylvania anthracite—\$64,600,000 in petroleum, \$20,000,000 worth of natural gas and large value in stone, brick clay and cement, with various other minerals. Of the metals, pig iron is worth almost as much as all others together, the value of the product in 1899 being given at \$25,000,000. Copper comes next with \$104,000,000, and the \$71,000,000 in gold is third. The market value of the silver produced in 1899 was about \$33,000,000 and the lead and zinc together were worth about as much. Quicksilver, aluminium, antimony, nickel and platinum are the other metals that figure in the table.

NEWS OF THE WEEK.

The Nagasaki Customs have granted Mr. W. D. Wentworth, Landing and Shipping Agent at that port, a license to act as Customs Broker.

A coolie has been arrested on a charge of being concerned in an assault on a drunken French bluejacket from the *Friant*, who became rather obstreperous in Chojamachi, Yokohama, on Sunday night.

Mr. Harry B. Wilson, aged 27, an assistant in the firm of Messrs. Guthrie and Co., and a member of the Siamese Consular Staff at Singapore, was drowned whilst bathing in the sea off Tanjong Katong on the evening of the 23rd ult.

The plague is on the wane in Hongkong. For the week ended 29th June there were only 62 cases and 61 deaths from plague, as compared with 155 cases and 152 deaths in the previous week. The totals now are:—Cases 1,495, deaths 1,423.

The permanent garrison which Great Britain proposes to keep at Tientsin will consist of the Hongkong Regiment and the 6th Burma Battalion with Pompoms; at Shan-hai-kwan there will be the 14th Sikhs and 4th Goorkhas, while the Mounted Infantry will replace the Cavalry.

Several gamblers were gathered at the Kuratamura, Iwami-gori, Tottori Prefecture, on the night of the 5th instant, when the police conducted a raid of the premises. One gambler was stabbed and one of the policemen badly wounded in the head during the affray. Many of the gamblers were arrested.

A man named Murayama Kiyomatsu of Kobe, bought on the 6th inst. a railway ticket for a

journey from Kobe to Sannomiya but continued his ride on to Tokyo. When the train was passing Shiha he jumped out of a window and fell on the road, receiving severe injuries. The railway authorities sent him to the Jikei Hospital at Atago.

The *Universal Gazette* learns that the Plenipotentiaries at Peking have given the contract of lighting the streets of Peking to Messrs. Mandl and Co., of Tientsin.

According to latest investigations by the authorities concerned, the total number of applicants for telephones during May last reached 44,913, of which 26,947 will be enabled to have arrangements made and in working order within this year.

A tailor named Ikeda Chiyomatsu, living at Matsukagecho, Yokohama, went to the Yokohama Post Office on the afternoon of the 10th inst. to cash a money order when he suddenly fell, and died immediately.

A man named Hisano Sennosuke, living at Yamane-mura, Higashi Ibaraki-gori, Ibaraki Prefecture, was shot by an unknown person on the night of the 9th inst. The murderer has not yet been arrested.

Owing to an embankment breaking at Yokotomura, Kita Saku-gori, Nagano Prefecture, on the 8th inst., two houses were washed away, two men were killed, seven men were badly injured, and two are missing.

In racing circles in England, it is said that Mr. W. C. Whitney's gifts to Huggins (the trainer) and to Lester Reiff (the jockey) in connection with Volodyovski's victory in the Derby, were £2,000 and £1,500 respectively.

The Hamburg-America line steamer *Deutschland* arrived at Plymouth on June 19, at 8.50 a.m., having beaten her own speed record. She covered 3,082 miles in 5 days 11 hours 51 minutes, at an average speed of 23.38 against 23.36, her best previous speed record.

The Governor-General of Formosa reports to the Home Department that plague returns at Taipei for the 6th inst. were—14 new cases and 10 deaths; at Tainan, 2 new cases and 3 deaths; at Taipei there were, on the 7th inst., 13 new cases and 8 deaths.

Mr. Fisher Unwin has just published another remarkable American success, viz "Quincy Adams Sawyer" by Charles F. Pidgin. It is a novel of new England life, and the success in America has been such that it is said to have made the name and fortune of a new and unknown firm of publishers.

Messrs. Vickers, Sons & Maxim inform the Associated Press that the increase in the firm's capital by £1,000,000 in ordinary shares has absolutely nothing to do with the American amalgamation. The measure is purely of internal finance and was considered necessary for the needs of the English company.

Colonel Garioni, of the Italian contingent in China, in reporting the events in which he participated, expresses the highest admiration for the Indian Cavalry, of which squadrons have often been attached to his troops, the Italians being without cavalry. He says they are the finest and bravest riders he ever saw.

Eight men and women who partook of young bamboo shoots at a house occupied by Yokoyama Sukeyemon, at Kawashima-mura, Hajima-gori, Gifu Prefecture, were poisoned on the 2nd inst. Five died and the remainder are under medical treatment though not expected to recover. The bamboo was served at a tiffin given by their host.

A committee has been formed at Altona to obtain subscriptions for a Sword of Honour for Count von Waldersee. The Field-Marshal was made an Honorary Citizen of the town on the occasion of his former stay there, and the Sword of Honour is to be presented to him on his return in the course of the summer.

The death is announced in home papers of Conn. H. Packe, R.N., at Bordighera. He was

engaged in all the operations at the reduction of the Peiho Forts (1860), and had charge of a division of transports. After the Chinese War, while commanding His Majesty's gunboat *Snipe*, and engaged in the suppression of piracy, he rescued the officers and crew of an American vessel, and received the thanks of the President of the United States.

A telegram from Toulon to the *Petit Journal* says:—The French cruiser *d'Entrecasteaux*, under orders at Toulon for the China Station, has undergone steam trials with very satisfactory results. During gun practice the 240-millimetre gun was fired from the after turret, but at the fifth shot the brake of the gun-carriage fractured at the valve. This will delay the departure of the vessel for her station.

The naval authorities at Portsmouth propose shortly to make some further experiments with liquid fuel, for which the *Surly*, a torpedo boat destroyer, which has been previously used for trials of this nature, and is specially fitted up for the purpose, will be again utilised. Last year American oil was tried, but it proved unsatisfactory, owing to the columns of dense smoke thrown up. This year the Borneo (Koetei) oil will be tried. In the *Surly* experiment the oil fuel will be sprayed on beds of coke, in order to ensure that the whole of the oil is consumed.

Admiral Rodgers, U.S.N., who arrived at Yokohama on Sunday in his flagship, the *New York*, paid a visit accompanied by the U.S. Consul-General, Mr. Bellows, to Governor Sufu and Rear-Admiral Mori, (Harbour-Master) on Monday morning. In the afternoon Governor Sufu, Rear-Admiral Mori, Mr. Egi (a Councillor of the Prefecture), Mr. Umeda (Mayor of Yokohama) and Mr. Otani Kahei (Chairman of the Japanese Chamber of Commerce) went off to the *New York* and called upon the Admiral.

A commission merchant, named M. Nishinomiya, of Moji, was in December last detected by the authorities smuggling 189 boxes of Manila cigars from the *Seiko Maru*. As the result of a close examination, says the *Nagasaki Press*, the local Customs a few days ago imposed a fine of yen 1,678.50 on the offender. When the case was brought to light, the man was in possession of only 99 boxes, the remainder having been sold. The 99 boxes and the money obtained from the sale of the other cigars have been confiscated by the Customs authorities.

The police are reported to be in search of a Frenchman named Luyat who is alleged to have obtained a considerable quantity of property from various persons on false pretences. Among others a Japanese silk merchant allowed him to have *habutai* to the value of over yen 700. The *Coptic* which left on Tuesday for San Francisco was searched but he was not on board.

The Frenchman Luyat, to whose doings in Yokohama we referred on Wednesday, has been arrested at Nagoya. It is asserted that on the 8th he despatched ten cases of champagne, which he had obtained from Messrs. Boyes and Co., and the *habutai* that Mr. Toyoda allowed him to have, to the railway station to be sent by rail to Shizuoka. He left Yokohama on the 9th and was followed the same day by officers, who arrested him at Nagoya on Tuesday night.

The Frenchman Luyat, arrested at Nagoya on a charge of obtaining goods on false pretences, was brought back to Yokohama by the police on Thursday morning. When arrested he drew a loaded revolver and threatened to shoot, but was disarmed by the officers.

Among the passengers who arrived per steamer *Gaelic* on the 3rd instant was Mr. Frank Prior Purvis, recently appointed Professor of Naval Architecture in the Tokyo Imperial University in succession to Mr. Percy A. Hillhouse, who returns to the Clyde in the autumn to resume practical shipbuilding. Mr. Purvis is a fellow of the Royal School of Naval Architecture at Greenwich, M.I.N.A., and Whitworth Scholar, and has enjoyed a long and varied experience of both the theoretical and practical branches of his subject, having

been closely connected with such well-known naval architects as Sir E. J. Reed and the late Mr. Froude, Sir William Pearce and Mr. Philip Watts, besides having accomplished much valuable practical work with Messrs. Denny of Dumbarton, and as managing partner of Messrs. Blackwood and Gordon, Port Glasgow. The Imperial University is to be congratulated on having secured the services of so able and experienced an instructor.

Mr. Purvis takes up his new duties in September, and hopes to be joined in the spring of next year by Mrs. Purvis and one of his daughters, a bonnie Scottish lassie of about ten summers.

After fifty-six years residence in Shanghai, during which long period he has had many varied experiences, Mr. P. H. Purcell, says the *N.-C. Daily News*, is leaving for home to assert his claim to some family property in Ireland, about which there is a dispute as to rightful possession. Mr. Purcell, who is the oldest foreign resident in the settlement, came out to Shanghai in 1845. He commanded one of Dent's steamers in the early days, and was up and down the river during the whole time of the Taiping Rebellion. He afterwards joined the Customs Outdoor Staff, of which he was a well-known and respected member.

There was a rather serious collision at Woosung on the afternoon of July 3rd between the German transport *Cresfeld* and the new blue-funnel liner *Peleus*. Both steamers were coming in, and they collided between the Woosung Spit Buoy and the Fort Buoy, at the mouth of the Huangpu. The *Peleus* has her stem twisted over to starboard and all the plates to which it is fastened are badly buckled down below the water-line. None of them, however, appear to be broken. A good many of the *Cresfeld's* starboard plates are also bent and started and it is thought that ten of them at least will have to be taken out and replaced.

The Tenth General Meeting of the Red Cross Society was held in the gardens of Uyeno Museum, Tokyo, on the morning of the 9th inst. Despite the rain, there were over 40,000 members present, the positions of the branches of the various prefectures being marked off by flags and tents. The Empress arrived at 9.30, Prince Komatsu, President of the Society, receiving her. Baron Hanabusa, Vice-President, then read the report of the society for the previous year, and delivered a long speech. After the election of officers the Empress congratulated the society and Prince Komatsu replied. The business of the meeting was over at 10.20 o'clock. There were over 100 lady members present, and it took two hours and thirty minutes for the crowd to disperse.

Four countries have now entered into keen competition to supply India with matches, says the *Madras Mail*. Three are well-known from the names on the familiar domestic match-box—Japan, Sweden, and Belgium. The fourth, many will be surprised to hear, is the Straits Settlements. At present the fight is mainly between Japan and the Straits Settlements, and the former has a slight lead with R10¼ lakhs a year, against R10 lakhs by the Straits Settlements. But the Singapore trade has for long been steadily increasing, whereas Japan is not doing much more than holding its ground. Of the two other countries, Belgium sent R7 lakhs worth of matches to India last year, and Sweden R4½ lakhs. The English match counts for very little in the struggle.

About one o'clock on Sunday morning two burglars armed with foreign and Japanese swords entered a watch-shop occupied by Fukawa Saizaburo, at Hiratsuka-machi, Nakagori, Kanagawa Prefecture. They tied up the proprietor, his wife, and six employees and then asked for money. The proprietor told them that all his money had been sent to the bank. The thieves, however, broke open a cash box and stole yen 7.50. They then said that as the haul of money was very small, they would require some good clothes and a watch. The proprietor thereupon asked to be untied so that he might get to a chest of drawers, where he kept his clothes. The men agreed to this, but the victim, biding his time, picked up one of the robber's swords and cut at one of the men. He at once fled, leaving Fukawa to deal

with his comrade in accordance with the principles of *Jiu-jitsu*. Both men are still at large.

The crew of the steamer *Cores de Vries*, commanded by Captain Rea, met with some rather exciting adventures on a recent voyage up the river to Hankow, says the *N.-C. Daily News*. Suspicion being aroused, preparations were made to meet probable surprises, and when one of the engineers saw some men, who had shipped aboard as passengers, trying to secrete a box of money, he gave the alarm and a free fight ensued between him and the ruffians. He defended himself for some time with a knife, and then received assistance from the rest of the crew, who were aroused by the noise. The men were eventually overcome, but most of them succeeded in escaping from the ship, and later on the leader of the gang slipped the handcuffs which had been placed on his wrists and jumped overboard, swimming safely ashore. The captured men, two of whom are old offenders, were placed in the Hankow Municipal goal. The engineer who gave the alarm has been rewarded for his courage by the owner of the steamer.

In writing on the trade of Yokohama during 1900 Mr. Acting Consul Chalmers tells us that in past years mention has been made of the unjust claims formulated by dealers when called upon to face losses, and the year under review has proved no exception to the rule, the complaints being numerous, and the allowances claimed—in the majority of cases conceded—being more flagrant than ever. This complaint has been very frequent indeed during the last nine months or so; since, indeed, the Chinese troubles largely closed that market to Japanese exports, and the silk export trade fell away. Japanese have not yet learned that in trade matters honesty is the best policy. They evade and shirk when the market is against them. With misfortune we may sympathise, but not the deliberate means of evasion too often resorted to in Japan.—*L. and C. Express*.

The question of foreign loans is again on the tapis, remarks the *Shingwa*. Rumour says that Mr. Sone, Minister of Finance, has communicated on the subject with a French capitalist; that similar procedure has been taken towards a German capitalist through Viscount Aoki. Another report goes so far as to assert that negotiations are being actually carried on with a foreign merchant, acting as representative of a certain American millionaire. Finally there is talk that a certain foreign merchant was requested to negotiate for loans with a Belgian Syndicate. As the particulars above stated are simply based on rumour, they can hardly be taken as facts, but there is no room for doubt, adds our contemporary, that any scheme for the introduction of foreign capital will be crowned with success.

A. B. C. F. M. MISSION.

The Japan Mission of the American Board of Commissioners for Foreign Missions held its twenty-ninth annual meeting recently at Kobe, when the beautiful grounds and building with all the excellent accommodations of Kobe College were generously put at the disposal of the Mission for the seven days of their meeting, beginning from July 3rd.

Of the 52 members of the Mission now in Japan, 42 were present, while there sat as corresponding members six of the Board's representatives in China, also two members of the United Brethren Board. These latter are co-operating with the American Board in theological education work, thereby furnishing an interesting bit of that united effort upon which stress was laid at the Missionary Conference last October.

While the prime object of such an annual gathering is the transaction of Mission business, other elements enter in more or less largely to round out the ideal conception of a Mission Meeting. These are found in the social and the devotional elements, together with the special features which characterized this gathering.

The discussions of the week covered a wide range of topics, including location and relocation of missionaries, inviting new missionaries, financial estimates, school and kindergarten matter, publications, cooperation of Missions in Japan.

In addition to the one or two families soon expected, a call was made for six new families and four ladies—not for opening new work, but for filling up depleted ranks. For the Mission has suffered some losses during the past few years, the most irreparable one being that of Dr. M. I. Gordon, "scholar, teacher, preacher, man of God," who passed to his reward in November of last year.

The healthy growth of the Doshisha at Kyoto since its reconstruction two years ago, and the large increase in numbers at the Women's College in Kobe, make imperative the call for new help to these schools; while the recent development of evangelistic work in connection with the Forward Movement (*Taikyo Dendo*) has shown many deficiencies in equipment for this extra demand.

The recent growth of the Women's College was the cause of considerable discussion, and as expansion seemed most manifestly in the line of its destiny, a committee was appointed to consider ways and means for raising funds, and for securing a new and more extensive site if that should be deemed best.

During the week of the meeting, the social element was not lacking. In addition to the delightful fellowship which marks such a gathering from start to finish, especially where all meet together, as they did here, in a common boarding club, there were several special features that entered in to make bright this side of the occasion. Not to speak particularly of the visit to the United States' warships that chanced to be in harbour at the time,—the *Yorktown* and the magnificent flagship *New York*,—a very pleasant affair was the Fourth of July celebration on Thursday evening. The school chapel was transformed into a very pleasant reception hall by the generous use of bunting, potted plants and various decorative devices, and among the guests and speakers of the evening were United States Consul Lyons, who with Mrs. Lyons honoured the meeting with his presence. Music and addresses and social intercourse together with light refreshments filled out a most delightful and patriotic evening.

The devotional element was, naturally, a large factor in the make-up of the programme. An excellent device has been used for the past one or two of these annual meetings, which combines the reports from the Stations with the devotional exercises of the day. By this plan the first half-hour of each session, morning and afternoon, is devoted to a report from one or more of the thirteen Stations, followed by prayer for this special work. The last half-hour of the morning session from 11.30 to 12 was given up to purely devotional exercises, following a topical programme previously prepared by the Chairman.

Sunday (7th) was a day rich in spiritual things from the morning sermon to the evening Eucharist. The preacher of the annual sermon, Rev. Dr. George E. Albrecht, of Kyoto, spoke upon Mark 1: 11, "Thou art my beloved Son, in thee I am well pleased," taking for his theme the unique place of Christ in the History of Religion. It was a masterly presentation, from the side of reverent, intelligent faith, of the ever recurring Problem of Jesus. And while making the easy affirmation that "the true science of religion has not reduced Jesus Christ to the level of other great religious teachers: He is still the chiefest among ten thousand, untouched by all the giants of the earth, as the sun stands high above the towering snow-capped peaks of the Himalayas," he yet did not hesitate to face the difficult question: In what consists the uniqueness of Jesus? What is it that lifts Him above all the venerated leaders of religions? The working out of the answer to this problem was a splendid piece of exegesis, the backbone of which was contained in the statement: If, instead of saying Jesus Christ was the Son of God, we say Jesus Christ had the consciousness that He was the Son of God, then we have given an absolutely sober, scientific answer, and have at the same time touched the salient point of his difference from all who ever were before, or who have come after Him. In his consciousness of Sonship consists his uniqueness which gives Him his place high above all sages and saints in the realm of the science of religion. This conscious-

ness has two chief characteristics; First, its purity. No sinful or doubtful deed is recorded of Jesus. He never confesses sin, repents, or prays for pardon. Second, its naturalness,—the spontaneity of this consciousness. Not arrived at by a process of reflection. He knew God intuitively. A crucial question then is, was this Son-consciousness an illusion? Whatever test is applied, the old dilemma cannot be escaped: either he was more than man or he was not a good man. The science of Comparative Religion teaches clearly and unmistakably that none has ever had the Son-consciousness which Jesus had; and adoring faith fills out the answer with the statement that it is because none has ever been the Son of God as Jesus was.

In the afternoon an interesting Christian Endeavour meeting was held, which was largely attended, and in which seventeen of the children of the Mission participated. Rev. C. A. Clark quite captivated the children with his address on Steamboats, with the telling and picturesque application of their need of steam, guidance, a pilot, chart and compass. The collections for the past year from the various branches have gone to the Okayama Orphan Asylum.

A vesper service was held, closing with the Lord's Supper, at which time three of the older children were received into church fellowship.

During the week, several interesting breaks were introduced into the routine which were not only highly profitable in themselves, but which were also valuable as the destroyers of any possible monotony; although the earnest and spicy debates that enlivened the business sessions had no particular savor of the monotonous. These breaks were in the form of special addresses, the first of which was a most interesting Annual Survey by Dr. D. W. Learned, rich in facts and statistics, and touching nearly every topic relating to the Mission for the past year, from Kindergartens to Cooperation.

Principal Hirotsu, of the Doshisha, gave a carefully prepared statement in regard to the Schools under his care, and made an appeal for sympathy with those Schools which are gradually winning back their former prestige.

Dr. J. H. De Forest, of Sendai, under the title of "The Religious and Moral Teachers of New Japan" (meaning those outside the Christian circle), gave a keenly analytical and very discriminating review of the life, work and influence of three men in particular,—Prof. Inouye Tetsujiro, Baron Kato Hiroyuki, and Mr. Fukuzawa Yukichi. It is to be hoped that this address may soon find its way into permanent form in print as it deserves.

Another real treat was the speech by Rev. Tasuku Harada, Pastor of Kobe Church, upon "Some Points of Contact with and Opposition to the Gospel in Japanese Character." This was a most illuminating address, finely conceived and thoughtfully wrought out. As, by request of the Mission, this is to be prepared for publication, it is unnecessary to say here more than that four points of contact and three of opposition were dwelt upon, the former being represented by the four Japanese words *Giri* (the sense of ought), *Ho-on* (sense of gratitude), *Renketsu* (moderation, or unselfishness?) and *Chūkō* (loyalty and filial piety); the points of opposition being the Fatalistic, Naturalistic and Pantheistic tendencies in the Japanese character.

A little discussion was indulged in as to the time and place of the next annual meeting, but the final outcome was a repetition of what has happened for many years now, viz., the decision that there is no more convenient time for all concerned than the first week in July, and no more ideal place than the beautiful Kobe College, where lovely outward surroundings are so richly blended with inward, generous hospitality.

H.B.N.

The wife of a rice-shop keeper at Ishikamachi, Niihagori, Ibaraki Prefecture, was awakened early on the morning of July 3rd by a voice crying out and on investigating the cause found her husband mysteriously murdered by some one. No property was missing.

CORRESPONDENCE.

THE HOUSE TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In answer to my letter on this subject in to-day's *Mail*, you have inserted a note alongside about Mr. J. F. Lowder paying up his delinquent house tax after convincing himself that it was just. It is almost incredible that a man of Mr. Lowder's professional reputation should have to spend one year on deciding this question. However, he would seem to be the very man to enlighten us on the questions at issue. I paid this tax last year promptly, with a feeling and protest that it was unjust, and have been giving the matter some attention all along, and I have found no reasons for changing my mind on the subject. One of the Foreign Ministers to Japan who at first advised his nationals to pay the tax has, so I have heard, recommended them since not to pay. It is evident that quite as powerful legal talent as Mr. Lowder's is on the other side, at least it has not yet reached his conclusion. We again ask for some of the lawyer's light.

Very sincerely,
July, 4, 1901.

SIGMA.

[“Sigma” has a very remarkable manner of interpreting a newspaper. We did not insert the note about Mr. Lowder by way of “answer” to “Sigma.” We had no thought whatsoever about “Sigma” when we inserted the note. If “Sigma” can advance any argument in support of his position we shall begin to think about him. But so long as he confines himself to comparisons of the amount paid by Japanese and foreigners, he can not expect to receive serious attention.—Ed. J.M.]

KYOTO SUMMER SCHOOL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your readers, especially missionaries and foreign teachers of English, may be interested to learn that parallel with the Student Christian Association Summer School at Kyoto, July 18-27, there will be two hours a day of Bible Study and lectures in English as follows:—

Dr. T. T. Alexander, Amos and Related Themes, four hours;
Rev. Albert Oltmans, N. T. Teachings on the Holy Spirit, four hours;
Rev. S. L. Gulick, Religions of Japan in Relation to Christianity, two hours;
Pro. C. M. Cady, Teaching English to Japanese, two hours;
Rev. R. B. Peery, Ph. D., Japanese Language and Customs, two hours;
Messrs. Helm and Fisher, Personal Work and Bible Study among Students, two hours.
Spontaneous worship, sociability and exchange of thought will form a rich background for the above.
The sessions will be held at the Doshisha at the same time as the Summer School, but will be so arranged as to allow of attendance upon Japanese sessions in which, by the way, all but one of the above lecturers will participate.
Bed and board will be provided at cost, but each guest should bring his own bedding, towels and mosquito net. A nominal fee of one yen will be charged for tuition. Upon arrival guests should go direct to the house next the Doshisha Girls' School, which has been kindly set apart for them.
Inquiries and applications for accommodation should be addressed to the undersigned as early as possible at 6 Ura Sarugaku-cho, Kanda, Tokyo.

Yours respectfully,
July 4, 1901.

GALEN M. FISHER.

MR. LOWDER AND THE HOUSE TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a subscriber to both funds which have been raised to protect the rights of property owners in the former foreign settlements and as one who has taken an active part in the arrangements made to obtain legal aid, allow me to correct a misstatement which has crept into your issue of this morning. You are in error when you say that it is a matter of public knowledge that could he (Mr. Lowder) have sacrificed his convictions to his interest he would have been entrusted with the very business which he is now accused of grudging to a rival. It was never proposed to retain Mr. Lowder. It was no question of his convictions, which, at the time both funds were started, were generally understood to be in favour of the property owners' view of the question.

Enclosing my card.

I am, Sir, Your obedient servant,

LEASEHOLDER.

Yokohama, 10th July, 1901.

LAW CASES.

In the Yokohama Chiho Saibansho on Thursday before Judge Yasuda, Messrs. Martin and Co. sued J. H. Ranger to recover yen 372.50, and interest at the rate of 5 per cent. Plaintiffs, in their pleadings, alleged that they let a steam-launch on contract to the Maples Hotel, under the former management, for four months from November, 1899, until February, 1900, at a charge of yen 37.50 per month, and plaintiffs further supplied to the Hotel forty tons of coal valued at yen 222.50 during January and April last year. Payment was never made. The organisation of the Hotel was subsequently changed, and all liabilities of the company were to be met by Mr. J. H. Ranger. Defendant, however, refused payment to plaintiffs.

In defence, it was contended that defendant had settled all the old liabilities of the company, and that his responsibility had ceased. Plaintiffs should now apply to Dr. Munro, who had succeeded defendant, for payment of this account. The hearing was adjourned to Sept. 27th.

Evidence was given in the Yokohama Ku Saibansho on Friday in the case brought by the Singer Sewing Machine Company to recover possession of a machine sold by them on the hire-purchase system to a Mr. Eugene, but which had been attached by a Japanese creditor of the latter. A Japanese employe of the Company stated the conditions under which the machine was lent to Mr. Eugene and the case was adjourned.

A case in which Arai Hikotaro sued Mr. John W. Hall to recover yen 500 and interest at the rate of 5 per cent. came before the Yokohama Chiho Saibansho on Friday. The dispute was in connection with the sale of certain buildings at Ikenoshita, Kuraki-gun, which occurred in February last. Plaintiff in his pleadings said he purchased the buildings for yen 2,700, and deposited with the auctioneer yen 500 as earnest money. At that time he thought the buildings belonged to Namikawa Seikichi and Sasao Shojiro. Subsequently he learned that the property belonged to Hoshi Nao, and he wished to cancel his bargain and get back his deposit.

In defence it was stated that Mr. Hall had been instructed by Sasao Shojiro and Namikawa Seikichi to sell by public auction the buildings at Ikenoshita. Although the property was at present registered in the name of Hoshi Nao, it had been sold by the latter to Sasao and Namikawa.

Sasao Shojiro and Namikawa Seikichi both gave evidence stating that they bought the property from Hoshi Nao, but as they bought it to sell again directly they did not take the trouble to register it in their names.

The case was then adjourned till Sept. 27, for the production of two more witnesses.

In the Yokohama Chiho Saibansho on Saturday before Judge Yasuda, the hearing came on of the petition filed by Mrs. Rosa Barman praying the Court for an order of divorce from her husband, William Barman. The details of the case have already been published, the chief fact being that the defendant (who was not represented in Court) left the plaintiff in July, 1898, and had not since corresponded with her. Judgment was given on Tuesday by Judge Yasuda in favour of plaintiff.

In the Yokohama Chiho Saibansho on Monday morning judgment was given for defendants in the suit brought by Mr. H. B. Bhesania against the P. & O. S. N. Co. Plaintiff was ordered to pay the costs of Court.

In the same Court the hearing was to come on on Monday afternoon of a suit brought by Hans Fiez, of Switzerland, against F. Wagen, but it was adjourned till Sept. 23rd owing to defendant's failure to present a proper answer to the petition of plaintiff.

On Tuesday morning a Chinaman formerly in the employment of the National Bank of China was brought up in the Yokohama Chiho Saibansho and examined by Judge Fujise on a charge

of having uttered a forged cheque. Mr. W. M. Humphreys, of the Bank, was examined as a witness in connection with the case.

In the Yokohama Ku Saibansho on Thursday morning the hearing was resumed of the suit brought by the Singer Sewing Machine Manufacturing Co. against Yendo Fuji. The case was again adjourned.

A wrestler named Hakkaku (formerly Onaruto) and others were arrested by the police at Narutoro, Hanazakicho, Yokohama, on the night of the 6th inst. and charged with gambling.

The hearing of a case, in which plaintiff, a provisioner, sues Mr. K. M. Benedickter, representative of the Russo-Chinese Bank at Kobe, for payment of yen 500 alleged damages, took place in the local Chiho Saibansho on Saturday. It was stated that plaintiff contracted to supply the meals of the passengers for Seattle on board the steamer *Milor* in April, 1900. The contract was re-let to a man, Yasui Kunitaro, who is not concerned in the dispute, and this man with ten assistants carried out the contract. The steamer arrived at Seattle on 4th May, 1900, via Victoria. It had been agreed that a free return passage by the steamer would be given to these employees, but Captain Hills without sufficient cause made the men leave the vessel and take passage home by the *Empress of China*, the men paying yen 500 in all. The men arrived in Kobe on the 29th June, 1900. They subsequently instituted an action against plaintiff and obtained the refunding of the sum of yen 500, which plaintiff now sues for. The case was adjourned.

In the Chiha Chiho Saibansho an action was began on June 24th by Messrs. T. Takagi, G. Koide, and T. Nakamura, counsel for the plaintiff, Mr. Hisaya Iwasaki, head of the Mitsubishi firm, against Mr. M. Shirasugi, President of the Boso Railway Company, for the purpose of obtaining recognition of certain debts contracted by the latter, and also for payment of the same. The facts and circumstances that led to the present complication are reported by the *Yoji*. According to the statement of the plaintiff (the Mitsubishi Co.) a loan was made to the Boso Railway Co. at a time when that corporation was in straitened circumstances, and as the application for the loan was very pressing, it was granted as a special favour. It was given against a promissory note for six months from February to August in the 30th year of *Meiji* to the amount of 200,000 yen. At the expiration of the term, when a demand was made for payment, the defendant (the Boso Railway Co.) was unable to meet it and consequently a postponement was allowed for another six months. This took place several times—each time either the promissory note was renewed or it was duly endorsed—until the 20th of November, 32nd year of *Meiji*, when half the amount was paid but the other half remained unpaid. In consequence of this, whenever the note matured, it was renewed as a special favour until 26th Nov. last when a demand for repayment was made as before. The defendant suddenly assumed an attitude quite contrary to expectation, and not only refused to pay, but openly refused to comply with the demand for endorsement. On this the plaintiff found it necessary to appeal to law although there had been some negotiations with a view to adjusting the difference. These negotiations succeeded so far as to lead to a postponement on condition that the defendant would duly endorse the note, but the latter insisting that there should be given a certificate ensuring postponement till the 37th year of *Meiji*, the plaintiff could not comply. On the part of the defendant (the Boso Railway Co.) it is alleged that although they did actually borrow the sum from the Mitsubishi firm in the 30th year of *Meiji* against a promissory note with interest, in the year following, when they issued their debentures, they paid off the debt with them through the 132nd Bank, and the transaction was duly entered in their books, which showed that the sum of 200,000 yen borrowed of the Mitsubishi Co. was paid in full on the 27th December, 31st year *Meiji*. The fact is that when the Company issued their debentures, there was scarcely any demand for them owing to the unfavourable circumstances, and by far the greatest part of them were taken by the 132nd Bank. The Company's debt was then transferred to the Bank in the form of debentures issued by the Company. These debentures were afterwards taken as security against the debt by the Mitsubishi firm and then taken for payment for one-half of the debt while the other half remained in the form of the note as before endorsed by Mr. Kato, the then president of the Company. Although the note bears an endorsement in the name of Mr. Kato, who was at the same time president of the bank, the Company are under no obligation

to pay the debt as the transaction is not duly registered in their books.

The real feature of the complication will be better understood when one comes to know the financial condition of the Boso Railway at the time when the debt was contracted, and the connection between Mr. Kato, the president of the Company, and the 132nd Bank, of which Mr. Kato was also president. Ever since its establishment the finances of the Company had been in a perplexing state; its debt at one time amounted to half a million yen, and the construction of its line seemed as if it would never be finished. With a view to the settlement of its debts and finishing the line Mr. Kato took measures to issue debentures to the amount of 600,000 yen. There were scarcely any subscribers excepting the 132nd Bank. However, Mr. Kato afterwards issued other debentures to the amount of 200,000 yen in addition to the above, and succeeded in getting the Mitsubishi to subscribe for half the amount of the debt the Company owed them. (At this time the Mitsubishi firm were acting as bankers for the Company.) As to the connection between the Boso Railway Co. and 132nd Bank, both being under the direction of the same president, Mr. Kato, the one was as a matter of fact subservient to the other, and they were in reality one and the same in interest. The debt in question was originally contracted when the late Mr. S. Narukawa was president of the Boso Railway Company. This gentleman had a special connection with the Mitsubishi firm and was elected president of the company with the object of obtaining through his influence a loan of 200,000 yen. In this Mr. Narukawa was successful; he was afterwards made president of the newly organized Teikoku Bank, and Mr. Kato succeeded him as president of the Company. When Mr. Kato set about raising the Company's loan, he made his 132nd Bank take the major part of it, and in the name of the bank he got the Mitsubishi to take the debentures as security for the Company's debt, and afterwards made the Mitsubishi buy debentures to the amount of 100,000 yen in payment of the Company's debt which was consequently reduced to 100,000 yen, for which a promissory note was given bearing the endorsement of Mr. Kato as President of the Boso Railway Company. Since that time the note has been renewed whenever it matured until January in the 33rd year of Meiji, when Mr. Kato was no longer president, his place having been taken by Mr. Shirasugi, the present President, and with him all the directors and auditors of the Company were changed. The new officials, of course, not knowing what had been done by their predecessors except from the records in their books, rejected the demand of the Mitsubishi firm.

The hearing of the case will begin after the summer vacation and will not be concluded in the present year. The case, which presents many complications, has awakened considerable interest.

FACTORY WOMEN.

Discussing the various occupations of females in foreign countries, the *Asiatic* says:—In England the largest number of women are employed in paper mills, book-binding, linen manufacture, and tailoring. Five to ten times as many females as males are at work in factories engaged in the manufacture of buttons, gloves, pens, and straw work. On the whole, simplicity and uniformity are the characteristics of female labour. In Germany, however, the chief employment of women consists in the production of window curtains, shawls, and knit work, which together absorb 84 per cent. of the entire number of women in the respective factories; spinning takes in 60 per cent. and braid 56 per cent. In Germany the proportion engaged in domestic service is 26 per cent.; bookbinding and pasteboard work absorbing 25 per cent., and business transactions securing the same percentage. The fair sex have thus a tendency to concentrate their capacity on things which are delicate and fragile. As to Japan, statistics on the same subject show the following results:—

Ratio borne by females to total males.		Per cent.
Factory.	Female operatives.	
Raw silk	107,348	93
Cotton spinning ..	53,053	79
Matches	11,385	69
Cotton fabrics	10,656	86
Tobacco	7,874	72
Mattings	1,641	59

Of the above total the greater number of operatives under fourteen years of age are employed on tobacco, spinning, and matches. As to the percentage of men and women having no occupation, in the United States, Germany, Italy, and Norway, our contemporary gives the following figures:—

Women per 100 men.	
United States	182
England	180
Germany	175
Italy	168
Norway	140

From the above it will be perceived that in America where the rights of women are, as is well known, recognised to the highest extent, female labour is on a comparatively large scale. Next comes England in this respect; whereas Norway and Italy, though far behind the three countries above mentioned, in point of civilization and development of industries, appear to have a comparatively small number of women unemployed.

THE MONEY MARKET FOR JULY.

Writing on financial movements for this month the *Asiatic* asserts that the settled revenue of the Government in the form of national taxes will aggregate 15,848,961 yen, while calls on companies' shares will amount to 1,498,185 yen, making a total of 17,347,146. As no interest on public loan bonds will be paid during this month, only the dividends of the various companies have to be counted as disbursements, but this sum does not exceed 15,473,684 yen, and there remains a surplus of revenue to the extent of 1,873,462 yen. Of course the fact is not to be overlooked that the amount of annual expenditures which remains unpaid does not fall short of 17,697,628 yen.

As to details of accumulation and distribution, the figures stand as below:—

NATIONAL TAXES.		Amount in Yen.
Land rates for urban house lots for the half-year	870,361	
Sake brewing tax for the 1st period	13,682,420	
Mixed sake (for the 1st period)	134,572	
Soy tax (for the 1st period)	1,096,930	
Patent medicine business tax for the latter half of the year	55,678	
Total	15,848,961	

CALLS ON SHARES AND DEBENTURES.		Period of Amount in payment. Yen.
Osaka Spinning (preference shares) 4th	100,000	
Osaka Railway	120,000	
Tobu Railway	205,000	
Kiwa Railway (new shares)	67,185	
Hankoku Railway (debentures)	940,000	
Total	1,498,185	

DIVIDENDS OF VARIOUS COMPANIES.		Amount in Yen.
Various banks	10,984,554	
Various companies	3,897,737	
Various railway companies	421,816	
Interest on Industrial Debentures distributed	178,522	
Interest on debentures of the Hokkaido Colliery and Railway Company	30,555	
Redemption of debentures of the Industrial Bank	12,500	
Redemption of debentures of the Osaka Beer Company	10,000	
Redemption of the Tsuruoka Hydro-Electric Company	13,000	
Total	16,473,684	

THE ODAWARA ELECTRIC RAILWAY.

At a general meeting of the Odawara Electric Railway Company held on July 2nd, President Nakano, after submitting a report for the 1st half of this year, sought to obtain the temporary approval of the shareholders in regard to the estimates of expenses of proposed work in the form corresponding to the settled accounts for the latter half of last year.

The items of expense of electric works as well as loans from banks, however, were not passed and the dividends for the present term were distributed as follows:—

	Yen.
Net profit for the current term	17,752
To reserves	888
To loans issued	1,775
Balance	15,089
Brought over from the previous account	282
Total	15,371
To rewards for officials	1,000
To dividends (4 per cent. per annum)	11,000
Carried over	371

It may be added that the principal shareholders of the above company are Mr. Wakao (2,940 shares), Mr. J. Watanabe (1,708), Baron Mutsudaira (1,680), Viscount Satake (1,000), and Mr. J. Wakao (1,000). There are five others holding from 840 to 990 shares.

THE LATE PRINCE HOHENLOHE.

The following brief summary of the career of the late Prince Hohenlohe, from *Men of the Time*, will be found interesting:—

Hohenlohe-Schillingsfurst, Clodwig Carl Victor, Prince of, born at Rothenburg, March 31st, 1810, was the second son of Francis Joseph, Prince of Hohenlohe-Schillingsfurst (of the line of Waldenburg). On the death of his father in 1841, Clodwig had just begun his judicial and historical studies in the University of Göttingen. A year later, after having passed his examination with distinction, he took a subordinate position in the public service as Auditor in the Office of Justice at Ehrenbreitstein. He next became Referendary of the Government at Potsdam. While working thus diligently at his post in Prussia, the Landgrave of Hessen-Rheinfels-Rothenburg died, and the princely family of Hohenlohe succeeded to a rich inheritance, including the lordships of Ratibor and Corvey. The event, however, did not alter Clodwig's position. His elder brother took the domains of Ratibor and Corvey, to which the King of Prussia, William IV., added the title of Duke. In 1845, on the death of his brother, Philip Ernest, Clodwig succeeded, with the consent of his elder brother, to the old family seat of Schillingsfurst, and, forsaking the Prussian service, took up his permanent residence in Bavaria. Thus at twenty-seven years of age he became an hereditary member of the Bavarian parliament. The ministry, meanwhile, in Frankfurt, sent him as Ambassador to Athens, Florence, and Rome. In 1849 he returned to Frankfurt. Having married the Princess of Sayn-Wittgenstein, by whom he has a numerous family, he retired for some ten years into private life, paying frequent visits to England, France and Italy. In 1860 the prince again entered upon parliamentary life, and favoured throughout an alliance with Prussia. Towards the end of 1866 the youthful king requested Hohenlohe to prepare and lay before him a programme of the principles which were to serve eventually as a ministerial policy. Prince Hohenlohe fulfilled his commission to the satisfaction of the king, and on Jan. 1st, 1867, succeeded Fierdin as Bavarian Minister. The whole of Germany at last adopted the Hohenlohe programme. In 1868 and 1869, Prince Hohenlohe was elected Vice-President of the Customs Parliament of the German Federation. In his capacity as Foreign Minister of Bavaria, he issued his famous circular of April 9th, 1869, directing the attention of the European cabinets to the serious consequences likely to arise from the decrees of the Oecumenical Council of the Vatican. Hoping to get the Pope to withdraw his political opposition, and viewing mere religious innovations with extreme indifference, the Prussian Government slighted the warnings of the Bavarian minister, and refused to take action against the contemplated decrees. In consequence of this desertion by the principal exponent of the Unity party, Prince Hohenlohe could not hold out against the attacks of the combined Particularists, Catholics, and Austrians, in the Bavarian Parliament, and had to resign (March 7th, 1870). He then resumed his seat in the Munich House of Peers; and in a few months, on France threatening war, made himself conspicuous by insisting upon the participation of Bavaria in the great national feud. Upon the successful termination of the war in 1871, he was elected member of the first German Parliament, and, in recognition of his patriotism, immediately became Vice-President thereof. In May, 1874, after the deplorable exit of Count Harry Arnim, Prince Hohenlohe was chosen German Ambassador in Paris. He was one of the German plenipotentiaries at the Congress of Berlin in 1878. In August of that year he was re-elected to the Reichstag on the second ballot, at Forstheim, Kuhlmbach, Bavaria, polling 9,800 votes, while his Catholic competitor had 8,700. After the death of Marshal Manteuffel, Prince Hohenlohe was appointed Governor of Alsace-Lorraine, a position which he held till Oct. 1894. During his administration he enforced the strictest passport regulations at the French frontier, until in Sept. 1891 the Emperor issued a rescript rendering it somewhat less difficult for Frenchmen to visit Alsace-Lorraine. In Oct., 1894, he was appointed Chancellor of the German Empire and Prussian Prime Minister in succession to Count von Caprivi and Count von Eulenbergh. He retired from public office on October 17th, 1900, when the Emperor bestowed on his aged servant many marks of high esteem.

FRENCH ENTERPRISE IN YUNNAN.

M. Doumer (says the *Strait Times*) is not allowing the grass to grow under his feet in regard to his pet scheme for a railway from Laokai to Yunnanfu, and he has already secured the approval of the French Cabinet to the convention he has made with a syndicate of Paris bankers to build the line at a cost of 70,000,000 francs. This announcement will not be received with unalloyed delight in Tonquin.

where the *Opinion* characterises the entire scheme as the work of a vulture seeking conquest in order to batten on the corpse of the victim. The same journal points out that the cost of construction of the line will greatly exceed the estimates; and, when completed it cannot be commercially profitable, though strategically it will conduce to the annexation of Yunnan by France at the price of considerable blood. The annexation, it further contends, will be of benefit to a horde of officials, but to no one else, and our contemporary winds up by comparing M. Doumer and his colleagues to a pack of vultures, as aforesaid, hovering about in readiness to pounce upon the spoils of Yunnan. At present the greater part of the export and import trade of that province is carried on through the open town of Mengtse, about 150 miles south of Yunnan-fu or Yunnan-sen, as the French call the capital—and quite near the Tonkin border. In actual going, Mengtse is distant from Yunnan-fu eight easy stages for pack animals, over a table land sloping up to northwards. Its climate is excellent; but a day and a half's journey to the south from Mengtse brings the traveller now into the low-lying and tropical valley of the Red River at Manhao, whence there is direct communication with the sea. Goods are brought from Hongkong to Haiphong on the Tonkin coast, and thence up the Red River in junks. Small steamers can reach Laokai on the Chinese frontier whence M. Doumer means to start his railway, but the navigation is so uncertain that shippers prefer junks. The difficulties of navigating the Upper Red River, and the two days' mule transport from the river valley up on the plateau of Mengtse, are serious hindrances to the trade; yet Mengtse is the commercial key of the best districts of Yunnan, and the chief supply town of a district containing a population of about 2,500,000. Its trade has been increasing rapidly. It was valued at only £560,000 in 1897. In 1898 it was valued at £596,804; in 1899 it had jumped to over £854,000, and last year it was probably well over a million. Withal, the town of Mengtse itself is neither large nor wealthy; it is little more than a forwarding station for goods. The Chinese merchants in Hongkong barter their yarns and cottons against Yunnan tin and opium. There are three large warehouses at Manhao, whence the imports are forwarded on mules to Mengtse, whence, again, after passing the Customs, they are commonly sent on into the interior under transit pass on the day of their arrival. There are no banks in Mengtse, and in a town through which over £750,000 sterling of Hongkong trade passes, it is a matter of great difficulty to change a cheque on Hongkong. Its chief product is tin, and it exported nearly £250,000 worth of that metal in slabs during 1899. The mines of Kuo-chiu are conveniently situated near by, so the expense of transport is small. When one figures that the exports of tin from Singapore during 1899 were valued at £1,200,000 while Mengtse—where one cannot change a cheque—exported slabs valued at more than one-fifth our local total for the same period it will be realised that Yunnan very possibly possesses rich mineral resources that may render M. Doumer's railway a commercially profitable as well as a strategically important venture.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

ANOTHER MANCHURIAN AGREEMENT.

Shanghai, July 3.

The *Daily News* correspondent in Berlin learns from St. Petersburg that Russia has entered into a fresh compact with China, which is tantamount to a resurrection of the Manchurian Agreement.

BERESFORD WISHES TO RESIGN.

The *Times* states that Admiral Lord Charles Beresford is anxious to resign his command in the Mediterranean in order that he may criticize the naval and military policy of the Government.

THE INVASION OF THE TRANSKEI.

The Boer invaders of the Transkei attacked the town of Maclear, but in vain, thirty young farmers keeping them at bay till General Dalgety relieved Maclear. The invaders are seeking retreat over difficult routes.

THE LIBERAL PARTY.

Shanghai, July 4.

A meeting of the Liberal Party has been summoned, at which, it is understood, a reso-

lution of confidence in Sir Henry Campbell-Bannerman will be proposed.

HEAT WAVE IN AMERICA.

The heat in America continues unabated and is accompanied by an alarming mortality. Business is paralyzed.

STEAMSHIP SUBSIDIES.

The (British) Consul at Nagasaki, testifying before the Steamship Subsidies Commission, urged that the granting of a subsidy for a British service to Japan would be a splendid national investment.

THE BOERS RETREATING.

Fourche is retreating towards the Drakensberg, the invasion of the Transkei having failed in its object.

APPALLING HEAT.

Later.

The heat in America is appalling. In New York there have been 225 deaths out of 307 cases.

COMMERCIAL CRISIS IN GERMANY.

Shanghai, July 5.

There is a commercial crisis in Germany following the failure of the Leipziger Bank.

THE BOERS AND THE WAR.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, replying to questions in the House of Commons regarding the termination of the war, said that Lord Kitchener had wired that the Boer leaders had proclaimed that they were fighting for their independence, which they would never surrender.

SUCCESS OF THE FRENCH SUBMARINE BOAT.

The French Naval manoeuvres have proved a striking success for the submarine boat, which approached the squadron unsuspected, passed along the entire line and torpedoed an ironclad and escaped unsuspected and unscathed.

YUNNAN RAILWAY.

The French Senate have approved of the Yunnan railway scheme.

RACING.

The Princess of Wales' Stakes was won as follows:—

Epsom Lad.....	1
Diamond Jubilee	2
Sigur	3

BRITISH WAR LOAN.

Shanghai, July 6.

The War Loan Bill has been read a second time in the House of Commons.

BOTHIA'S COMMANDO.

Botha is encamped at High Veldt East Springs. It is estimated that over 13,000 Boers remain in the field.

REINFORCEMENTS FOR SOUTH AFRICA.

Between the fifth of July and the second of August eleven vessels will leave England taking 1,000 troops and 5,000 horses to the Cape.

NEW WAR SHIPS.

Shanghai, July 7.

The shipbuilding programme includes three ships of 16,500 tons, six armoured cruisers and ten torpedo-boat destroyers of improved type.

CASUALTIES IN SOUTH AFRICA.

The official returns show that in June the casualties in South Africa were: 15 officers and 152 men killed, 42 officers and 444 men wounded, 375 missing.

LORD ROSEBERY.

Lord Rosebery has returned to London.

There is much speculation as to his attitude, and interest is intensified in the Liberal party crisis.

BOERS WRECK A TRAIN.

A Boer force north of Naboomspruit wrecked a train from Pietersburg. Lieutenant Best, nine men of the Gordons, and nine others were killed.

HENLEY.

Leander beat Pennsylvania by a length at Henley for the Grand Challenge Cup. It was a magnificent struggle and the excitement was intense.

AUSTRALIAN DEFENCE.

Later.

The Australian Defence Bill provides for a small force of regulars, with large forces of militia, mounted infantry and volunteers, and also provides for a classification of all adult males.

THE WRECKED TRAIN.

Besides those killed at the wreck of the train, there were 10 Gordons wounded. No details whatever are to hand.

RUSSIA AND THIBET.

Shanghai, July 8.

The Thibetan Mission was ceremoniously received by the Czar at the Peterhof, where they handed over some valuable presents.

THE POPE AND FRENCH POLITICS.

A letter from the Pope in plaintive terms condemns the French Associations Law, just passed, as injuring and impairing the power of the Church.

DEATH OF PRINCE HOHENLOHE.

The death is announced of Prince Hohenlohe, ex-chancellor of the German Empire.

RUSSIAN OPINION ON THIBET.

The *Viedomosti* describes as idle talk the rumours of a Russian protectorate over Thibet. It declares that Thibet must remain a no-man's-land.

UNIVERSITY CRICKET.

The University Cricket Match between Oxford and Cambridge being unfinished, the game has been declared drawn.

[Note.—In 1827, 1844, 1888, 1899, and 1900 the matches were not finished. So far, Cambridge has won 32, Oxford 29, and there have been 6 drawn games. Oxford won in 1898 by 9 wickets; Cambridge won in 1897 by 179 runs.—Ed. J. M.]

AMERICAN COMBATANTS IN THE BOER WAR.

Shanghai, July 9.

Great Britain has declined to release the Americans found among the prisoners of war in South Africa.

[NOTE.—Many of these American prisoners are of Irish extraction and some are in Ceylon at the present moment. The American Ambassador to the Court of St. James first approached the British Government with regard to them last Fall.—Ed. J. M.]

KILLING THE WOUNDED.

Evidence from various sources shows that the Boers killed the wounded lying on the field after the battle of Vlakfontein.

A later telegram says that Lord Stanley has announced that a full enquiry has been ordered into the Vlakfontein allegations.

PLAGUE ON THE M.M. "LAOS."

A case of bubonic plague has been discovered on board the M.M. liner *Laos*, which has just arrived at Marseilles from the Far East. Upwards of 300 passengers and crew are quarantined.

[NOTE.—The only Yokohama passengers on the *Laos*, so far as we can gather, are Madame Mathieu and her two little children—one a baby in arms.—Ed. J. M.]

BRITISH ARMY IN SOUTH AFRICA.

The number of troops present in South Africa is 251,000, whereof 14,000 are sick.

HOW AUSTRALIA WILL ARM.

Shanghai, July 10.

The Australian Defence Bill provides that all male British subjects between 18 and 60 are liable to military service in times of emergency.

RUSSIA AND THIBET.

A Russian official *communiqué* to the press regarding the Thibetan Mission says that it was purely of a religious character and had no political significance.

THE ENGLISH LIBERALS.

Later.

A largely attended meeting of the Liberal party has been held at the Reform Club. The proceedings were entirely harmonious and a resolution of confidence in Sir H. Campbell-Bannerman was adopted.

THE LIBERAL SPLIT.

Shanghai, July 11.

The Liberal meeting is regarded as a mere temporary truce. Despite the semblance of unity it is already recognised that the situation is unaltered by the carefully arranged proceedings.

SOUTH AFRICA.

Scheeters with forty men held Murraysburg for two days. He burned the principal buildings and seized the money in the bank. Two rebels were publicly hanged at Cradock and Middleburg.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, July 3.

The Chamber of Deputies has voted by 374 to 71 a supplementary credit of 80 millions of francs for the expedition to China. M. Delcassé declared that France would remain on the route to Peking like the other Powers.

The Commission of secret finance has unanimously adopted the project for the Yunnan Railway.

Saigon, July 5.

The Yellow Book published with regard to affairs in China affirms the moderation of the French troops, which was highly appreciated by the Chinese authorities and the Chinese people who asked to be placed under French administration.

Saigon, July 7.

The Chamber of Deputies has voted the Direct Contributions and has separated from the discussion of the Budget the question of an income tax.

The failure of the Bank of Leipzig has caused panic and involved the failure of some industrial associations. Many administrators have fled, been arrested, or committed suicide.

THE YUNNAN RAILWAY.

Saigon, July 8.

The French *Official Gazette* publishes the Law authorising the construction of the Yunnan Railway.

The Parliamentary session is closed.

THE PLAGUE ON THE "LAOS."

Saigon, July 11.

The *Laos* has been sent to the Lazaret of Frival at Marseilles. Nineteen firemen were attacked by pest between Port Said and Marseilles. Two have died.

FLOODS IN KIANGSI.

There are inundations in Kiangsi. Four thousand persons are believed to have been drowned.

(RECEIVED IN TOKYO.)

NORTH CHINA.

The estimates of the Powers were on the basis of withdrawal on the 1st of July, but as their troops have had to remain, additional expenses have been incurred, and the residue of the sum agreed to by China is consequently much reduced. It had therefore become difficult to find means of satisfying Japan's demands for an increase of her portion on account of the probable loss she will incur in negotiating the bonds, and if, now, Russia and other Powers advance fresh demands, Japan's case will be almost hopeless.

On the occasion of Lieut.-General Baron Yamaguchi's leaving Peking on the 6th instant, the German Minister and all the commanding officers in Peking as well as many staff officers accompanied him to the station. Guards of honour were furnished by England, America and Russia and a band by France. The Lieut.-General left Taku on the 8th at 8 a.m. amid salutes from all the war-vessels of the Powers.

(FROM THE "NORTH-CHINA DAILY NEWS.")

AFFAIRS IN THE PHILIPPINES.

Hongkong, June 23.

It is telegraphed from Washington that after the 4th of July until otherwise ordered Judge Taft will exercise authority in civil affairs, under conformity with the instructions given the commission dispatched from the United States in April, 1900, and subject to the approval of the Secretary for War.

The Military Governor will continue to exercise authority in the districts still hostile.

General Cailles is to surrender with six hundred riflemen at Santa Cruz on Monday, the event being converted into a grand *festa*.

AFFAIRS IN THE PHILIPPINES.

Hongkong, June 24.

A telegram from Manila announces that General Cailles has surrendered unconditionally with four hundred rifles at Santa Cruz. They all took the oath of allegiance, and were then released.

THE TIENSIN ANNIVERSARY.

Tientsin, June 25.

The banquet and fête last evening in commemoration of the anniversary of the relief of Tientsin were a brilliant success. Mr. A. Zimmermann, the German Consul (who has replaced General Wogack on the Provisional Government), presided, and made special reference to the gallant services of General Wogack, Captains Bayly and Burke, Jim Watts, and the volunteers.

The fireworks included a set piece, which represented a mimic bombardment of Gordon Hall.

General Wogack telegraphed his congratulations.

TUNG FU-HSIANG IN MOTION.

News arrived here yesterday that General Tung Fu-hsiang is marching on Taiyuanfu, and that the Governor of Shansi is soliciting foreign assistance.

THE DEPARTURE OF GENERAL GASELEE.

General Gaselee is expected to leave Peking on the 18th proximo.

DISASTER IN KOWLOON DOCKS.

Hongkong, June 26.

Seven Chinese have been burnt to death on the American water-tender *Arctus* in Kowloon docks, and three seriously injured, through a fire in the shaft tunnel.

FAREWELL TO ADMIRAL SEYMOUR.

Hongkong, July 4.

Admiral Sir E. H. Seymour, G.C.B., was entertained at dinner at Government House on Tuesday, and at luncheon at the Club by the China Association on Wednesday. He left in his flagship, the *Centurion*, for home last night.

A COUNSEL OF DESPAIR.

A petition to Mr. Chamberlain, Secretary of State for the Colonies, asking for the appointment of a commission, accompanied by an independent sanitary expert, to enquire into the sanitary condition of the colony, is being largely signed.

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM EUROPE.

Berlin, June 24.

An international Board is about to be formed at Tientsin for the War Loan service, and those connected therewith will also be entrusted to watch over the income of the sea salt gabelle.

The situation in Manchuria is again considered serious at St. Petersburg, as according to late news large bodies of troops, both Mongolian and Manchurian, are reported to be congregating.

Berlin, June 25.

The Leipziger Bank (Capital 48,000,000 marks) has been declared by the proprietors to be insolvent. Creditors to the amount of 87,000,000 marks are involved.

The Treber-Concern (probably the Company for manufacturing the malt, etc. refuse of the brewers into food for animals) at Cassel, with capital of 12,000,000 Marks and Letz (?) have failed.

There is a panic in the Exchange at Berlin and all stocks are falling rapidly.

Berlin, June 26.

The Leipziger Bank is now bankrupt.

Berlin, June 27.

The Secretary of the Navy, Vice-Admiral von Tirpitz, proposes to establish a coaling station in the South Sea and to declare for this purpose all collieries there to be the property of the Government. The Director of the Colonial Office, Privy Councillor Dr. Stöbel, consequently asked the Governor of German New Guinea at Herbertshöhe, von Kenningsen, to make a report on this question.

The liabilities of the Leipziger Bank amount to 92 million marks, the assets to 150 millions, whereof 111 millions come under the heading of sundry debtors. The director of the bank, Mr. Exner, has been arrested.

NEWS FROM THE NORTH.

Peking, June 27.

The question of the method of payment of the Chinese indemnity seems to be still far from settled. France has finally withdrawn her objections to the use of the salt gabelle in payment, but now the Viceroy and Governors make the point that the heavy charge necessary to raise thirty million taels annually from the provinces is more than their revenues can bear.

Chefoo, June 27.

Numerous refugees from Manchuria are arriving here. They report that the whole province of Shing-king is in a state of insurrection. The rebels are overrunning the country, pillaging and burning. Around Moukden all the villages and hamlets have been burned, and hundreds of the inhabitants who offered resistance have been killed. The Russian forces are entirely insufficient to maintain order in southern Manchuria.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 20TH, 1901.

DEATH.

On the 12th instant, in Tokyo, YASUSABURO WAKEDA, Director of Mitsui Bussan Kaisha, aged 47. Funeral will take place on the 15th at 9 a.m. in Tokyo.

MARRIAGE.

At the Legation of France and subsequently at the Tsukiji Cathedral, on the 17th instant, Monsieur JULES ADAM, Consul of France and First Interpreter of the Legation of France in Tokyo, to Mademoiselle ADRIENNE BOUTARD.

SUMMARY OF NEWS.

THE Japanese cruisers *Itsukushima* and *Hashidate*, with naval students on board, left Fusan for Gensan on the 11th inst.

A SEAMAN named Sakane Saburohiko, belonging to the war-vessel *Kasagi*, committed suicide on the ship at Fukuoka on the 12th inst.

A *soshi* named Ito Tomojiro, living at Oimatsubo, Yokohama, was arrested by the police on the 11th inst., on a charge of libelling officers.

A MAN named Fujiwara Yasutaro murdered another named Uyeda Yasutaro at Matsumoto-cho,

Higashi Chikumagori, Nagano Prefecture, on the night of the 13th inst. The criminal was arrested at once.

SIR JOHN CARRINGTON, C.M.G., Chief Justice of Hongkong, is enjoying the cool delights of the Nikko mountains. He is staying at the Lake Hotel, Chuzenji.

THE Nikko and Chuzenji hotels are overflowing at the present time with visitors from Shanghai and the China coast ports. So far the season has been very rainy.

AN explosion occurred in a fireworks factory owned by Suwa Daisuke, Nishi Tobemachi, Yokohama, on the 11th inst., by which Suwa's wife and one workman were badly injured.

TWO American stowaways named Edward Hurry (18) and Frank Kelly (17) arrived at Yokohama by the *Hongkong Maru* on the 10th inst. and were handed over to the Harbour police.

A COAL dealer named Aizawa Seijiro, a native of Niigata, was arrested at Shanghai and sent back to Osaka on the 10th inst. charged with uttering several counterfeit bonds in Osaka.

A DEALER in old furniture named Tsuda Kuni-saburo, living at Tobemachi, Yokohama, was attacked by cholera on the afternoon of the 13th inst. and died at Manji hospital the same evening.

A MAN named Furuhashi Sadahachi, living at Kamizuma-mura, Makabe-gori, Ibaraki Prefecture, committed suicide on the 12th by shooting himself after having killed a woman by stabbing her in the throat.

A JAPANESE employer of Messrs. Carl Rohde & Co. was robbed of a bag containing five cheques amounting to 4,500 yen and 16 yen paper money between Shinagawa and Omori, on the morning of the 13th inst.

A COLLISION occurred between a Japanese steamer and a fishing boat in Taga Bay, Ibaraki Prefecture, on the 14th inst. and one fisherman was drowned. The steamer kept on her course and her name is not known.

TWO students named Takino Hyoya (21) and Murata Yeizaburo (24), living at Honjo, Tokyo, were arrested by the police on the 11th instant, charged with stealing several articles from a boarding house on the 7th inst.

A COLLISION occurred between an engine and several ballast cars at Tsubata, on the Hokuyetsu Railway, early on the morning of the 14th inst. Two workmen were injured. The engine and four ballast cars were damaged.

THE German ship *Rickmers* arrived at Nagasaki from Philadelphia on Friday week. The ship covered the whole distance in 110 days. A terrible hurricane was encountered off the Cape of Good Hope and four of the crew were washed overboard.

A DEAD body has been found at a place called Yugakubo, on Mutsumine San, Saitama Prefecture, which is believed to be that of the missing Niimura Bungoro. The supposition that a body recovered from the Atsugi river was his seems to be incorrect.

THE Osaka Shosen Kaisha steamer *Taitai Maru*, 2,700 tons, which was built at the Mitsu Bishi Shipyard, Nagasaki, will be launched on August 3rd. Mr. Nakabayashi, President of the Osaka Shosen Kaisha, will attend. The new vessel is to trade on the Yangtze.

A MAID servant named Ogawa Asa (16) living at Kaneda-mura, Naka-gori, Kanagawa Prefecture, was arrested by the Tobe police on the 11th inst.

on a charge of stealing over 100 articles from the house of her former employer at Noge-machi on the 18th ult. and setting fire to the premises to conceal evidence of her guilt.

A YOUNG man named Tatamiya Shichizo, employed in a barber shop at Kamiyacho, Kanda, Tokyo, while cutting a customer's hair on the night of the 10th inst. knocked down a hanging lamp. The oil splashed all over his clothes and he was shockingly burnt. He died the following afternoon.

MR. CAMERON, one of the superintendents at the American gold mines at Un-san, Korea, was brought to Chemulpo recently suffering from a disease whose nature was at first not known, but it soon developed into the most malignant form of smallpox and he died on Saturday, the 22nd June.

SHORTLY before the last train arrived at Shim-bashi station on the 15th, a man jumped from a window of the railway office. He was arrested and handed over to the Shiba police. He was found to be named Kanayama Kinjiro, living at Yonezawa-cho, Tokyo. He had in his pocket yen 250.

FOUR Japanese living at Yokohama, hid in the coal-bunkers of the *Hongkong Maru* and attempted to smuggle themselves out of Japan on the 28th May. The vessel brought the men back to this port on the 10th inst. They were sent to the harbour police first and to the procurator's office the following day.

A MAN named Yamada Suekichi has been arrested by the Water Police and sent to the Court for trial on a charge of having defrauded two natives of Fukuoka Prefecture of yen 100 each on the pretext of securing passages for them to Seattle on board the steamer *Riojun Maru* without passports.

TWO burglars named Ozawa Yasutaro and Yebara Ryuichi were arrested in Saitama Prefecture, on a charge of having entered the house of a blacksmith named Takichi Keijiro, at Yoshioka-cho, Honjo, Tokyo, on Tuesday night last. It appears that they murdered his wife and badly injured her husband.

FORTY-THREE labouring people of both sexes employed on the second fort at Futsu were returning home in three boats shortly after five o'clock on the afternoon of the 12th inst. when between the second and first forts a boat was capsized. The men were rescued at once but three women are missing.

A WOMAN named Hidamura Hisa (18) living at Shiroato-mura, Tachibana-gori, Kanagawa Prefecture, attempted to commit suicide by shooting herself with a pistol belonging to her brother on the afternoon of the 11th inst. She was rescued by her family. The bullet entered the throat and stopped at the back of the head.

A FIGHT occurred on Saturday last between two carpenters employed in the erection of Count Kuroda's residence at Mita, Tokyo, during the course of which one of the men struck his companion a violent blow on the head with a hammer and then escaped. The injured man was taken to the hospital and is not expected to recover.

THE *Government Gazette* of India announces the death on June 18th of Her Highness the Begum of Bhopal. The Viceroy states that for 33 years Her Highness ruled her State with marked ability. Her people have lost a just and considerate ruler, and the British Crown, one of its most faithful feudatories. Having left no son, a daughter will doubtless succeed, thus establishing the unique event in the history of the State of three consecutive generations being ruled by Queens.

CHINESE AFFAIRS.

Saturday, July 13.

General Ma with 15 battalions is reported to have arrived in the vicinity of Peking, which city he will soon enter. It is expected that the duty of dealing with the *Lieu-chuan-hui* will be entrusted to him, in addition to his previously indicated duty of organizing, in conjunction with Governor Yuan, a guard for the Imperial Court.

The British troops in Peking are to be transferred to Tientsin on the 14th instant, when Major-General Gaselee will resign his command to a junior officer.

The Chinese Prince Imperial is said to be about to pay a secret visit to Ninho to meet his father Prince Tuan. Much care is reported to have been taken for the purpose of concealing the fact, but it has nevertheless become known. If the story be credible—which we take leave to doubt—the probability of Tuan's execution in deference to the demand of the Powers, is evidently very remote. Indeed we never could appreciate the wisdom of preferring such a demand, for whether Prince Tuan deserved or did not deserve capital punishment, to ask the Court to pronounce and carry out a sentence of death against the father of the heir to the Throne was to put an altogether excessive strain upon Chinese docility.

Reports are coming in which indicate that the inundations in Kiangsi have assumed disastrous dimensions. Numbers of aged persons and children have been drowned. It is apprehended that the trouble may extend to other regions in the Yangtze Valley.

Lieut.-General Baron Yamaguchi arrived at Bakan on the 11th instant. All the ships at Moji and Bakan were dressed, and a most hearty welcome was given to the returning General. Several interesting assertions are attributed to him. He regards without any uneasiness the outbreak of the *Lieu-chuan-hui*. They are one of the incidents that must always be anticipated in China, and no necessity exists to employ troops against them. At all events, Governor Yuan's trained force, three thousand strong, is now encamped within a few miles of Peking and will be fully able to dispose of all such troubles. Russia shows so evident a disposition to treat Japan with deference that the Russian occupation of Manchuria is not likely to prove permanent if Japan plays her cards discreetly. The chief questions for discussion by the Peking Conference have now been settled, and it is probable that, in the end, Japan's demand for an additional indemnity will be successful. Mr. Komura will doubtless soon return to Japan to take the portfolio of Foreign Affairs, but the date is uncertain and he still has much business on hand. The coming of Na Tung to Japan will probably be subsequent to August. Prince Shun is on the point of setting out for Germany, but things will be arranged so that the two envoys shall arrive simultaneously at the capitals to which their mission of apology is directed. Germany will probably keep her troops in Shanghai. The Japanese civil administration in Peking has long been employing the services of Chinese subjects in various posts except as policemen and has found them very efficient. In Tientsin the case has been the same. As for the Tibetan mission to Russia, it will be difficult for the latter to impart to it any political significance. The Tibetans are disposed to turn rather to Japan. General Yamaguchi comes to Tokyo on the 14th or the 15th. The Imperial Court leaves Hsian on the 1st

of September and will probably arrive at Peking in the beginning of November. Strenuous exertions are now being made to effect restorations at the Palace. Among the Chinese, the people of Szechuan seems to have the most character, but as a general rule everything depends on money and there is therefore very little hope of organizing a really strong military system.

The *Asahi*, writing about the rumour of General Gribski's suicide, interprets it in the sense that Russia has resolved to change her policy of merciless force in dealing with the Chinese. At the same time, our Tokyo contemporary insists that General Gribski was not personally responsible as he only executed the orders of St. Petersburg. But we desire to remind the *Asahi* that nothing of the kind has been proved. It has not been shown that the St. Petersburg Cabinet issued any mandate justifying the Blagovestchensk massacre. Even assuming the accuracy of the alleged telegram—a credulous assumption, we think—“fling Chinese across Amur” can scarcely be construed into the injunction “massacre the Chinese and fling their corpses into the Amur.” If General Gribski has committed suicide, it was probably because he found that under his command an act equally disgraceful to Russia and disapproved by Russian officialdom had been perpetrated.

Monday, July 14.

General Gaselee is expected to come to Japan for a brief visit on his way home from China. We trust that the British residents will do something to show their appreciation of this gallant officer's conduct of the Chili campaign. General Gaselee has shown qualities not usually required from an officer of his rank and position, and if we have not heard much of his doings, it is precisely because he possessed sufficient tact and patience to act a self-effacing part under circumstances of much embarrassment.

Secretary Hay is reported to have expressed the opinion that Japan may justly claim special consideration on account of the loss she must make in selling the Indemnity bonds. He does not think that either Germany or Russia can properly advance any similar claim, seeing that both countries can sell the bonds at par.

A body of about a hundred insurgents are said to have made their appearance at a point northward of Wiju, and the Korean garrison of Wiju has joined the Chinese troops for the purpose of dealing with the marauders.

The Chinese mission of apology to Germany passed through Tientsin for Tongku on the 12th instant.

An edict has been issued from Hsian calling upon the Chinese Ministers in Europe and America to send in the names of any students they can recommend as having graduated in foreign languages and being of sound constitution. It is the intention of the Court to make a selection of such persons for official employment. If this edict be sincere, which we see no reason to doubt, it may mean a great deal.

The rumours about the *Lieu-chuan-hui* bear a remarkable resemblance to those circulated at the outset about the Boxers. Some accounts put their force at fifty thousand men; others insist that they have not more than twenty thousand; some regard them as very formidable; others consider them scarcely worthy of attention. But no one doubts, we imagine, that if the Chinese Authorities undertake the work resolutely, there will be any difficulty in quelling these insurgents. The Boxers

would never have become really dangerous had not they received assistance from the Government. Meantime strange stories are circulated about fresh troubles in North China. It is alleged that Prince Tuan and the Prince Imperial are acting in collusion, and that their immediate purpose is to take possession of Shansi and establish the capital there. Tuan has always been a danger. So long as he lies under sentence of death, and so long as Tung Fushang is similarly prescribed, it is only natural that these two men should endeavour to strike a blow in their own defence.

A Tokyo contemporary states that the prohibition against the despatch of telegrams to China by the Chinese Representative in Berlin was relaxed last month.

Tuesday, July 16.

The latest intelligence from China is that the Empress Dowager, fearing that if the Prince Imperial accompanied the Court on its return to Peking, he might become the centre of intrigues and a source of disturbance, placed him in the hands of a body of trustworthy adherents and sent him from Hsian to join his father in Shansi, or wherever Prince Tuan is sojourning. This step is believed to be preliminary to final removal of the young Prince from his position of heir apparent, and it is thought that Prince Tuan's reputed share in the rebellion of General Tung Fushang is due to indignation on account of his son's deposition. If the Court has been sincere in admitting that Prince Tuan is criminally culpable for his support and encouragement of the Boxers, it would seem a natural step that his son should be deprived of the succession to the Throne, for assuredly the lad can not be expected to grow up with sentiments favourable to the only policy by which the integrity of his country can be preserved. He would have to choose between filial impiety or unpatriotic conservatism, and if the Empress Dowager has the shrewdness attributed to her by common report, she will take care that he is not subjected to such an ordeal.

Wednesday, July 17.

News is said to have reached the officer commanding the French troops at Paoing that the *Lieu-chuan-hui*, hearing of the intention of the Chinese Government to send a strong force against them and of the prospect of cooperation on the part of foreign troops, have taken alarm and dispersed. If this be true it confirms the view taken from the first by many well informed people that the *Lieu-chuan-hui* rising was a matter of trifling importance, and that the only danger threatening the restored peace of North China is the disaffection of Tuan and Tung.

Thursday, July 18.

It is now rumoured that in view of the still unsettled state of Chili, the Powers will not withdraw their forces altogether from North China, but will post a portion of them in Shanghai. This forecast is accompanied by a rider that Mr. Sheng will be appointed to discuss the matter with foreign Powers. The story sounds very apocryphal.

Prince Shun, the Chinese ambassador of apology to Germany, has reached Shanghai en route for Berlin.

Lieut.-General Yamaguchi thinks that the disturbances in North China may be considered as ended for the present, so far, at least, as the employment of troops is concerned. There will be riots on a small scale: that is more or less inevitable in China, where the administration is swayed by rival factions like the Manchus and the

Chinese. The recent complications were comparatively easy to deal with because Southern China took no part in them. The empire was only half alive. Had it exerted its full vitality the trouble would have been enormously magnified. But the Chinese are a strange people. They were actually sorry to say goodbye to the Japanese troops and preferred not a few requests that they should remain. People who can welcome the presence of foreign soldiers on their country's soil are evidently strangers to patriotism. The fact is that the word "China" has very little significance for the Chinese. To govern them by a display of force it would be necessary that the display should be perpetual, for when their enemy takes off his armour for a moment, they immediately become friendly with him. The civil government has been handed over to them. They may not carry it out very well, but they have had some instruction and they will be under foreign supervision. About 3,000 Chinese constables have been fairly well trained and these will doubtless prove very useful. The Chinese evidently wanted to remain longer under Japanese jurisdiction, but of course that was out of the question. There was some hesitation about removing the troops, but finally the step was decided upon, and the number of the guards was definitely fixed for garrisoning the necessary places. It is probable, however, that a considerable force will be retained in Southern China. It is not impossible that complications may arise in Southern China, and Japan will do well to be on her guard. Li Hung-chang is apparently discharging his functions of plenipotentiary, but in truth he is too old to do much and he has moreover lost the confidence of all classes. Prince Ching is behaving in an earnest, straight-forward manner. He seems to be fully sensible of Japan's good-will towards China. Tung Fuh-shang is certainly a power to be reckoned with on account of the military force at his disposal. Few of the Chinese high officials or satraps have much military strength but Tung is a marked exception.

Friday, July 19.

About two thousand of the Lien-chuan-hui are said to have assembled in Shing-teh, and to have distributed circulars calling on the people to cleanse the Chinese empire and purge it of the foreigner. The local authorities seem powerless to check this movement, but doubtless these two thousand insurgents will not display any force of cohesion greater than that shown by their twenty thousand comrades who have dispersed as soon as the shadow of Ma's army loomed in the distance.

A Russian force having landed at Taku-shan and found that the Antung bandits had dispersed, has directed its movements to Fen-hwan where it will be stationed for the present.

A Japanese traveller who has just returned from Wuchang says that there are about 20 Japanese subjects in residence there. The military school was closed before the summer recess, probably because the large sums of money sent by Viceroy Chang to Hsian for the support of the Court obliged him to economise in other directions.

The King of Italy has instituted a new order, to be known as the Knights of Labour, the gold cross of the order being given to those who have helped on the progress of the working classes, and who have invented improvements to assist skilled labour. The cross bears the inscription, "To the Worth of Labour."

REUTER'S TELEGRAMS.

A correspondent of one of our local contemporaries calls attention to a difference between the versions of a Reuter's telegram given by the *Japan Times* and this journal, and suggests that where the sense of a telegram is doubtful the wisest plan would be to give the message in the original form so that the public may draw their own conclusions. We quite agree with the latter suggestion, and indeed it has been our own habit to indicate that a difficulty of rendering exists when such is the case. But in the particular case that elicited these comments, it did not occur to us that there could possibly be any ambiguity. The words of the telegram were:—"Evidence various sources shows Boers killed wounded lying field after Vlakfontein." We interpreted the telegram to mean that the Boers had killed the wounded as they lay on the field; the *Japan Times* interpreted it to mean that "the Boer killed and wounded were left lying on the field after the battle of Vlakfontein." Subsequent news has confirmed the correctness of our version. But surely the matter never could have been in doubt? It would have been quite farcical for Reuter to telegraph that the Boer killed and wounded were left lying on the field, such an event being a normal incident of warfare. We do not intend to prefer any charge of carelessness against our contemporary. It has happened in the past that telegrams correctly interpreted by the *Japan Times* were rendered wrongly by ourselves. But this is a matter of some importance, for the accusation brought against the Boers is of the gravest nature and, if proved, will create a very ugly feeling against them in England. It will probably not produce any effect at all in Germany and France. The Germans and the French accept as incontrovertible truth every charge brought by the Boers against the British, although lying of the most flagrant description has been proved again and again to be among the chief weapons employed by the Boers throughout this war. But neither the Germans nor the French attach any credence to statements made by the British themselves. They ought to know, if they knew anything about the British, that English officers do not lie and that no British General makes false reports. But their acquaintance with the British officer does not extend to that degree. We anticipate, therefore, that whatever evidence be collected about the Vlakfontein incident, the German and French newspapers will receive it with incredulity.

In connexion with this matter of telegrams, we desire to draw attention to another matter. On Friday morning we published the following telegram:—"Scheepers with forty men held Murraysburg for two days. He burned the principal buildings and seized the money in the bank." The *Japan Times* gave the following version of the same telegram:—"Commandant Scheeper's forty men held Murraysburg two days against the British, burned the principal buildings, &c." Now the words "against the British" did not occur in the original telegram. They make all the difference in the world in the significance of the news. If Scheepers with 40 men held Murraysburg for two days in the face of a British attack, and then succeeded in getting off clear with his little party, he accomplished a most remarkable feat. We do not believe that he did anything of the kind. The obvious meaning of the telegram, we think, is that Scheepers and his forty men were left for two days in Murrays-

burg before a British force could be brought up to drive them out, and that when a British force approached they beat a timely retreat as was right and prudent. That version merely constitutes another illustration of the enormous difficulties experienced by the British in guarding every point of a vast extent of territory against the forays of a mounted enemy, scattered into a number of marauding bands which move with singular rapidity and carry ten days' provisions in their holsters. But these forayers do not attempt to stand against a British attack. To come to blows with them it is necessary to surprise them or to hem them in. Therefore by interpolating the words "against the British" the *Japan Times* effected a radical change in the significance of the telegram.

It appears that the only two Tokyo journals which interpreted the Vlakfontein telegram correctly were the *Chino Shimbun* and the *Nichi Nichi*. The others all represented the Boer killed and wounded as having been left lying on the field by the British, and the *Jiji Shimpō* added a double-headed heading "cruelty of British soldiers." The *Kokumin* made the same error in its morning edition, but corrected it in its afternoon issue. We suspect that the responsibility lay with the *Japan Times*, which probably translated the telegram before distributing it. The mistake was most unaccountable, for it passes our comprehension to understand how any impartial reader could assign such a meaning to the message. However, the point is that the Tokyo journals have been instrumental in publishing a slander most injurious to the reputation of the British, and we suggest that they should lose no time in removing the false impression from their readers' minds.

The *Jiji Shimpō* corrects the mistake made by it in re-producing the Reuter telegram about Vlakfontein. But we do not observe that any of the other erring journals have adopted the same frank course. Apparently they think that to circulate a cruel libel against British soldiers is of less consequence than to admit their own fallibility as interpreters of telegrams.

MARQUIS ITO ON A POLITICAL TOUR.

Monday, July 15.

Marquis Ito, speaking to friends who met him at Umeda Station, ridiculed the statement published by certain newspapers that the Minister of Home Affairs had called on him to advise him not to make speeches calculated to excite the people. No thinking persons believed such a ridiculous story, and it would not have occurred to Marquis Ito to contradict it, we imagine, had not a direct question been put to him. His Excellency also noted the foolish talk of his having sanctioned the introduction of party politics into local affairs. What he has always done is to deprecate anything of the kind. Concerning the opening of Manchuria, he said that Russia would be the Power to approach, not China, but we suspect that the statement was accompanied by some qualification which escaped the reporter. The Marquis alluded to the apparently excessive expenditure of the localities, and said that he had endeavoured to warn people against that danger as a probable result of the war. In the case of harbour works at Kobe, for example, if the enterprise were a small affair demanding little expenditure and capable of being speedily concluded, it might be approached with a light

heart; but as it was a big work requiring large outlay of money and time, the financial programme must be clearly fixed before commencing. Concerning the attitude of the *Seiyun-kai* towards the Cabinet, the Marquis declared that he did not regard it as the duty of a party to oppose a Government merely because the members of the latter were not enrolled in the party's ranks. It would be time enough to discuss the question when the Cabinet's acts presented a text.

Marquis Ito's speech to the Kobe branch of the *Seiyun-kai* has been reported to Tokyo by telegram, but evidently only the outlines have been forwarded. From these we gather that the Marquis laid much stress on the unanimity of purpose with which the nation has applied itself to carry out the intention embodied in the Imperial Oath made at the time of the Restoration. His Excellency observed that whatever may be the quality of a country's rulers, harmonious action on the part of the people is essential to intelligent progress. It was to assist such progress, especially in the matter of carrying out the purpose of the Constitution, that the *Seiyun-kai* was formed. The Marquis spoke also of the necessity for greater circumspection and perspicacity in administering local affairs, so as to secure progress while avoiding debt. Doubtless the speech dealt with practical details, but the meagre nature of the telegraphic report obliges us to be content with a mere sketch.

Thursday, July 18.

Marquis Ito made an interesting speech to a Kobe audience on the 13th instant. He recalled the events of 34 years ago, when at the age of 26 he found himself called on to discharge important official functions in connexion with the coming of foreigners to Kobe and the fracas with the Bizen samurai. We learn from this narrative that Taki Zenzaburo, whose suicide in the temple Yeifuku-ji, in Hyogo, terminated the Bizen incident, was not selected for punishment. He voluntarily declared that the fault of having ordered the soldiers to fire rested with him alone, and that the punishment must fall on him. Marquis Ito had to be present at the suicide. Taki Zenzaburo had been fencing master to the Bizen clan. He died with the utmost dignity and composure.

Another point made clear by the Marquis' speech is that before he set out on his trip to Europe he had become a convert to the anti-Shogun agitation. Rai Sanyo's celebrated work, *Nihon Seiki*, seems to have converted him. He carried a copy of the volume with him to England. It need scarcely be added that his sojourn in Europe, though brief, fully convinced him of the necessity of Japan's abandoning her policy of isolation, and that (on his return home) he became a prominent advocate of foreign intercourse—advocacy which nearly cost him his life on several occasions.

Friday, July 19.

Marquis Ito, addressing the Okayama branch of the *Seiyun-kai* on the 15th instant, made a long and able speech which is fully reported in the columns of the *Nichi Nichi Shinbun*. He commenced by tracing the origin and development of political parties in Europe and showed that they all had their beginnings in differences of principle, or of creed, or in unions to struggle against oppression. America was an exception. There party platforms were academical, and it resulted that the parties showed much less mutual animosity. In Japan the curious point is that although there were parties dif-

fering in name, there had originally been no difference in their purpose. They had a common object, the establishment of constitutional government. After the fall of feudalism the country returned to the administrative system that existed before the Kamakura epoch. But it was plain that in order to unify the empire and to carry out the progressive purpose indicated by the Imperial Oath, constitutional government must be introduced, and for the purpose of making preparations a committee of four, consisting of Okubo, Kido, Ito, and Itagaki, was appointed in 1874. Then, in 1881, the date was fixed for the promulgation of the Constitution. Meanwhile political parties had come into existence with the sole object of hastening the advent of parliamentary institutions. There was no reason why organizations mutually antagonistic and calling themselves by different names should have been organized for such a purpose, and in the absence of solid grounds of divergence, their hostility to each other was really very slight. After the Constitution was promulgated and the Diet opened, party Cabinets became the question of the hour, the Government interpreting the Constitution as conferring only limited powers on the Diet, and the Diet seeking to read into its provisions a much larger measure of rights. In short, the question of the time was how to interpret the Constitution. But the prime aim of political parties should be to secure the smooth operation of the Constitution, and it was for that purpose that the speaker, appreciating his special responsibility, had entered the ranks of a party. His platform did not include any such plank as office-seeking. Still less did he seek to gain victories over other parties. On the contrary, he should count party gain an unqualified loss if it involved any injury to national interests. His purpose was to establish harmony between Government and people, to promote the Sovereign's progressive aims, and to educate young men who should conduct State affairs on the lines of the empire's liberal policy. The speech referred to many other matters but the part we have here epitomised seems the most interesting.

RUSSIA AND THIBET.

The latest rumour is that Russia has preferred a demand to China that Thibet should be declared absolutely independent. Of course the public will connect this statement with the recent visit of a Thibetan mission to Russia, which mission was declared by the St. Petersburg Government to be entirely without political significance. Thibet as an independent state is an absurdity, and Thibet obtaining its independence through Russian intervention does not mean a permanently independent Thibet, unless history has abandoned its habit of repeating itself. Nevertheless the scheme is clever, if credible. For China is certainly not in a position to resist any such demand on Russia's part. It would seem that even Viceroy Li's eyes will be opened, before he quits the scene, to the costliness of confidence placed in a Power governed by the impulse of expansion. To be stripped of Manchuria and Thibet within the short space of a twelvemonth by the friend under whose wing Li has sought refuge for his country, is an object lesson which even the old Viceroy must appreciate.

In the suit of the P. & O. Company against The Crown, the King's Bench has decided that under the Merchant Shipping Act, Larca and Europeans must be treated alike regarding the so-called crew space.

ANOTHER LIBEL.

Monday, July 15.

Mr. Matsumoto Kumpei has brought an action for libel against the *Hochi Shinbun*. That journal republished, after an interval of two months, the slanderous matter which appeared originally in the columns of the *Asahi Shinbun*. There can be no doubt that such republication was malicious. Several barristers spoke in defence of the *Hochi Shinbun*, and we are compelled to say that their speeches constitute a flagrant disgrace to the Japanese Bar.

Two of these four barristers applied themselves to prove that sexual immorality is the habit in Japanese society at present and that to accuse a man openly of it could not, consequently, be regarded as a libel. One of them contended that the plaintiff made a habit of openly talking of his own intimate acquaintance with the various forms of social evil in the West, and that he should therefore be pleased rather than annoyed to find the character of a Lothario attributed to him by his own country's journals. In other words, these barristers sought to condone their client's slanders by blackening the reputation of their country and by adding further slanders of their own. A third barrister took the ludicrous ground that as a life of 75 days is proverbially assigned to rumour, a newspaper republishing a story after an interval of 60 days could not be said to have revived a rumour. Such arguments are contemptible. The question is whether newspapers in Japan are to be granted legal license to attack the private life of individuals, and to destroy men's moral reputations with impunity. As for a barrister who can pretend that any Japanese journal would publish slanders like of those of the *Asahi* and the *Hochi* without intending to destroy the fair fame of their victim, or that the conduct attributed to Mr. Matsumoto is of an ordinary every-day character involving no disgrace in Japan—such a barrister deliberately attempts to gain currency for an obvious falsehood. If acts of the kind charged against Mr. Matsumoto had the sanction of custom and were regarded with the indifference claimed for them by the *Hochi*'s legal defenders, neither the *Asahi* nor the *Hochi* would ever have published them. It is impossible to over-rate the importance of this trial, for if the Court adjudicating the libel case against the *Hochi* takes the same view as that taken by the tribunal which judged the *Asahi* case, there will cease to be any hope of protection for the private individual against the cowardly and reckless slanders which newspapers are now only too prone to admit to their columns.

Thursday, July 18.

The Tokyo District Court has furnished a new topic for surprised comment. Our readers are aware that Mr. Matsumoto Kumpei brought a libel suit against the *Tokyo Asahi Shinbun* for publishing a statement plainly intended and unquestionably calculated to destroy his reputation. The case went before the Tokyo District Court, and the Judge ruled in favour of the defendant on the ground that failure to pay debts incurred at restaurants or houses of assignation, and associating with *geisha* and women of easy virtue—such being the things laid to Mr. Matsumoto's charge by the *Asahi*—could not be regarded as disgraceful acts from the stand-point of modern Japanese society, and must therefore be excluded from the conduct which the law forbids a newspaper to attribute publicly to any in-

dividual without incurring the risk of punishment for slander. Against that extraordinary decision Mr. Matsumoto appealed, and his appeal is now awaiting trial. Meanwhile the *Hochi Shimbun* reproduced the *Asahi's* article, and Mr. Matsumoto at once proceeded against it. The case came up for hearing in the same District Court of Tokyo before the same Judge. But on this occasion the result was different. The Public Procurator having strongly argued against the injustice of alleging that such acts are sanctioned by the social canons of the time, and that they are not calculated to injure a man in the estimation of the public, the Judge admitted the propriety of that view and ruled in a sense diametrically opposed to his previous judgment. He conceded that the acts in question were disgraceful and that to impute them to anyone constituted a libel. It will be at once inferred that there followed a decision in favour of the plaintiff. Not at all. The Judge's next plea was that the re-publication of the offensive matter by the *Hochi Shimbun* could not be considered as falling within the significance of the term "uttering" (*teki-hatsu*) used in the law of libel. In other words, the *Hochi* had merely given renewed currency to statements which were already public property, and therefore it could not be held to have "uttered" them, in the sense of the law. A more extraordinary ruling was probably never made by a tribunal of justice. Its effect is that any newspaper is at liberty to re-publish a libel which has appeared in the columns of a contemporary. Apparently the Judge failed altogether to recognise the elementary fact that all newspapers do not circulate in the same section of society, and that as the contents of one journal's columns may, and frequently do, remain entirely unknown to the readers of another journal, the latter's reproduction of statements originally published by the former may, and generally does, mean the bringing of those statements to the attention of a new audience. But even apart from that obvious argument, what is to be said of the doctrine that if one paper has been guilty of a villainous slander, all others may with perfect impunity assist to give publicity to the libel? We wonder if the Judge of the Tokyo District Court imagined that by such a ruling he was upholding the right of free speech. If he entertained any such notion he was lamentably mistaken, for the right of free speech can not be legitimately exercised without a due sense of responsibility on the part of those enjoying it. A system founded on principles such as those enunciated by the Tokyo judge would be absolutely intolerable to any civilized society.

REWARDS FOR JAPANESE MILITARY MEN.

We observe with pleasure that the *Kokumin Shimbun* has a strongly-worded article urging speedy recognition of the conduct of the officers and men that served in the Chili campaign. It is a matter of profound surprise to foreign observers that men like Major-General Fukushima and Colonel Shiba have not yet been rewarded by their Sovereign. Is there on the part of the Japanese a failure to appreciate what these men and Lieut.-General Yamaguchi, as well as the other commanding officers of the expeditionary force have accomplished for Japan? It may be confidently asserted, we think, that the events of the past year have done more to raise Japan in the estimation of the Occident than even her brilliant victories in 1894-5 did. The world was more

or less sceptical about the real value of her achievements in the latter war. People were disposed to attribute the result to Chinese weakness rather than to Japan's strength, and the hysterical outcry raised about Port Arthur undoubtedly had the effect of marring the record. But in the Chili campaign every detail of the Japanese organization came under the close observation of competent military critics of Europe and America, and nothing but unqualified praise was elicited. There were also the facts that Japan saved Peking, that her methods of civil administration were highly laudable, that the conduct of her troops towards non-combatants contrasted most favourably with the conduct of troops representing some of the foremost States of Europe, and that she uniformly abstained from any attempt to assert herself at the expense of the union of Powers. All these things have won for her a strong place in Occidental esteem, and she ought to lose no time in recognising the services of the men that contributed to bring about such results. Very possibly there is a proud feeling on the part of the officers themselves that they only did their duty and that they do not desire to be distinguished above their fellows. But, after all, they are human, and therefore not beyond the influence of rewards which in all nations and ages have proved useful incentives to efficiency.

THE LAMA MISSION.

Tokyo journals say that the Lama, whose arrival in Kyoto took place on the 11th instant, is a personage of even greater importance than was originally reported. They give his name as "Acha," and say that his suite consists of five Thibetan priests and two Chinese. A curious explanation of his visit to Japan is offered. Last year, he was obliged to fly from Peking in consequence of the Boxer troubles, and after his return to that city some of the restrictions hitherto observed at the Lung-ho-kung were relaxed, so that a party of Japanese were able to attend. Among them was Mr. Okoshi, a priest of Hongwan-ji, who went in full canonicals. The Lama, observing him, expressed much surprise and asked whether any believers in Buddhism were to be found in Japan, his impression being that the faith of Shakyamuni had followers in China only. Mr. Okoshi undeceived him, and the Lama, having thus received some inkling of the real state of the world outside China, expressed a wish to visit Japan. We read that at the Chinese Court he is treated as a prince. It need scarcely be said that he received an impressive welcome in Kyoto, and that the great temples of the Hongwan are making every possible effort to convey to his mind a favourable impression of the state of Buddhism in Japan.

Naturally the coming of the Lama to Kyoto is giving rise to some sensational stories. The *Hochi Shimbun* publishes a very circumstantial tale, which nevertheless does not carry complete conviction to our minds. Our contemporary says that the temple of Lamaism in Peking was originally included in the quarter taken possession of by the Japanese troops. The Russians, however, asked to have the district handed over to them. They were clever enough to understand that the Lama Acha being virtually King of Mongolia, great political advantages might accrue from currying favour with him. The Japanese made no difficulty about acceding to their Allies' request, but—so the story runs—the Russians

showed a want of perspicacity in their manner of utilizing the opportunity thus presented, for when two prelates of the Greek Church called upon the Lama in the sanctuary of Lung-ho-kung, they had seven females in their suite of twelve persons, and wine and women being peremptorily excluded from the precincts of the sanctuary, Acha was much offended. To this incident are to be attributed Russia's failure to achieve her purpose and the subsequent readiness of the Lama to be friendly to Japan.

Where did the prelates of the Greek Church find the seven females, we wonder, and since when has it become their custom to include women in their following on state occasions?

The Lama is represented as saying that he comes to Japan to thank the Japanese for the action of their troops in guarding China and in protecting the Lung-ho-kung against being desecrated by foreign troops. He also desires to see the country. Apparently he is making use of his time in Kyoto for the latter purpose.

"A FOOL'S PARADISE."

In view of the recent letter of Lord Charles Beresford and his publicly expressed desire to resign the junior command in the Mediterranean fleet, in order to arouse Great Britain to a sense of the dangers awaiting her in that vast inland sea, the leading article in the June *Fortnightly* by Colonel Willoughby Verner, under the heading given above, is of more than ordinary interest. His intention in writing the article is to show the capital importance to Great Britain of maintaining her strength in the Mediterranean, in ignoring which the nation's leaders allow themselves, he declares, to live literally in a fool's paradise. Few Englishmen, says the writer, realise that this inland sea "is for us a place of arms of supreme importance, and that the very heart of its defence is centred in the island of Malta, with its secure harbours, repairing docks, and stores of ammunition and coal for our warships." The position towards Russia, Colonel Verner argues, has become totally altered by the events of recent years. "Since the Black Sea is tabooed to our warships and is free to those of Russia, the fleets of the latter Power are unassailable by us until they emerge into the *Ægean* Sea. In other words, the Sevastopol of to-day, for all intents and purposes, may be taken as being at the entrance to the Dardanelles, and in consequence is only 450 miles from the route between Malta and Alexandria—a day's steaming, or a little more."

It is well known that Russia has forbidden the Porte to fortify the Bosphorus, and there are very good grounds for assuming that she has already made arrangements for passing her warships through the Dardanelles at her pleasure. What would occur, then, if we found ourselves at war with Russia in alliance with France? It is as clear as noonday that as matters stand a hostile fleet based on the great naval arsenal of Toulon, with an allied fleet practically based on the Dardanelles, and both equidistant from Malta and within two days' steaming of that point, afford a strategic combination greatly to our disadvantage. Added to which these two fleets, in effecting a juncture anywhere near Malta, would derive a welcome support and ample supplies from the new harbour of Bizerta.

It is not a little significant, the writer goes on to observe, that the subject selected for the best prize essay of the French Naval League was "Naval Tactics and Strategy for France in case of a war with England."

The President of this League is Admiral

Bienaimé, the Chief of the French Naval Staff, an appointment corresponding to that of First Naval Lord of our Admiralty. This officer awarded the prize to a young naval lieutenant, who advocated unconditionally, in the event of a war with England, an immediate offensive. It is hardly necessary to point out that the adoption of such tactics is an absolute "volte-face" as regards French precedents. In former days it was ever England who, in a naval war, adopted a vigorous offensive, and yet we here see the first man in the French Navy deliberately approve of a total reversal of the traditional tactics of his country, i.e., the defensive. The question naturally arises, why are the conditions thus reversed? The answer is not hard to find. Simply because our two fighting fleets, those of the Channel and the Mediterranean, are not ready for war, and because the French know this perfectly well.

With regard to the readiness of England's possible antagonist, Colonel Verner says it is an open secret that sundry preparations have recently been made in the Black Sea, and that considerable Russian forces are massed at Odessa, while the Russian Volunteer Cruiser fleet is at hand to convey these troops wherever they may be required. "Alexandria, the strategic key of the Eastern Mediterranean, has remained unfortified ever since 1882, when we destroyed its forts, nor is there a single modern gun mounted to protect the harbour and anchorage." A descent upon Egypt, or even Malta, is therefore a comparatively simple matter, so long as the British Mediterranean Fleet is not supreme; and the writer's final conclusion is that what the British require is "that, firstly, more battleships should be sent to the Mediterranean; secondly, that many more cruisers should be placed on that station; thirdly, that a large additional flotilla of destroyers should be sent out to thwart the French torpedo-boat scheme; and fourthly, that a proper complement of auxiliaries, condensing vessels, repairing vessels, ammunition and store-ships, coal depôts, &c., without which a modern fleet cannot keep the sea, should be at once assembled there."

THE HOUSE TAX CONTROVERSY.

In recent numbers of this journal two letters have been published, one over the signature of "Sigma," the other over that of "Leaseholder." The former expressed surprise that "a man of Mr. Lowder's professional reputation should have to spend one year on deciding this question;" the other affirmed that "it was never proposed to retain Mr. Lowder" as counsel for the property-owners who deny their liability to pay the house tax, and further that when the idea of employing counsel was first mooted Mr. Lowder's convictions were "generally understood to be in favour of the property-owners' view of the question." We have made further inquiries into this matter, and their result enables us to inform "Sigma" that his conception is erroneous as to the time required by Mr. Lowder to come to a decision, for the records of the Kanagawa municipality show that Mr. Lowder paid his house tax for 1899 and also for the first half of 1900 at due dates. It is plain, therefore, that from the first Mr. Lowder entertained no doubt about the legality of the tax, and indeed we have it on his own authority that such is the case. This explanation disposes also of "Leaseholder's" suggestion that Mr. Lowder's convictions were originally different from what they are now. Concerning the other point, namely, the question of engaging Mr. Lowder's professional services on behalf

of the property-holders, the facts, as we understand them, are these:—When the advisability of engaging a legal representative first presented itself, one of the two sections into which the objecting property-holders were divided, applied to Mr. Walford, the other—consisting largely of Germans—to Dr. Lönholm. We do not say that at that time there was any idea of seeking Mr. Lowder's aid for we are not aware that there was. But we do say that Mr. Lowder, from the first mooted of the question, made no secret of his conviction that the recalcitrant property-owners were spending money on a forlorn hope, and we deem it a fair inference that his open expression of these opinions deterred those who would otherwise have liked to have the benefit of his assistance. Subsequently and while the case was still pending, Mr. Walford resolved to leave Japan, and the property-owners did not find themselves in a position to offer him terms such as would induce him to postpone his departure. It was then that, as we are credibly informed, the idea of employing Mr. Lowder would have taken practical shape had not his views as to the legality of the house tax become public property. It is only right that these explanations should be offered since the correspondence demanding them has appeared in our columns, but we have to apologise to Mr. Lowder for discussing topics which do not properly fall within the range of journalistic comment.

THEFT AT THE GOVERNMENT PRINTING OFFICE.

On the night of the 13th instant thieves broke into the strong room of the Government Printing Office in Tokyo, and carried off a sum of thirty thousand yen in ten-yen notes, which had just been prepared for delivery to the Bank of Japan. Of the stolen notes, ten thousand were numbered from 754,001 (*nu*) to 755,000 (*nu*); the second ten thousand from 758,001 (*nu*) to 759,000 (*nu*); the last from 822,001 (*nu*) to 823,000 (*nu*). It is alleged that a notice will be issued declaring these notes to be valueless, but really we can not see how such a step would be justifiable. The notes were completely ready for circulation at the time of the theft. Had they passed into the hands of the Bank of Japan, as was intended, they would merely have been registered by the Bank and would not have received any stamp or additional mark whatever. How can the public be asked to distinguish such notes, or find the value of them as a punishment for failing to distinguish them? The general inconvenience caused by any attempt to enforce such a precaution would far outweigh the value of the notes to the Government. It is evident that the thieves must have had full cognisance of the arrangements at the Printing Office or they could not possibly have timed their operations so exactly. The police ought therefore to be able to trace them, and in the meanwhile they must be left to put the notes into circulation as far as they can.

It need scarcely be said that the authorities have decided not to attempt to stop the circulation of the notes stolen from the Printing Bureau. Inasmuch, however, as no notes had previously been issued with the mark *m* (ヤ) over the numeral denoting the number of the note, the public should not have much difficulty in detecting the stolen paper. Any note marked *m* may be considered as part of the purloined batch. Some of the notes have already been changed, and some persons are under arrest.

On Thursday morning, at Byobuzaka, near Ueno, the police succeeded in arresting Kumazawa Kanji (34), who had been in the employ of the Government Printing Office as a workman for over 12 years. In his possession were most of the stolen notes, he having succeeded in uttering 35 of them only. He had absented himself from work on the plea of illness, for 100 days, and was attempting to escape into the country when arrested.

INDEBTED TO SHAKESPEARE.

The by-paths of literature are always entertaining, even to the casual stroller among their solitudes. We therefore feel under a certain obligation to Mr. Volney Streamer and Mr. Louis Francis Eggers for their *dilettante* volume entitled "Book Titles from Shakespeare." The industry displayed in making such a compilation is enormous and perhaps is hardly given its due, while the discoveries one lights upon during a perusal of the book fully repays the labour of reading. It seems only natural that "Hamlet" should have afforded the largest number of titles, for has not one dear old lady who has achieved a name in English literature assured us that "Hamlet" is but "one long string of quotations"? Next in order is "As you like it," and then comes "Macbeth." Among American authors, Mr. W. D. Howells owes the greatest debt to the Bard of Avon. No less than thirteen of his titles are borrowed from the plays. Here is the list:—

A Circle in the Water ("Henry VI").
The Coast of Bohemia ("Winter's Tale").
A Counterfeit Presentment ("Hamlet").
A Foregone Conclusion ("Othello").
A Hazard of New Fortunes ("King John").
A Modern Instance ("As You Like It").
An Open-Eyed Conspiracy ("The Tempest").
The Quality of Mercy ("The Merchant of Venice").
A Sea Change ("The Tempest").
The Shadow of a Dream ("Hamlet").
The Undiscovered Country ("Hamlet").
A Woman's Reason ("Two Gentlemen of Verona").

Mrs. Oliphant, Mr. Frankfort Moore, and Mr. Robert Barr have each taken two titles from Shakespeare, while there are many borrowers of one title. We have only space for a few:

Mrs. Alexander: *Her Dearest Fire* ("Hamlet").
 Grant Allen: *This Mortal Coil* ("Hamlet").
 James Lane Allen: *The Mettle of the Pasture* ("Henry V").
 F. Anstey: *The Giant's Robe* ("Macbeth").
 Gertrude Atherton: *What Dreams May Come* ("Hamlet").
 Rhoda Broughton: *Not Wisely But Too Well* ("Othello").
 F. Marion Crawford: *Love in Idleness* ("A Midsummer Night's Dream").
 Thomas Hardy: *Under the Greenwood Tree* ("As You Like It").
 Julian Hawthorne: *A Fool of Nature* ("Hamlet").

KOREAN NEWS.

The *Shogyo Shimpo* affirms that the Yun-nan-Syndicate loan is not likely to become an accomplished fact, for although the transaction has been actually ratified, official opposition to it is growing in Seoul. The only difficulty is that the Koreans do not know how to meet the Syndicate's demand for an indemnity amounting to 450,000 yen in consequence of breach of contract. This loan has certainly created a great deal more interest than it deserves to attract. We have been hearing about it constantly for nearly two months, and the public must be getting heartily tired of the question.

MR. KATO AND THE JUDGES' STRIKE.

Mr. Kato Takaaki, speaking at the Graduation Ceremony of the Hogaku-in on the 12th instant, dwelt on the unfortunate tendency shown by Japanese judicial officials to adhere with slavish want of intelligence to the letter of the laws they are required to administer. They seem to imagine that laws are made not to promote the welfare of the people but to hamper and annoy them. Japan is now fully equipped with codes, and the one great question is to apply them wisely, recognising that the laws are for the people not the people for the laws. Mr. Kato condemned in unsparing terms the conduct of the Judges and Public Procurators, who, some months ago, organized an agitation for an increase of salaries and actually threatened to strike if their demands were not conceded. It was pleaded by these officials that their present emoluments are not sufficient to enable them to maintain the position and dignity properly attaching to their rank and office, but in truth their conduct in organizing such an agitation did more to impair their position and dignity than any paucity of emoluments could affect. If such a thing happened in London or Berlin, these judicial officials would be expelled from society, whereas, to Mr. Kato's profound astonishment, some of them had been handsomely rewarded.

Mr. Kato Takaaki says to a newspaper interviewer that, in his opinion, a large part of the documents and telegrams passing through the hands of the authorities with reference to foreign affairs might safely be given to the public. Probably the reticence hitherto observed in these matters was due to some trouble caused by an indiscretion. But if proper judgment were exercised the people at large might be kept much better informed than they are. Materials for criticism would probably be furnished by such a method, but so would materials for applause. Mr. Kato might have added that ignorance is the most intolerant critic of all. In ninety-nine cases out of every hundred the strictures penned by journalists are due to imperfect knowledge of the subject they discuss.

Mr. Kato also utters a word of warning against seeking to obtain capital through the medium of any agent that offers his services. Frequently such agents are mere speculators, who have no backing whatever, and whose only hope of success is to go in search of a capitalist after a would-be borrower has been found.

THE LATE MR. UYEDA.

Mr. T. Uyeda, who expired at his residence in Mita, Tokyo, on the 12th instant, enjoyed a high and well deserved reputation as a business man. He had been connected with the great Mitsui Firm for many years, and at the time of his death—which took place at the early age of 47—he held the important position of Director of the Mitsui Bussan Kaisha. Some time ago, he had an attack of influenza which was followed by lung trouble, and although hopes of his recovery were not abandoned until a recent date, his state caused the gravest anxiety to his friends and relatives. His death, when many years of useful activity should still have lain before him, will not only be a heavy blow to the eminent firm he so ably represented, but must also be felt by Japanese business circles in general, for he represented the very best type of merchant.

THE EMPEROR AND THE RETURNED TROOPS.

Major-General Nagaoka has carried to Hiroshima an Imperial Message from the Emperor to the Fifth Division, which fought in Chili under the orders of Lieut.-General Baron Yamaguchi. On the 15th instant the Division was drawn up on parade to receive the message, which ran as follows:—"Last year on the occasion of the disturbances in China, you discharged your duties strenuously and earnestly, and in obedience to the instructions given, observed the dictates of strict discipline and propriety, and, working in coöperation with the forces of Europe and America, distinguished yourselves for clemency and brought credit on the flag of your country, to Our profound satisfaction. We trust that officers and men alike will continue to display the same loyalty and assiduity."

We presume that steps are taken to render such a message as the above intelligible to the soldiers. Translated into English it seems simple enough, but we can assure our readers that it is couched in a style so classical as to be quite incomprehensible by other than men of literary attainments. It is surely a strange thing that so many of the matters addressed to the public and intended for general instruction in this country should be disfigured by pedantry which sacrifices the sense to the form.

Each officer was subsequently handed a sum of one *yen*, each non-commissioned officer 50 *sen* and each private 25 *sen*, which gifts may be briefly described as *pour boires*. That is an old Japanese custom which will probably be abandoned before many years are passed. It has never seemed to us entirely congruous with the canons of the *bushi*, nor can we think it an artistic act that an occasion such as the issue of an Imperial Message to an Army returning from an arduous campaign should be marked by small donations of money. If there is to be a merry-making, as it is right and proper that there should be, might it not more fitly take the form of a dinner to the men?

FATAL RAILWAY ACCIDENT.

A very sad accident occurred on the evening of the 13th instant at 9 o'clock on the Government Railway from Takasaki to Naoyetsu. At the train was entering the 25th tunnel over the Usui Pass, one of the pipes of the engine exploded, and the train began to run backwards. Baron Mori, Chief Engineer of the Nippon Tetsudo Kaisha, was among the passengers. He was proceeding to his villa at Karuizawa in company with his son, a lad of 13. Knowing the dangers that would result if the train's backward motion could not be arrested, he leaped out and called to his son to follow. But the lad hesitated, and Baron Mori, who seems to have forgotten himself in his anxiety to save the child, reached up to the carriage and got the boy into his arms. Just as he did so, however, one of the side-brakes struck his legs and knocked him down. He threw the child from him, clear of the train, but was himself dragged under the carriages and killed. Unfortunately his son also lost his life, for he struck his head so heavily in falling that the injury proved instantly fatal. Two of the stokers, in attempting to reach the brake van, were slightly injured, as was also one of the drivers who leaped from the train. The other driver stood by his post resolutely, and by great exertions and presence of mind managed to bring

the train to a stand. Baron Mori was born in 1849. He was of the family of Mori of Choshu, and his career had been distinguished and useful. He was usually spoken of as the father of railways in Japan, and his most unhappy death will be universally regretted. It would seem from the above account that only one engine was attached to the train though there are usually two. We do not understand, either, why there should have been serious apprehension of the train's gathering reverse velocity, seeing that the line is built on the Abt system.

The fatal accident to Baron Mori, Chief Engineer of the Nippon Railway, who was run over by a train which, owing to a defect in the machinery, had got beyond control at the Usui Pass, has excited wide interest among the foreign communities in Japan. An increasingly large section of the foreign residents of Yokohama, Tokyo, and Kobe, not to mention scores of missionaries scattered throughout the country districts, are making it a practice to spend a week, and if possible a longer period, during the summer at Karuizawa for the sake of its health-laden breezes and refreshing coolness. Now to approach Karuizawa from the Tokyo side it is necessary to use the Usui railway, and we think that, in view of the recent fatality, an obligation devolves upon the Government as well as the Railway Company to publish the result of the official enquiry which will, as a matter of course, be held into the cause of the accident. Besides, the travelling public—Japanese as well as foreign—demand that some effective guarantee should be given that the Railway Regulations regarding the use of two engines on the line should be strictly adhered to, and not altogether ignored as has been the custom, we are assured, up to the present. A frequent traveller over this line informs us that he has seldom seen two engines attached to the Usui-toge train unless it was known that an important Government official was travelling by it. If this statement is correct, it points to the existence of a state of things which amounts to nothing less than a public scandal. We can not credit it, however, though there appears to be no doubt that the train which met with the recent accident had only one locomotive.

RETURN OF GENERAL YAMAGUCHI.

Lieut.-General Baron Yamaguchi returned to Tokyo at 10.45 a.m. on the 17th inst. and was received at the station by Prince Fushimi, Marquises Yamagata and Oyama, Viscount Katsura, Mr. Sone, Viscount Yoshikawa, Generals Nozu, Ito, Terauchi, Okubo, any many other officers of high rank, as well as the Governor of Tokyo and a number of municipal officials. A large crowd assembled at the station with flags waving, and altogether, in spite of the heavy rain, the returning General had a fine welcome. He is to be received in audience by the Emperor to-day when the First Class Order of the Sacred Jewel and the Second Class Order of the *Kinsli* (golden falcon) will be conferred on him. Major Generals Manabe, Tsukamoto and Fukushima will have audience at the same time and will receive the Second Class of the Golden Falcon. Other officers who distinguished themselves in the Chinese campaign will receive lower ranks of the same Order.

Lieut.-General Yamaguchi is credited with saying some interesting things. He remarks on the extraordinary healthful-

ness of Peking. There were a few cases of sun-stroke on the march thither, but after reaching the city the troops enjoyed almost complete immunity from disease, in spite of the heat and the bad water. The Foreign Representatives decided, at a meeting held after the relief, that no troops should be allowed to take up their quarters in any of the buildings forming part of the Imperial Palace, but Field-Marshal Waldersee upset that arrangement, for immediately after his arrival he occupied the I-lang Palace for residential purposes, and thereafter the whole of the forbidden city was guarded by foreign troops. The Lieut.-General makes some comments on the quality of the foreign troops. He pays a compliment to the Germans as being the best disciplined and having the finest physique, but when he comes to speak of the conduct of the foreign soldiers towards civilians, his identifications are replaced by asterisks which deprive the story of all interest. He says that Sir Ernest Satow is remarkable among the Foreign Representatives for moderation and assiduity; that the Russian Minister is changeable and unreliable; that the German Minister is quick, able and influential; and that the Japanese Minister enjoys much confidence, and is always placed on committees. The relations between the Japanese and the British were extraordinarily close. General Yamaguchi remarks that the English assigned the Imperial State carriage to carry him from Peking to Tong-ku, which was more than they did for Field-Marshal Waldersee on the occasion of the latter's departure. Li Hung-chang is pro-Russian, but he is very old and has little power of work. He seems to place his whole reliance on Russia and is always guarded by Russian soldiers. Prince Ching, on the contrary, is pro-Japanese. He has Japanese guards, and in many ways he shows how entirely he trusts the Japanese. He evinces earnest solicitude with regard to national affairs. But the truth is that China is very poorly supplied with statesmen at present. Her most influential and able man seems to be Yuan Shih-kai. His reputation is high and he commands a strong force. Officers of his staff are already in Peking, diligently making arrangements for the return of the Court. Viceroy Li had the intention, at one time, of placing the Palace within the Japanese military sphere after the return of the Court, but the cost of building barracks deterred him.

GARDEN PARTY IN TOKYO.

Dr. and Mrs. Hatoyama entertained a large party on the afternoon of Friday the 12th at their pretty villa in the Otowa suburb of Tokyo. The occasion was to say farewell to their friends in view of the Doctor's approaching departure for the United States, where he is to receive the honorary degree of LL.D. from Harvard University. He will be accompanied by Mrs. Hatoyama, and they expect to be absent from Tokyo for about three months. The weather on Friday morning looked most unpropitious for a garden party, but happily it cleared up at noon, and a very enjoyable time was spent, the guests assembling at four o'clock and breaking up at about six. Among those present were Marquis and Marchioness Nabeshima, Count and Countess Okuma, Mr. and Mrs. T. Kato, Bishop and Mrs. Awdry, Dr. and Mrs. Hamao, Professor and Mrs. Hozumi, Mrs. Buck, and many other distinguished personages.

AN INCIDENT.

There is in Tokyo a scholar of repute named Shinobu Joken. His reputation for erudition is based on skill in literary compositions after the Chinese model. On the 15th instant, the *Niroku Shinbun* published a long poem over this scholar's signature. It abounded in accusations against the late Mr. Hoshi and in applause of his murderer, Iba Sotaro, the former being denounced as a public robber and a corrupter of morals, and the latter extolled as a national hero. Messrs. Saito Jiro and Inouye Keijiro, two barristers who hold Mr. Hoshi's memory in affectionate regard, called on Shinobu Joken, and the result of their interview with him is the publication of a letter in which he apologises earnestly for his poetic effusion. He declares that it does not embody his own sentiments; that he never regarded Mr. Hoshi as a public robber and a corrupter of morals, and that the poem was, in fact, nothing beyond a metrical version of an article which appeared in the columns of the *Yorozu Choho*. He had shown the poem to a friend, who in turn spoke of it to Mr. Watanabe of the *Niroku Shinbun*. The latter called on Mr. Shinobu, saw the poem, praised it highly and asked to be permitted to take a copy. Leave was granted on the express condition that the poem should not be published. Mr. Shinobu avows that he had Mr. Watanabe's explicit promise to that effect and that he afterwards took steps to emphasize the condition. Yet, to his great astonishment, the poem appeared in the *Niroku Shinbun* of the 15th instant, and he has now only to offer a profound apology and to denounce the deceit of which he was the victim.

A pleasant story, is it not, as illustrating the methods of yellow journalism. The *Yorozu Choho* eulogizes an assassin and villipends his victim. A silly, empty-headed student of classical Chinese converts the barbarism of the *Yorozu* into verselets. A member of the *Niroku Shinbun's* staff gets possession of the verses by a lying subterfuge, and prints them in flagrant violation of his promise. And then finally the classical Chinese scholar comes out with an abject apology, declaring that he only intended to be wicked on the sly and that he has been cruelly cajoled: a worthy trio, the *Yorozu*, the *Niroku* and the classicist.

MILLIONAIRES.

It is calculated that there are 3,828 millionaires in the United States. That is to say, one in every twenty thousand of the population enjoys the proud distinction. These 3,828 persons possess sixteen thousand million dollars, or something over 4 millions each, on the average, and their total property is one-fifth of the 81,750 millions representing the wealth of the nation. These figures are the result of calculations made by the *New York Herald*. They are supplemented by statements that in the beginning of the 19th century America had not more than half a dozen millionaires; that 87 per cent. of the present millionaires have built their own fortunes, many of them, however, working on foundations laid by their fathers and grandfathers, and that they have come from all the great industries in the proportion of 19 per cent. from manufacturing, 16 per cent. from merchandizing, 13 per cent. from real estate, 12 per cent. from railways and steamships, 10 per cent. from banking, 6 per cent. from mining, 6 per cent. from farming, and 5 per cent. from other occupations. The ac-

curacy of the *Herald's* figures is denied by other journals but only on the ground that such information can not be collected with any certainty, men of property being proverbially reluctant to declare their exact incomes and the public being proverbially disposed to exaggerate the amounts. But there is no disputing the fact that the accumulation of colossal fortunes is a prominent feature of modern America. The people have discovered some recipe for that species of achievement. Yet though such a great part of the country's total wealth is held by a small fraction of the population, it does not appear that the large fraction suffers from indigence.

IMPERIAL STEEL WORKS AT WAKAMATSU.

A luncheon was given at the Imperial Hotel in Tokyo on the 11th instant by Mr. Wada, Chief Engineer of the Wakamatsu Steel Factory, to celebrate the inauguration of the works. We take from the *Japan Times* the following epitome of Mr. Wada's speech:—

Founded in April 1900 the works commenced partially in February of this year the manufacture of pig iron, and in May the work of manufacturing, also partially—about 40 tons a day to be more exact—Siemen's steel. Next two of the five roll mill plants having been completed, the production of medium and small rails and plates were started towards the end of June. The other plant will be completed by the end of September and the manufacture of large rails and other ware will be started at once. He stated that some accidents had happened to the blasting furnace soon after its opening for operation, but they were soon made all right, and at present pig iron to the extent of about 100 tons was being turned out, the ore used being that obtained at Kamashi, Mimasaku, and Taya (China). The experiments thus far made had proved the efficiency of the works for the purpose intended, and as 90,000 to 100,000 tons of steel could be produced in a year when all the arrangements shall have been completed and the operations can be carried out to their full extent, the Director is confident that the profit realized from the work might cover in a reasonable space of time the capital invested in this important and novel industry of Japan. He added that the works were obliged to be self-supporting in the supply of coke required and, though the coke produced by the works was as good as that generally used in steel works abroad, the failures of the contractors to fulfill their jobs within the stipulated time had constituted a serious drawback in making the preliminary arrangements of the works.

Mr. Wada also stated that from next year the Factory will use iron obtained from Akiya in Echigo, where ore has been found equal in quality to the best imported mineral. This fact is welcomed with much satisfaction for many Japanese had feared that, after all, the Factory would be obliged to depend upon foreign countries for its supply of mineral.

ACCIDENT IN TOKYO.

As the carriage of His Excellency the Spanish Minister was returning from the Tokyo Club on the evening of the 17th instant, it ran over a woman of 57 and inflicted injuries which, it is feared, will prove fatal. Tokyo journals find fault with the driver of the carriage, not for awkwardness in driving but for continuing his progress after the accident without any attempt to stop the carriage until arrested by the shouts of the bystanders.

A bronze medal, on which will be graven an eagle fixing its talons in a dragon and on the reverse side the Emperor's signature, will be conferred upon the officers and men of the German expedition to China. A similar medal in steel will be conferred upon all persons—soldiers, and civilians—who have taken part in the preparation of the expedition or have in other ways contributed to the success of the campaign.

NOTES ON CURRENT EVENTS.

Telegrams to Tokyo allege that the failure of the Leipziger Bank and the disasters it entailed have produced a panic in Berlin and caused a violent decline in the market price of various securities. London also has felt the event in a similar manner though less acutely.

The *Saratoff* has returned to Nagasaki in the ordinary routine of her voyages, but the officers for whose reappearance the police were waiting had the prudence to be absent from the ship. They were condemned by default, it will be remembered, for taking photographs within the limits of fortified areas, and the police had orders to arrest them wherever they could be found. But they are evidently resolved not to be found, which is as convenient a solution as any other.

Forty-six blue-jackets belonging to the U.S.S. *New York* and *New Orleans*, which came to Yokohama in connexion with the Perry-memorial ceremony, took French leave a few days ago. Twenty of them were arrested and sent back to their ships, but the remainder have not yet been apprehended and it is thought that they are hiding in Tokyo.

A telegram published by the *Chuo Shinbun* says that Japanese four per-cents have had a further drop of ten shillings, being now quoted at £75, and that English Consols have dropped to £92½. No explanation is offered, but it is possible that the weather in Japan has been used by speculators to suggest the danger of a bad rice crop.

The death of Mrs. Ohny has caused great grief in Tokyo where, as Miss Matsuno, she had been known for several years and universally loved. The deceased lady was in the very bloom of her youth, and the sincerest sympathy is felt for her bereaved husband and parents.

Rear-Admiral Rodgers, commanding the United States Squadron in the Far East, was received by the Emperor in audience on the 12th instant.

Count Li, son of the Li Kamon-no Kami, has exchanged visits with Admiral Rogers—who is a grandson of Commodore Perry—and has sent him various presents.

The Customs Authorities in Shanghai are said to have given an order to the Dock Yard in Nagasaki for the building of a steamer. If we are not mistaken this is the first example of a sea-going vessel being built to foreign order in a Japanese yard.

Although the Government has agreed to withdraw, from the 1st of August, the veto on the despatch of emigrants to Hawaii, it has set a limit of 3,000 to the yearly exodus, and has ordered that not more than 3 or 4 batches shall be despatched monthly, and that a ship must not carry more than 60 at a time. That evidently puts an end to the sending of special vessels, for no ship could afford to make the voyage for the sake of 60 emigrants.

The investigations into the claims of Japanese subjects whose houses were destroyed in Hawaii for sanitary reasons seem to be progressing very slowly. There are some 2,600 claimants, but only 5 or 6 claims have been examined in a month. It is plain that at such a rate the process would be interminable and the commissioners are now said to be thinking of striking off an

average sum from each claim and recommending immediate payment of the remainder without further investigation. It appears that 2,500 householders have claimed the same sum—300 dollars—for the destruction of their houses.

As usual the problem of Asiatic labour is again coming upon the tapis in British Columbia. It crops up every summer. The Japanese engaged in the work of salmon catching are not only very skilful but also content with comparatively small wages, and as there are some five thousand of them, the jealousy of the white labourers is not unnatural. It is stated that the number of Japanese is not as great this season as it was last year.

Sixteen persons remain in Yokohama who have not paid their taxes and seem determined not to do so. They are 1 Swiss, 1 French, 6 English, 4 Americans and 3 persons of unknown nationality. The local authorities are about to proceed against them by the method of distraint.

We read in the *Chuo Shinbun* that a large Belgian bank is about to be established in Japan. Mr. Kawamura Junzo is said to have been conspicuously engaged in bringing this about. The bank will commence with a capital of 40 million yen, to be gradually increased as occasion arises. It is to have branches in China and Korea, and it will lend money for enterprises of various kinds.

The same journal alleges that a Belgian Syndicate has lent a sum of 100,000 to Mr. Imai on the security of the Kawasaki coal mine in Buzen. A foreigner is to be appointed over-seer of the mine, and the sale of the coal is to be controlled by the syndicate. The terms are 8 per cent. interest and the repayment of the capital in 8 years.

Consultations continue to be held between the directors of the Land and Sea Insurance Company of Japan and Mr. Malcolm Lyon, who has come out to represent the interest of the British insurers. Apparently the discussion has not reached a conclusion or even been carried within sight of settlement. Neither can we gather clearly from the accounts published by Japanese journals what the nature of each side's proposal is. Mr. Lyon is said to advocate the Company's continuance of its business so far as its existing engagements are concerned, since their abandonment as this juncture would involve a loss of some eighty thousand pounds. But the view of the directors is not stated. Meanwhile a sum of money has been lodged by the Company with the Specie Bank under arrangement that it can not be drawn out without the joint sanction of the directors and Mr. Lyon.

THE WEATHER.

The heavy rain of the past month seems to have done most damage in Shikoku and Kiushiu. Reports from Marugame (Shikoku), Bakan (Shimonoseki), Chikuzen and Saga indicate heavy floods and considerable injury to embankments, roads and bridges. The Chiku-gawa in Chikuzen is said to have risen 24 feet, and the Yana-gawa in the same province, 18 feet.

There is no doubt that the excessive rainfall has greatly impaired the prospects of a good vegetable crop. The rice crop is, of course, too young to suffer. The plants were set out before the wet season began, and there was then some fear that their growth might be seriously stunted

by want of rain. They have now had more than sufficient wet, and a little sunshine is much to be desired. Anything like a failure of the rice crop would be a very grave matter for Japan, since it would have the effect of depleting her stores of specie.

Intelligence is reaching Tokyo of great damage done by floods in the south. Several coal-mines have been inundated. No less than 69 lives were lost owing to that cause at the Katsuki mine in Chikuzen. Fukuoka Prefecture is suffering greatly. There have been burstings of banks, overflowings of rivers, washing away of railway beds, swampings of houses, and considerable loss of life. Two thousand people are said to be in need of public relief.

Disastrous inundations are reported from China. A large part of Hupeh is said to be under water, owing to floods in the Yangtze; Honan is suffering similarly from an overflow of the Tung-ling lake and Kwantung is inundated by the West River. It would seem that China has been visited by weather like that now afflicting Japan.

It is anticipated that the weather will not clear up completely until the end of the month. The state of affairs is compared to that which was witnessed in 1890 and 1896, when the rainy season commenced at the end of June and lasted until the end of July. The Meteorological Authorities are reported to be of opinion that the whole summer will be more or less unsettled, and that there will not be any lengthy spell of very hot weather. The market price of rice is rising rapidly.

CONFIRMATION AT CHRIST CHURCH.

The first confirmation within the walls of Christ Church, Yokohama, took place on Sunday, and despite the drenching rain a good congregation assembled. Before the hour of Morning Prayer, we should first mention, the Right Rev. William Awdry, D.D., Bishop of South Tokyo, confirmed a class consisting of persons "of riper years," the majority of whom were ladies. This service was most solemn and impressive in its quiet simplicity. In the afternoon the youths and maidens who have been preparing under the Rev. Aubrey L. Sharpe gathered in the sacred fane at 3 o'clock. The hymn, "O, happy band of pilgrims" was sung; then the Bishop gave a tender, thoughtful address to the candidates, after which the hymn, "O, Jesus, I have promised" was feelingly rendered. Then followed the sacred rite of the laying-on of hands, the service concluding with the bright processional, "Through the night of doubt and sorrow."

YACHTING.

The 17-raters started at 2.30 on Saturday afternoon and had a fairly good race, the wind, though light, keeping enough strength to carry them home:—

Wettinge..... 4.22.40 | *Bonito*..... 4.37.20
Edna..... gave up |

Both first and second prizes (given by the French Residents) were on handicap, under which *Wettinge* allowed *Bonito* 9 minutes. The first prize and two record points thus went to *Wettinge* and the second with one point to *Bonito*. *Devonia* did not start.

The race for 39-raters and the cruising class resulted in *Spray* winning on time allowance the first prize, presented by Admiral Beardslee, *Swanhill* taking the second prize.

Of the 21-raters only two started and *Edna* won easily the first prize presented by Mr. E. Yamada (Bisansha).

DRUNKENNESS AND OTHER VICES IN JAPAN.

SOME time ago we had occasion to refer to an article appearing in the *New Voice* over the signature of Mr. W. S. JOHNSON. The writer drew a very unpleasant picture of Japan, where he spoke of drunkenness and vice as prevalent, and hinted in very unequivocal terms that missionary labours are handicapped by the indifference of the average missionary to temperance problems. He also alleged that the treaties stand in the way of Japanese legislation to check the import of spirituous liquors. We differed from these views and declared ourselves "at a loss to conceive what Mr. JOHNSON meant by 'the conditions of drunkenness and vice that prevail in Japan.'" He now explains his meaning by reference to our own advertising columns, which, he says, are "soiled with three big illustrated advertisements of so many different kinds of beer of Japanese manufacture, one wine advertisement and two advertisements of rum-selling hotels, all of which institutions have been developed in Japan since the country was opened to 'Christian civilization.'" One would suppose from this explanation that Japan had never possessed any spirituous liquor of her own. Surely Mr. JOHNSON must know that she brews from rice a beverage called *sake*, which is much more intoxicating and deleterious than beer. In fact, if beer could be altogether substituted for *sake* Japan would be greatly the gainer. Such questions, however, are merely side issues. The point is that Mr. JOHNSON's article plainly suggested a flagrant prevalence of drunkenness in Japan, whereas in truth there are few countries where so little inebriety is to be seen. A drunken man is a very rare sight in a Japanese city, and when he does make his appearance, it may be taken for granted that the intoxicant responsible for his condition is neither beer, brandy, gin nor rum, but *sake*. Of course it would be an incalculable blessing for Japan, and indeed for every country in the world, could the use of intoxicants be totally and effectually prohibited. But if any successful campaign is to be conducted against them in Japan, the point of principal attack must be *sake*, not beer, nor gin, nor brandy, nor rum. Concerning the matter of vice, Mr. JOHNSON, as might have been expected, falls into the common error that because the social evil is licensed in Japan, and because its votaries, being collected in one place and confined to it, may be seen in considerable numbers by any one that goes to look for them, therefore that particular form of vice is more prevalent here than in Western lands. It is hardly possible to discuss that subject in such a manner as to reach any definite conclusion, but again we must object that Mr. JOHNSON's writing tends to create a false impression, for it suggests that vice is not only exceptionally prevalent but also painfully flagrant in Japan. It is nothing of the kind. Those that take the

trouble to search for it can find a striking exhibition. But none need have it forced upon his observation as is the case in Western cities. A man may live all his life in Tokyo or Yokohama without witnessing one of the scenes that he can not choose but see every night of the week in London. History shows, as indeed reason indicates, that the Japanese system was adopted for the purpose of limiting the evil and bringing it under official control.

Mr. JOHNSON also preferred a charge against the missionaries. He spoke of Japan as being "weighted down with tipling missionaries," and he alleged that "a large number of missionaries neither preach nor practise total abstinence." The Rev. U. G. MURPHY, who is stationed at Nagoya, has sent to the *New Voice* an able article, in which he shows that out of 721 Protestant missionaries in Japan, representing 29 societies, all the members of 22 of the societies are total abstainers. Thus completely answered, Mr. JOHNSON might have been expected to acknowledge his error, and to express satisfaction that the conditions of which he complained do not exist in Japan. But he does nothing of the kind. His answer is this:—"As to the statistics of the missionaries: I made my statement complained of about the Christian missionaries. Mr. MURPHY confines his investigation to the Protestant missionaries. This excludes the Catholic missionaries, who mostly belong to religious orders, members of which shy out like a young colt at a piece of meat, but are recognized connoisseurs of sherry and rum." Mr. JOHNSON, then, referred to the Roman Catholic missionaries. It was of them he wrote when he said that "Japan is weighted down with tipling missionaries." If so, he certainly did not succeed in making his meaning clear. But are the Roman Catholic missionaries what he describes them to be? Can the epithet "tippling" be applied to them with any pretence of accuracy? Assuredly not. No greater libel could have been penned.

INTERNATIONAL INTERCOURSE.

IN connexion with the unveiling of the Perry monument, somebody, quoted by the *Asahi Shimbun*, says that the difficulty of inducing China to act as Japan has acted towards foreign intercourse is to be attributed to the different methods pursued originally with the two countries. England in attempting to open China has always appealed to the people rather than to the Government. She has proceeded by the *route* of trade, seeking to win the approval of the nation by convincing its units that their interest lies in a liberal attitude. But so long as the Government remains unconvinced, nothing really effectual can be accomplished. In Japan's case, on the other hand, PERRY addressed himself direct to the *Shōgun's* Government, and by intimidating the latter, secured the country's adherence to the new departure. The same critic is evidently anxious to mitigate the obvious

inference suggested by such a retrospect, for he adds a rider that had a British squadron and a Sir HARRY PARKES come to Uraga in 1853 instead of an American squadron and a Commodore PERRY, there would doubtless have been war. It is difficult to reconcile that hypothesis with the previous allegation that England follows the peaceful path of commerce in her dealings with China. But, in truth, the whole retrospect seems faulty. How can any intimidation contrived by Commodore PERRY with his little squadron be compared to England's capture of Canton, to her bombardment of the Yangtze ports and finally to her capture of Peking itself? If a clap of thunder in the ears of Chinese officialdom is needed to shake them out of their conservative rut, England has been playing Jupiter for a great many years. Besides, every careful student of Japanese history knows that the *Shōgun's* Government, whose consent PERRY, and above all HARRIS, won, was overwhelmed largely by its treaty-making liberality, and that not PERRY, nor HARRIS, but Kagoshima and Shimonoeki secured the acquiescence of the MIKADO'S Government, without which acquiescence the implementing of the treaties must have taken place amid torrents of bloodshed.

THE PERRY MEMORIAL.

UNVEILING CEREMONY.

Very disheartening weather attended the ceremony on Sunday of unveiling the memorial erected to commemorate the first landing of Commodore Perry on the shores of Japan forty-eight years ago. The morning opened dull, and rain began falling at an early hour, so that when the *Hakoni Maru*, in which the guests were conveyed to Kurihama, started at 9.15 a.m., there was little promise of good weather. As the steamer got out of the harbour and passed the Lightship, however, the sky cleared a little and it was confidently hoped that the day would resemble that on which Perry landed—in this respect at any rate, that a rainy morning would clear up into a bright and sunny afternoon. Ere the ship reached her anchorage this expectation was effectually dispelled, for the weather settled down into a steady fall of rain. Under these discouraging conditions the landing and re-embarkation of the sight seers were conducted.

The arrangements of the Committee of the Beiyukai had been fully seconded by the naval authorities, who provided for the presence of several warships on the occasion of the event. These were the *Shikishima* and *Hatsuse*, the two most modern of Japanese battleships—they lay a little to the south of the entrance of Uraga harbour, the former, however, being present rather in the capacity of a pleasure craft, for she conveyed the Ministers of State and leading officials from Yokohama. Further south, close to the Plymouth Rocks, was anchored the *Fuso Kan*, a stumpy ironclad which came to Japan from England in 1883, we believe, and has since been included in the first and later the second line of battle. This was certainly not out of courtesy to her traditions, for prior to the war with China even the *Fuso* was not to be despised. On Sunday, however, she merely illustrated the contrast between ancient and modern naval Japan. Two corvettes of old type with the out-of-date clipper bow were also present to emphasize the difference. They were the *Kongo* and the *Anaki*, the latter of which was among the first warships built in Japan, and, being of wood from Amaki, was named accordingly. The *Shikishima*, which had lain for a day or two in Yokohama, proceeded to Kuri-

hama, on Sunday morning having been preceded by the three American warships *New York* (flag-ship), *New Orleans*, and *Yorktown*. The last named anchored off the small village of Kurihama and a very fine sight the combined squadrons presented in their holiday dress, even viewed under such unfavourable atmospherical conditions.

The *Hakui Maru* anchored about eleven o'clock, and at once the work of landing her passengers began, a number of launches taking guests from both gangways. For the accommodation of these a pier constructed of pontoons had been provided, and each consignment of passengers as they landed walked up the gently sloping beach, a large part of which was kept clear by police. Some eighty yards from the water's edge the visitors passed a design intended to represent Commodore Perry in the uniform of an American flag officer, and by his side a Japanese official in full military dress. This was meant for Toda Izu-no-Kami, and it is no discredit to the artist to say that he was much more successful in his delineation of the Japanese than of the foreign figure. These figures stood on a structure covered with black material, being thus representative of a rocky headland. A few yards further brought the visitors under a large *mon*, or gateway, of evergreens, which opened upon an enclosed space some 50 or 60 yards square, at one end of which, facing them, stood the memorial, flanked on each side with booths, one for the reception of Japanese high officials and military and naval officers, and the other to accommodate American diplomatic, consular and naval officers. In the former, dressed in civilian costume, was General Viscount Katsura, Premier; Viscount Enomoto, who wore naval uniform and a mass of decorations, and many other leading Japanese, mostly in official dress. In the other were Baron Kaneko, President of the Beiyu-kai, Admiral Rodgers, commanding the U.S. squadrons on this station, Mr. E. C. Bellows, U.S. Consul-General, Mr. G. H. Scidmore, Deputy Consul-General, and a considerable contingent of officers from the ships. The other sides, except that towards the sea, were occupied by white uniformed Japanese officers, and by the Japanese and foreign civilian guests.

So far as the physical surroundings could be applicable, they were, to say the least, depressing. On their way ashore the strangers had passed a couple of torpedo boat destroyers, half a dozen torpedo boats and other craft, all decorated, but with drooping and bedraggled finery which represented in some sense the depressed spirits of all—except the most optimistic. On their left they saw the yachts of the Yokohama Yacht Club, which, having had a racing cruise to Uraga, and shifted round early in the morning to the berths assigned to them, now lay, headed by their flagship (Mr. Scidmore's *Yamato Damashii*), endeavouring to appear festive and holiday-like. But they also had wet hunting, and though the crews, under penthouse-like awnings, strove to appear jovial, they plainly were not happy. So, on shore, everything was wet and sloppy, and during the space of time which elapsed while boatloads came ashore and tramped moistly to their places, their predecessors sat round glumly and dodged the rain drops that leaked generously through the awnings. But this could not have been avoided, and lest some expression of that kind should be omitted from this notice, it may be said that the members of the Committee absolutely sacrificed themselves to promote the comfort of their guests. Yet it must be remarked regretfully that what might have been a fine and imposing ceremony was shorn of its picturesque features by the terrible weather.

Shortly before noon a Japanese naval band (that of the *Hatsuse*) marched in and took up its station facing the memorial, in front of which was a roofed rostrum and platform from which the addresses were to be delivered. A strong guard of honour, consisting of about five hundred men, landed from the Japanese ships, also arrived and formed up in two large companies behind the band and also fronting the monument.

The latter is a huge slab standing upon a square base of granite, and this again rests upon a large granite foundation rising some four feet above the ground and sloping gently upwards. The

inscription on the side facing the sea was written by Marquis Ito and consisted of gilt characters of which the following are a copy and a translation:—

北米合衆國水師提督伯理上陸紀念碑
大勳位候補伊藤博文

"This monument marks the landing-place of Commodore Perry, of the United States of North America.

"Marquis Ito Hirobumi, Highest Order of Merit."

On the reverse side were characters of which the following is a translation:

"Landed on the 14th June 6th year of Kaei. Constructed on 14th July, 34th year of Meiji."

Below this is a translation of the inscription on the obverse.

It may be added that the monument, which has been built under the supervision of Mr. Otani Kahei, the contractor being Mr. Yokomizo Tomekichi, of Hinodecho, Yokohama, is of material obtained only from the six villages of Sagami. Also it may be noted that the whole work is 33 feet high and weighs 19 tons. The expense has been about 5,000 *yen*. From a pole beside the memorial depended two festoons of flags, and hunting was tastefully disposed in the enclosure and throughout the tiffin tent, the credit of which belongs to a party of bluejackets from the *Amaki*.

The period of waiting was not enlivened by any incident, if we except, perhaps, the arrival of a somewhat jaded looking party of bicyclists, led by a naval officer, who ceremoniously saluted and then disappeared. A solitary policeman with a bicycle aroused hopes of some other distraction, but none came, and the company fanned themselves resignedly with *uchinwa* provided by an enterprising firm of Yokohama haberdashers.

At 12.04 p.m. the proceedings began, the band striking up a Japanese air and Admiral Rodgers being conducted to the base of the monument whence, first uncovering, he "broke out" the cords that had previously held a light cloth in front of the inscription, permitting the characters to appear to the spectators. This was loudly applauded.

Baron Kaneko Kentaro, President of the Society, then read the opening address in Japanese, after which the guard-of-honour presented arms.

On the shore of the District of Miura, Kanagawa, there lies a village called Kurihama, where on the 14th of July, 1853, Commodore Perry of the United States of America, by the order of his Government, first landed and met the special Commissioners of the Shogunate to conclude a Treaty of Amity and Commerce between Japan and the United States. From this humble village, the modern civilization of the Japanese Empire might be said to have sprung up. Rear-Admiral Beardslee, who was then a midshipman in the Fleet commanded by Commodore Perry, came a second time to Japan last year and he went one day to Kurihama to see the place of landing 49 years ago. At a meeting of the American Association of Japan he narrated the condition of our country at that time, when the Empire was strictly adhering to the policy of seclusion from the rest of the world, forming by herself a world of her own, and to-day coming to Japan he found himself in a quite a different country, holding a prominent position among the Great Powers of the world and competing with the nations of Europe and America on the path of modern civilization. The progress of Japan during the half century since confronts the eye of the Admiral as an image of other ages. Kurihama, further remarked the Admiral, was the gate by which all the Western civilizations were introduced into Japan, and therefore a

mark to denote the site should be erected for posterity. The members present were greatly impressed by the narration and at once passed a resolution to erect a monument to Commodore Perry at Kurihama. The Association from the very beginning never meant to erect a grand monument, but on the contrary, designed a simple and modest monument to mark for the future the most important place in the modern history of the Japanese Empire. Therefore only a small area of ground has been allotted for the purpose. When the news of our enterprise was made known, the people of the United States at once showed a keen interest and ardent sympathy and moreover the Government ordered Rear-Admiral Rodgers, Commander-in-Chief of the United States Fleet, to attend the Unveiling Ceremony with three men-of-war. His Majesty the Emperor, having heard of the enterprise of the Association gave a pecuniary donation towards the monument fund. All these have been received by the Association as the mark of an unexampled honour.

But the erection of the monument to commemorate the national epoch for the opening of the whole country should not be carried out by one association alone but by the whole people. Particularly so, when it has been so warmly received both at home and abroad. Having deemed it improper for the Association alone to undertake the task of erecting the monument, we decided to enlarge the scope of our first object so as to comprise all ranks and circles of the Japanese people. But the time was too short to realize the idea of the Association, and moreover we then found that the monumental stone had already been cut and engraved and would not allow of any alteration. Therefore we were compelled to carry out the enterprise according to our original plan.

To-day is the 39th anniversary of the first landing of Commodore Perry at this place—we select the day to unveil the monument and consecrate the dear memory of our benefactor. Fifty years ago when Commodore Perry stepped on this shore, the Japanese Empire had been veiled over by the mist and cloud of seclusion for nearly 300 years and any manner of intercourse with foreign countries had been strictly forbidden. But since the Imperial Restoration of 1868, our Government has introduced laws and customs of western nations and the whole nation has undergone a complete change and has made wonderful progress, and to-day we behold the Japanese Empire, having concluded treaties with foreign Powers on equal footing and having promulgated a system of Constitutional Government, in a prominent position among the civilized Powers of the world. All these come from the wise and enlightened Policy of His Majesty the Emperor, yet we are greatly indebted to the Government of the United States, who first of all the Western Powers, induced our country to open herself to foreign intercourse.

The United States being our nearest neighbour, has kept, in diplomacy, the most amicable relations, and in commerce, the most important position with Japan since the very beginning of our treaty.

Rear-Admiral Rodgers is the grandson of Commodore Perry, who first landed here 49 years ago. What a delightful coincidence that the grandfather sowed the seeds of modern civilization at Kurihama and to-day the grandson is to unveil this Monument.

This Monument is erected to show that our intention is never to forget the friendly feeling of the United States that sent Commodore Perry to induce Japan in a peaceful way to have intercourse with foreign Powers, and besides to show before the world that our amicable relations with the Great Power is happily kept up and that all the western civilization so wisely introduced originated from this humble shore.

The presence of distinguished Naval Officers from the country with whom we enjoy most intimate friendly relations and of Ministers of State and of all the ladies and gentlemen, has greatly honoured the ceremony to-day. We only regret that the limits of space and time have prevented us from extending a more general greeting to all whom we desire to be favoured by their presence. Considering that this place is lacking in almost all facilities of communication both on land and sea, that so many should favour us with their presence here must be deemed a very great honour. On behalf of the Committee who have erected this Monument, I have sketched a brief history of the stone and in conclusion I hereby beg to express my sincere thanks for their presence.

Owing to the illness of Col. A. E. Back, U.S. Minister, the address which he had prepared was read by Mr. J. M. Ferguson, Second Secretary of the Legation, as follows:—

Had some wise man of prophetic vision, a half century ago, foretold that Commodore Perry's coming to Japan with his ships, landing at this place, and having intercourse with the Japanese Government would be followed by so momentous consequences within fifty years as are now manifest, he would have been treated with derision. Nothing would have been more incredible. And yet, if the Commodore had never approached these shores some other similar

incident might have followed with like result. The time was opportune and conditions were favourable for such a departure from the old and the beginning of a new era.

That a nation with its peculiar civilization of more than 2500 years, existing wholly within itself, with little if any contact with the outside world, should have changed its feudal system of government to a constitutional government entirely by its own initiative and by the grace of a wise Emperor within 35 years, is a marvel to the civilized world.

Since the advent of Commodore Perry the Empire of Japan has, within herself and of her own volition, ceased to be a hermit nation; has made treaties of amity and commerce with the nations of the world; has opened the country to the people of all nations, welcoming them within her borders and throughout the land, granting to them like immunities and protection as given to native subjects. She has now become a world power, accepted in full fellowship into the family of nations on an equality with western countries.

In such a short period of time to have evolved an army so disciplined and efficient as to command the admiration of the world; to have built a navy of such strength as to force her recognition as one of the great sea powers, speaks volumes for the wonderful enterprise and ability of this the youngest in the family of recognized civilized nations.

One can only understand this when he comes to know the people—their mental activity, their energy, their endurance, their independent and progressive spirit, their ambition, their pride of country, and their loyalty to their Emperor. Then one will understand how it is, not only that such an army has been created and disciplined and such a navy built, but also the causes that have brought into existence their constitutional form of government; their modern educational system, so enlarged as to provide for all the youth of the Empire; their modern financial system, their new judicial system, their complete postal and telegraph system; their extended railway and light-house systems; their hospitals, so well equipped; their Red Cross Society, so well conducted; their extensive textile manufactures and other thousand and one new industries by which they are successfully competing with western nations in many articles of commerce; their large merchant ships traversing the seas, exchanging products with every country; and the many other evidences to be seen of changed conditions in so short a time so astonishing to the world.

For her progress in the direction of a new civilization the Empire of Japan has had no precedent. No conquering power has ever overrun this country or devastated its coast cities. No foreign power has attempted to conquer her, or has coerced, or in any direction has shaped her course. She does not owe her marvellous progress and prosperity and her constitutional form of government to the control or direct influence of any other country. These grand results have been wrought out by the evolution of a wise people, with inspiring impulses and great masterful courage that overcome the greatest difficulties and that insure to a people independence and power. Nowhere in the history of the world can be found a parallel. No one can foretell or set a limit to that degree of advancement the nation is yet destined to reach. The scroll of her future is not yet open to mortal vision. Of that one can only judge from what her aspirations and ambition have already accomplished.

As an American citizen I express my profound congratulations that these and other wonderful and beneficent consequences have followed Commodore Perry's visit, and I am proud of the fact that from that time the most friendly relations have existed between the United States and Japan, and that the ties binding the two countries have been growing stronger with passing years.

Mr. President and Gentlemen: This shaft of granite that marks the spot where Perry landed, erected by your people in honour of its memory, is the strongest evidence, not only of the recognition of the benefits following his coming, but of the friendship existing between your people and mine.

I thank you and your people for this great tribute to the memory of that heroic naval Commander, an American citizen; a tribute unprecedented, unaccountable to those not familiar with the character of your people and the spirit which animates them.

Under the beneficent rule of a wise Sovereign may your people ever continue in prosperity and happiness and may everlasting peace and goodwill exist between the United States and the Empire of Japan.

A speech in Japanese was delivered by the Premier, Viscount Katsura:—

On this auspicious occasion on which the Beiu Kyokai carry out the ceremony of unveiling the Perry Monument, one naturally turns his thoughts to the coming of Commodore Perry of the United States Navy four decades and some years ago. Since those days the civilization originally possessed by this country has greatly advanced under the benign influence of Western civilization; and it gives me

boundless joy to participate in this grand celebration at this moment when the light of our progress is sending forth its rays with increased brightness. Furthermore we have to-day with us the United States Fleet despatched hither for the special purpose of taking part in the celebration. This act of friendship, always characteristic of the American nation, will be most highly appreciated and will never be forgotten by our people high and low. Considering it a matter of honour to be present on this felicitous occasion I have great pleasure in saying these few words of congratulation.

Admiral Rodgers then addressed the assemblage. He said:—

As I stand here to-day honored by this occasion, and representing together with the officers and men under my command, the Navy of the United States, and appreciating as I do the courtesies and hospitalities extended to us by the Imperial Government of Japan; realizing the sentiments of good will and friendship which inspired, under the leadership of Baron Kaneko and his Committee, the generous originators of this event, I feel for many reasons that it is for me an especially happy occasion. Looking back for nearly half a century I remember the departure from home of my grandfather, Commodore Perry, upon his diplomatic mission to Japan. I remember his return, bringing with him the first specimens of Japanese handwork and art that ever reached the United States and many of these are still treasured in my family. Naturally the Perry family has always cherished sentiments of affection for Japan and the Japanese, and I have been impressed with them from childhood. I also remember the honour tendered to Commodore Perry by his fellow citizens upon his return to the United States, including handsome presents, among others a magnificent service of silver plate in recognition of his successful execution of a delicate diplomatic mission. I believe it to be an interesting fact that Japan in 1854 received the first fully accredited Ambassador from the United States. Commodore Perry had the honour to be the first diplomatic representative of our country empowered with the functions of an Ambassador. The Navy of the United States has always cherished a warm and cordial feeling for Japan and its people. My inclinations have led me to know Japan perhaps as well as any one could who never visited her shores, and no one could be more impressed than I am with the characteristics which have brought Japan with rapid strides to be the peer of the leading military and naval powers of the world. The presence of my friend Rear-Admiral Beardslee is a happy incident of this occasion. We all know of his connection with it and of the interesting fact that he is one of those who landed here nearly half a century ago. May he long be a survivor of it. That the cordial feeling which exists and has always existed between the United States and Japan may continue undisturbed is my earnest hope and I believe that from no country will Japan receive more hearty good wishes than from that in which Matthew Galbraith Perry was born.

Governor Sufu, who was the next speaker, spoke in Japanese, of which the following is a translation:—

The American Association in Japan was, when Rear-Admiral Beardslee visited this country last year, considering about things past and at last decided to erect a memorial to the late Commodore Perry's landing at Kurihama, Mura county. When the association made their resolution known to the public, it was greeted by a great number of people. The construction of the memorial having now been completed, the ceremony of its unveiling is to take place to-day. Let us express our thanks to the Government of the United States, which has ever shown kindness and good-will towards us, for having dispatched, on hearing of the event, the Commander of her squadron in these waters to take part in this ceremony, and our most sincere greeting to Rear-Admiral Rodgers. Although it is not to be disputed that our national principle of opening this country to foreign trade and intercourse and adopting what is good is due to our august Sovereign's virtue, we must acknowledge that Commodore Perry's visit gave a great impetus to the progress of Japan. This monument has been erected to the memory of the distinguished officer who came to these shores 48 years ago; it will serve to cement the friendship of the two countries forever and thus remain as a praiseworthy souvenir. I am very fortunate indeed that this tract of land is within the jurisdiction of Kanagawa Prefecture, the Governor of which, although beyond my merit, I am. It is also a great honour and pleasure to see so many foreign and Japanese excellencies, ladies and gentlemen attending here this ceremony. With these few and inadequate words I make this congratulatory address.

July 14th, 24th year of Meiji.

KOHEY SUFU,
Third-class of the Junior Honorary Rank
and Third-class Order of the Rising Sun.

The last address was given by Admiral Beardslee. We append this which, as will be seen, was in the form of a paper, though the parts spoken were from memory.

PERRY'S EXPEDITION.

In two years a half century will have elapsed since the day, July 8th, 1853, that four large ships, bearing the Stars and Stripes at their peaks, steamed, and were towed into Yedo Bay. Two were side-wheel steam frigates, the *Susquehanna*, and the *Mississippi*, which towed the square ship-rigged sailing sloops of war *Hymouth* and *Saratoga*.

They proceeded slowly and cautiously up the Bay, for in those days there were no reliable charts of Japanese waters, and the sounding leads and lines were kept very busy.

The ships came with guns loaded with shot and shell, their crews at "Quarters," and every officer and man on the lookout, for possible warlike demonstrations, ready to repel if attacked and punish; reader still to give friendly greetings, if unopposed, for the flags at their peaks were harbingers of peace and goodwill.

No exhibition of hostility was encountered, unless the conduct of certain large boats, manned by men in uniform, and commanded apparently by Officers, who wore each a pair of swords could be so considered. These, propelled rapidly by several long oars, sculled from over the stern quarters and beams, made great efforts, apparently, to intercept and impede the ships.

Numerous other craft encountered fled, to the right and left, fleeing from an unknown but suspected danger, as might a bevy of flushed quail before a dog.

One of the largest of the impeding boats gave evidence of a desire to communicate. A richly attired, two-sworded officer held up, and waved a paper, and as the leading ship the *Susquehanna*, nearing Uraga Point, slowed down, preparatory to anchoring, this boat got alongside and the official scrambled on board.

The ships anchored, because night was approaching, dangerous rocks and reefs, had been noticed on the port-bow and beam, there might be others ahead.

As the official reached the deck, the dignified demeanour, which he had lost during his climb (for the side ladders were not yet in place), returned for an instant, but with it a curious mixture of trepidation, and we thought undue obsequiousness.

A group of officers had gathered to receive him, facing them, and with a glance, apparently selecting the most important, he sank to his knees, bowed until his forehead nearly touched the deck, raised his head, and handed to the officer, a document, then resumed his position, until bidden to arise.

Dr. S. Wells Williams, and Mr. Portman, interpreters, were called upon to translate. The paper was written in Japanese and Dutch, and read:—

"Who are you? What is your business here? do not presume to anchor, return to the place from which you come. Act otherwise at your peril."

The warning came too late, the ships had anchored.

Seeing that the bluff was ineffectual, that it provided more fun than fear, the official who, from his dress, was of evident high rank, and who proved to be Yezamon, the Governor of Uraga, unbent from his official austere style and laughed with us.

And he laughed still more, when "grub and grog," as the youngsters irreverently described cakes and whiskey, were served to him and his staff.

Yezamon proved not only a good fellow, but a good feeder. He liked the cakes, but accustomed to diminutive cups of sweet sake the rather stiff glass of grog served to him, choked him; he relieved our apprehensions by asking for more, which he got; and the first step in converting the Japanese to American customs had been taken.

The four ships wore star-spangled ensigns at their peaks; the *Susquehanna*, at her fore the large white star marked broad pennant of the Commodore.

Very little did the Japanese then appreciate the significance to them of those stars; that they were destined to shed over them a bright light which in time would pierce, shatter, and roll away in fragments the dark curtain which for ages had enveloped them, for Perry had come, not simply as a Squadron Commander of high rank, but as the Ambassador of the United States, bearing to their Emperor a letter from President Fillmore, inviting and urging them to abandon their seclusion and to join the family of civilized nations. This invitation, Japan very happily for all concerned accepted, then not content with the back seat, to which alone, as youngest of the group, she was entitled, has with strides, which have excited the admiration and wonder of the world, competed for the front.

Commodore Perry was charged by President Fillmore, to deliver, with all due pomp and ceremony, to which he, as Ambassador, and it, as a President's letter, were entitled, a letter to the Emperor of Japan.

Very properly, he concluded that none less than a

Prince in rank could receive him and the letter; he aimed for one, and he got two.

We were anchored in about twenty-five fathoms of water, not far from Uraga Point, which jutting out from the Western shore divides the long narrow fjord like harbour of Uraga from a bay to the southward, with a long sweep of curved gravelly and sandy beach—Kurihama.

Soon after we anchored, the large Government boats began to anchor in a circle, forming a cordon around us.

This action Commodore Perry deemed insulting, and he directed the Interpreter to so inform Yezamon.

The precise words he used are not on record officially, but according to the "Galley Packets," they were:—"If they don't clear out of that, I will sink every blessed one of them," or words to that effect.

Yezamon, with a sandwich in his grasp, and the tail of his kimono flying in the wind, rushed to the rail, and loudly shouted an order; the boats began at once to weigh anchor, and dispersed, some cutting into Uraga Harbour, some up the bay towards Yedo.

From the eighth of July until the thirteenth, the time of all entrusted with the Diplomatic duties was fully occupied, in daily official conferences, with committees of Japanese officials.

None of these visitors ever caught even a glimpse of the Commodore, who, secluding himself, carried on his business through his staff, which included Captain Frank Buchanan, Commander of the *Susquehanna*, Captain Henry A. Adams, the Chief of Staff, Lieutenant Contee, the Flag Lieut., Dr. S. Wells Williams, a profound Oriental scholar, well versed in the mysteries of Japanese writing and Mr. A. Portman, a highly educated Dutch American.

The language used was mostly Dutch; documents submitted were generally in the literary dialect of China, the conferences were generally followed by refreshments.

There was plenty of work for those not engaged in the conferences. Very frequent were our drills, and many a fine object lesson did the bluejackets furnish to the Japanese, by their skill and celerity in handling the great guns, small arms, bayonets and swords. And there was hardly an hour in the day, that Lieut. Bent with nearly every boat of the Squadron, was not out surveying, a Lieutenant and a Midshipman to each boat, the former to take angles, the latter to record them and the soundings. "From early morn till dewy eve," we were kept at it, with strict orders that we were not under any circumstances to land. At all times Japanese government boats hovered near ours, apparently minding their own business, actually minding ours.

The conferences, were all very much alike; at each, so said the Galley Packets, they began by salutations, and the extremely low bows of all of the Japanese officials relieved Yezamon from the suspicion of obsequiousness, for they all did it. The business usually began by a polite and positive statement by the leading Japanese that a certain point left over from yesterday's meeting for consideration, could not possibly be yielded, for it involved violation of Japanese Law. Met by equally polite and positive assurance that the point at issue must be yielded; they would bow and yield, then, as though relieved from a strain, the strain of upholding until the last moment a point they were glad to yield, they would with great affability take up for discussion the next suggestion.

It was as though they were pulled in opposite directions by two opposing forces; undoubtedly they were, but this was not known to Commodore Perry.

Japan was at the time being torn by contending forces, powerful men among them had wearied of the usurped reign of the Shoguns, with whose representatives ours were dealing. Whichever course these representatives adopted, they were liable to censure and danger.

Japan was ripening for a change: Perry came at the right time.

On the afternoon of July thirteenth, Governor Yezamon announced that as all preliminary points had been satisfactorily arranged, two Princes, representing the Emperor, would the next day receive the Commodore and the letters at a place selected on shore in Kurihama-Ken.

The next morning dawned fair, calm and misty, so calm, that when, wishing the guns of the ships to command the place of meeting, the Commodore made signal to "Shift berth" to place appointed, the sailing ships had difficulty in obeying.

Kurihama is about three miles south of Uraga, has a long broad sweep of beach, and has a range of moderately high hills enclosing it from the rear, two projecting bluffs on each end, somewhat resembling a horse shoe, there is off the mouth of the Bay a group of dangerous rocks, which the *Plymouth* having drifted near, were named after her "Plymouth Rocks."

A river discharges into the Bay, on both sides of which, principally on the south existed and exists, a fishing hamlet,—of low tiled, and straw thatched houses.

On a terrace at the left, stood and stands, prettily tree embowered, a small temple.

Except, for the natural scenery, which is beautiful, and in facilities for landing, which are good, it is doubtful if this first visit to Japanese soil could have been made at a more unpretentious spot.

In honour of the occasion, a large house had been erected, at Yokohama or Tokio, taken down, its parts numbered, transported and re-erected on the low land facing the Bay, contrasting sharply in its white newness with the brown, moss covered buildings of the village, which, from appearances, were hundreds of years old.

The new building, "Reception Hall," was profusely and gorgeously decorated with flags, banners, streamers and lanterns.

At about the centre of the beach, a wharf composed of mat bags filled with gravel and sand, with some loose planks for flooring, had been constructed.

The ships were dressed with flags and bunting, and nearly all of their boats were employed to carry the landing party of over three hundred officers and men. There had been considerable discussion as to who should be members of the landing party, and much emulation, for all wanted to land, but some could not, it was necessary that some stay with the ships, to care for them. The staff officers would naturally accompany the Commodore. The older officers drew lots, to decide. No such privilege was accorded the youngsters. My duty that day was "boat duty," thus in charge of one of the *Plymouth's* boats, I carried a part of her quota to the landing.

The boats mustered off the bow and beam of the *Susquehanna* and "lay on their oars." Signal "form double column" was made, then we straightened out in pairs. This signal was given when Commodore Perry was about to leave the ship for his barge, a twelve-oared boat, under a salute of 13 guns, the band playing the National air:—

"My Country 'tis of thee
Sweet land of Liberty"

Captain Buchanan, who was in charge of the landing party, took the head of the procession in a twelve-oared barge, escorted by a pair of Japanese boats, in each of which was a Governor and Pilot, then came the launches and cutters in pairs, crowded with officers, blue-jackets marines, and bandsmen. Then Commodore Perry in his barge, which was also escorted by two Japanese boats carrying nobles, then a rear guard of a few pairs or boats. All were in full dress uniforms, and undoubtedly presented a fine appearance, but it was very hot work.

When the leading boats reached the wharf, the officers and men disembarked, and were lined up by Captain Buchanan in two ranks, to receive the Commodore, then in fours to march up the beach to Reception Hall. Two athletic bluejackets, and two handsome young sailors were among the personal body guard of the Commodore. The former bore, one the United States ensign, the other the Commodore's broad pennant; the two young sailors bore boxes of rosewood trimmed with gold, on which reposed, opened, the letters from the President, which were on vellum, and from the corners of each (there were two, one being Commodore Perry's credentials) hung suspended, by a gold and silk cord, a large gold seal.

Along the inner side of the beach, where an artificial bank protects the low land from high seas, was arrayed, standing in grim silence, and motionless as statues, four or five thousand Japanese troops, cavalry and infantry.

Quietly attired in chain and plate armour, with black lacquered hats, and scowls, armed with swords, spears, bows, and a few with match-lock guns, the officers with fans; as silent as they, our troops marched past to the Reception Hall, our band playing—

"Hail Columbia."

If on that march some careless bluejacket, perhaps irritated by the scowls with which we were greeted, had made a bit of a mistake with his loaded rifle, what a change would have come into history, for badly armed as they were, recent events have demonstrated that Japanese soldiers are not to be under-rated, and the odds were over fifty to one. For details of what occurred inside of Reception Hall—an incident which occurred to me, not a very creditable one I admit, prevented me from seeing or hearing—I was not admitted.

I must make use of the records of others. There was at the end of the room, opposite the entrance, a dias or platform. On it sat on cushions, the two princes, Toda-Izumu-no Kami; and Ido-Iwami-no Kami. Toda, prince of Idzu, and Ido, Prince of Iwami. At their left were armchairs provided for the Commodore and Staff. As the Commodore entered, the Princes arose and bowed gravely. When all were seated, Tatsunosuke, the Interpreter for the Japanese, arose and asked in Dutch:—

"Are the letters ready for delivery?"

Mr. Portman replied "They are." Then at a signal from the Commodore, the men bearing them took them from the boxes, displayed the writing, signatures

and seals, then laid them on a scarlet lacquer box, provided by the Japanese.

The Prince of Iwami then, through his interpreter, handed to the Commodore a receipt, which was as follows:—"The letter of the President of the United States and Copy thereof arc received, and will be delivered to the Emperor."

"It has been many times intimated that business relating to foreign countries cannot be transacted here, but at Nagasaki."

"Nevertheless, as it has been observed that the Admiral, in his quality of Ambassador of the President would feel himself insulted by a refusal to receive the letter at this place, the justice of which has been acknowledged, the above mentioned letter has been received in opposition to Japanese laws; as this is not a place to negotiate with foreigners, so neither can conference nor entertainment be held; therefore as the letter has been received you can go."

After a brief silence Commodore Perry informed them that he would leave with his ships immediately, and that in a few days he would leave the bay and that he would return for an answer the next spring. Japanese annals claim that he promised to leave Japan at once.

Tatsunosuke now took the letters and left the room, bowing deeply to everybody; as he did so, he informed the Commodore that there was nothing more to be done. After a moments silence, the Commodore rose and left, the two princes arising and bowing as he did so. Except those recorded, no words were spoken during the ceremony, which lasted less than half an hour. The procession of our troops reformed, and all returned to the ships, which immediately got under way, and proceeded up the Bay towards Yeddo, much to the consternation of the Japanese, who had received an impression that they would steer down and out. They went but a short distance, anchoring for the night at "American Anchorage," where I will leave them to give an explanation why it did not fall to me to become a witness of all that I have described, as occurring in Reception Hall.

The matter was of no importance to any one but myself, and not very important to me then, but in later years it has grown into considerable importance, not only to me, but to others, for it has enabled me with truth to claim that I landed with Perry, and with him trod Japanese soil, a claim that has been of much service when in later years I have been advocating certain steps.

When in fact, I was using every argument in my power to induce the Japanese to think as I did that Perry's work among them deserved commemoration, in the form of a Monument. At the first it was very uphill work. Nearly everyone with whom I talked, seemed to approve, but the offers of help were few, until in November last, in Tokyo, I came in contact with the right man, Baron Kentaro Kaneko, in the right place, at a supper given at the Maple's Club by the Heiyu Kyokai, at which I was a guest. Baron Kaneko endorsed my idea so strongly, that, securing the co-operation of the Association it took from my shoulders all responsibility for the work, which it assumed, and the result you see before you the work of Japanese. To Baron Kaneko and the Heiyu Kyokai all Americans and Japanese owe thanks. I tell of my episode with reluctance, for it is a tale of indiscretion upon my part, and a very bad example to younger officers who read this, had I received punishment for my offence, I admit that I richly earned it, but I can with Con, the Shaughran, say: "Be bad 'twas worth it."

I was, as I have stated; a Midshipman in charge of a boat it was beyond question my duty, after reaching the landing, to remain in my boat to see that the boat's crew, or keepers, did so also, and that they got no liquor. As the men landed, I had something to do, and did it, to get my party on shore. As the procession with flags flying, and band playing, began to march up the beach, I began to wish I was with it; wishing grew to longing, as the distance from me increased, and I began to lose details, the longing grew irresistible, I was young, thoroughly excited, and devoured with curiosity—therefore to my shame, be it said, I yielded.

Carefully assuring myself that Captain Buchanan, was so far ahead, that it was not at all likely that he would see me, I first instructing the boat-keepers as to their duty, failed in mine. I left my boat and joined in at the tail end of the procession.

I had hardly marched a hundred yards when a sharp stern hail reached my ears, and set me "tingling" all over. A voice never to be forgotten by a youngster, who "has been caught" by "old Buck," for it was that of Captain Buchanan.

"Mr. Beardslee: are you not in charge of a boat Sir?"

"Yes Sir," I managed to stammer, "but" * * *

"Return to her immediately. Sir, and stay there."

I did not stop to argue or remonstrate, I returned "immediately" and "stayed there," thus this narrative loses the benefit of my "personal experience." For several days, I was in fear and trembling awaiting the report against me, which I was sure would be made, and the very appropriate ensuing

punishment. They did not materialize, Captain Buchanan, whether influenced by a bit of mercy, of which he was capable, or through forgetfulness, which was not one of his characteristics failed to report me. I now for the first time report myself.

"American Anchorage" is one of the many places named by Perry, which names remain until this day.

There was "Mississippi Bay," so-called because when, during our survey work, the boats got beyond Kanon Saki, and out of sight from the ships, the Commodore to ensure their protection, sent the *Mississippi* to protect them, and she found safe harbour in the bay that bears her name, and there were Susquehanna Bay, Saratoga Spit, Rubicon and Treaty Points, Perry and Webster Islands, Macedonian Reef, Reception Bay, and Plymouth Rocks, all named from some incident in the cruise, and the names still adhere.

At daylight on July sixteenth, the squadron moved to "Susquehanna Bay," where a large and pleasant reception was given by the Commodore and officers to the Japanese.

During the two days, the boats were kept busy surveying, under charge of Lieut. Silas Bent, greatly to the annoyance of the Japanese, who, whenever our lines ran toward Veddo, become greatly excited, upon receiving reassurance that no one should land and that we would not go to Veddo, they calmed down. At daylight on the 17th, the squadron left the Bay.

PERRY'S SECOND VISIT.

On the eleventh day of February, 1854, Commodore Perry again came to Veddo Bay, his mission being to receive the expected answer to the letter from the President to the Emperor and also to, if possible, arrange a treaty with the Japanese.

His Squadron was composed of the ships employed on his last (and first) visit, with the exception of the *Plymouth* to which I was still attached. Business detained her at Shanghai, China, where work, in protecting American lives and interests, had developed. A partial account of which is given in *Harper's Magazine* for August 1899, under the title:—"Episodes of the Taming Rebellion."

Perry's Squadron had been augmented, there were now nine ships viz: the side wheel frigates *Porpoise*, *Susquehanna* and *Mississippi*, the first his flagship, and the sailing ships *Saratoga*, *Macedonian*, *Undeleta*, *Lexington*, *Supply* and *Southampton*. They did not stop this time off Uraga, but came directly to "American Anchorage," a far safer harbour.

The Japanese officials promptly came and welcomed the Americans in the most friendly manner, the days of encircling the ships with cordons of spying boats and of other annoyances were passed, but circumlocution still prevailed.

Nearly a month was devoted to discussions on board ship of preliminary points, the main point being the selection of the most suitable place on shore for the delivery of the Emperor's answer to the President's letter.

Commodore Perry preferred Veddo, to which the Japanese most strongly objected, they preferring Nagasaki, to which place the Commodore refused to go; for ages it had been the rendezvous of the Dutch and other traders, thus too cheapened for his use. Place after place, Uraga, Kurihama, Kamakura, Kanagawa, and Yokohama, were considered in turn, to each place not already surveyed, boats and ships were sent to survey, and except in case of Yokohama, to condemn as not suitable.

Yokohama, then a mere fishing village, was finally selected, principally on account of its broad area, of suitable harbour, and comparatively safe anchorage, its good depth of water, from which the ships could command the adjacent shore and protect those engaged in the conferences. Workmen began at once the construction of a suitable building on Treaty Point, which was finished, decorated and ready for its purpose on March 8th, the day set for the ceremonies, but on the morning of that day it, with its banners, flags and lanterns, had disappeared, it had been surrounded with a cloth curtain, which completely hid it. To this concealment Commodore Perry most strenuously objected, and it was removed. At 11.50 a.m. March 8th, twenty seven of the Squadron's boats carried over four hundred officers and men, escorting the Commodore to the appointed landing. As on the previous occasion, Captain Buchanan, was in charge, and the bands played, and guns saluted as before, but all was not as before.

No scowling army confronted our people, simply a Guard of Honour, and on arrival at the building they were welcomed as guests, refreshments were served, and half an hour devoted to social intercourse: then the Commissioners, of whom five had been appointed by the Japanese Government, invited and escorted the Commodore and his staff into an adjacent room, when and where business began by the delivery to the Commodore by the Chief Commissioner of a document, which he said was the answer of the Emperor to the President's letter. This being read and translated by Dr. Williams, proved as a whole satisfactory, the letter terminates thus:—

"It is therefore quite impossible to give satisfactory; answer to all your propositions."

Then certain points for discussion were given, the letter concluded—

"After settling the points before mentioned, the treaty can be concluded and signed at the succeeding conference."

Nearly three weeks, were occupied in discussions, and settling the "before mentioned points," then on the thirty-first day of March, the treaty was concluded and signed by the Commissioners, who were representatives, not of the Mikado, but of the Shogun Iyesada, the *de facto* Emperor.

CHRONOLOGY OF PERRY'S EXPEDITION.

1853.

July 8th—Squadron entered Veddo Bay, anchored off Uraga.

July 14th—Reception of Perry and the President's letter.

July 16th—Squadron moved to Susquehanna Bay.

July 17th—Squadron left Veddo Bay.

1854.

Feb. 11th—Augmented squadron arrived Veddo Bay, anchored at American Anchorage.

Feb. 27th—Squadron arrived Yokohama.

March 8th—Conference at Treaty Point began, Emperor's letter to President delivered.

March 13th-14th—Exchange of presents.

March 31st—Treaty concluded and signed.

April 18th—Squadron left Veddo Bay.

May 12th—Squadron left Shimoda for Hakodate.

The band then played a few bars of a Japanese air and the guard-of-honour marched off headed by buglers.

Behind the enclosure a large marquee had been erected and in this a capital tiffin was set out. The company was very large, for the three hundred who went on the *Hakui Maru* were probably doubled by the contingents from the ships, yet the arrangements were quite successful, remarkably so if one considers the adverse circumstances. At one end of the tent were shown a black lacquer chair stated to have been used by Commodore Perry 48 years ago, and another of red lacquer used by Toda Izu-no-kami. Close by was a screen bearing sketches and pictures showing the Japanese idea of the American naval officer in, and shortly prior to, Perry's day. "It was not complimentary. In this vicinity also could be seen four generations connecting the date of Perry's arrival with the present time. Here was the veteran of 90, who, then 42 years of age, was present at Perry's reception—is indeed asserted to have been the first man to see the foreign ships and to signal their advent upon Japan's national life. Here also were his son, a youth of 70, his grandson, a babe of 48, and his great grandson, a lisping of 18, who might, however, in the ordinary course of events, have secured the attendance of yet another generation.

After viewing these relics and mementoes the company began gradually to return on board ship—if possible a more dismal business than the going ashore had been, for the rain was now coming down in earnest. So far as the *Hakui Maru's* guests were concerned their discomfort ceased as soon as they set foot again on her deck, and no effort was spared by those in charge to make the return trip agreeable. Refreshments of all kinds were provided most bounteously, and while the thanks of all are due to the Reception Committee, recognition should also be made of the generosity of the Nippon Yusen Kaisha in placing the ship free at the disposal of the Beiyu-kai. The officers—Capt. Tsuji, Chief Officer Tominaga, Chief Engineer Kawaji, and Purser S. Sugihara—gave every possible attention. To the last named, especially, foreigners were indebted for acts of kindness, which doubtless in many cases went unappreciated because performed unobtrusively.

The members of the Reception Committee were: Messrs. Y. Murota, Chairman (Minister Resident), B. W. Ariga, treasurer, B. Yamaguchi, assistant treasurer, B. M. Yamamura, and Otani Kahei. These were on board the *Hakui Maru* at Yokohama and took part in the reception of the guests at Kurihama along with the following: Messrs. T. Sagawara, Y. Yamaguchi, S. Tsuraya, Sawaki, C. Suzuki, O. Koinori, S. Sakurai, H. Sawada.

A list of the most important personages present (excluding the foreign ladies who braved the stormy weather) must necessarily be imperfect. We present the following, however: Viscount Katsura, Premier; Viscount Tanaka, Minister of

the Imperial Household Department; Viscount Enomoto, Privy Counsellor; Baron Yamaguchi, Vice-Minister of the Imperial Household; Baron Kaneko Kentaro, President of the Beiyu-kai; Mr. K. Sifu, Governor of Kanagawa Prefecture; Mr. T. Megata, Director of the Revenue Bureau in the Finance Department; Mr. Nagasaki, Chief Secretary of the Imperial Household Department; Mr. Miyaoka and Mr. Kato, Ministers Resident; Mr. Kondo Kenpei, President of the Nippon Yusen Kaisha; Messrs. Ogawa and Iwanaga, Directors of the Nippon Yusen Kaisha; Mr. Okura Kihachiro, Mr. Yoshida, Private Secretary of the Minister for Foreign Affairs; Mr. Umeda, Mayor of Yokohama; Mr. Watanabe, President of Yokohama Sailancho; Mr. Minakami, Superintendent of Yokohama Customs, Capt. Kaburagi, I.J.N., Dr. Takagi, Surgeon-General I.J.N., Mr. J. McLean, U.S. Vice and Deputy Consul-General, Mr. Kurino, Japanese Minister in Paris. These, with the exception of the Premier, went by the *Hakui Maru*, but by the *Shikishima* and other means there also attended: Admiral Yamamoto, Minister for the Navy; Mr. Sone, Acting Minister of Foreign Affairs; Baron Kodama, Minister for War; Mr. Hirata, Minister for Agriculture and Commerce; Field-Marshal Count Oyama, Lieut.-General Terauchi, Vice-Admiral Tsunoda, Mr. Uchida, Vice-Minister for Foreign Affairs; Rear-Admiral Uriu, Rear-Admiral Uyemura, Capt. Iditi, Chief of Staff of the Squadron, and many others.

The *Hakui Maru* arrived back shortly before five o'clock, her passengers having, owing to the smoothness of the water and despite the rain, had a very pleasant trip.

On Friday evening a dinner in honour of Admiral Rodgers, U.S.N., and the officers of his squadron now in Yokohama, was given at the Oriental Hotel by Governor Sulu, the Mayor of Yokohama, and the Japanese Chamber of Commerce of Yokohama. Beside the Admiral and officers of the American fleet, the guests included Baron Kaneko Kentaro, Rear Admiral Beardsley, U.S.N., retired, Consul-General R. C. Bellows, Mr. G. S. Sedmore and Mr. J. McLean, Messrs. W. T. Payne, J. Landsley, H. C. Howard, A. M. Knapp, and a large number of prominent Japanese officials. Governor Sulu proposed the health of the U.S. President Mr. McKinley and Admiral Rodgers that of the Emperor of Japan, both being duly honoured. The Mayor of Yokohama in a brief speech referred to the fact that Admiral Rodgers was a grandson of Commodore Perry, and the Admiral in reply expressed appreciation of the personal reference and of the cordial relations between American and Japan, which he hoped would for ever endure.

Mr. Otani Kahei, Chairman of the Japanese Chamber of Commerce, proposed the health of the "Officers of the Fleet" in the following words:—

Admiral Rodgers, the Officers of U.S.N. and Gentlemen:—On behalf of the Yokohama Japanese Chamber of Commerce, I beg to express our sincere gratitude for the honour conferred upon us by your presence this evening, and deem it a good fortune in being allowed to say a few words. Our deep slumber of seclusion was suddenly broken by Commodore Perry's knock at our doors at Kurihama. In the midst of difficulties consequent upon the narrow and exclusive ideas of the people in those days, his patience and perseverance prevailed and so the doors were thrown wide open for the commerce of the world. Since then we have derived stimulus and inspiration in our commercial development from America and at last we have gained the day of realization. We are told, Admiral Rodgers, that you are a grandson of Commodore Perry, the benefactor of Japan, and that you are about to attend the unveiling ceremony of the Perry Monument at Kurihama by order of your Government. It is no doubt a matter of great joy for us to have an opportunity of welcoming such a distinguished guest as yourself and therefore we tender this evening a most cordial and heart-felt welcome to you. In closing, I desire that the enlarged commercial relations between Japan and America will knit more firmly the friendship that has always existed among us. I propose now to drink to the health of the Officers of the U.S.N. and Gentlemen present. Captain McKenzie, of the U.S. Flagship *New York*, responded.

The Mayor of Yokohama, Mr. Umeda, proposed the health of Rear-Admiral Beardsley, and the latter in responding remarked upon the changes that have occurred since he accompanied Perry to these shores, and contrasted the Yokohama of to-day with the appearance of its site in 1854 when it was selected as a harbour by Commodore Perry on his second visit.

A dinner party was given, on the evening of

the 15th, at the American Legation, the guests being Admiral Rodgers, U.S.N., the Ministers of State, Baron Senge, Governor of Tokyo-fu, Mr. Matsuda, Mayor of Tokyo, and other diplomatic, military and naval officials, covers being laid for fifty.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

Under the title of *Fujin Mondai*, the *Niroku Shimpō* contends that female education in Japan is somewhat overdone when compared with the education of boys. In many cases, says the writer we are quoting, the subjects taught to girls are far too difficult and impractical to suit their mental capacities and to prove useful in after-life to the students. The educational facilities provided by the State for girls are in every way superior to those provided for boys desiring to receive a high class education, if the number of the latter be taken into consideration, as is shown by the following tables:—

GIRLS.			
High Normal Schools.			
	1898.	1899.	1900.
Applicants for admission	166	168	207
Entrances	57	80	76
Proportion of entrances to applicants	3.5	4.8	3.7
Other High Girls' Schools.			
Applicants for admission	69	263	121
Entrances	65	106	66
Proportion of entrances to applicants	9.4	4.0	5.5
BOYS.			
High Normal Schools.			
	1898.	1899.	1900.
Applicants for admission	151	246	308
Entrances	56	57	100
Proportion of entrances to applicants	3.7	2.3	3.2
The First High School.			
Applicants for admission	736	867	1,219
Entrances	306	325	338
Proportion of entrances to applicants	4.2	3.7	2.8

Thus it is seen that whereas the female entrances to high-class schools is in the proportion of from 40 to 90 per cent. of the applicants, those of boys stand between 20 and 40 per cent. of the applicants. Hence what money there is available for education should be devoted to supplying more high-class boys' schools before the question of increasing girls' schools be taken into consideration. It is not high class technical knowledge that Japanese women want so much as general training that shall fit them to discharge the duties of wives and mothers with greater efficiency. There is too great a tendency in modern Japan, says the *Niroku Shimpō*, to fill a girl's head with useless theories instead of preparing her to become a practical, business woman capable of taking charge of the affairs of a household. We are glad to observe, continues the *Niroku*, that the Tokyo Education Society at its April Meeting adopted the following resolutions bearing on female education. (1) That in Girls' Schools the hours given to sewing should be increased. (2) That the number of subjects studied be reduced. (3) That the whole course of study be rendered more practical. (4) That Calisthenics and Music receive more attention. These are all steps in the right direction.

* * *

There are few books that have had a wider circulation in English schools than Forster's *Citizen Reader*. This work some time ago was reprinted by the Sansaidō and is now much used in Middle and High Schools in this country. But we read in the *Jimmin Shimbun* that Mr. Takenokoshi Yosaburō has brought out a Japanese Citizen Reader (*Jimmin Tokuhon*), which is issued by the Kaikakusha and sells at 30 sen per copy. The following notice of the work we take from the *Jimmin Shimbun*:—"The long expected 'Citizen Reader' has been published. We draw the attention of all engaged in education to this work. In its opening pages we find Marquis Saionji turning the words of Confucius, 'People must be made to obey, but not be informed (instructed)'"

(*kore ni yorashimubeshi; kore wo shirashimubekarazu*), upside down and making them read: "People must be instructed and must not be made to obey (blindly)." Whatever Chinese scholars in this country may think of this proceeding, there is no denying that Marquis Saionji is only giving utterance to prevailing sentiment when he condemns the Chinese method of keeping the masses in entire ignorance of the principles and policies which control government administration. There will no doubt be some persons who will maintain that when Marquis Saionji wrote 可使知之; 不可使由之, *kore wo shirashimubeshi; kore ni yorashimubekarazu*, he went too far, and hinted that people are under no obligation to obey. But he is no more to be taken too literally than was Fukuzawa by sensible readers when on one occasion he classed Kusunoki Masashige with Gonsuke (a low-class servant). Exaggerated language is allowable when attacking long-standing abuses. Such language attracts attention in a way that milder terms would not do. The *Jimmin Tokuhon* is eminently fitted to furnish to young students an adequate idea of the methods of government followed in this country as well as the particulars in which the Japanese Constitution differs from the Western Constitutions on which in the main it was modelled. Patriotism is defined and illustrated. The relation of monarch to the subject, the Diet, the franchise, voting, the power of the Diet, and the like, are all explained in turn. The work is intensely modern and represents the ideas of those best versed in present day politics. The only doubt we have in reference to it, says the *Jimmin Shimbun*, is whether the explanations given are simple enough and full enough to be intelligible to young students. It is not without printer's errors, we observe, but on the whole it is a volume that ought to receive a warm welcome in all schools.

* * *

The *Osaka Asahi* publishes the views of several Japanese literary men now studying in Germany on the "Reform of Stage-acting in Japan." The names of those whose views the *Asahi's* Berlin correspondent, Mr. Hayashi Gakunan, gives are those of Messrs. Haga, Fujishiro and Iwaya Sazanami. The first thing that these gentlemen observe is that they are impressed with the superiority of the taste of the theatre-going public in Europe. And they say that the popularity of wrestling, the musical drama known as the *Gidayū*, and of the performances of dancing girls in Japan show that Japanese taste is on a lower level than that of Occidentals. The Japanese theatre as now conducted is not a place to which to take a refined Japanese lady. The necessity of reform is universally acknowledged, but how it can best be effected is a problem that has yet to be solved. Dr. Tsubouchi Shōyō and one or two others at one time wrote much on this subject, but their efforts have resulted in nothing worthy of mention. In order if possible to obtain something satisfactory, the Japanese now residing in Berlin have formed a Society called the *Engeki Kairyō Kenkyūkai*, which, as its name implies, is bent on determining what are the particulars in which reform is most needed. Great efforts are to be made to obtain a large membership. School teachers, musicians, students and literary men are all to be canvassed for, and different branches of the association are to be formed. There are many subjects connected with the proposed reform, say the Berlin promoters of this movement, that will need special discussion. Such are mixed dancing on the stage, the extent to which foreign music should be utilised, the extent to which the best *Nō* performances can be retained. There are several particulars in which all educated people are agreed. One is the necessity of shortening the hours during which a performance lasts, another is the introduction of a higher class of plays than are now in use. The present stage-acting of Japan may be designated *Kawara-shibai*,* that

* The first actors in Japan are said to have been beggars, who performed on the river beach, called *kawara* in Japanese. These actors are known as *Kawara Kojiki*. The title *Kawara Shibai* is applied to the most vulgar class of acting.—(WRITER OF SUMMARY.)

is, a species of acting only suited to the lower class. In Berlin in some of the large theatres there is a Royal box, which is occasionally occupied by the Emperor. Stage-acting in Japan must be raised to a higher level so as to afford real pleasure to the upper classes as well as to the middle and lower orders.

* * *

On June and the *Fiji Shimpō* published an article entitled *Nihon sōsengyō no gensai oyobi shōrai* (Japanese shipbuilding: its present state and its future) by Dr. Miyoshi, the well-known civil engineer. Not so very long ago Dr. Miyoshi visited various docks in Europe and America for the purpose of seeing what was being done in the shipbuilding line in the West, and the essay he has furnished to the *Fiji* gives the conclusions he has reached on this subject after a good deal of investigation; which we reproduce here in an abbreviated form. Though Japan seems to herself to have made great progress in shipbuilding in recent years, compared with what is being done in the West her efforts are very diminutive. Taking the year 1900, the total tonnage of the men-of-war and merchant ships built in the West was 2,420,000, while that of vessels constructed by Japan was 23,000, about 1 per cent. of the whole. England of course heads the list among shipbuilding nations, the tonnage of her ships being 86 per cent. of the total number of tons. If Japan and England be compared, Japan only builds one-seventieth part of the ships constructed in Great Britain. Hitherto Japan has ordered most of her ships in foreign countries, but she must aim at constructing her own vessels as soon as possible. Our docks being comparatively modern, they are equipped with all the new appliances for shipbuilding. But in England at some of the dockyards antiquated machines and appliances are still in use. In the matter of facilities for turning out big vessels Japan is well furnished, but the orders received by the various dockyards are quite insufficient. Hence it happens that when an order is received the cost of construction becomes very great. The capital sunk in this industry is considerable and those who are responsible for the working of the various yards are naturally anxious to be in a position to pay some kind of a dividend to the shareholders. Added to this there is a lack of skilful workmen, which involves great delay in the turning out of ships. Another difficulty is the lack of suitable material for shipbuilding in this country. The iron, for instance, has to be imported from abroad, and this has to be procured after an order has been received involving the delay of nearly a year before the work of construction commences. The present situation is such that unless the Government is prepared to protect the industry to a certain extent there is no chance of its holding its own against foreigners. For years past all important orders have been sent abroad and this is likely to be the case as long as things are left as they are now. That our dockyards are able to turn out big ships in good style is no longer open to doubt, but without some Government help there is little chance of their showing their capabilities just at present. But there are hopeful signs for the future. The Fukuoka foundry is now turning out good iron and the number of skilled shipwrights is yearly increasing and as labour is cheaper in this country than in the West eventually our shipbuilders ought to be able to compete successfully with foreign constructors if they can hold out long enough to effect this purpose. It is on this last point that we have our doubts. If, on account of the reverses they have met with, several of our dockyards should be closed, the outlook for the future would be very gloomy. As examples of countries that by strenuous efforts and State aid have converted themselves into shipbuilding countries Germany and America may be cited. Both of these countries at one time ordered all their ships in England. One of the essential conditions of success in this industry is the power of producing at home the principal part of the material used in construction. It is this that Japan finds so difficult just at present. But with State aid the difficulty can be overcome. We ought to be encouraged by the good work that our dockyards have

already done. The *Hitachi Maru*, a vessel of 6,000 tons, was built here and so were the *Asa Maru* and the *Kaga Maru*. In order to encourage the industry it would be well if a large man-of-war were constructed in a Japanese dockyard. It is most important that we should prepare ourselves for a contingency that is by no means improbable, the closing of foreign dockyards to us on account of a war. Long ago America foresaw that this was a danger to which she too was exposed and took effective measures to meet it. Great naval Powers must become great shipbuilding countries. The only naval Powers that depend on foreign countries for their ships are Russia and Japan. It is impossible that we can compete successfully with other countries in marine transport as long as we order all our vessels from abroad. It would be wise for the Government to refuse to grant large subsidies to companies that purchase all their vessels abroad. The grants made for the encouragement of navigation ought to go to those companies that use home-built steamers. Another difficulty which our shipbuilders encounter comes from the backward state of general industry in this country compared with Europe and America. In England most of the fittings required for a vessel are supplied by special industries at a cheaper rate and more promptly than they could be made at the docks. In Japan such fittings are made at the dockyards, involving extra expense and delay. The present excess of imports over exports is largely owing to our practice of purchasing vessels abroad. The 12 vessels used by the Yusen Kaisha for the European line, the 3 vessels on the Australian line, costing on an average a million yen each, the steamers purchased abroad by the Osaka Shosen Kaisha and the Toyo Kisen Kaisha since the war, running into some 20 million yen, and the constant purchase of men-of-war and armour in foreign countries represent vast sums of money paid into foreign coffers that might with different management be kept at home. The above facts suffice to show that the development of shipbuilding in this country is an urgent question demanding the attention of statesmen and calling for the support of the whole nation.

* * *

The *Kokumin Shinbun* publishes an article on the future of representative government in Europe by Mr. Mizusaki Kiichi, who is now in Scotland, the gist of which we give below:—Though there are a few people in England and America who hold that the representative form of government is by no means an ideal form and that were it possible it would be better for a country to be governed by a mere oligarchy, or what has been called an aristocracy of talent, yet the majority are of opinion that representative government is on the whole better suited to the sentiments of the masses than any other conceivable form. I once consulted an American on this subject and he said that in the United States the loss of the franchise would mean the decay of all energy. The feeling in each breast that the Government is wielded by the people and that anything that they unitedly wish to effect they can bring about is so strong that it is impossible even to conceive of the Americans giving their consent to any other form of government. Representative government implies party government, and that means government by the majority. As Spencer has pointed out, majorities are apt to be both despotic and oppressive. But though it is desirable that the minority should have every opportunity of being heard, to entrust it with the reins of Government in countries like England and America would be quite impossible. But party government as known to the men of a former generation has throughout Europe and America changed; and at present cabinets are formed on the basis of agreement as to certain principles and policies. Imperialism, for instance, figures largely at the council-boards of the great Powers at the present moment. It used to be held that questions of foreign policy should be determined without consulting the mass of the people. But this is found to be no longer possible. In England, Germany and America and even in France the strength of the ruling Cabinets is largely owing to the popularity of the

foreign policy they are adopting, which may be described as Imperialism of one form or another. One very noticeable feature of modern representative government in Europe is the high position held by monarchs. In England, in Germany and in Austria the power of the sovereign is enormous, though in each case exercised within strict constitutional limits. . . . Coming now to Japan we may dismiss the assertion that representative government is not suited to the yellow race as a somewhat silly generalisation. If representative government has succeeded among the Hungarians there is no *a priori* reason why it should not answer with us. At any rate we are now trying the experiment. It is as yet too early to pronounce a final opinion on the matter. It is evident that we have made many mistakes, as we were bound to do at the outset. We are deficient in what may be called constitutional morality; in the feeling of obligation to keep secrets faithfully, in reverence for age, in readiness to combine with others for the carrying out of a purpose, in the separation of public and private interests and the adjustment of our intercourse with each other accordingly. If people ask me what it is that makes representative government such a success in England, I reply without hesitation that the character of the people is such that they can be trusted to alter the constitution to suit new situations. But since the English are governed by reason rather than by feeling very few radical changes in the constitution are made. But in countries like France, which in many respects Japan resembles, the changes made in the constitution by successive legislative assemblies are very great. Japan's constitution has not been changed, but politicians are incessantly altering the forms of administration and replacing old sets of rules by new ones, apparently quite overlooking the fact that successful government depends more on men than on regulations. It is no doubt largely owing to the lack of the proper qualifications for administration in the officials employed that necessitates their being bound down by such a multiplicity of rules as now exist. *Nihon wa rikken teki dotoku shukan no soyô (shitaji) naki tame, keishikiteki hōritsu wa karazaru bekarazaru wa zannen no koto nari.* "It is to be regretted that because Japan lacks the groundwork of constitutional moral habits, she has to rely on formal laws and regulations." Though 33 years have passed since Japan abandoned feudalism, the spirit of feudalism still remains to a very large extent, as is shown by the way in which people rely on the Government for the accomplishment of all great enterprises, and by the servility shown to officials on every hand. All this finds no parallel in England. It has often been said that England's strength lies in the character of her middle classes. Her lower orders are not equal to ours and in the conduct of the upper classes there is much that is open to objection, but the intelligence, refinement and morality of her middle classes differentiate them altogether from us. If we could only get Japanese society permeated with the spirit of our *shizoku* we should be a different people. The trouble with us is that the *shizoku* keep too much to themselves and the commercial and industrial world are allowed to fare as they may. The idea that we could effect anything and everything if we only had a Diet, is no longer entertained by us after 12 years experience. We are the first non-Christian nation that has adopted representative government and naturally there are some that predict failure for us. But there is no reason for despondency. The abuses prevailing among us are by no means irremediable, and it lies with our politicians to make a success of the political institutions we have adopted in the same way as has been done in the world of science, industry and commerce. There is nothing in the reason of things to prevent our being successful.

* * *

In the *Keisei* Mr. Shimada Saburō, under the title of *Russia and America*, compares the rapid progress of the two countries during the past hundred years and the feelings with which they are each regarded by the Japanese nation. In

1796, says Mr. Shimada, Russia had a population of about 36 millions. This has risen to 130 millions. Her acquisition of territory has gone on at such a rate that she now controls about one-seventh of the area of the world. America's population, originally about 3½ millions, has gone on growing at an astonishing pace. In 1870 it stood at 38 millions. In 1880 it had reached 50 millions and in 1900 had exceeded 70 millions. The growth of her large towns has been quite phenomenal. In 1850 there were only about 500 people in San Francisco. The population now is nearly 300,000. The whole of the Pacific trade is likely to be absorbed by America. Japan's attitude to the two countries is very different. Russia she fears, but America causes her no alarm. The reason of this is that we consider that Russia has relied on military power for her progress, but that America's progress has been of an industrial and commercial type. Here I differ from the mass of my fellow-countrymen. In as far as Russia's power has depended on the sword, in so far as she gives us no cause for alarm. It is rather the competition of the practical business-loving Americans that we have to fear. *Ware baryoku no osoresu: jitsugyō no chikara no asari.* A country whose development is chiefly owing to the size of its army and navy and whose people are only partially enlightened is in these modern days in a very unenviable position. Russia spends 40 million pounds sterling annually on her armaments, but only devotes 3 millions to education. America only devotes 10 million pounds to her Army and Navy, but lays out 23 million pounds on education. To America's development there is no limit, because her people are equal to the task of fitting themselves for any enterprise they may wish to undertake. Commerce, agriculture and industry are making strides in that country that astonish Europe, and along with the vast wealth that America is accumulating there will ever be all the military strength that she can possibly need. Having the men and the money wherewith to hold her own against all foes, what need she fear? Yet it is a curious fact that we Japanese have for the most part failed to realize the formidableness of America. Russia has the reputation among us of possessing great military strength, but where are the proofs of it? Have not Russian troops shown considerable inferiority when compared with those of other Powers in the military operations of the past twelve months? And moreover, Russia lacks money and is put to it to maintain the position she has assumed in Manchuria and North China. We have nothing whatever to fear from a country like Russia. But what we have to fear is being left behind in business competition. The country that bears the name of the Mizuhō-no-kuni (The productive country) still has to import its flour from America. The true method of expanding the empire and of extending the prestige of the country is not by resort to arms, but by showing an ever-growing proficiency in the arts of peace.

* * *

The *Keisei* has an article on "Our Army in Northern China," which furnishes information contributed by one whose name is not given but who was in China from the commencement of the trouble there up to April last. We cull the following remarks from this article:—It is a cause for gratification that our troops were not considered weaker than any of those of the allied forces. The point in which we especially showed to advantage was the spirit of the men, which, principally owing to the fact that they all realized that the credit of the nation was at stake, was excellent. But there was one particular in which we felt ourselves to be entirely outdone. That was in the matter of horflesh. Our animals looked ridiculous side by side with the mounts of the allies. We realised our great ignorance in the management of horses. Some of our men were killed by handling restive beasts unskillfully. The whole subject of horflesh and how to produce a good breed must be gone into afresh. During our former war with China the use of coolies by the Army led to many abuses, owing to the impossibility of getting these coolies to obey military law. But in the recent campaign

a portion of the reserve force took the place of the coolies and attended to the transport business, and consequently we had no trouble. The white dress of our soldiers we found to be a mistake, especially when we were attempting to surprise the enemy. In the matter of food Occidentals came off better than our troops on the whole, as though our men were able to eat almost anything, their rice-cooking required time and special arrangements and rice is a bulky thing to carry about. Though for the most part the conduct of our men was such as to lead the Chinese to speak well of us, there were exceptions to this rule. (*Waga mitari, kitari shita tokoro de zuibun warui koto mo, minikui koto mo, kitanai koto mo yatta yô ni omowaru*). But what I regretted most was the entire ignorance on the part of our men of military and civil administration and organisation. This is the result of the strict enforcement of the rule that soldiers are not to concern themselves with politics of any kind. When internal revolution is feared the enforcement of such a rule may be a wise precaution, but when our troops have to act in union with Occidentals, they suffer much from their great ignorance of civil affairs. Even our officers lacked the necessary knowledge of general affairs to enable them to take the lead in suggesting arrangements. Our officers need a different kind of education to that they are receiving in order to be abreast of other nations in the management of non-military business. Their ignorance of foreign languages too caused considerable inconvenience. Our military education is far too narrow in scope and our officers need to be made more men of the world than they now are. Our military men are ignorant of the object of war and hence can do nothing towards carrying out that object (*ikusa wa ikusa no tame suru to omotte oru*). But there were some exceptions. Lieut.-General Yanaguchi was very popular on account of his urbanity and amiableness of disposition. Major-General Fukushima was in great request on all sides on account of his knowledge of foreign languages and of affairs generally. Colonel Shiba gained a high reputation both as a military leader and as a civil administrator. But taking our force as a whole, we realised our deficiency in general knowledge and in diplomacy.

SOME NEW BOOKS.

A Secretary of Legation, by HOPE DAWLISH; London, Methuen and Co.

THE scenes of this story are laid in the capital of Zafia, which, according to the authoress, "is an island in that ocean which is the ultimate region of the Sunrise; it is that spot of farthest East beyond which lies the West. To reach it you must pass out of the realm of England, as the English think; travelling eastward, and leaving behind you the crags and sunny waters of the island of Hongkong. Later, after a few days' journey, you must leave the shore of Japan upon the port bow, steaming on a course thence south-east by east. That is the course which the early Zafians steered their junks long ago, when they left their native country, oppressed by the rule of the god-like Emperor Atamatsusa—god-like in his stern decrees—steering for an unknown land, but carrying with them the customs of the much-loved country they left behind. Zafia in much resembles Japan; the sequence of the flowers in the two countries is, however, not precisely identical."

The principal characters in the book are Henry Dale, "a smart, good-looking young man of eight-and-twenty," lately come as Second Secretary to the British Legation; George Trehearne, First Secretary and *Chargé d'Affaires*; his wife Beatrix, who in her early youth had kept a gambling hell at Budholm, "gayest of gay Northern cities," but who has, she thinks, put her past behind her; Miss Vaughan, a maiden lady with means, who has passed the

sunny side of 40 years; Eileen Murray, niece of the Trehearnes; and a dozen or so of the diplomatic corps of Zafia. In the days when Mrs. Trehearne, as Bella Orme, or Bella Donna, had run her roulette table at Budholm, young Dale had fallen under her influence. A timely promotion to the Legation at Washington took him away before he had "dipped" too deeply, and he had forgotten all about Bella Donna when he unexpectedly renews her acquaintance at the other side of the world, but this time as the honoured and much loved wife of his Chief. Mrs. Trehearne, trusted implicitly by her husband, who knew the sad tale of her youth and had liquidated her debts before marrying her, did not pay him back in his own good coin, and when the story opens, she is pressed for money to discharge obligations which she has contracted unknown to Mr. Trehearne. The appearance of Dale upon the scene leads the woman to resort to the wiles of her youth and to re-establish her former influence over him, and she gets the lad to play roulette at the German legation on her account; play two-handed poker with her; and finally place a large sum on a horse running in the local races for her husband's cup—all with disastrous results so far as Dale is concerned, nearly a thousand pounds sterling passing from his pockets in the course of the various transactions. He is a ruined man, when fortunately George Trehearne hears the whole sordid tale from the lips of his wife, just before she is stricken with a terrible illness. He pays Dale's debts, resigns the service, and takes his wife and niece back to England. While all these things were *en train* Dale had fallen in love with pretty Eileen Murray and the pair become engaged, but the book closes without giving any indication whether they eventually marry. One of the chief actors in the tawdry melodrama is Miss Vaughan, who came out to Zafia to found a sailor's home. On the voyage Dale, a fellow passenger, paid her a great deal of attention, and she falls in love with him. When Dale's troubles thicken he goes to her for financial assistance and she offers him this as well as her heart. But such a gift he cannot accept and as "hell knows no fury like a woman scorned," Miss Vaughan turns and rends him. In other words she precipitates the crisis which leads Mrs. Trehearne to confess all to her husband.

There is no blinking the fact that Tokyo is the only place which fills the landscape set-out in so much detail of flower-seasons, those "firesome treaties," and cognate subjects, throughout the book. But we should be sorry to give any reader the impression that because the author has chosen for her canvas the British Legation of the capital of Zafia, pen-portraits of former residents of Tokyo are to be found in the book. If any person sits down with the intention of finding anything of that nature he, or she, will be disappointed. The book is on sale at Messrs. Kelly and Walsh.

The Siege of the Peking Legations, by Rev. ROLAND ALLEN, M.A.; London, Smith Elder and Co.

THIS is a plain, temperate, straightforward account of the siege of the Peking Legations told by the Chaplain of the Rt. Rev. Bishop Scott, who for some five years has been acting Chaplain to the British Legation in Peking. Residents in the Far East have been surfeited with Diaries of the Siege and the stream of heavy-toned literature which has flowed over the Chinese question during the past twelve-months, but we can honestly recommend this book even to the most jaded

among us. Mr. Allen has lived and worked among the Chinese, and we are therefore not surprised to find him writing:—"From their own point of view, if only one could grasp it, the Chinese had doubtless plenty of justification." He traces the rise of Boxerdom and in calm dispassionate language paints the state of Chinese feeling just prior to the troubles in Shan-si in the early months of 1900, as realised by a few far-sighted men among the foreign missionaries and foreign communities at the treaty ports, which said opinions were flouted by officialdom as unnecessarily alarmist. The story of the siege is well told, Mr. Allen keeping to the diary-form as far as possible. He pays high tribute to the Chinese converts, to the ladies who took part in the nursing, and to Col. Shiba and his gallant band of Japanese. Even to one who has read some dozen siege-diaries, Mr. Allen's story proves very thrilling, and his happy knack of illuminating a situation by a neat phrase shorn of all unnecessary words is a faculty highly to be praised. Messrs. Kelly and Walsh have the book in stock.

In Bad Company, by ROLF BOLDREWOOD; London, Macmillan and Co., Yokohama, Messrs. Kelly and Walsh.

THE versatile Australian magistrate who writes under the pen-name of Rolf Boldrewood has collected in this volume a series of sketches, articles, and stories which he has contributed to various periodicals during the past few years. They are of varying merit, and we do not think that the one which gives its title to the book, though the longest, is the best. One gathers a very good idea of Australian life from these pages, life as varied as one can wish; but on the whole the stories relating to the bush attract the most.

The Silver Skull, by S. R. CROCKETT; London, Macmillan and Co., Yokohama, Messrs. Kelly and Walsh.

MR. S. R. CROCKETT, like another well-known member of his cloth, wields the pen of a ready writer, and his books now make a goodly row upon the shelf. But like the Rev. Sabine Baring Gould, before-mentioned, Mr. S. R. Crockett's books bear a very strong family resemblance to each other, be the scene laid in Scotland, in Northern Germany, or in Italy. The puppets he puts upon his stage have all "too much of a muchness" about them. There is the same amount of mighty muscle and brawn on view; the same quantity of gore to be spilled ere the heroine finds her mate and retires behind the veil of domesticity; the same heroics, the same villainies—and Crockett villainy and heroics at that.

The present story deals with the final crushing by General Church, early in last century, of the "free-companies" which once held unlimited sway in the "heel-of-the-boot" of the peninsula of Italy; the tragic end of the Vardarelli Brothers, the beloved "Robin Hoods" of the peasantry, and the utter extermination of the Decisi, a murder-society which had for its cognisance "A Silver Skull," and its supreme head Ciro Annicharico, *Abate* of Grottaglio, Priest of the Red Eyes, Man of Seventeen Murders. For those that like this style of book, "The Silver Skull" can be recommended.

"BRASSEY'S NAVAL ANNUAL."

WE have again in the 1901 issue of *Brassey's Naval Annual* a record and a text book of the British Navy which still stands univalued. For the second time Mr. F. Leyland acts as editor, but Lord Brassey contributes an introductory article which takes in many points connected with

naval matters. Referring at the outset to the enormous advance in naval expenditure under all the leading administrations, he remarks that France is spending this year £13,500,000 upon her navy, Russia £9,000,000, and Great Britain £30,875,500, which is an increase of £2,083,600 on the amount voted for the year 1900-01, and an increase of £12,000,000 on the total for 1894-95. Lord Brassey at the outset emphasizes the importance of the fleet to England. It is her right arm. But for it she would be a cipher in the councils of Europe, might be denuded of her colonies, and could not hold the Indian Empire for a year. But for it the British working-man might any day find his daily occupation gone, and the price of his children's bread risen to half-a-crown a loaf. Every shilling devoted to it, if expended with economy and judgment, is well bestowed, for it is England's insurance against those great accidental calamities which destroy the happiness and prosperity and sometimes the lives of nations. As the *Spectator* has said, it is, moreover, the one fighting arm in which by the nature of things we have the chance of surpassing all other peoples. It is the form of war most suited to the genius of our race and bound up with the most stirring traditions of our history. And not only is the fleet necessary for defence: it is the surest guarantee of peace. Writing on the well-known paper of the Duke of Wellington in 1847, Lord John Russell said "If both (France and England) are prepared, both will be unwilling to rush into war at the hazard of severe and instant retaliation, or at least of successful repulse." Some observations by M. Fleury-Ravarin, in the report of the Committee of the French Chamber of Deputies on the Navy Estimates for 1901, are quoted to the effect that naval power is an essential instrument in diplomacy, and that if France's policy is expansion, whether colonial or simply commercial, she must have an adequate navy to support it. As to the standard of strength Lord Brassey thinks the maintenance of a force superior to a combination of Germany, Russia and France would be to impose a heavy burden, which cannot be necessary so long as prudent councils direct the policy of the empire.

With these preliminary propositions Lord Brassey proceeds to discuss, first, the manning of the navy. And it is an interesting coincidence, at the moment of writing on this subject, to find that a point drawn attention to by him is being seriously considered by the authorities at home. He holds that our method of relying unduly on a permanent force for manning is extravagant, and that such a force, not supported by reserves, cannot adequately supply the means of reinforcement in time of war. "As a reserve," he says, "standing behind the permanent force of marines and marine artillery, a volunteer force recruited from the classes that were enrolled in the Royal Naval Artillery Volunteers, disbanded by the Admiralty over which Lord George Hamilton presided, seems desirable." And only yesterday we read that the Admiralty are considering the advisability of the establishment of Naval Volunteers and also of a school of naval strategy. Dealing with ships, perhaps his only observation to be quoted is his warning that though our strength is fully up to the standard of equality to any two Powers, a deduction must be made in the case of a fleet which will be expected to act on the defensive. In future estimates the appropriation for battleships must be increased, looking to the mercantile auxiliaries as the scouting ships of our squadrons and the defenders of our commerce. It is therefore necessary to make further provision for auxiliary vessels. There is, next, an instructive chapter on training, in which the results of recent discussions on the subject are summarized. A section devoted to battleships treats of the necessity for a rapid growth in dimensions. It is a reasonable presumption, he says, that the biggest ships are the best, and our ships are the biggest. Turning next to machinery and engine-room personnel, he finds that in the introduction of the Belleville boiler we made too great a rush. In principle we were right, but we had not, and we cannot for some time provide, a fully trained personnel for the engine room complements. "In this respect

foreign navies, and notably the Italian and the Japanese, seem to have done better than ourselves in the avoidance of mistakes of management." There is a chapter on cruisers and an interesting discussion of the question of reconstructing old ships, which opens with a statement that perhaps explains the attitude of the Admiralty on this subject:—"Expenditure on rearmaments, and on the fitting of new machinery to the older types of battleships is not viewed with favour by constructors, to whom it must always be a more grateful task to build from designs of their own than to modernise ships which are becoming obsolete." Within prudent limits, he asserts, no expenditure would yield more immediate results in re-inforcing the navy than that incurred in fitting the sound and not badly protected hulls of the earlier ironclads with effective engines and guns. In war with a first class power the sphere of action of our converted ships would be found in distant waters, in the capture of coaling stations, and in defending our trade with the East by convoy and patrol. He quotes from a paper by Lieut. Dawson, R.N., this striking illustration from a possible meeting between the *Inflexible* with her muzzle-loading guns and a French cruiser of the *Cassard* class with breech-loaders:—

"At a range of 8000 yards, or beyond, the French ship would be in safety against the fire of the *Inflexible's* guns, whereas at this range the French cruiser, with the aid of her modern guns and of modern telescopic sights, would be able to make good practice against the British ship, and, in my opinion, would put her quickly out of action by firing large capacity high explosive and other modern shells. Let us, from this particular illustration, consider further the cost to the country. Each man employed on board ship costs us about £100 per annum, and thus the wages bill for 485 men is at the rate of £48,500 per annum. The up-keep during war of a ship of the *Inflexible* class in the expenditure of coal alone, since it would be at famine prices, would be enormous, and the cost of repairs, etc., greatly disproportionate to the services rendered. But apart from these monetary items there is the far more important question of the ineffective employment of the 485 men, whose training represents a large national asset. And, what would be still more deplorable from more views than one, if these obsolete ships, of which there are very many in the Service, are sunk or taken, a very large and very unpleasant gap would be made in our personnel. Other similar illustrations might be given, but this one surely affords strong reason for either selling the old obsolete ships and expending no more money on them even in peace times or for arming them with modern artillery. The latter course seems to me more advisable, as armaments of a kind can be provided much more quickly than new ships to replace the old vessels, and history has shown the value of reserve ships to fill up gaps in naval warfare, even if they be not quite up to the mark from a ship construction point of view. The nation which can more expeditiously challenge the enemy anew after a hard-fought battle is the more likely to succeed ultimately."

We pass over chapters on torpedo craft and on mercantile auxiliaries, in the latter of which is quoted the opinion of a French admiral, Fourrier, to the effect that "As types of fast cruisers for the destruction of commerce, I know of nothing which more fully meets the requirements than those magnificent trans-Atlantic steamships, the *Lucania* and *Compania*, capable of maintaining a speed of 22 knots an hour with extraordinary uniformity. The *New York*, *Paris*, *St. Louis*, and *St. Paul*, and the English ships *Majestic* and *Teutonic*, possess the same qualities, though in a somewhat lesser degree of perfection. Such ships will in my view, be the destroyers of commerce in the future."

The subject of retarded construction receives some attention. In five years, it appears, the expenditure has been four and a half millions below the sum voted by Parliament. The delay in construction seems to have arisen from difficulties in the manufacture of armour which, according to the First Lord, have now been overcome. As the most serious trouble has arisen over dockyard built ships Lord Brassey thinks it would be advisable to put out construction to contract more largely. Contracts, he asserts, should be given at prices sufficient to yield a fair profit, and penalties for delay should be enforced. In closing Lord Brassey says:—

It is a very agreeable duty to pay a well-merited

tribute of praise to the great departments of the Admiralty. They achieve their enormous task with as large a measure of success as it is reasonable to ask for in all the circumstances of increasing change and progress with which they have to deal. Certainly no foreign administration does better. Under none is there so little wasteful expenditure. No Service produces a finer body of officers and men; none possesses more powerful ships. No Administration is supported with a liberality so large as that which the British Parliament has in late years bestowed on the Navy. It has not been thought necessary to press for additional expenditure on the Navy. A forward movement is certain to be general, leaving the relative position unchanged, while the taxpayer is burdened. In this connection it should not be put out of view that the strength of the British Navy rests on a broad foundation.

Our Empire comprises one-fourth of the population of the globe. The combined trade and revenues are fully proportionate to the numbers of the people. As an evidence of our maritime resources we may compare the 1,502,000 tons of shipping built in 1900 for the British Empire with the combined construction of all other countries.

COLONIZING FORMOSA.

The Private Secretary to the Governor of Formosa has sent us an article of which the following is an exact translation:—

The difficulty of paving the way for colonisation is felt by all nations. Why should Japan be an exception? The only difference, if any, is that the difficulties confronting Japan are comparatively insignificant, and that she has progressed and is still progressing with fair prospects of future success. Under these circumstances it is evident that she must in no way flinch from, or hesitate over the work she has taken on hand. With regard to Formosa it may be remarked that four years prior to the appointment of Governor-General Kodama to the chief post in the island, the actual revenue did not exceed 5 million *yen*, but by the 33rd fiscal year of *Meiji*, namely, last year, the total had swelled to 15 millions. As to the imports and exports of the same year it may be noticed that the former amounted to 22,070,000 *yen*, of which 13,570,000 were realized by foreign and 8,500,000 by Japanese products; while the exports abroad aggregated 10,570,000 *yen* and to Japan 4,330,000 *yen*, making a total of 14,900,000. That was a remarkable increase in comparison with any of the previous years. Indeed the Japanese Government has, in order to facilitate the administration of Formosa, contributed several million *yen* every year by way of supplementing both the military and civil expenditures as well as the funds for various undertakings. These facts are enough to show that the Government has succeeded in realizing a certain amount of profit from the colonization of Formosa, while endeavouring at the same time to bring to perfection the schemes formulated for the development of the island. There could be no greater mistake than to suppose that the Government, having incurred considerable losses every year in connection with the island, is now faltering in the attempt to carry out its future programme. This being the case, we have no hesitation in asserting that correspondence published in the *Hongkong Daily Press* of the 1st June, under the title of "Risks of a Japanese Colony," must be characterised as an extremely absurd disquisition, inconsistent with the principles of arithmetic, if indeed it may not be regarded as the result of an argument deliberately fabricated; inasmuch as any acquaintance with the process of calculation will not admit of the conclusion that Japan has entirely failed in her colonial policy. Indeed, the essay referred to contains figures strikingly erroneous, and it is little wonder that conclusions based on such errors should go far from the point at which they are aimed. It may be stated, by the way, that according to latest statistics the number of Japanese in Formosa, with the exception of Government officials and troops, totalled about 30,000, of whom one-fifth are women.

The statement that the monopolies of camphor and opium, and the tea industry, are unquestionable falling into the hands of the Japanese, is quite true; but in this matter there are certain circumstances to be noted. Formerly foreign-

ers, taking advantage of the ignorance of the natives, secured a most unreasonable amount of profit but since the island passed into the hands of the Japanese Government, strict control has been exercised over them, so that no room is now left for them to carry out their fraudulent schemes. On the other hand, those aliens who from the outset aimed at reasonable profits have been able to continue their occupation up to the present, with apparent satisfaction.

Then, too, remarks are made about the subsidies for navigation. They are based on facts.

The subsidies in question were originally granted to prevent the foreign companies from monopolising, as they had formerly done, the entire profits of navigation for Formosa. The advantages arising from the subsidising policy, therefore, were in fact cosmopolitan. The benefits it conferred could be enjoyed equally by Japanese, Chinese, and aliens without discrimination. That such a policy was in no way the outcome of an anti-foreign spirit seems to be beyond question.

The writer of the essay above referred to did not, in the course of his remarks, hesitate to accuse the Japanese, especially Mr. Goto, President of the Formosa Civil Bureau, of harbouring an anti-foreign feeling, setting forth all conceivable forms of insulting language towards the latter, conduct which cannot but be regarded as the outcome of private malice which a certain discontented foreigner seems to have entertained; inasmuch as the statements made by the writer in question were not only far from the facts, but as they appear to have emanated from feelings of discontent, the inference that may be drawn from them is that they were the result of an attempt to promote the malicious intentions of others if not to further the personal interests of the writer himself. Even readers of the essay may have formed a correct judgment on this point without difficulty. To illustrate the fact that the Formosa Government Office has, instead of harbouring an anti-foreign spirit, been consistently faithful to the pledge it made to adhere to the universal principles of humanity, the entrustment of the sale of camphor to Samuel Samuel & Co. may be taken as unequivocal evidence in this respect. Toward foreigners of good standing, who are known to engage in honest enterprises, the Formosa Government have been extremely liberal, and have, in conjunction with them, endeavoured without hesitation to carry out schemes of reclamation and colonisation. In short, it has been the avowed object of the Formosan authorities to do so.

As for a singular remark to the effect that the Formosa Railway requires 45 millions of yen instead of 28 millions, it has only to be characterised as a gross absurdity, which cannot but excite ridicule and derision. At present the engineer-in-chief, in Formosa, with his unrivalled experience and energy, is expected to complete the work at a cost below the original estimates, which, in spite of the extravagant appreciation in the price of iron throughout the world, after the Diet's approval of the same, are prevented by the caution and foresight of the engineer from being affected, so that the work on hand may be brought to completion in any case. These facts are quite familiar to the public.

What can have persuaded our critic to assert that Chinese who have been ill-treated by the Japanese, and have resolved upon immigration, do not fall short of 50,000 in number? Upon what statistics has he based his opinion? Instances in which wealthy persons have removed from the island are not altogether wanting, but the causes of their departure appear to lie in circumstances which render their permanent residence impracticable, or else in the fact that loss of reputation has necessitated the change of their abode. Such cases are to be found indeed even among Europeans. While they were possessed of landed property in Formosa, their private circumstances did not allow them to enjoy a permanent domicile in the island, and they consequently removed to China. There was even one, we remember, who, having contributed an article to a certain foreign journal, representing himself as a councillor of the Japanese Government, propounded arguments which were as strange

as they were absurd. As a European his conduct betrayed an unusual defect in morality.

The question of camphor defies all controversy by virtue of the existence of a contract with a foreign firm represented by Messrs. Samuel Samuel and Co.; and nothing can be a greater perversion of the truth than to infer, as this critic seems inclined to assert, that as the amount of capital formerly invested by foreigners had reached half a million yen, they ought to have been granted suitable rights by way of remuneration, but that the Government, ignoring all these facts, had not taken steps to confer such rights upon them. If that be true, how is it that no foreigner has ever attempted to make a claim on this point?

Finally a word has to be said about a note published under the heading, "President Dr. Goto's speech at the opening of a dock in Foochow." It was a canard, and that it was so might have been recognised even by the inhabitants of Foochow, inasmuch as the President not only did not attend the opening ceremony of the dock referred to, but never delivered a speech at any public meeting. It is our strong belief that the President is not so injudicious as to commit the folly of creating a spirit of rivalry over the preponderance of influence between the yellow and white races. His personal character and his conduct, which have never betrayed any inconsistency with the principles of civilization, are an ample proof that while directing his attention to the cultivation of intimacy between Chinese and Japanese, he at the same time desires to secure an equal result with regard to Europeans and Americans.

Again, the notion that of the exports from Formosa tea stands foremost, camphor being about 60 per cent. less than tea, is already a thing of the past. Such errors in calculation, however, are too many to be enumerated. At all events, it is not surprising that arguments based on mistaken premises should lead to unsatisfactory conclusions.

CRICKET.

BORN IN JAPAN V. THE REST.

No one with the slightest knowledge of local cricket could have anticipated the "snowing under" which the "Born-in-Japan" sustained on Saturday afternoon at the hands of "The Rest." Five times previously have the Native Born challenged the remainder of the Club, and five times have they proved victorious. But on Saturday they encountered their Marathon—or shall we say their Omdurman, to bring the simile up to date—and were hopelessly defeated. It was but another illustration of the "glorious uncertainties of the game": nothing else can account for it. True the bowling of the older men was a trifle too good for the youngsters and the change from matting to a grass pitch was rather disconcerting, the wicket not being an easy one by any means. Still the Native Born wickets fell a little too easily. "The Rest" went to bat first, Crawford and Firth facing the bowling of Clarke and Kilby. The first wicket fell at 19, but Stuart who filled the vacancy was cleaned bowled by H. W. Kilby before he had broken his duck. White had similar ill-luck, being caught by H. W. Kilby; off Wheeler's second ball. After this a stand was made and the fourth wicket fell just as the century was reached, though Wilkinson gave four chances to the field. Then the bowlers got another chance and three wickets went down at the cost of eight runs. Maitland now joined Fradgley and the score slowly mounted. At 127 the partnership was broken—Maitland had been given a life at 23—Fradgley succumbing to a ball from H. W. Kilby. On Lammert joining Maitland some free hitting was indulged in and the telegraph hoisted 169 ere Lammert was caught at the wicket by Pollard. C. E. Libeaud, the last man in, was clean bowled by E. W. Kilby, first ball, so the side retired, Maitland carrying out his bat for 24, which included two 4's and three 3's. The top score was made by E. B. S. Edwards, 38, who also made two 4's and five 3's. Three men made 24 each—Maitland, Wilkinson and Lammert. H. W. Kilby did the lion's share of

the bowling, sending down 96 balls and taking 4 wickets. Sidney Wheeler with 48 balls took 3 wickets. It was now 4.35 p.m., and the heat of the day had sensibly decreased, a slight breeze blowing across the ground.

Disaster lay in wait for the "Born-in-Japan" at the very outset, P. B. Clarke being bowled by White first ball. H. W. Kilby then joined his brother Edward and with White's fifth ball made a single. The last ball of the over brought down E. W. Kilby's wickets: White's analysis here reads prettily—6 balls, 1 run, 2 wickets. W. S. Moss now joined Harry Kilby, but the partnership was of short duration, Kilby, through over eagerness, being run out when he had only made 4. Kingdon filled the vacancy, and meanwhile Moss put up a few runs. At 14 he lost Kingdon, bowled by White. The new-comer was H. R. Hunt; he made two singles and was then stumped by Duff—five for 18. Then the troubles thickened, Moss and Wheeler both being dismissed without the score being augmented—seven for 18. Strome and Pollard, with the help of a bye, saw 22 hoisted ere they left the field. Graham was the last to go in. He made a single and was then caught by Stuart, the match concluding with the score at 25. A feature of the innings had been the splendid work accomplished by Duff behind the wickets.

There was a rather thin attendance of spectators, though several ladies were present. Score:—

A cricket match between teams "Over Thirty" and "Under Thirty" was played on the Kobe Recreation Ground on Saturday afternoon, and although the elders were without the help of Murray, Edwards and Lightfoot they succeeded in defeating their juniors by 118 runs, the principal scorers being Buckley 43, Stephens 48, and Cabeldu 44.

A man named Shirai Yujiro (25), living at Yamabushicho, Shitaya, Tokyo, was arrested by the Ushigome police on the 17th inst. on a charge of stealing several articles from a house at Kami Rokubancho, Kojimachi, on the 16th inst. The accused has three brothers named Jirokichi (22), who has been seven times arrested, Shotaro (20) four times, and Tokujiro (17) three times. A family of thieves.

BASEBALL.

The baseball team from the U.S. flagship *New York* met a Japanese team on the Yokohama cricket ground on Tuesday afternoon and sustained a beating by 12 runs to 7. The Japanese nine played a capital game all round and rather surprised the sailors at times by some excellent bits of fielding. The teams were—

"NEW YORK."		TOKYO.	
Snyder.....	C.	...	Takato.
Bruff.....	R.F.	...	Y. Matsukata.
O'Brien.....	C.F.	...	Ota.
Hurley.....	S.S.	...	Hirano.
Cogswell.....	I.B.	...	S. Matsukata.
Richley.....	J.B.	...	Kubota.
Vandermaist.....	L.F.	...	Kamei.
Shean.....	P.	...	Moriyama.
Blieler.....	2.B.	...	Nagao.

The Japanese led from the first innings, though towards the end of the game, the naval men pulled themselves together and by making fewer errors kept down the score. But their opponents were too far ahead to be reached:—

	1	2	3	4	5	6	7	8	9	
Tokyo.....	2	0	3	0	6	1	0	0	0	=12
"New York"...	0	0	4	2	0	0	0	1	0	=7

"NEW YORK" VERSUS "YORKTOWN."

A game of baseball between the U.S. flagship *New York* and a Japanese nine was arranged for Thursday afternoon on the Cricket-ground, Yokohama, but at the last moment the Japanese players, mostly from Tokyo, found it impossible to keep the engagement. The *New York* then signalled to the fleet and in response the *Yorktown* pluckily offered to pit its nine against the redoubtable flagship combination. A capital game was the result, as a glimpse at the score will show.

The *Yorktown* went to bat first, at 3.30 p.m., but lost their first two batters ere the first base was reached. Then Davis got down to second, being helped by a wild overthrow, but he got no further, for Gasken putting up a fly was held by Snyder, 2nd base, and the side retired without scoring.

Opening for the *New York*, Snyder went under before reaching first, but Cogswell, with a neat hit which just eluded short-stop, took his base easily. Then Hurley brought this player home with a two-bagger, and the crowd cheered. Whereupon Hurley feeling confident, tried to get down to third, only to be forced off, a very weak hit by Bruff being smartly fielded by short-stop. O'Brien going out at first the side retired, Bruff being left at second. Score, one run.

The *Yorktown* failed to score in the second innings, and the *New York* fared similarly. Going in for the third innings, the *Yorktown* added another duck's egg to the list, nothing of special event happening. The flagship also failed to knotch a point and the same tale has to be told of the fourth innings for both teams, the fielding being smart all round. The fifth innings saw a change in the character of the game and before it closed an alteration was necessary among the figures on the telegraph board. To begin with, *Yorktown* lost Dorn at first; then Weiss took a base, upon being hit, and worked down to second. An error on the part of Snyder at second, allowed him to reach third, and then Riley brought him home, the left fielder muffing the ball. Next minute the field were so rattled that a wild overthrow from Lelond enabled Riley to reach the home plate. Two runs were thus made before the side went out. Shean opened proceedings for the *New York* with a hit that short-stop's error converted into a three-bagger; then Lelond brought him home. Some wild overthrowing by the field generally allowed Lelond to get to third, but there he stopped and saw the side go out, Snyder being held on a fly in the right field—a capital catch; and Cogswell failing to get to first, Lelond was forced off third by a smart double-play. The score was now even—two all. The sixth and seventh innings produced nothing, the fielders beating the batters easily. In the seventh innings, by the way, Bruff, the *New York's* catcher, made a brilliant catch behind the plate, holding a foul fly by Shean at the very corner of the net, having to run up the bank to reach it. The crowd gave a deservedly hearty cheer. The eighth innings saw excitement rising high, and the comments of the crowd were getting rarer every minute. *Yorktown* went out without scoring, however. Then the *New York* made their winning run, a two-bagger by O'Brien, assisted by a rattled field, bringing Cogswell to the home plate. The *Yorktown* began their ninth essay by losing Gasken on strikes, Severin was caught by third base. Then Dorn, favoured by an over-throw of third base to first, worked right round to third. Unfortunately Weiss succumbed to strikes and the game was over. O'Brien's pitching was good; and Riley's very pretty. Positions and batting order:—

"NEW YORK."		"YORKTOWN."	
Snyder.....	2B.	Nolan.....	L.F.
Cogswell.....	1B.	Shea.....	C.F.
Hurley.....	S.S.	Davis.....	2B.

CHINA: A POEM.

The following is a transcript of the Rugby Prize poem for this year, written by the nephew of a well known Yokohama resident:—

I dream'd I stood upon a spreading plain,
Bright with the scarlet poppies all around
Waving, as in our cornfields waves the grain,
And, as some cruel fight had stained the ground,
All bloody looked the land; while, far away,
Pagodas, minarets, and temple towers
Caught the fresh splendour of the sun's first ray,
And cast long shadows on the dazzling flowers.
As higher in the heavens rose the sun
The silent air was startled by a cry,
The shout of many voices, joined in one,
One long-drawn cheer that seemed to rend the sky.
And, as I gazed, behold! a mighty host
Sprang from the earth, full armed before my eyes,
Numberless as the sand upon the coast,
Their banners like the stars that deck the skies.
Their captain marshalled them upon the plain,
And to the multitude addressed a stirring strain.

"Land of the rising sun,
Where the blood-red poppies grow,
Spite must be waged and won
Hence with the western foe.
Fight for your wives and homes,
Fight for your own dear land,
Eastward the tyrant comes,
Scatter his arms like sand:
Fight for your father's graves,
Fight for your Empire old,
Drive him across the waves!
Yield not to guns nor gold:
Curse them who caused this strife,
Breaking our old-world peace
With the bustle of western life
And the cares that never cease.
Over the hills they leap,
Over the flowery meads,
Breaking our grand-sire's sleep
With the roar of their iron steeds,
They will take away your gold,
Your liberty, and your land,
Fight for your Empire old,
Scatter them, like the sand!
Land of the rising sun,
Where the blood-red poppies grow,
War must be waged and won,
Hence with the western foe!"

So spake the captain, and the host around
Took up the strain, and made the heavens resound:—

"Land of the rising sun,
Where the blood-red poppies grow,
War shall be waged and won,
Death to the tyrant foe!"

They scarce had ceased their singing, when a change
Came o'er my dream,
I stood again upon the plain, I saw the scarlet gleam,
But it was not now the poppyfields that gave that
hue so bright,

The land was red with the blood that was shed
When the East and the West did fight!
Once more stood an army marshalled there, and
worn and spent were they.

But their eyes shone bright with victory in the glow
of the dying day.

And, as they marched to the city gates, a song of
praise sang they,

For Heaven had blest the arms of the West upon
that hard-fought day.

And this was the song their leader sang, and the rest
took up the strain,

And the earth all red with the blood new-shed echo-
ed the words again:—

"Land of the rising sun,
Where the blood-red poppies grow,
Progress and peace have won,
Stifle your sobs of woe,
Wake from your old-world sleep,
Bury your old-world creed,
Long were your slumbers deep,
Wake, from their thraldom freed:
Wake with the dawn of day,
Error and gloom are o'er,
The night hath passed away,

Passed to return no more,
Land of the rising sun,
Where the blood-red poppies grow,
Christ and His Peace have won,
Stifle your sobs of woe!"

The vision vanished; and behold! I saw a prosper-
ous land,
A city full of plenteousness, and peace on every
hand,

No more the blood-red poppy grew to make brute
beasts of men,
Its baleful power had passed away with the reeking
opium den.

No infant's wailing rent the air by heartless parents
slain.

But from a thankful populace arose the joyous
strain:—

"Land of the rising sun
Offer a hymn of praise
For the reign of Peace begun,
And the dawn of the golden days,
Lands of the setting sun,
Lands of the far-off west,
For the good deeds ye have done
May your names for aye be blest.
Lift up your voice once more,
Sing out the gladsome strain,
Sing! for the night is o'er,
Ne'er to return again.
Land of the rising sun
Offer your hymn of praise
For the reign of Peace begun,
And the dawn of the golden days."

While thus they sang I woke, the vision o'er,
Twas but a dream; I would I were something more!

Rugby, May, 1901.

R. K. D.

NATIONAL TRADE.

Latest investigation shows that the foreign
trade of Great Britain and ten other nations when
reckoned in Japanese currency stands as below:—

Year.	Export Thousand yen.	Import Thousand yen.	Aggregate Thousand yen.
Great Britain.....1900	3,474,500	5,131,603	8,606,103
Germany.....1899	2,006,386	2,776,141	4,872,527
France.....1899	2,213,400	2,339,200	4,552,600
United States.....1900	2,741,526	1,699,882	4,441,408
Holland.....1899	1,266,400	1,532,800	2,799,200
Russia.....1899	939,712	964,167	1,903,879
Austria-Hungary.....1899	912,086	788,312	1,700,398
Belgium.....1899	779,720	904,080	1,683,800
Italy.....1899	574,966	602,624	1,177,590
Spain.....1900	289,547	344,058	644,505
Japan.....1900	224,929	220,401	445,331

Thus in the matter of exports as well as imports Great Britain comes first; Germany second, France third, the United States fourth, and Japan stands eleventh in order and falls short of such nations as Spain by 200 million yen. Now, taking Japan as the basis, the trade of other nations stands as follows; Great Britain has 20 times as much as Japan; Germany, France, and the United States each ten times, Russia, which stands sixth in order, has over 4 times, and Italy, poor as she is, has over 3 times. If we compare them next in relation to their exports only, we see Great Britain still stands first, but Germany and France fall behind the United States. The recent increase in exports of the nation last mentioned is remarkable. The amount of our exports is only one-fifteenth that of Great Britain, and one-twelfth that of the United States, and is short of Spain by 70,000,000 yen.

Viewed from the side of imports Great Britain again comes first, followed by Germany, and then come the United States, by which it will be seen that the imports of the United States are small as compared with her exports; Japan is lowest with regard to imports as well as exports. Her present foreign trade when compared with that of the first year of Meiji has augmented in an extraordinary degree—tenfold—and yet when viewed with that of Great Britain, the United States and others, the aggregate is exceedingly small—hardly even worthy of comparison.

A telegram dated London, 26th June reports:—The breech-block of a twelve-pounder exploded at Freshwater in the Isle of Wight, and Captain Bray and a gunner were killed, and seven men injured. Captain Arthur Le Messurier Bray, whose life has been accidentally sacrificed, served with the Chitral Relief Force in 1895, and received the medal with clasp. He was in his 33rd year, and obtained his present rank in 1893.

NEWS OF THE WEEK.

Thursday's issue of the *Miyako Shinbun* has been suspended by the authorities.

A violent earthquake was felt in Yokohama shortly before eight o'clock on Thursday night.

The Government Railway between Kushiro and Shirakabe in Hokkaido will be opened on the 20th inst.

The Japanese flagship *Shikishima*, now at Yokosuka, will leave for China with the standing squadron in a few days.

Owing to the heavy rain at Bakan on the 14th inst., 10 houses were destroyed. One man was killed and four men were injured.

Twenty-two families of soldiers killed in China last year, received *yen* 200 each from the Japanese military authorities a few days ago.

An engineer named Kawamoto, employed in the Kagoshima Meteorological Office, committed suicide on the morning of the 15th inst.

The takings of the Tokyo Tramway Company for the two days of the *Bon* festival were; July 15th, *yen* 5,225.55; July 16th, *yen* 8,288.50.

Mr. Segawa, Japanese Consul at Hankow, arrived at Nagasaki on the 16th inst. from Shanghai. He is appointed Consul at Gensan, Korea.

Rear-Admiral Kimotsuki delivered a long speech on the Navy before the students of the Yokohama Commercial School on the 13th inst.

The Tagawa Coal Mine of Fukuoka, belonging to the Mitsui, was flooded by the heavy rain on the 16th inst., and several coolies are missing.

A man named Kitagawa Kichisaburo, living at Sŏn, Korea, has been ordered to leave Korea for three years by the Japanese Consul at Chemulpo.

A young man and a young woman committed suicide by lying down before a train at Uyeno station on the night of the 14th inst. Both were killed.

An old man residing in Honjo, Tokyo, upset a kerosene lamp on the morning of the 15th and was so badly burned that he is not expected to recover.

A well-known character named Yamazakino Matagoro was murdered at Shinjuku, on the night of the 15th inst. The murderer has not yet been arrested.

The editor of the *Matsuyei Nippo*, for libelling the Shimane Prefectural Assembly, has been sentenced to two months' imprisonment with hard labour, and a fine of 10 *yen*.

A boy employed at the Imperial Hotel, who went to Kurihama on Sunday, in connection with the unveiling of the Perry memorial, is missing and search is being made for him.

A San Francisco paper, reporting the detention of the *Carlisle City* in quarantine at St. Diego, states that there had been six deaths from *pneumonia* on board. Nothing is said as to plague.

A former *kazoku* named Takezono Kocho, living at Nihon-yenoki, Shiba, Tokyo, was arrested by the Azabu police on the 15th inst. charged with forging *kukemono*. He was imprisoned for two months in April last.

The Blue Funnel liner *Alcinous* has reported that on the passage from Yokohama to Kobe in lat. 34° 4' N. 137° deg. 43' E. she passed a dismantled junk with masts lying ahead of her. There was no one on board, and apparently she had been just abandoned.

A fracas occurred on Thursday evening in China Town between several blue jackets from the *Ocean* and a number of jinrikishamen. A policeman was badly kicked and two sailors also received minor hurts but were released in the morning after spending the night at the Police Station. It is stated that the police in a very

arbitrary fashion arrested a foreign resident who was endeavouring to persuade the sailors to go with the police.

A man named Harajima Kansuke, living at Sunagawa-mura, Kita Tama-gori, Tokyo, was summoned by the District Office on the 11th inst. for service in the army as a conscript. He refused to obey the call and on the 16th inst. committed suicide by shooting himself in the head with a revolver.

The members of the Yokohama City Assembly, the Municipal Council, and a general representation of the Red Cross Society (Yokohama branch) will receive Lieut.-General Baron Yamaguchi, Commander of the Fifth Division, who will pass Hodogaya by train on the morning of the 17th inst.

H.M.S. *Hermione* had a splendid send-off from Hongkong on the 1st. She calls at Bangkok *en route*, to enable Capt. Cumming to pay his respects to the King of Siam. The *Hermione's* paying off pendant is 470 feet long. Her crew are to be transhipped for home at Malta, where she is to be refitted for this station.

News has reached Aden that in the recent fighting in Arabia, the Sheik of Koweit lost five thousand men, including his brother and two nephews. Ben Rashed lost two thousand men and also several relatives. Ben Rashed is now wreaking vengeance on his vassals who supported the Sheik of Koweit. In Harida he has beheaded twenty men.

A farmer named Nakajima Kichigoro, living at Osawa-mura, Kotama-gori, Saitama Prefecture, murdered his next door neighbour, named Nakajima Keisaku and badly injured his sister Roku, on the 11th inst. All the trouble appears to have been about the keeping of domestic fowls. The murderer was later on arrested by the police.

The Fourteenth of July, the anniversary of the Fall of the Bastille, was very quietly observed on Sunday by the French residents of Yokohama. The tricolour was hung out from all the French houses in the Settlement and on the Bluff; at noon a salute was fired; while at the Oriental Hotel special tiffin and dinner were served; and at night the French cruiser *Friant* was illuminated.

Two carpenters, named Kitamura Kintaro, of Ishikawa-machi, Yokohama, and Tazawa Kumajiro, of Tobe, met in a restaurant at Hisakata-machi, Yokohama, on the 16th inst. to celebrate the *bon* holiday. After drinking a quantity of *sake* Kitamura made an impolite remark to a guest in the house, a gambler named Yoshida Hisakichi, whereupon the latter jumped up and stabbed Kitamura's in the head with a knife. He then escaped but was arrested the following day.

The funeral of the late Baron Mori Jusuke and his son took place at Yanaka cemetery on the afternoon of the 17th inst. Representatives of Prince Mori, Marquis Ito, Marquis Yamagata, Count Inouye, Mr. Utsumi, Minister of Home Affairs, Viscount Nomura, Privy Council, Baron Kohayakawa, Viscount Soga, Baron Suyematsu, Mr. Matsumoto Soichiro, and Mr. Yamada Shigenari, and several hundred persons were present.

A coolie named Hasegawa Torakichi, living at Sugamura, Minami Kanbaragori, Niigata Prefecture, met three other coolies in a coolie house on the 10th inst. After drinking a quantity of *sake* a quarrel began between Hasegawa and the other coolies, and the former left the house. The three men then pursued him and inflicted upon him such severe wounds with a large saw that he died on the spot. Two of the men were arrested the same evening.

The richest nation in the world, proportionally, is not Great Britain, not busy little Holland, nor even the United States. For the greatest average individual wealth, says *Science Shiftings*, we must look to the Australian Commonwealth. Australia is rich in land fit for settlement and industry. Its national prosperity is dependent upon no single product, but embraces pastoral, agricultu-

ral, and mining industries in almost equal degree, and to these are rapidly being added manufactures. Last year the total value of the products of the colonies forming the Australian Commonwealth amounted to fully £110,000,000.

A man found asleep and arrested by the police in a temporary workshop of the higher railway at Yamashitacho, Kojimachi, Tokyo, attempted to escape by jumping into a ditch in Hibiya. He was dead when brought out.

A bluejacket of the battleship *Ocean* while returning from Tokyo on the 15th, lost his cap as the train was nearing Sakuragicho, Yokohama. He jumped off to recover it but was arrested and handed over to the Tobe police, who afterwards released him. The man was not hurt.

During 1900, there were 72 certificates of competency gained at the Examination of Masters, Mates and Engineers in Hongkong. These comprised the following grades:—Master 19, First Mate 23, Second Mate 3, First Class Engineer 27, Second Class Engineer 45. The failures totalled 29, of which 24 were in the test for second class engineer.

Writing on July 8, the *China Mail* said:—The Plague epidemic is now almost at an end. The cases during the past forty-eight hours only total six. These were all Chinese and all were fatal. The figures for the week were 47 cases and 46 deaths. At the beginning of June, when the plague was at its height, the week's cases totalled over 200. The figures now stand as follows:—Cases: Chinese 1,461, other Asiatics 51, Europeans 26; deaths: Chinese 1,424, other Asiatics 34, Europeans 9.

We have received from the Lighthouse Bureau of the Department of Communications, "A List of the Japanese Lighthouses, Lightships, Buoys and Beacons for the 34th year of Meiji." In former years we have spoken in warm terms of the trustworthiness of this useful publication, and we could repeat in all sincerity those eulogiums with regard to the present volume. A chart of Japan showing the positions of the lights, from the far northern Kuriles down to the south of Formosa is appended, as well as a sheet of coloured diagrams describing the varieties of lights used on the coasts of this island empire.

The special edition of the *Illustrated London News*, which Messrs. Kelly and Walsh have on sale just at present, is a splendid specimen of the printers' and engravers' art. It is entitled "The Record of a Glorious Reign;" and contains besides "the Life and Accession of King Edward VII." There are 14 superb photogravures in the volume, besides hundreds of pictures. The letter-press is as good as the illustrations, being furnished by leading writers of the day. We anticipate that Messrs. Kelly and Walsh will soon be sold out, for this souvenir is one of the handsomest things in its line that we have seen.

For the following story the cricket editor of the *Manitoba Free Press* is responsible:—At West Lynn, in the earlier eighties, a Winnipeg scratch team met the West Lynners. C. Rickards, one of the Winnipegers, made a long and lofty hit, but to the astonishment of the long-field, over whose head the ball had been hit and who was hot in pursuit of it, the umpire, a local man, yelled, Lost ball! This strange proceeding caused an indignant remonstrance to be addressed to the umpire, who retorted, in self-defence, "Well, that ball was hit out of Canada into the United States, and I think that entitles any umpire to call 'Lost ball.'" They were playing on the boundary line, and under the circumstances it was held by all playing that the umpire was justified in his action.

A literary lawsuit of much importance is now in its initial stages in England, and according to the *Academy* the matter will certainly be brought to the issue of a trial. The parties are Messrs. Pearson and Mr. Hall Caine. In January of this year Messrs. Pearson started their new sixpenny home periodical, *The Lady's Magazine*. The send-off attraction was the serial production of Mr. Hall Caine's much-

to the Queen for her commands as to their punishment. "Punishment!" said the Queen, "why not even the keepers dare enter those pens. I do not want them punished. Brave boys, I am proud of them." Both heroes of this escapade have served in the present war—one has fallen with honour, the other has returned safe home to England.

The French Government has entrusted Mr. Etienne Richet with an important mission to the Far East. He left Marseilles by the mail steamer *Annam*. The mission is to visit successively Ceylon, Burnmah, Siam, Indo China, China and Japan. The reports of the mission will be published, and the duration of the voyage will be about a year.

The average time occupied by vessels passing through the Suez Canal was 18 hours 32 minutes in 1900, against 18 hours 38 minutes in 1899. In 1900, 360 vessels used the Canal for the first time. In that year the tonnage of the mail boats increased 268,290 tons, whereas that of the exclusively commercial vessels diminished 757,866 tons, and whereas the mail boats represented in 1899 only 23.10 per cent. of the total tonnage of all the vessels using the Canal, the proportion for 1900 rose to 26.30 per cent.

The Official Navy List for 1901 shows that the German Navy now musters two Admirals, seven Vice-Admirals, including Prince Henry of Prussia, 12 Rear-Admirals, 54 Naval Captains, 22 Frigate Captains, 86 Corvette Captains, 208 Lieutenant-Captains, 324 First Lieutenants, and 133 Second Lieutenants, of whom Prince Adalbert of Prussia is the senior. Three Admirals and one Corvette Captain are *a la suite*, and one Rear-Admiral, 28 Captains, and two Lieutenant-Captains are at the disposal of the German Naval authorities. The number of Midshipmen is 426, and that of the Naval Cadets 210. The Marines have one Major-General, two Lieut.-Colonels, six Majors, 31 Captains, 37 First and 60 Second Lieutenants. The Torpedo Corps have 30 officers.

The death occurred recently, in London, of Mr. Henry Brunton, M. Inst. C.E. The treaty negotiated by Lord Elgin with Japan stipulated that the coast should be lighted and buoyed for the safety of general navigation. When Sir Harry Parkes drew the attention of the Japanese Government, in 1868, to this clause, which had not been fulfilled, he was informed that they were perfectly willing to carry out their obligations, but their inexperience made them unable to. Mr. Brunton was selected to aid them, and on his arrival in Japan, he found that the work before him was not so simple as building lighthouses in his native country. Sir Harry Parkes persuaded the British admiral to let him have the use of the despatch steamer *Manila*, and in that Mr. Brunton and his staff made a tour round the coasts of Japan, visiting some 20 sites, and making the necessary surveys and calculations. In ten years' time he had built 50 lighthouses, and had organised a complete Government department for their maintenance. He further reported on, and made the plans for, the removal of the bars at the mouth of the rivers, on which Government officials are even yet working. His design for the harbour in Yokohama Bay was thought too expensive by the Government at the time, but that subsequently adopted was on his lines. It is not too much to say that Mr. Brunton's complete and permanent success in all that he undertook for Japan had much to do with the gradual rise of the feelings of respect and admiration with which the Japanese have viewed England and its institutions.

A Parliamentary paper has just been published in England showing the numbers of commissioned, subordinate, and warrant officers, petty officers, men, and boys of the executive, engineer, and other branches of the Royal Navy, and also of the Royal Marine forces which were borne on the active list of the Royal Navy on April 1, 1900. The return was called for by Sir John Colomb, M.P. From it we learn that the total numbers in the separate branches were as follows:—Executive officers and men, 49,222; en-

gineer officers and men, 25,959; Royal Marine officers and men, 18,461; officers and men of the remaining branches, 12,865; making a grand total of 106,507 of all branches. The return is interesting as showing the enormous increase in the engineer branch compared with the executive branch which has taken place of late years. In the year 1878 there was a total executive personnel of 27,911, and an engineer personnel of 5,627. Twenty years later the executive personnel had increased to 44,336, and the engineer personnel to 22,289. On April 1, 1900, the total number of executive officers and men was as shown by the return just quoted 49,222, and of engineer officers and men 25,959, from which it will be seen that, while the executive branch has not doubled its numbers since 1878, the engineer branch has increased in the same interval by nearly five times. There has, of course, been a general advance in all classes owing to the increase which has taken place in the numbers and sizes of vessels of the Royal Navy, but the phenomenal growth of the engineer branch is due more to the fact that the type of war vessel has completely altered in the period under consideration, and that every function of the modern man-of-war depends for its performance upon machinery of some kind or other.

CORRESPONDENCE.

THE HOUSE TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I entirely agree with your apology to Mr. Lowder in your issue of this morning for discussing topics which do not properly fall within the range of journalistic comment. Mr. Lowder has my sincere sympathy, for I am sure that it was never his intention that his letter to the authorities, covering his cheque for his house taxes, should have been made public and far less was it his intention to provoke a discussion of his motive. However, since the matter has come before the public, it seemed to me right to correct a misstatement of fact and I still deny that, but for Mr. Lowder's views on the house tax question, "he would have been entrusted with the very business which he is now accused of grudging to a rival." Further, I still say that, as far as I am aware, it was never proposed to retain him.

I observe that the records of the Kanagawa Municipality show that Mr. Lowder paid his house tax for 1899 and also for the first half of 1900 at due dates. He appears to have withheld it, however, for the 2nd half of 1900 and the first half of the present year until the 1st inst. because the question was under official debate. Is it not still under official debate? Does not the same reason still hold good? Are we to understand that he did violence to his sense of justice in withholding the amount of the tax and that his conscience has at length compelled him to make amends?

I am, Sir, your obedient servant,

LEASEHOLDER.

Yokohama, July 13th, 1901.

TO "LEASEHOLDER," CARE OF THE EDITOR OF THE "JAPAN MAIL."

SIR,—In answer to the second paragraph of your letter to the *Japan Daily Mail*, dated the 13th inst., I am indebted to the courtesy of the Editor of that journal to be allowed to say to you, directly, that I refrained from further acting on my own opinion as to the obligation to pay municipal rates, as they became due, for the second half of the year 1900, and onwards, because I had heard that the validity of their imposition was disputed, and that the question had been submitted to the Foreign Representatives for discussion with the Japanese Government.

On learning that so far as the British Government is concerned, the question was no longer under diplomatic discussion, and was likely to be relegated to a forum to which from the first I conceive it rightly belonged, there seemed to me to be very strong reasons why I should no longer abstain from acting on my own conviction of what is just and right in regard to the payment of rates. On your own showing, I do not for a moment presume that those reasons can be of any interest to you; and you will readily understand that I must decline further public explanation or discussion with a correspondent whose identity is unknown to me.

Yours, &c.,

J. F. LOWDER.

Yokohama, July 15th, 1901.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reply to Mr. Lowder's letter in your issue of to-day, I beg to say that "Leaseholder" has no

desire to conceal his identity and that he, therefore, writes this letter over his own proper signature.

Mr. Lowder states—on what authority I know not—that "so far as the British Government is concerned, the question is no longer under diplomatic discussion and was (sic) likely to be relegated to the forum to which from the first I (Mr. Lowder) conceived it rightly to belong. I have made enquiries of persons who should be in a position to know, and, as far as I can gather, there is no ground for the statement that the matter is no longer under diplomatic discussion. However, allowing that point to pass at present, the word "Forum" may mean anything from a market place to a Court of Arbitration—or the tribunal of Mr. Lowder's own conscience. Setting the latter meaning aside as unlikely, and supposing that he refers to some properly constituted tribunal—the matter, on his own admission, is still *sub judice* and the position is not materially changed. Why then, should Mr. Lowder volunteer payment of his taxes?

I am, Sir, Your obedient servant,

J. COLE HARTLAND.

Yokohama, July 16th, 1901.

The following letters have been sent to the Editor of the *Japan Mail* for publication:—

To J. COLE HARTLAND, Esq.

SIR,—Assuming the question on which we are at issue to have passed beyond the stage of diplomatic discussion, and that it is likely to come before the Courts, perhaps you will be good enough to inform me in what sense it can be said to be *sub judice*. There is certainly nothing in my letter to "Leaseholder" that can by any possibility be construed into an admission that it is; and it is moreover evident that my position is very materially changed, inasmuch as on the above assumption, my property might at any moment become liable to attachment, and I might have to defend an action against myself, brought for the express purpose of compelling the payment of rates which in my judgment ought to be paid. This answers the question propounded by you to the Editor of the *Japan Mail*, but which I prefer to address to you directly, now that you have enabled me to do so by the disclosure of your name.

Yours faithfully,

J. F. LOWDER.

17th July, 1901.

To J. F. LOWDER, Esq.

SIR,—I am in receipt of your letter of yesterday.

You ask me, assuming the question upon which we are at issue to have passed beyond the stage of diplomatic discussion and that it is likely to come before the Courts, in what sense can it be said to be *sub judice*. As I understand it, it would be quite possible for a matter to have passed beyond the stage of diplomatic discussion and to be in the course of being relegated to another forum *e.g.* Arbitration and yet to be *sub judice*; but had your letter been clear, I should not have committed myself to the statement that the question was, *on your own showing*, still *sub judice*. It was, however, far from clear to what forum you referred or under what circumstances the question was likely to be relegated to it. You will observe that you spoke of the "question" as if it were to be dealt with as a whole and not in the form of particular and individual cases, as would necessarily happen if your forum were a Revenue Court, and I think, on re-reading your letter, you will admit that it lacked explicitness. It is scarcely to be imagined that the British Government, after making a definite demand, will be content to accept an unqualified refusal, and, therefore, it did not occur to me that you could by any possibility mean a relegation of the question to the Japanese Revenue Courts, to which I now understand you conceived it from the first to have rightly belonged.

On the assumption that the question has been entirely abandoned by the British Government, an individual Briton might have considered it expedient to pay his house-tax; but, when he, being a lawyer, accompanies his remittance with a letter giving a gratuitous opinion as to the legality of the impost, it is not surprising that so extraordinary a proceeding should, after the letter has been made public, excite considerable speculation.

I am, Sir, yours faithfully,

J. COLE HARTLAND.

Yokohama, 18th July, 1901.

18th July, 1901.

To J. COLE HARTLAND, Esq.

SIR,—I am in receipt of your letter of this date. Until reading it, I was unaware that the British Government had made any demand, definite or otherwise, with reference to the house tax. You say, "on the assumption that the question had been entirely abandoned by the British Government, an individual Briton might have considered it expedient to pay his house tax"; well, that is practically the assumption on which I acted;—I say "practically," because, as

I wrote yesterday, what influenced me was the supposition that the question had passed beyond the stage of diplomatic discussion, and was likely to come before the Courts; and that exactly expresses what I understood to be the case. But you go on to say that when that individual Briton, being a lawyer, accompanies his remittance with a letter giving a gratuitous opinion as to the legality of the impost, it is not surprising that so extraordinary a proceeding should excite considerable speculation. For my part I should consider it extraordinary in any one, lawyer or layman, to omit to explain the reason of his delay in making a payment which he had withheld against his own judgment. Here, with your permission, this correspondence must cease; but as it has already partially been made public, I propose to send the remainder to the *Japan Mail*.

Yours faithfully,

J. F. LOWDER.

USUI PASS ACCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—For the satisfaction and assurance of the many foreigners and others who are preparing to spend the summer in Karuizawa, it is specially important that the Railway Company should inform us what steps are being taken to render practically impossible the recurrence of what might so easily have proved a still more terrible catastrophe.

In England in such cases a public inquiry into all the circumstances is often instituted with the best possible results.

Does any Government Board in Japan conduct such inquiries? And if not, why not?

In the above case, happily the brake-power proved able ultimately to arrest the descending train; but there seems to have been strange delay, and something evidently hindered the brake's immediate and effective application! What was it? And why? And how about next time?

Yours truly,

A KARUIZAWA VISITOR.

MR. A. N. HORNBY ON SMOKING CRICKETERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Last Saturday morning I met one of "The Rest," whose first season in Japan this is, and on my venturing to hope that he would distinguish himself that afternoon, he replied:—"Well, I don't know; I find that I cannot do justice to myself if I smoke a great deal, but, as I have knocked it off the last day or two, I hope to do fairly well."

Strangely enough, the very next day I read the following in *The Australasian*:—"At Whitefield, near Bury, the celebrated veteran Lancastrian, A. N. Hornby, in opening a bazaar in aid of the Stand Cricket Club, said:—"The only game I think worth playing is cricket. Had it not been for cricket it is certain that Australia would not be so well-known as it is now. If I can give any hint to young cricketers coming forward I shall be only too pleased to do so. They must learn to obey in the field, and not smoke until they are of age. My father promised each of his sons £100 if we did not smoke before we reached the age of 21. I was 25 before I smoked my first cigar, and I have never regretted having waited so long. I do not disagree with smoking as a practice, but you can't smoke and play cricket regularly. Don't forget that."

Yours, etc.,

A. P. P.

July 17th, 1901.

LAW CASES.

In the Yokohama Chiho Saibansho on Monday before Judge Kato and Procurator Honda, an employee named Ito Heihachi in the service of Messrs. Boyes & Co., No. 153, Yokohama, was charged with stealing postage stamps and money belonging to the firm. A *banto* named Arai Tatsuji gave evidence and the accused was found guilty of the theft of the postage stamps, and sentenced to three months' major confinement and six months' police surveillance. He was acquitted of the charge of stealing money owing to the lack of evidence.

Mr. J. H. Ranger is reported to have instituted a libel suit in the Yokohama Chiho Saibansho against Mr. P. B. Clarke, of the Maples Hotel, Limited. Plaintiff alleges that defendant uttered slanderous statements against him at a public meeting and subsequently caused the slanders to be published in a newspaper.

MARQUIS ITO ON CURRENT JAPANESE AND FOREIGN POLITICS.

A representative of the *Kobe Herald* met Marquis Ito by appointment on Sunday last in his hotel at Kobe with the view of eliciting the ex-Premier's views on various matters of current concern in Japan and abroad.

The Marquis was offered condolences on the death of Mr. Hoshi Toru, his right-hand man in the organization and conduct of the Constitutional party. Marquis Ito said that while, of course, the death of Mr. Hoshi had caused him the deepest regret, it would make little or no difference to the party—the *Seiyukai*. Mr. Hoshi was a very excellent organizer and an exceedingly able parliamentarian while the Diet was in session, but he (Marquis Ito) did not anticipate any change in the order of affairs in the party through Mr. Hoshi's death. Marquis Ito said he was satisfied with the progress his party was making throughout the country. His present visit to Kobe was undertaken in its interest. He was also proceeding to Okayama, but although he had requests from many other centres for similar visits it was impossible for him to undertake these.

A question was put to the Marquis as to the position of the Katsura ministry which had succeeded his own. It was a fact, he said, that it was in a minority in the House of Representatives, but he thought its prospects at the moment were good on the whole, although this question was not one on which much could be said just now.

The conversation then turned on the question of the progress of representative institutions in Japan. Marquis Ito said he regarded the progress made as satisfactory. Necessarily the responsibilities and privileges of representative government were not so fully realised by the people of Japan as, for instance, by the people of England, but the minds of the people were moving in the right direction. The Marquis, with a laugh, admitted that not a few of the politicians of Japan went into politics from motives of self-interest only. "Of necessity this is so," he said, but again there was reason to think that improvement was going on. It depends upon the leaders, the Marquis said, with some emphasis. "Honest and disinterested leaders will lead the body of the people in the right way." With regard to the China situation Marquis Ito indicated that affairs were now by way of being satisfactorily settled. Japan, he admitted, had every reason to be satisfied with the issue of recent events. Japan's policy was, of course, directed to the maintenance of the integrity of China, and this the Marquis thought, was the aim of all the powers. They were all agreed that this was the only possible policy at present with the exception, the Marquis added, of Russia perhaps. They could not be fully informed at present of the ultimate intentions of the St. Petersburg government. Then as to Manchuria Marquis Ito seemed to think that the Russian authorities would require some sort of understanding or agreement with regard to that territory. He had observed the reports of another secret agreement between Russia and China, but so far as he knew these reports had no foundation in fact. They had Russia's declaration that she was to withdraw from Manchuria when order was restored in China. As to the carrying out of that declaration Marquis Ito could not say much. It might depend on the question as to when "order" was restored, and it was the case that troubles were again occurring in China. The Marquis was unable to say what Japan might do in the event of an attempt to negotiate another Russo-Chinese Agreement or as to the fulfilment of the Russian declaration about the evacuation of Manchuria. He did not think that Russia could expect anything more than some agreement or arrangement with regard to her withdrawal from the province.

The talk came round to England and her international position as affected by recent events. Marquis Ito thought Great Britain retained her supremacy upon the seas, but other powers were now building up their sea strength and factors were thereby coming into being which were bound to affect England's position. The Marquis was asked to state his view on the South African question. He did not doubt that the Boer territories were to come under British rule. As to the causes of the war he thought England, through Mr. Chamberlain, might have acted a little hastily. Why was not the franchise accepted as offered by Mr. Kruger? He thought if England had waited a few years she would have stood better before the world. She had acted a little too precipitately in some respects. In any event he thought the Boers would never make a great nation. As to England's relations with France and other European powers there were no present signs of trouble. At another point Marquis Ito commented on the manner in which the Colonies of England had come to her assistance. When he (the Marquis) was in England at the time of the Jubilee he had spoken with several of the British Colonial premiers and he thought that the action of the

Colonies in connection with the Boer war was to a large extent attributable to the Jubilee celebrations in England.

Returning to Japan a question was asked as to the future of the religious question in this country. Marquis Ito said it was out of the question to suppose that the Japanese Government was ever likely to deviate from an entirely impartial attitude vis-à-vis the various religions in the country. The Government had no thought of acting in any way to the prejudice of one against another form of religion. They were all on equal terms and would remain so. A broader aspect of the question was suggested by the interviewer. It might be said that almost every nation that in history had risen to considerable power or prestige in the world had been animated in a certain degree by the impulse or the inspiration of some form of religion—were it even paganism or superstition. The question was, did Japan propose to ignore that impulse throughout her career or was there any substitute which might serve the ends or meet the needs which elsewhere were satisfied in the religious impulse? Marquis Ito appeared to appreciate the point of the question and said they in Japan looked to the function of religion being fulfilled by culture and science and the inspiration of knowledge. Japan would continue to follow out the paths of western learning and inquiry. That meant her continued abandonment of the example of Chinese literature and learning formerly followed, the Marquis admitting that the process of that abandonment must continue.

Marquis Ito seems interested in the future of America. He expressed the view that in ten years the United States will probably be the formidable power of the world. He had read the accounts of the formation of great trusts in America but he scarcely thought these were practicable in Japan at the present time.

About the current financial situation in Japan Marquis Ito said an early improvement was looked for. The attitude of Europe towards Japanese securities was a matter that gave the Government some concern, however, and it would demand their attention.

Marquis Ito assented to the view that Korea was the most natural outlet for the surplus population of Japan. The climate and living conditions were similar to those of Japan and Japanese emigration therefore must tend in that direction. As time went on the flow of Japanese emigrants towards Korea would render the state of affairs there tantamount to an official occupation of the peninsula by Japan. As to the prospects of an outlet in South America Marquis Ito thought it might be a possible field for a few thousand labourers but little more. Formosa was expected to pay its way in the course of a few years. The outlook for the Japanese administration there was very good. Unlike the Chinese of the mainland the Chinese of Formosa were peaceable and content and this spoke well for Japanese rule.

THE RECENT INSURANCE CASE.

Following is a full copy of the judgment in the above case:—

Plaintiff—Rinhokusen, a Chinese subject, proprietor and manager of the Segiho Hall at No. 139, Yamashita-cho, Yokohama.

Representative of the above in the suit—Akiyama Genzo, a barrister.

Defendant—Norwich Union Fire Insurance Company, London, England.

Representative of the same—Bavner and Co. (ordinary partnership), at No. 209, Yamashita-cho, Yokohama.

Legal Representative of the said company—John Hill Jewett, an American citizen and a member of the said company, at No. 4 of the same street.

Representative of the same in the action—Sawada Shunzo, a barrister.

With regard to an action thus brought before the court for recovery of damages incurred in connection with fire insurance by the parties concerned, the court restricts the argument to a protest advanced by the defendant's representative, and gives judgment as follows:—

The costs of proceedings should be borne by the plaintiff.

FACTS OF THE CASE.

Defendant's representative states that the plaintiff, having, at the outset sued one H. B. Victor Gielen, managing director of Bavner & Co., at No. 209, Yamashita-cho, Yokohama, as a representative of the Norwich Union Fire Insurance Company, caused a legal document to be sent to him, and moreover, after having verbal arguments with him, had a decision made by the court in regard to the disputes which occurred in the interval. Thus restrictions of right have originated, and there is no reason to admit the plaintiff's new statement that the former document of suit should be altered in the sense of representing John Hill Jewett as agent for Bavner & Co.

Although Jewett, because of his being an agent for Bavier & Co., was likewise regarded as a representative of the fire insurance company now defending this case, and as such was summoned to the court for verbal argument, yet as he had not received a legal document satisfying the requirements of the Code of Civil Procedure, being only furnished with a note headed "Statement for the alteration of a legal document," while as a matter of fact law suits can only secure the validity of restrictions in right by the transmission of the legal document above indicated, the case now under prosecution must be condemned as an illegal suit destitute of valid reasons for the limitation of rights. The plaintiff has apparently instituted an action against the Norwich Union Fire Insurance Company of London, England. His assertion virtually amounts to this: that Bavier and Company is the representative of the company for Japan. But the company in question does not in any way represent the fire insurance company referred to. It may therefore be asserted that the latter has no fixed place of establishment within the limits of the Japanese empire. If so, to institute an action in the District Court of Yokohama is a step altogether improper, and at the same time, incompatible with the jurisdiction of the court in question. As a matter of fact Bavier & Co. transacts the business of an agency in matters of fire insurance, but it has no competence to institute a law suit as a representative of the fire insurance company under prosecution as remarked above, or to defend a suit brought against it. The fire insurance company in question reported to the Japanese Government, that according to Article II. of Imperial Ordinance No. 273, issued in the 32nd year of *Meiji*, it had appointed as its agent one Wilfred Worthington Till at No. 50, Yamashita-cho, Yokohama. From the date, therefore, on which such a report was presented no person except Till could possibly exist as the legitimate agent of the fire insurance company referred to.

Moreover, with regard to foreigners engaged in insurance business Article CNV. of the Law for the enforcement of the present Commercial Code, which was in force at the time of the operation of the new treaties, provided that "special rules shall be established by Imperial Ordinance." Accordingly in June of the 32nd year of *Meiji* Imperial Ordinance No. 273 was issued embodying the special rules referred to, and the representatives of insurers were required by Articles I. and II. to forward a report to the Government. The said Imperial Ordinance No. 273 was made to remain valid until the enforcement of another Imperial Ordinance No. 380 issued in September of the 33rd year of *Meiji*, the provisions of Articles I. and II. of the latter being exactly the same as those of the former. Now, as the Norwich Union Fire Insurance Company has nominated the above mentioned Till as its representative in Japan and forwarded a report to that effect, the said Till is, as a matter of course, the legally recognised agent of the company referred to. The present complaint, therefore, ought to have been made against him as the company's representative. That such a procedure was not adopted is unjustifiable, and the case ought to be rejected.

Such were the allegations of the defendants.

Plaintiff's representative, however, protests that the case under notice was brought against Bavier & Co. at No. 209, Yamashita-cho, Yokohama, as a representative of the Norwich Union Fire Insurance Company, and the reason why in the previous legal document the name of H. B. Victor Gielen was mentioned as managing director of Bavier & Co. was because he was wrongly understood to have the capacity to represent the insurance company in question.

Alterations were therefore made in the document, in such a way as to replace the name with that of John Hill Jewett, a member of the said company. But as the plaintiff did not furnish evidence showing that Jewett was really a member of the company a document for alteration was rejected by the court.

The plaintiffs therefore renewed their efforts to forward to the court a statement as to the alteration in the nature of the suit, on the strength of evidence showing Jewett to have the capacity to present Bavier & Co. Properly speaking, anything like a restriction of rights can occur only between the parties in dispute, and not between the representatives of such parties. In a case like the present in which the defendant remains the same, it is not to be deemed an illegal act when alterations are made in regard to the agents of the parties concerned, on the ground of erroneous representation or other circumstances.

As Jewett is competent to act as a representative of Bavier & Co., he has likewise the capacity to represent the fire insurance company in the case under notice.

He was therefore sued in such a capacity, and the case after all did not constitute a separate or fresh prosecution. Again, the legal document having previously been forwarded to Bavier & Co., no separate copy of it was transmitted to John Hill Jewett, as the delivery of a document for alteration should have

sufficed for the present purpose, without anything approaching to imperfection in the legal procedure Jewett ought to respond to the suit as a legal representative of the fire insurance company against which it was instituted.

Although the defendant's representative alleges, that as the fire insurance company referred to had already appointed Till as its agent in Japan, and had presented a report to that effect to the authorities, the said Till alone must be regarded as the agent in question, for no other person could really be found to retain that capacity, yet it must be understood that since the contract for insurance in the present case was concluded prior to the operation of the new Commercial Code, it could in no way come within the purview of the Code in question. Even admitting that it ought to be treated in accordance with the new Code, still it follows that a mere report forwarded as to representation of the company above mentioned will not confer upon the person named any authority to act as a representative, so long as the recognition of the Government was not secured. On the other hand, Bavier & Co. are actually, as agents of the Norwich Union Fire Insurance Company, transacting insurance business, making contracts for insurance, and signing the policies issued therefor. Facts have evidently proved them to retain the capacity of a representative. The defendant's allegation, therefore, concerning the inconsistency in the jurisdiction of the court is anything but justifiable.

On the above grounds the plaintiff desires that all the contentions of the defendant be rejected.

REASONS FOR JUDGMENT.

The limitation of rights in any law suit can be made only between the parties in dispute, and not between the representatives of such parties. Accordingly, when restrictions in rights have resulted between the parties concerned, it is of course impossible to alter such parties. But the alteration of representatives by reason of erroneous statements being made or from other causes, before or after the restrictions in rights have commenced in respect of the defendants who are actually the same party in dispute, does not involve a change either in the original scope of the suit, or in the parties concerned, and the case remains as efficient as before. The plaintiff's statement for correction in the present case is therefore not illegal.

Again, as a certificate of registration presented by the plaintiff contains a statement that John Hill Jewett is an American citizen, and a member of Bavier & Co., it is evident that the said Jewett has the capacity to act as a representative of the company mentioned.

The plaintiff alleges that as the Norwich Union Fire Insurance Company is represented by Bavier & Co., which in turn is represented by John Hill Jewett, the Jewett in question must be regarded as a representative of the fire insurance company referred to.

In making investigation as to whether the said Bavier & Co. really represents the fire insurance company under notice, we find that the former has been transacting insurance business in Yokohama, making contracts for insurance, and signing the policies issued. On this point no contention exists between the parties concerned, as is evident from Exhibits 1 and 2 showing the contracts to have been concluded with Bavier & Co. In cases where business is transacted by any person on behalf of another, the relation of an agency is created to a certain extent, but it can in no way be assumed that the person in such a position is directly the representative or agent of the one for whom he manages the business. Nor can it be admitted that although the person who executes business for another may declare that he is authorized to act as a representative of the latter, his declaration is not to be regarded as showing that the person for whom he transacts business is necessarily to be represented by him. In the present case no evidence exists as to the capacity of representation, and it is therefore impossible to conclude that Bavier & Co. are authorized to represent the Norwich Fire Insurance Company. Then it follows that the suit brought before the court on the ground that Bavier & Co. have the capacity to act as a representative of the insurance company referred to is unjustifiable and ought to be rejected. For these reasons no explanation is necessary in regard to all other arguments or protests advanced, and judgment is given as specified above.

June 25th, 34th year of *Meiji*.

At the 1st Civil Section of the District Court in Yokohama.

Presiding Judge KANO TETSUJIRO,
Judge MATSUDA KOMAO,
Judge TANUMA TAKIJIRO.

THE FORMOSA MONOPOLIES.

The *Kokumin* publishes an interesting article on the above subject of which we translate the following:—

CAMPHOR.

In spite of disturbances created by the natives in the principal manufacturing districts, during the current fiscal year, in consequence of which work was suspended for some time in several places, the aggregate amount of the production for the year shows more or less of an increase in comparison with the preceding year. The amount of revenue from camphor this year is estimated at 4,720,000 *yen*, and, calculating the average for the two classes of this commodity at 86 *yen* per picul, we have a fair prospect of securing an output to the extent of about 70,000 *kin* over the figures for the previous year.

The amount of camphor sold since the establishment of the monopoly in the 33rd year of *Meiji* stands as follows:—

33rd year.	Class A.		Class B.		Total for both.
	Amount in <i>kin</i> .	Value in <i>yen</i> .	Amount in <i>kin</i> .	Value in <i>yen</i> .	
July ...	185,000	176,415	144,700	122,995	339,400
August ...	5,000	4,740	304,500	256,275	316,500
Sept. ...	61,500	58,425	91,500	77,775	153,000
Oct. ...	87,500	81,125	215,000	182,750	302,500
Nov. ...	40,000	38,000	193,500	164,470	372,500
Dec. ...	75,000	71,250	297,500	252,875	—
34th year					
Jan. ...	79,000	75,525	159,500	135,575	239,000
Feb. ...	120,000	114,000	175,100	148,550	295,100
March ...	353,000	335,920	1,059,400	934,400	1,453,300
Total ...	1,007,800	957,410	2,677,700	2,276,045	3,685,500

Beside the above, in March of the 34th year of *Meiji* two other grades began to be produced, one by the process of drying and the other by that of pressure. The figures were:—

	<i>Kin</i> .	<i>Yen</i> .
Class A.....	1,007,800	957,410
Class B.....	2,677,700	2,276,045
Drying Process	40,000	37,700
By Pressure	105,000	131,112

The crude camphor in stock at the Head Monopoly Office and its branches at the end of the 33rd year (fiscal) amounted to about 300,000 *kin*. This with the four classes above mentioned, constitutes the total output in the island for the period extending from July, 1900 to the end of March this year.

Again in the 33rd fiscal year the quantity sold in the form of camphor oil was 1,142,634 *kin*, valued at 467,737,291 *yen*. After November of that year, however, sales of oil were abolished, the oil being delivered to special contractors for manufacture on condition that 45 *kin* of crude camphor for every 100 *kin* of oil should be handed to the authorities, who were thus enabled to secure the output without difficulty to the estimated amount by the current fiscal year. The following figures show the amount of the export for the four years from the 30th to the 33rd year of *Meiji*:—

Year.	Abroad.		Into Japan.		Total.
	value <i>yen</i> .	value <i>yen</i> .	value <i>yen</i> .	value <i>yen</i> .	value <i>yen</i> .
33rd	1,385,645	1,000,938	2,372,138		
32nd	1,732,740	292,261	2,025,041		
31st	1,661,945	334,830	1,996,775		
30th	1,321,116	184,109	1,505,225		

The export of camphor oil as a product, was as follows:—

	Kin.	Yen.		
33rd	—	—	907,089	907,085
32nd	6,440	1,328	1,074,529	1,075,857
31st	15,954	2,679	540,949	543,628
30th	65,573	10,319	437,626	447,945

It is thus an indisputable fact that the amount of the export has been gradually increasing, in spite of the falling off in the price of camphor in the foreign market owing to its over production in the interior. The Formosan Government, therefore, has frequently altered the sale price in view of such a contingency. Still though the fall in value arose from excess in export it did not in any way affect the amount of production in the island.

SALT.

The amount of salt purchased at the various Salt offices in Formosa during the 33rd fiscal year was as follows:—

	<i>Kin</i> .
Shinchiku	511,669
Rako	1,000,000
Hoteishi	14,753,737
Hokumanto	28,704,440
Taku	6,445,923
Tainan	9,545,923

Total

On the above total 17,281,140 *kin* were taken to the interior of Japan by Mr. T. Oguri. The entire value realized by 1st, 2nd and 3rd classes aggregated 112,878,673 *yen*. The forecast as to supply

and demand in the island for this year stood as follows:—

Class.	Amount of salt received in advance. Kin.	Demand in the island.	Amount transported to Japan.
1st.....	16,134,959	—	13,000,000
2nd.....	31,161,296	—	27,000,000
3rd.....	63,430,622	42,633,600	50,000,000

Total..... 110,726,877 42,633,600 50,000,000

The estimated amount of the output is nearly double that actually purchased by the Government during the 33rd year of Meiji. The export to Japan too has considerably increased and Formosan salt, on the whole, having acquired a high reputation in Japan its prospects are in every respect hopeful.

OPIMUM.

The following show the quantity of opium delivered, sold, and retailed in the different districts, the number of smokers, and the average quantity taken by each individual in one day from April to December of the 33rd year:—

Districts.	Delivered to District offices.		Sold to licensed dealers.
	monme.	monme.	yen.
Taipeh.....	11,754,000	11,714,040	969,392
Taichu.....	11,230,800	11,135,110	858,867
Tainan.....	17,209,100	17,134,300	1,308,612
Ilan.....	925,200	918,600	64,738
Taitou.....	394,200	395,643	31,129
The Pescadores.	464,400	464,570	34,003

Total..... 41,977,700 41,776,263 3,266,742

Districts.	Retailed to Smokers.		yen.
	monme.	monme.	
Taipeh.....	11,985,867	11,107,681	—
Taichu.....	9,919,678	867,326	—
Tainan.....	16,280,396	1,313,356	—
Ilan.....	906,795	74,645	—
Taitou.....	397,416	36,409	—
The Pescadores.	364,027	41,032	—

Total..... 399,55,179 3,504,452

The total number of smokers is 165,752, who, classified according to the district to which they belong, may be tabulated as below:—

Districts.	Males.	Females.	Total.	Average per head per day monme.
Tai-peh.....	44,603	3,990	48,593	0.886
Taichu.....	40,700	2,390	43,090	0.825
Tainan.....	61,834	5,557	67,391	0.978
Ilan.....	2,299	423	3,722	1.344
Taitou.....	899	173	1,072	1.000
The Pescadores.	1,615	69	1,684	—
Total.....	152,950	12,812	165,752	—

The material imported for the manufacture of opium during the 33rd year amounted to 60,120 *kin* approximately valued at 3,392,860 *yen*, the average value per *kin* being 56.42 *yen*.

The amount of import during the past four years stood as under:—

Year.	Kin.	Value in Yen.	Average Yen.
32nd.....	369,962	2,715,809	7.503
31st.....	216,754	2,044,392	6.880
30th.....	252,351	1,570,347	6.126
29th.....	117,791	1,164,856	9.889

Thus the three principal commodities under the Formosan Government Monopoly, with the exception of opium, for which a special system was established, are increasing year after year in the amount of their output, thus enabling the Government to adhere to its original policy without interruption.

FORMOSAN GOVERNMENT ORDINANCE

No. 40.

The fees and rents to be paid according to the Rules for the execution of the Formosan Customs Regulations are fixed as follows:—

The present Ordinance will come into operation on and after July 1st in the 34th year of Meiji. Ordinance No. 93 (August, 32nd year of Meiji) is repealed from the date of the present ordinance coming into force.

Fees to be charged for the special opening of the Custom House or its branches at Keelung and Taku:

8 a.m. to 6 p.m.	10 yen per hour.
6 a.m. to 12 p.m.	15 yen "
12 p.m. to 6 a.m.	20 yen "
6 a.m. to 8 p.m.	15 yen "

Special opening of the Custom House or a branch thereof is not permitted for less than 2 hours in the forenoon from 8 to 10, and in the afternoon from 4 to 6, on ordinary days, and for less than three hours on all other days.

The fees in regard to branches (those at Keelung and Taku excepted) are as follows:—

From sun-rise to sun-set—5 yen per hour.

From sun-set to sun-rise—7.50 yen per hour.

When special opening is required simply for the making of a report of a ship's entry or departure, half the amount of the fees will be paid at the Custom House or its branches.

Fees for special permission for lading, unlading, delivering, receiving or transmitting goods at the Custom House or its branches:—

From sun-rise to sun-set—

2 yen for ships of foreign style.

1 yen for ships of Japanese and Chinese type.

From sun-set to sun-rise—

3 yen for ships of foreign fashion.

1.50 yen for ships of Japanese and Chinese type.

Fees for special permission to undertake the inspection of goods outside the Custom House or its branches:—

For each hour or fraction thereof required for inspection, 5 yen.

N.B.—When travelling expenses are required, the actual amount thereof shall be charged separately.

Fees for Foreign Trading Vessels entering or clearing at ports not open to foreign commerce:—

For each time, 10 yen.

Fees prescribed by Article LXXXVI. of the by-laws for the enforcement of the Formosan Customs Regulations:—

Attestations or certificates, 2 yen each. Daily

Returns of articles of export or import, 20 yen per month. All other tables relating to ships and cargo, 5 yen down to 50 yen each.

Rents prescribed by Art. XCVII. of the By-laws for the Enforcement of the Formosa Customs Regulations:—

Boat wharf, 5 yen for each ship per day; Land, 5 to 15 *sen* per *tsubo* per month; Buildings, 20 to 60 *sen* per *tsubo* per month.

For the use of land and buildings, amount of fees for half a month shall be collected for a period up to 15 days in the case of less than one month, and one month's fee be imposed when the period of 15 days is exceeded.

THE P. & O. COMPANY.

The directors in submitting their report for the half year which ended on March 31st, state:—

Three new steamers have been delivered since the last report was issued, namely, the *Plassy*, the *Sicilia*, and *Soudan*. The sister ships of the last

two mentioned vessels, the *Syria* and *Somali*, will be at work within the next two months. A contract has been made with Messrs. Barclay, Curle, and Co., for a fifth steamer of the above (*Sicilia*) class, which appears in the fleet list under the name of *Sardinia*. A more important contract has been arranged with Messrs. Caird and Co. for the construction of two mail and passenger steamers of 10,000 tons and 11,000 horse-power, which have been temporarily named the *Mongolia* and *Moldavia*. It is with deep regret that the directors have to report the loss of the *Sobraon*, by stranding on a reef on the coast of China during a fog on April 24. At the moment of writing this report, the full particulars of this casualty are not to hand, but a Board of Trade inquiry will be held respecting it in due course. Happily, there was no loss of life. Apart from this unfortunate occurrence, all the services have been carried on with the customary efficiency. Several vessels have been engaged temporarily in the conveyance of troops during the past six months, and the following steamers are at present under charter with the Government, namely, the *Assaye*, *Simla*, *Carthage*, *Formosa*, and *Manila*. This work has been carried out successfully at all points. To fill the place at the Board rendered vacant through the resignation of the Earl of Selborne, mentioned in the last report, the directors have nominated Lord Burghclere, who will offer himself for election at the annual meeting. The freight revenue of the half-year shows a large decline. While the outward business has on the whole been satisfactory, the homeward trade has been disappointing in every direction, except from Australia, where the receipts show a moderate increase. The intercolonial trade between Bombay and China and Japan exhibits a serious loss, owing to the collapse of the spinning industry in Bombay which was alluded to in the last report. The freight returns of the half-year show a diminution of nearly £100,000, compared with the corresponding period of last year. The passenger business has

been good, notwithstanding a certain irregularity, which is no doubt due to the continuance of the war in South Africa. The numbers of passengers carried in almost every direction have exceeded those of last year. The expenditure has risen largely. Coals, labour, provisions, and stores generally, show marked advances on the figures of recent accounts. It may therefore be understood that if the accounts for the half year show on the whole a favourable result, which happily is the case, it is owing, in a large measure, to the transport work, in which so many of the ships have been engaged during the period to which this report refers. In conformity with the resolution passed at the special meeting of Dec. 7, and confirmed at a subsequent meeting on the 28th idem, the directors have declared the payment of an interim dividend on the preferred stock at the rate of five per cent. per annum, and on the deferred stock at the rate of seven per cent. per annum, payable on and after June 7.

HONGKONG AND SHANGHAI BANK.

The Manager of the Hongkong and Shanghai Banking Corporation in Yokohama has received the following telegram from the Head Office, Hongkong:—

"Subject to Audit, Bank dividend for the half year will probably be 30/-.

"Added to Reserve Fund \$7½ lacs; carried forward to next half year \$14¼ lacs."

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

	Alr.	Temp.	State of	Remarks in	
	Max.	Min.	Lake.	Weather.	General.
Sunday, 7th	66°	59°	70°	Fine	{ Lake rose 4ft. 6in. during last week.
Monday, 8th.....	65°	57°	70°	Fine	{ Rain at night.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

NAVAL MANOEUVRES.

Shanghai, July 12.

The naval manoeuvres commence on July 16th; 163 warships are to participate.

RUSSIA IN CENTRAL EUROPE.

Russia's increasing friendship towards Serbia and Bulgaria is causing some anxiety to Austria.

SOUTH AFRICAN AFFAIRS.

Mr. Brodrick, speaking at a banquet of the Conservative Association said that the mistakes of the Government are due to excess of consideration for the enemy. The Government trust Kitchener and will place no obstacles in his way.

Kitchener has informed Mr. Brodrick that seven men testified that they saw the Boers shoot the wounded on the field at Vlaaksfontein. He has ordered that sworn evidence be taken.

A MEETING OF POTENTATES.

Shanghai, July 13.

The Continental Press is discussing the likelihood of a meeting between the Emperor William, the Czar, and King Edward at Mainz during the autumn manoeuvres.

AUSTRALIA AND WHITE LABOUR.

The Australian Senate has rejected a proposal that vessels carrying the Imperial mails shall be exclusively manned by white men.

REWARDING HIS SOLDIERS.

Shanghai, July 14.

King Edward presents war-medals to 3,000 of the Imperial Yeomanry at the Horse-Guards parade on the 26th July.

GREAT HEAT IN AMERICA AND EUROPE.

Intense heat is damaging the American crops.

Tropical heat is general throughout Europe.

THE LIBERAL SPLIT.

The cleavage in the Liberal party seems widening.

BRITISH NAVAL POLICY.

The British Admiralty are considering the advisability of the establishment of Naval Volunteers, and also a school of naval strategy.

SERIOUS NEWS FROM CANADA.

FIGHTS BETWEEN JAPANESE AND WHITE FISHERMEN.

Serious conflicts have occurred at Vancouver between white and Japanese salmon fishermen. The latter number 3,000. Both sides are armed with rifles. Boats have been destroyed.

[NOTE.—When the last mail left Vancouver, feeling was running very high between the two parties. The white fishermen had struck for higher wages, demanding 12 cents a salmon, while the masters offered 10½, and the Japanese were working for the lower rate. Racial prejudice was also developing very strongly to intensify the situation.—Ed. J.M.]

AMERICA AND JAPAN'S INDEMNITY.

Later.

Mr. Secretary Hay has instructed Mr. Commissioner Rockhill in Peking to support Japan's application for an increase of her indemnity.

ANOTHER FRENCH SUCCESS.

A successful experiment has been made with a navigable airship. Leaving St. Cloud, the airship rounded the Eiffel Tower and returned to St. Cloud.

RUSSIA AND BULGARIA.

Shanghai, July 15.

Much comment is caused by a lengthy visit to Varna (in Bulgaria) by a Russian squadron with the Grand Duke Alexander.

NARROW ESCAPE OF STEYN.

General Broadwood's brigade has surprised Reitz, capturing the so-called Orange River Government, Steyn's brother, and papers. Steyn escaped in his shirt-sleeves.

BRITISH AT ZEERUST.

The British reached Zeerust with the loss of one officer killed, and three officers and 24 men wounded.

HARROW DEFEATS ETON.

Harrow defeated Eton at cricket by ten wickets.

PLAYERS BEAT GENTLEMEN.

At the Oval the Players beat the Gentlemen by ten wickets, Abel making 247.

[NOTE.—In 1900, Harrow won the great Public School match by one wicket; in 1899, the match was drawn. Harrow has now won 32 times, Eton 28, and there have been 16 drawn games.

The Players won the Oval match in 1900 against the Gentlemen by 37 runs, the totals being, Players, 302 and 253 (Abel not out 153; Hayward 94); Gentlemen, 205 and 313 (C. J. Burnip, not out, 123; C. McInchey, 68).—Ed. J.M.]

THE REITZ ENGAGEMENT.

Shanghai, July 16.

Colonel Broadwood took 29 prisoners at Reitz, including Generals Wessels, Clonure and Dward and three Government officials. It is believed that De Wet is among those that escaped.

THE SHOOTING OF THE WOUNDED.

Mr. St. John Brodrick has read a despatch from Lord Kitchener in which the latter says he is forwarding to Commandant Delarcy sworn depositions with regard to the shooting of the wounded at Vlaaksfontein.

GENERAL FRENCH.

General French has captured a Boer laager in the Graaf Reinet district but Commandant Scheeper's main body has escaped.

TO EXPLOIT CHINA.

Shanghai, July 17.

The *Standard's* Brussels correspondent telegraphs that a Belgian-Franco-Russian syndicate is being formed, for the purpose of building railways in China, with a capital of a thousand million francs.

INDIAN LOAN WITHDRAWN.

The Indian loan of £3,000,000 sterling has been withdrawn, the applications being inadequate. This is attributed to the tightness of the money market, which is depressing Consols and other gilt-edged securities.

[NOTE.—The Indian £3,000,000 loan was offered at £98, and was to bear interest at 3 per cent.—Ed. J.M.]

BRITISH ARMY MOVEMENTS.

Mr. St. John Brodrick, Secretary for War, has stated that the report of the withdrawal of troops from South Africa and other changes of plan are wholly inaccurate, but he is not in a position to make any statement.

LORD ROSEBURY.

Shanghai, July 17.

Replying to a request from the City Liberal Club for a pronouncement, Lord Rosebery writes that he will never voluntarily re-enter politics. He believes that the Liberal attitude of neutrality in a war to which the whole Empire rallied spells Liberal impotence.

CASUALTIES IN SOUTH AFRICA.

The casualty list shows that seven Connaught Rangers were killed and three lieutenants and 17 men were wounded near Aliwal North on July 14th.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE PLAGUE ON THE "LAOS."

Saigon, July 14.

Two more stokers of the *Laos* have died, but the crew and passengers are not attacked. The doctors think that the epidemic will be localized among the Arab stokers.

FRENCH NEWS.

Saigon, July 16.

M. Baille, Mayor of Hanoi, has been named Inspector of the Indo-Chinese Civil Service.

No additional death nor any fresh case of pest has occurred among the stokers of the steamer *Laos*.

The National fete passed off with much eclat in Paris. The review was brilliant and the President was much cheered.

Saigon, July 18.

Madame Obywska, a Pole by birth, fired a shot with a revolver at M. Boudin, Minister of Public Works, who was proceeding in his carriage to the Elysée. She missed her aim. She declared that she had wished to fire at M. Delcassé, as she pretends that the Minister of Foreign Affairs refused to pay her important sums which she claimed.

(SPECIAL TO THE "JAPAN MAIL.")

GENERAL MACARTHUR.

Kobe, 7.40 p.m., July 12.

General MacArthur arrived on the *America Maru* and landed at 9 a.m. He was met by Mr. Consul Lyon and a few Japanese officials and proceeded to Kyoto by the noon train with his staff, consisting of Colonel Crowder, and Captains Brown and Kernan.

THE ACCIDENT FROM THE "TERRIBLE."

The body of the stoker drowned from the *Terrible* was washed ashore at Suma this morning. The cruiser *Isis* sent a launch for the body in the afternoon and the burial takes place at 7 a.m. to-morrow.

Drawn game

9..... Castles is the correct move. If Black captures the Bishop, White proceeds with 10—Kt takes P ch, K to B sq; 11—B to R 6, K to Kt sq; 12—Q to K 4, and the attack wins. Other variations are equally favourable for White. Captain Mackenzie was evidently quite familiar with this variation, for he again makes the right move with 10—P to K Kt 3. The more tempting 10.....Kt to K 3 would be followed by 11—B takes Kt, Q P takes B; 12—R to Q sq, B to Q 2; 13—B to R 6 again with advantage. Black having repelled the attack, White has to be on the defensive; but he dexterously managed to change off pieces, and to remain with Bishops of different colour, when with a Pawn behind a draw was the result of this instructive game. It might be pointed out that if 26.....R takes B, then 27—R takes R, Q takes R; 28—Q to B 7 ch, and Q takes R.

SORE HANDS

Red, Rough Hands, Itching
Burning Palms and Painful
Finger Ends

ONE NIGHT TREATMENT

Soak the hands on retiring in a strong, hot, creamy lather of CUTICURA SOAP. Dry, and anoint freely with CUTICURA, the great skin cure and purest of emollients. Wear, during the night, old, loose kid gloves, with the finger ends cut off and air holes cut in the palms. For red, rough, chapped hands, dry, fissured, itching, feverish palms, with shapeless nails and painful finger ends, this treatment is simply wonderful.

Millions of Women Use Cuticura Soap

Exclusively, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, in the form of baths for annoying irritations, inflammations, and chafings, or too free or offensive perspiration, in the form of washes for ulcerative weaknesses, and for many sensitive antiseptic purposes which readily suggest themselves to women, and especially mothers, and for all the purposes of the toilet, bath, and nursery. No amount of persuasion can induce those who have once used it to use any other, especially for preserving and purifying the skin, scalp, and hair of infants and children. CUTICURA SOAP combines delicate emollient properties derived from CUTICURA, the great skin cure, with the purest of cleansing ingredients and the most refreshing of flower odours. No other medicated soap ever compounded is to be compared with it for preserving, purifying, and beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour, Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching and irritation and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. Aust. Depot: K. TOWNS & Co., Sydney, N. S. W. So. African Depot: LEANOR LTH, Cape Town.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 27TH, 1901.

BIRTHS.

On the 19th inst., at No. 26-D, Yamate-cho, Yokohama City, the wife of J. E. DE BECKER, of a daughter.

On the 19th inst., at Kagoshima, the wife of Rev. H. V. S. PERKE, of a son.

ANNOUNCEMENT.

MR. FRED. L. PYNE wishes to announce his engagement to MRS. M. TOUSSAINT, formerly of New York.

DEATHS.

At his residence, No. 237, Bluff, on the 20th inst., ARTHUR OTIS GAY, in his 82nd year.

At No. 83 Kitano-cho, Nishone, Kobe, at 2.15 a.m. on 22nd July, HERMANN MARCUS, aged 33 years.

SUMMARY OF NEWS.

MR. UYEKI SHICHI, M.P., for Hyogo, resigned on the 22nd inst.

THERE was heavy rain at Sendai on the 22nd inst., and several houses were flooded.

THE *Moniteur Universel*, founded in 1798, and until 1871 the official organ of the French Gov-

ernment, announced on July 1st that it would cease to appear.

DYSENTERY is spreading in certain districts of Kanagawa Prefecture, and people are getting alarmed.

A TRAIN on the Nippon Railway was derailed at Tomobe on the night of the 20th inst. One man was killed.

PRINCESSES KITASHIRAKAWA MITSUKO, Sadako, Takeko, and Hiroko left the capital for Nikko on the morning of the 22nd inst.

HAIR fell at Ochiai-mura, Tsuga-gori, Tochigi Prefecture, on the afternoon of the 22nd inst. Great damage was done to crops.

THE Shanghai press is informed that the Russo-Chinese Bank has declared a dividend for the year 1900 of 15 roubles a share, equal to 8 per cent.

THREE newspapers named the *Hokai Fji*, the *Hokumon Shimpo*, and the *Hokkaido Mainichi Shinbun*, published at Sapporo, are to be amalgamated.

SHORTLY after ten o'clock on the night of the 23rd inst. fire broke out in a waste-paper shop at Yoshiokacho, Ichome, Yokohama. Eight houses were partly damaged.

THE census return shows the population of Paris to be 2,660,000, against 2,411,000 in 1896. Paris will consequently be entitled at the next election to 40 deputies instead of 37.

AN old woman named Iwasa Tama, living at Banhamachi, Honjo, Tokyo, was drowned in a pond at the residence of Viscount Ota, at Sendagicho, Honjo, Tokyo, on the 19th inst.

THE last plague returns in Formosa show at Tainan one new case and one death, at Taipeh eight new cases and twelve deaths. Total new cases from January 4, 1901 and deaths 3,268, all men.

THE cruisers *Itsukushima* and *Hashidate*, with naval students on board, now stationed in Korean waters, will arrive in Yokosuka on the 4th or 5th August. They left Yokosuka on the 25th April last.

A MAN named Murata Kinotsuke, employed in a house at Kobikicho, Kyobashi, Tokyo, threw stones at a launch passing under Toyotama-bashi on the 21st inst. and injured a passenger. He was arrested.

SEVERAL natives of Formosa have forwarded contributions towards building a tomb for Mr. Mizuno Son, formerly chief of the Formosan Administration Office. Nearly yen 20,000 has already been contributed.

THE local office of the Chinese Imperial Maritime Customs, whose presence in Hongkong and Kowloon has long been a grievance in the colony, is shortly to be moved to Chak-wan, in Chinese territory, just beyond Deep Bay.

A CARPENTER named Hirai Harukichi a native of Shizuoka, was arrested by the Isezaki-cho police on the 23rd inst. charged with stealing several clothes and yen 14.20 from a public bath house at Suyeyoshi-cho, Yokohama.

A MAN named Minakoshi Hachiro, of Omiya-machi, Saitama, attempted to murder his father, by stabbing him on the night of the 17th instant. He at once confessed at the Urawa police station. The old man is not expected to recover.

A MAD dog has been biting several persons at Yamadacho, Yokohama, since the 18th inst. The Kotobukicho police were sent to search and they eventually killed the animal. Another dog

belonging to a foreigner in Yamashitacho was attacked by hydrophobia a few days ago and after being examined by Mr. Masuda of Motomachi, the animal was killed.

FIRE broke out in a matting-shop occupied by Takahashi Iyemon, at Tansumachi, Yotsuya, Tokyo, shortly after 2 o'clock on the morning of the 19th inst. Sixteen houses were destroyed and seven damaged. One man was hurt.

LANDSLIPS caused by rain occurred at Tomita and Ishizaka, Yamataki-gori, Chiba prefecture, on the afternoon of 21st inst. Two men were buried and one woman badly injured. Several houses were, at the same time, washed away by a flood.

A MAN named Miyamura, member of the Tokyo City Assembly, wounded a young man named Inomata Toyojiro on the afternoon of the 21st inst. at Fukagawa, by beating him with an umbrella. Miyamura was arrested by the police at once.

THE body of a young woman, found floating in the Creek some days ago, proves to be that of a daughter of one Shoji Kinsaku living at Uchida-cho, and has been handed over to the deceased's parents. She appears to have drowned herself over a love affair.

A boy named Harada Masaji (6), and four other boys were playing with some Chinese fireworks at Miyashitacho, Azabu, Tokyo, on the night of the 19th inst. when a bundle of the crackers caught fire and the boy was badly burnt on the face and hands.

A COOLIE named Higurashi Kichitaro employed at Shimbashi station, was repairing the permanent way at Shibaura on the afternoon of the 19th inst. when a train ran past from Shinagawa. Just as he stepped aside to avoid it another train came up on the other track and struck him. The body was sent to the Jikei Hospital at once.

THE *China Gazette* understands that the Germans intend to establish three permanent camps in Shanghai, i.e., one on the Bubbling Well Road, one on the Jesfield Road, and the third on the Yangtsepoo Road. At present there are some 2,000 German troops in the place, but whether they are all going to remain or not is unknown.

A YOUNG man named Nakamura Sankuro, living at Kami Negishi-machi, Shitaya, Tokyo, was arrested by the Koishikawa police on the 22nd inst. He borrowed a bicycle worth yen 150 at a bicycle shop on the 16th inst. and after riding round the streets sold it for 55 yen at a house at Konyacho, Kanda. Then he travelled to Nikko.

THE Yokohama Shooting Club's monthly match took place at the Club Grounds at Tsurumi on Sunday. In the general match Mr. Nakajima and Mr. Sudzuki won the first and second gold medals, with scores of forty each out of a possible of fifty points. In an extra match as arranged by the Club, Mr. Yano, Mr. G. Hewett and Mr. Negishi won the first, second and third gold medals.

DR. LOUIS ROBINSON notes in *Blackwood* the curious fact that the ordinary plebeian nose with a low bridge and wide nostrils, which in good English society is looked down upon, so to speak, is really the nose which is proper to mankind. The whole human race possesses it in infancy, and it is everywhere found among all types of character. The straight, clear-cut nose of the patrician type is not natural; it is the result of hereditary culture.

THE INDEMNITY.

The statement is repeated by Japanese journals that Japan has withdrawn her claim of an additional sum to cover the difference between the amount of indemnity estimated by her as a ready-money payment and the amount she would be likely to realize were the payment made in four-per-cent. bonds. But our own information does not bear out that assertion. There has not, we believe, been any withdrawal. Japan's claim stands, and, what is more, it has been recognised as just by all the Powers. Whether it will be satisfied, however, is another question. There was originally a considerable surplus after deducting the united claims of all the Powers from the 450 million taels which China had agreed to pay. But that surplus has subsequently been swallowed up by additions made to the various claims in consequence of the protracted stay of the troops in Chili and other unforeseen causes. Hence, in order to provide funds for satisfying Japan, it would be necessary that all the Governments should agree to a *pro-rata* reduction of the sums demanded by them, and it is of course problematical whether their sense of justice will take that practical form.

As to the tariff question, it is incorrect to allege, as many journals have alleged, that Great Britain has refused to agree to an increase bringing the average to 10 per cent. Great Britain's position in this matter is neither illiberal nor irrational. She is quite willing that the rate should be raised to an effective five per cent., articles now paying more than that figure being reduced to it—with the exception of opium—and articles paying less than it being raised—with the exception of rice. She is also willing—and this is where the newspapers misrepresent her—that the tariff should be raised to an effective 10 per cent., but she insists that the additional five per cent. must be conditional on the actual abolition of *likin*, and that, instead of definitely devoting the proceeds of the increase to the payment of the Indemnity, its appropriation to that purpose should depend upon the sincerity shown by China in implementing her promise to abolish *likin*, should such a promise be obtained from her. No one can pretend to think that an engagement given by China to abolish *likin* would be certainly effective, for however good the faith of the Central Government, the localities are so much interested in the collection of this duty that its genuine abandonment could not be anticipated without much greater display of efficiency on the part of Peking than experience warrants us in expecting. Therefore the condition proposed by England seems a wise precaution. But, on the other hand, it obviously excludes the proceeds of the increased tariff from the list of assets definitely available for paying the Indemnity, since the money would only be conditionally allottable to that purpose. It is there that the difference of opinion arises. All the other Powers without exception desire that the tariff should be raised to an effective 10 per cent., and that the sum realized should be unconditionally set aside as collateral security for the satisfaction of the Indemnity. England therefore finds herself in a minority of one; an unusual state of affairs where such matters are under discussion. To our mind her position seems to be at once logical and practical, but apparently the Powers do not take that view. Meanwhile it has been agreed by all that the free list shall be virtually abolished in the import tariff. The free list contains such items as wines, wear-

ing apparel, tobacco, &c.; in short, articles mainly used by the foreign communities. Statistics show that the imports under these various headings now average from six to seven million taels annually, and there does not seem to be any valid reason for exempting them from duty. Rice also stands on the free list, and with regard to it also a difference of opinion has arisen, Great Britain insisting that it should remain on the free list as a famine import, whereas the other Powers take a different view. The trade returns show that the annual import of rice into China averaged six million taels approximately, during the five-year period ended in 1900. It is difficult to reconcile that figure with the theory of a famine import, though an extensive failure of the home crop might at any moment alter the conditions. France ought to be interested equally with England in this matter, for Indo-China would become, in common with India, a source of supply in the event of crop failure.

The sums involved in these questions about the free list and rice being comparatively insignificant, an inference is suggested that the Representatives are perplexed to find funds sufficient for the service of the Indemnity. Such seems to be the case. The increase of the tariff to an effective 5 per cent.—imports alone being concerned—, together with the abolition of the free list, is expected to give an additional revenue of some 3 million taels only. As for the monies already collected by the Customs, the greater part of them is already pledged, and not much more than from one to two million taels remain available for the Indemnity. Then there is the domestic customs. The Chinese authorities put the revenue available from that source at one million taels. But they are probably much under the mark. At all events, the Foreign Representatives are understood to think that if these customs were under efficient management, the return would be fully 3 million taels annually, and at that figure the asset has been included in the estimates. Concerning the salt gabelle, great differences of opinion exist with regard to its possible yield, the estimates varying by many millions of *yen*. Sir Robert Hart is understood to have remarked with regard to this tax, when the project of impounding it was first mooted, that there are not foreigners enough in China to collect it. But he appears to have subsequently agreed to the feasibility of the project, and the tax is now entered in the programme at a sum of ten millions. It will be seen that the figures here set down amount barely to 18 million taels, which is just the sum required for paying interest at 4 per cent. on the Indemnity of 450 millions. As for the sinking fund, it is to be obtained by appropriating the Customs revenues as they are gradually released from obligations to which they are now devoted. The whole programme looks like very close financing but there is a strong probability that the estimates will prove to have been very conservative, and that the various assets will be found much more productive than they are now expected to be. The Chinese Government will of course find itself in somewhat straitened circumstances. It will doubtless be driven to the imposition of fresh taxes. Rumour says that a house tax is not improbable.

CHINESE AFFAIRS.

Saturday, July 20.

The Chinese Plenipotentiaries have informed the Foreign Representatives that the Lien-chuan-hui are losing strength daily,

and that the Chinese forces are fully able to deal with them.

It is stated that Italy has again applied to China for a lease of Sammun Bay, but that the Court at Hsian has directed its plenipotentiaries in Peking to courteously reject the demand.

A service for the souls of the men that lost their lives in the siege of Peking, was performed on the 18th instant in the Hongwan Temple at Tsukiji, Tokyo. Baron Nishi read an address to the spirits of the departed, and Count Otani Kosen, Lord Abbot of Nishi Hongwan-ji, presided. About 300 persons were present, including Viscount Katsura, Baron Kodama, Admiral Yamamoto, Viscount Yoshikawa, Mr. Sone, Mr. Kioura, Mr. Hirata, Mr. Utsumi, Marquis Saigo, a representative of Marquis Oyama, General Nozu, Marquis Hachisuka, Marquis Kuroda, Count Matsukata, &c.

Monday, July 22.

Simultaneously with the withdrawal of the foreign troops from Peking, five thousand soldiers of Yuan Shih-Kai's army are to enter the city. That arrangement has been consented to by the Foreign Representatives.

Prince Konoye reached Tientsin on the 18th instant.

A telegram from Shanghai says that the Hsian Court is in communication with its Plenipotentiaries in Peking concerning the despatch of the Tibetan mission to Russia, which probably causes uneasiness in China as it does elsewhere, though no one seems to pay any attention to the coming of a mission to Japan.

It appears that a Reuter's telegram to Europe attributed very strained relations to the Representatives in Peking, but that it has been contradicted by a special message subsequently sent from another quarter, which states that the relations of the Representatives are excellent and that there is every hope of the negotiations being brought to a satisfactory termination.

At a meeting of the Foreign Representatives held on the 18th instant in Peking, a comparatively simple plan with regard to the payment of the Indemnity is said to have been introduced and passed without dissent. This new method abolishes the project of a six-years' interval before commencing redemption, and in other respects modifies the old scheme, but the exact details are not published. Nothing seems to have been yet settled, however, with regard to the question of the tariff or of Japan's demand for an additional number of bonds.

The Court at Hsian strongly objects to any increase of the areas of the Legation compounds in Peking, and has further instructed its Plenipotentiaries to endeavour to procure the posting of the guards outside the wall. But if it be true that a section of the wall has already been demolished, the utility of this last demand is not apparent.

Tuesday, July 23.

A very circumstantial rumour is now circulated with regard to the Court's return to Peking. The story is that Liu Tien-ling memorialized the Throne to the effect that whatever advice might be given by Viceroy Li, Prince Ching and others, it would be unsafe for the Court to return to Peking so long as Russia remains in possession of Manchuria, since that Power might seek to force an objectionable agreement upon China, and the result would be another flight from Peking. To that the Empress-Dowager is reported to have answered that inasmuch as the departure of the Court from Hsian has already been announced by Im-

perial Decree, a change of programme would be difficult. Liu Tien-ling's answer was that the best plan would be for the Court to set out from Hsian, as announced, on the 1st of September, and to proceed as far as Hai-phong, there taking up its residence until an agreement can be concluded for the evacuation of Manchuria by Russia. To that proposal the Empress-Dowager is said to have assented, and officials have been sent to Hai-phong to make the necessary preparations. Such is the tale. It strikes us as being a little too circumstantial.

The Imperial Envoy to Germany, Prince Chun, a young man of about 20, reached Shanghai on July 15th and received a courteous reception from the Germans, the French and the British. His Highness lunched with the German Consul-General and left Shanghai on the 20th instant by the German mail steamer *Kiatschou*. After discharging his duties of apology in Berlin, the Prince will visit England, America and Japan.

Rumour now says that the insurgents beyond the Korean frontier are by no means quelled. The last news, it will be remembered, was that when a Russian force landed at Taku-shan, the rioters were found to have evacuated Antung and dispersed northward, so that the Russians decided to move on without making any attempt to capture them. If the new report be correct, these insurgents have re-assembled at a point further east, and are causing much disturbance. The telegraph says that Russia is secretly preparing to send twenty thousand troops against them, but that is evidently an exaggeration.

It is stated that the Russian Authorities have refused to grant passports to German officers for travel through Manchuria. It will be remembered that Colonel Powell, a British officer, is said to have been stopped by the Russians at a point between Mukden and Tiehling in Manchuria, and sent back to Newchwang. If these stories are true, it follows that Russia is behaving as absolute mistress of Manchuria, and that foreigners do not enjoy under her regimen the privileges secured to them by treaty with China. On the other hand, if Russia considers that a state of war exists in Manchuria, she is unquestionably within her rights in refusing to permit foreign travel within any regions to which her control extends.

The Chinese are said to be seeking to recover the torpedo-boats and other vessels captured by the allies on the occasion of the Taku bombardment.

The foundations of the Ketteler monument are being laid in Peking.

Thursday, July 25.

There is a rumour that Governor Yuan Shih-kai will be appointed Viceroy of Chili after the return of the Court to Peking and that he will also have command of the Imperial Guards. If that be true, it may be presumed that Li Hung-chang will return to his post in Canton, unless he is put on the shelf, a very unlikely contingency, although, if the various accounts that reach Japan may be credited, his capacity for work has almost disappeared. Mr. Cornaby alleges that Yuan Shih-kai is "a sycophant of Yung Lu" whom he accuses of conspiring to overthrow the Empress Dowager and the Emperor and to obtain the crown for himself. It was to Yuan, according to Mr. Cornaby, that the Emperor, in 1898, entrusted the order for the execution of Yung Lu, whose treachery and reactionary policy had become known. But Yuan disclosed the matter to Yung, and Yung represented it to the Empress Dowager in such a light that the

great *coup d'état* followed, and all the Emperor's reform projects crumbled into ruins at the touch of the old lady. How hard it is to know anything about the back-stairs of Chinese politics! No two foreign observers are found in agreement about anything, however cardinal.

Friday, July 26.

A Tientsin journal, quoted by a Tokyo contemporary, alleges that the Chinese Court has directed Li Hung-chang to open negotiations with Russia for the latter's evacuation of Manchuria. The old Viceroy is not likely to be a very vigorous negotiator in such a matter and with such a *vis-à-vis*. Besides, it is fatuous on China's part to prefer any request of the kind until she takes some vigorous practical steps to restore in Manchuria such a condition of law and order as would warrant the St. Petersburg Government in entrusting to her care the interests it has acquired there. If she were to appoint Viceroy Li himself, or still better, Governor Yuan Shih-kai, to be governor-general of Manchuria, with authority to raise a force of eighty or a hundred thousand troops, drill them under foreign instructors and equip them with the best modern weapons; and also to organize a strong body of police similarly disciplined and trained, the sincerity of her actions would be credible in St. Petersburg. But she does nothing substantial. The old incompetence remains unchanged, and grows daily more conspicuous by contrast with the forces operating against her. It is quite curious to look back upon the history of China during the past 50 years. Steadily and uniformly the iron circle of foreign aggression has been drawn round her with ever increasing narrowness. For a long time England was her chief menace. But though England fought with her more than once and beat her to her knees, the British Government never threatened her territorially. The promotion of commerce being England's only view, she was content to seek compensation in trade privileges, in the opening of new ports, in the establishment of settlements, and in the acquisition of a commercial emporium at Hongkong which should serve as a special portal to the markets of China. In England's hands China was territorially safe. Then came the troubles with Russia in central Asia. Territorial aggression certainly was written on Russia's standard. She obeyed an irresistible impulse. Yet she did not treat China harshly in those days, nor did her doings constitute any immediate menace to the integrity of the empire. Perhaps the first note of real danger was struck by the French in the war of reprisals, when they demonstrated the impractical and impossible character of China's old-fashioned policy of surrounding herself with buffer States, to be utilized in her own interests for lessening the shock of foreign impact but never to be assisted in their own interests. The world then realized that these frail outworks were to be broken down; and that it could only be a question of time until China herself stood open to the blows she attempted to avert by such futile devices. It appears, however, to be a decree of the history-making deity that these dramas should move uninterruptedly to their *denouement* even when the latter can be plainly discerned in the distance. Her buffer states of Annam, Tonquin and Burmah having been stripped away, China began to undergo the process of disintegration. She lost Formosa, Shantung and Manchuria, one after the other, and she is now in the position of having some ten

thousand foreign troops permanently posted in her metropolitan province and holding all its points of vantage. Can any one imagine for an instant that the work of disintegration will now be suspended? Can any one detect any evidence that the forces of aggression have exhausted themselves, or that this tragedy will now be definitely arrested although its victim remains as helpless and incompetent as ever to make any effective resistance? Those 20 millions of Boxers pictured by Sir Robert Hart, will they ever find time to step into the breach?

It is alleged that when Governor Yuan Shih-kai is appointed Viceroy of Chili, General Ma will be nominated his successor in the governorship of Shantung. Germany, however, is understood to have objected to this arrangement. The reputation acquired by Ma during the complications of last year does not constitute a recommendation to an office which would bring him into close contact with foreigners. Most people will be disposed to regard Germany's objection as natural and proper, but it is at the same time obvious that if foreign interference is to be exercised in such a matter as the nomination of her domestic officials by China, her sovereignty become a farcical affair.

COUNT ITAGAKI ON MODERN JOURNALISM.

Count Itagaki vehemently and justly protests against the ignoble and contemptible methods pursued by various newspapers which, for the purpose of discrediting the acts of a political opponent, do not hesitate to attribute to him the most selfish and unworthy motives. The proximate cause of the Count's indignation is that several Tokyo journals have been attempting to represent him as entertaining a desire to return to power, their inference being founded on a rumour that he had remonstrated with Marquis Ito on the latter's method of managing a political party. It is true that Count Itagaki has long entertained a theory of his own about the organization of parties, and it is also true that he submitted his theory to Marquis Ito, who does not appear to have yet adopted it. But it is further true that he submitted it to Count Okuma, and if his relations with Marquis Ito are to be misinterpreted on account of such an occurrence, the same argument should apply to his relations with Count Okuma. He was one of the most prominent advocates of the formation of the *Seiyun-kai* by Marquis Ito, and there is nothing he desires more than the success of that Party. As for himself, his sole aim at present is to promote the regeneration of society and the improvement of public morality, objects which appear to him to be of prime importance. He finds the methods of certain newspapers to be mean and dishonourable in the last degree.

Count Itagaki's criticism of journalistic methods deserves hearty endorsement. In many cases the editor who undertakes to analyse a leading publicist's motives is wholly incapable of appreciating them, and ends by reading into them a reflection of the motives by which he would himself be influenced under similar circumstances. That is the true explanation of such writing. So soon as a journalist is found attributing treacherous or mercenary motives to his rivals or his opponents, he furnishes to his readers a true index of his own disposition.

TROOPS IN CHINA.

It is alleged that Germany will leave seven battalions of troops in North China, two battalions in Shanghai, and one battalion of special troops in addition to the above. The further information is supplied that a "company" in the Germany Army numbers 150 men, but the strength of a battalion can not be inferred from that bald fact. Truly it is exceedingly difficult to form any clear idea as to the intentions of the Powers with regard to this question of troops. News came a few days ago that, at a meeting of the Foreign Representatives, it had been decided to remove all the troops with the exception of two thousand. That seemed scarcely credible in view of the programme previously announced, namely, the garrisoning of a defensible quarter in Peking and of the Tientsin city, as well as the military tenure of all the points of vantage between Peking and Taku. Two thousand troops would scarcely suffice for all those purposes, and now comes the intelligence that Germany alone contemplates leaving four or five thousand, to say nothing of her Shanghai garrison. It is possible, of course, that her Kiao-chow troops may be included in this estimate. Another version is published by the *Asahi*. It says that there will be about 2,000 foreign troops left in Peking alone, and that their composition will be, 350 each from Japan, England, Germany and France, 250 from America, 150 from Italy and 50 from Austria, together with special corps. Tientsin is to have a garrison of 6,000; consisting of 1,400 each from Japan, England, Germany and France, and 100 each from Russia and Italy, together with special corps. Shan-hai-kwan will have 500 each from Japan, England, Germany and Russia, or a total of 2,000. The reduction of the Tientsin garrison to 6,000 will not take place until after the Court's return to Peking.

The Powers appears to be approaching these arrangements with a light heart, but it will probably have occurred to many observers that an extraordinary degree of interest attaches to a project which is absolutely novel in the history of the world. On no previous occasion have all the nations of the Occident together with one of the Orient, combined their military strength to effect a common purpose, and that not a temporary but a permanent purpose. There is perhaps reason to dread that the constant proximity of troops some of whom have shown themselves so accessible to gusts of international hatred, may constitute an additional menace to the preservation of peace. But the more vital point is that this elaborate arrangement can last only so long as the Powers concerned in it remain on good terms with each other. Should two or three of them fall out their troops will have to be withdrawn promptly from China, unless she is to be made either a battle field, which is scarcely possible, or a neutral ground, which is altogether inconceivable. And should such a withdrawal occur, the curious duty of acting as substitutes for the belligerents while they are fighting out their quarrel elsewhere, will devolve upon the remaining Powers. Granted, too, that none of these complications occurs: that the world remains at peace for the next dozen of years, and that the troops of the various Powers live pleasantly side by side throughout that time, the problem of their ultimate withdrawal looks sufficiently difficult to solve. It does not appear that the Representatives of the Powers have seriously approached that question. They

have not, so far as the public knows, indicated any conditions under which the withdrawal should be effected. What is to be the signal for the cessation of this strange military occupation in which the troops of all the Great Powers are concerned? Such an union of forces may perhaps be regarded as a triumph of civilization, but it is at the same time the most interesting and pregnant drama that the world has ever been invited to witness.

DISASTROUS FLOODS IN JAPAN & CHINA.

Monday, July 22.

At 6 a.m. on the 20th the centre of depression which had been lingering in the vicinity of Tsugaru Strait, moved northwards towards Chishima (the Kuriles), and at the same time a centre of elevation which had been observed on the Formosan coast began to travel north towards Japan. This is the report of the Meteorological Bureau, and it is now anticipated that the weather will become definitely settled. The 20th was the first of the Dog Days (*Do-yo*) according to the Calendar, so that the season is not so irregular after all. Since the Meteorological Bureau was established in 1871 there has been no such rainfall as that of this year. Something similar was seen in 1885, 1889 and 1895, but the quantity of rain in those years was smaller. In Tokyo the rainfall between the 1st and the 18th of July was 234 m.m. whereas the average fall is 127.5 m.m. Kiushiu suffered most. Rain fell there unceasingly from the night of the 13th instant to the afternoon of the 15th, and the resulting floods caused considerable loss of life, the greatest casualty being at the Iwasaki mine in Fukuoka where 65 men were drowned, the water having invaded the mine in the middle of the night and cut off all road of escape. It may be mentioned that this mine belongs to Mr. Iwasaki Kumenosuke, not to Baron Iwasaki. A serious inundation is reported from Hankow also. During May and June rain fell for about 40 days in the Yangtze Valley and though the weather cleared at the beginning of July, great floods began to sweep down the Yangtze, carrying with them numerous corpses of men and animals. At Kiukiang the River attained a depth of 45 feet, and at Hankow, of 48 feet. The Viceroy is represented as powerless to deal with a phenomenon of such bewildering dimensions. It is stated that the *Yoshino* has taken advantage of the flood and proceeded up the River to investigate the state of affairs.

Since writing the above we learn that a fresh centre of depression has declared itself on the west of Kiushiu and that a renewal of rainy weather is anticipated. The marked rise in temperature that has taken place suggests, however, that the weather has assumed a more seasonable character.

Tuesday, July 23.

The latest centre of depression that has developed is reported to be lingering obstinately in the neighbourhood of Kiushiu. Until it decides upon its future course, there is no possibility of looking for fine weather. The Meteorological Authorities are now disposed to take 1889 as a basis of comparison for this year, and to predict that really hot, sunny weather will not present itself before the end of July.

PROFESSOR KIKUCHI AND MR. EBARA SOROKU ON EDUCATION.

H.E. the Minister of Education speaking in Okayama, which he has visited in connexion with a tour of inspection, repeated a criticism often uttered by the late Mr. Fukuzawa that too often the object of education in Japan at present is to obtain an official post. Before the *Meiji* era, education may be said to have been confined to the military class: the people learned a little reading and writing only. But now-a-days education has come to be regarded as the most important aim in life. That would be an excellent change if more attention were paid to the purposes of education, which ought always to be considered as a means of fitting a man for some special pursuit. The Minister observed that the present habit of school inspectors when they travel about the provinces is to encourage youths to enter the Middle Schools. He deprecated that advice and would prefer to see them urged to take up technical subjects. Another point to be noted is the great importance of exercising the inventive faculty. Foreigners are beginning to show great reluctance in granting facilities to Japanese students to examine machinery and practise its uses, so that unless the Japanese become independent in these matters they will find themselves embarrassed.

The Minister made a notable remark about female education. He advocated its development on much wider lines than those followed at present, but he did not express any approval of female universities. His view is that woman's chief functions are of a domestic character and that her education need not be carried beyond the standard of an elementary school teacher, since she would then be sufficiently equipped to undertake the education of her own children in their tender years. This verdict places Professor Kikuchi in direct opposition to Professor Naruse, who was chiefly instrumental in establishing the girls' university in the Koishikawa suburb of Tokyo.

As to moral education, Mr. Kikuchi said that the principles of morality had been unchanging in all ages but the practice had differed greatly. He expressed the somewhat remarkable opinion that in pre-*Meiji* days people lived in accordance with their station and without extravagance, but that in the present day little care was taken to adapt the standard of a man's living to his means. This is a sign of the lax morality of the era, and a proof of it is furnished in the fact that ready-money transactions are the only dealings foreigners will have with Japanese. If there is to be such a thing as solid national progress, men must learn to speak the truth and to keep their promises. He did not hold up Kusunoki Masashige and Oishi Yokio as examples for direct imitation in these times of peace, but he did commend the spirit by which those heroes had been animated. Nothing was more necessary than the inculcation of moral precepts in the schools, and above all by the mothers of the rising generation.

It is easy to foresee that these remarks of the Minister of Education will cause some controversy. Fine discriminations are not to be expected from the public. You can not tell young people to admire the spirit animating certain celebrated heroes of antiquity and, at the same time, warn them not to imitate the acts of those heroes. Kusunoki Masashige with 50 followers committed suicide on the banks of the Minato-gawa. Those fifty men were the remnants of 600

with whom he had hurled himself at the powerful phalanx of Ashikaga Takauji under circumstances where victory was hopeless. Oishi Yokio was the leader of the Forty-seven *Ronin*. The Forty-seven *Ronin* were heroic persons, in a sense, but, in another sense, they may be classed with Iba Soroku. Confucius, among his many beautiful sayings, left one to the effect that until the winter comes men do not recognise that the oak and the pine are evergreen. The sage meant that a hero remains unknown until circumstances arise for the display of his heroism, but that his spirit ought always to be present. It is a fine doctrine, but the trouble is in educating the spirit, one is apt to educate also an impatient longing for opportunities to display it. Many generations hence, when the lapse of centuries has softened the sharp outlines of these heroes of military feudalism, it may be possible to extract for present use the spirit of persons like Kusunoki and Oishi, without remembering the violent means they employed to assert it. But just now such models are apt to produce Iba Sotaros and Kurushima Tsunekis. We think, therefore, that other models might be set up more advantageously.

Mr. Ebara Soroku has succeeded Mr. Hoshi Toru as President of the Tokyo Educational Society. Mr. Ebara is a Christian—which fact is not without significance. Some of his views are published. He observes a Baron Shibusawa riding in a carriage and eating foreign food, but he also observes men robed in old fashioned cotton clothes who would not for anything swallow a cup of milk. The spirit of progress does not permeate society uniformly. At the same time, there are all sorts of devices for breaking down the morality of the young. If the middle-school student may be seen frequenting archery booths, the elementary school urchin may be seen shouting in a mock religious procession with an empty sake tub for a sacred car. As for the quality of education, there was lately an instance of a youth who could not compose an ordinary epistle without egregious errors, though he could write a model letter to his mistress, and there was a case of a girl whose every-day communications were beneath contempt but who, committing suicide with her lover, left behind her a document couched in beautiful language. To these young people the sensational novel had been a more important educational factor than the text books they studied at school. Having been asked recently to deliver a lecture at a school meeting in the Nippon-bashi district, he had desired to be shown their primers of morality, and he had found that the juveniles were invited to read the works of Fujita Toko, Sakuma Shozan, Nakai Toju, Murasaki Shikibu and Iwano Shuhei. Were these the sort of volumes to place in the hands of the children of the present day? Moreover, in one of the text books he found the precepts:—"Foreigners value honesty; therefore speak the truth to them;" and "Foreigners have come over thousands of miles of sea to Japan, leaving their homes and their friends behind, therefore be kind to them." Were Japanese children to be taught by implication that honesty is not necessary in dealing with their own people, and could anything be more misleading than to suppose that foreigners threw themselves on the mercy of the people of the country and expected to be treated with special favour?

MR. JOSEPH LINDON SMITH'S PICTURES.

The Boston Museum of Fine Arts, which, owing to the remarkable munificence of many of the residents of that city, promises ultimately to outstrip all other institutions of the kind in its Japanese collections, recently took the exceptional step of sending out to Japan the eminent artist, Mr. Joseph Lindon Smith, for the purpose of getting exact reproductions of some of the remarkable specimens of sculpture in Nara and Kyoto. Mr. Smith has made a specialty of this kind of work. Pictures taken by him in Italy and in Egypt created quite a sensation in America, and showed that it is possible, in effect, to place treasures of ancient art in a museum without carrying the original objects thither. The Boston Museum sent Mr. Smith to Japan five months ago to do for Nara and Kyoto what he had already done for Italy and Egypt, and Mr. Smith is now about to leave Japan, carrying with him some splendid reproductions of great works which for centuries lay hidden in Nara and Kyoto while the ignorant world imagined that Japanese sculpture was represented solely by the *netsuke* and the *kodogu*. Of course Mr. Smith, for all his diligence, has not been able to do more than exploit a very small part of this mine of wealth, but we are much mistaken if his inimitable reproductions do not inspire the Boston connoisseurs to give him a second commission. At all events we sincerely hope that such will be the case. Photography and chromolithography are quite inadequate to accomplish the ends which Mr. Smith has attained.

THE USUI TOGE ACCIDENT.

We understand it to be the opinion of a foreign railway expert, who has an intimate knowledge of Japanese lines in general and of the road over the Usui Pass in particular, that the recent accident which caused the death of Baron Mori and his son does not justify the newspaper comments it has elicited. This expert says that two locomotives are quite unnecessary; that there is ample provision of brake power to check the train, and that the employment of the brake power is quite independent of the condition of the locomotive's machinery. We need scarcely say that this expert echoes the ridicule evoked by a correspondent of one of the local English journals who avers that the Railway Authorities never put on a second locomotive unless there is reason to expect a visit from some high official. That is manifest silliness; a typical specimen of ignorant suspicion. The fact is that no disaster need have been apprehended from the accident to one of the locomotive's tubes, as was proved, indeed, by the train's backward motion having been subsequently arrested within a distance of a hundred yards. That verdict tallies with our own idea that the arrangement of brake power in connexion with the Abt system should be quite reliable under such circumstances, without any reference to the steam power of the locomotive. Still folks who are not railway experts may be excused for taking the obvious view that if the breakdown of one locomotive threatened a calamity—whether from technical or moral reasons—the presence of a second engine would have been an additional security. It is re-assuring to learn that there are no grounds for such a view.

MARQUIS ITO'S TOUR.

Saturday, July 20.

Marquis Ito says that he does not go to the length of alleging that all men of affairs should join the ranks of the *Seiyu-kai*. But he does think that business folk have a very material interest in politics, since they are closely concerned with the questions of taxation and of commercial and industrial facilities. The great problem before Japan at present is how to make money. The conduct of her troops in China and the methods of her officers won much commendation. One foreign critic said that the Japanese seemed to take to war as a duck takes to water. But military strength without monetary strength is not civilized strength. That is Japan's pressing need, and men of affairs should earnestly co-operate with the Government to remedy the defect.

At Yamaguchi on the 17th instant the Marquis delivered a long speech on the relations between parties and cabinets. The telegraph says that the speech was most interesting and that it produced much effect, but as yet no details are to hand. His Excellency left Yamaguchi on the 19th and proceeded to Wakamatsu to inspect the new Steel Foundry.

Tuesday, July 23.

Speaking at a *reunion* in Yamaguchi, Marquis Ito declared very positively that he does not indorse the policy of cutting down State undertakings which have been already carried some way towards completion. He considers it very bad economy to sacrifice the sums expended on these works when a resolute effort might bring them to the stage of profitable enterprises. That is a declaration distinctly opposed to the view taken by Viscount Watanabe, and we are somewhat surprised that Marquis Ito did not sacrifice his Minister of Finance rather than jeopardise a policy which he approves. His Excellency explains, however, as we understand, that no way of providing for the continuance of the works was immediately available. He also hints that he had a project, but that official etiquette forbids him to disclose it. Incidentally he mentioned that according to calculations made by Count Inouye in 1898, the Government undertakings then in progress represented a sum of five hundred million *yen*, and the undertakings inaugurated by the people totalled nine hundred million *yen*, inclusive of those started before the war. The fact that such large sums were involved and, at the same time, the paucity of capital in the country, fully accounted for the stringent condition of the money market.

Friday, July 26.

Marquis Ito having concluded his southern tour, has returned to Oiso, and is said to be in excellent health. He has conversed with a number of visitors at his villa and is now believed to be arranging plans for a political tour in the northern provinces. This intention on the part of the Marquis appears to have roused the Progressists and the Imperial Constitutionists to activity. They are reported to be planning the despatch of delegates to the same regions as those included in the Marquis' itinerary. Marquis Ito visits Tokyo to-day for the purpose of calling at the Palace.

AMERICAN LOCOMOTIVES.

In former times the question of American *versus* English locomotives was keenly discussed in this country and occasioned some

warmth of feeling. We can not certainly say what answer practical experience has furnished, and it will be wiser to refrain from giving currency to rumours. But the latest news from Europe and elsewhere goes to indicate that the superiority claimed at one time for the American locomotive is at least apocryphal. Thus the assistant chief engineer of the Orleans Railway in France reports that the results of working these engines is not satisfactory. They were ordered because of an urgent need, but they are found to burn more coal and their maintenance costs more than that of other engines, so "the company does not contemplate further purchases." Again, the ex-manager of the Cape-Colony lines, while admitting that in respect of material, prompt delivery and hauling power, the American locomotive is worthy of all praise, adds that it burns 20 per cent. more fuel than its English rival. Mr. S. W. Johnson, superintendent of the locomotive department of the Midland Railway Company in England, which company purchased 40 American locomotives two years ago at the time of the machinists' strike in England, declares that, as the result of six months' test, "the American locomotive costs from 20 to 25 per cent. more than the British in fuel, 50 per cent. in oil and 60 per cent. in repairs." Major Johnstone, a British officer in Egypt, reports that the American locomotives in use there "average 10 per cent. more coal than the other types," and Sir Alfred Hickman, ex-president of the British Iron Trade Association, commenting on Major Johnstone's statement, says:—"This, so far, confirms the reports from Burma and Assam, and, if correct, would make the American engines dear as a gift." Very likely there is a measure of prejudice in all this, but still the weight of testimony can not be ignored.

THE LAMA IN TOKYO.

The Lama arrived in Tokyo at 10.45 on the forenoon of the 21st instant, and had a marked reception. Some three hundred persons prominent in Buddhist circles assembled at Shinbashi to greet him. Viscount Miura, acting as representatives of the various sects, took the lead in welcoming the distinguished visitor. The Lama will spend a week in this part of the world, and will devote some of the time to visiting Nikko. It is expected that he will deliver a lecture to-day in the Hongwan temple at Tsukiji.

Tokyo journals are full of accounts of the Lama's visit to the capital. It appears that a large crowd assembled at the Hongwan Temple in Tsukiji on the 23rd instant, when the Lama and his suite made their appearance on the platform, but those that had come with the hope of hearing the great man speak were disappointed. His substitute alone came forward, and the speech he delivered was very brief and conventional. He said that he had never seen such a crowd assembled on a religious occasion in any country, and that the fact must be taken as an indication of the vigorous condition of Buddhism in Japan. Tibet and Japan were separated by a long interval, but they had a common creed and it should be their aim to work together hand-in-hand for the promotion not only of religious progress but also of social.

The Lama is busily viewing all the sights of Tokyo, especially the religious and educational institutions. His movements are accurately chronicled by Tokyo newspapers but the foreign public will probably be con-

tent to learn that the visitors are following the usual routine observed by distinguished tourists; that they will conclude their sojourn in this part of Japan by a visit to Nikko, and that the Japanese are treating them with all the hospitality for which this country is famous.

REWARDS TO OFFICERS.

The principal Japanese officers connected with the campaign in Chili have been rewarded for their services by receiving the next higher class of the Orders already held by them. Vice-Admiral Togo and Lieut.-Colonel Shiba, however, are treated exceptionally, being raised two ranks. Colonel Shiba thus becomes holder of the Third Class Order of the Rising Sun and the Third Class Order of the Kite. It is difficult to arrive at an accurate estimate of the value of these decorations from an European point of view. Perhaps the best comparison is to say that a third class order in Japan corresponds with a companionship, a second class with a commandership and a first class with a grand cross. A second class is comparatively difficult to obtain, the theory being that some specially signal service must be performed to establish a title to it. We do not pretend to pass any opinion as to the adequacy of the reward in the case of Colonel Shiba and Admiral Togo. But Major-General Fukushima has been raised only one step, ascending from the Third Class to the Second of the Rising Sun, and from the Fourth to the Third of the Golden Kite. He has, in fact, become possessed of a K.C.B. in place of a C.B., though the parallel is not quite accurate since the Japanese Order does not carry any title of nobility. It must be confessed that this reward seems inadequate in the eyes of an Englishman. Had Major-General Fukushima been an English officer he would certainly have received a step in army rank as well as knighthood. Apparently, however, it is not customary in Japan to give steps of army or navy rank as rewards for good service in the field. That method of recognition, so highly prized in Europe and America, certainly has been resorted to in this country on occasions. If we remember aright Major-General Fukushima himself, after his celebrated ride across Siberia, was raised from the rank of Major to that of Lieut.-Colonel. On the present occasion, however, there has not been one instance of such promotion. Lieut.-Colonel Shiba's receipt of the Third Class Order of the Golden Kite is very exceptional, the Third Class never having previously been held by an officer below the rank of Major-General; but Major-General Fukushima scarcely seems to have been adequately recompensed. Captain Hara, of the Navy, who as well as Lieut.-Colonel Shiba, was mentioned in Sir Claude MacDonald's despatches, has received the Fifth Class Order of the Golden Kite. It should be added that the Order of the Golden Kite entitles its holder to a yearly allowance. The first class carries an annual grant of 1,500 yen; the second class, 1,000 yen; the third, 700 yen; the fourth, 500 yen; the fifth 300 yen; the sixth, 200 yen and the seventh, 100 yen. We can not find that any reward has been conferred on Sub-Lieutenant Inouye, who behaved with such remarkable gallantry in firing the fuse at the blowing up of the Tientsin gate. Probably there will be another gazette.

The leading citizens of Tokyo are arranging for a grand reception of the principal officers, naval and military, who have re-

turned from China. The afternoon of the 26th has been fixed for the demonstration and the place will be the Imperial Hotel. Tickets are to cost 2.50 yen each, and sixteen hundred invitations have been issued.

We read in the *Chino Shimbun* that Lieut.-Colonel Shiba received one of the diamond rings sent by the Pope to the leaders of the defence of Peking, but that, on being consulted about Orders which foreign States contemplated bestowing on him, he intimated his unwillingness to accept any such distinction as his own Sovereign had not bestowed on him any mark of favour. Now that he has been exceptionally honoured by the Emperor of Japan, he will doubtless make no objection to receive the distinctions which other States will desire to give him.

Lieut.-General Baron Yamaguchi and Major-General Manabe were entertained at the *Kaiko-sha* (Military Club) in Kudan, Tokyo, on the 22nd instant. There was a great gathering of officers, the principal being Field Marshals Marquises Yamagata and Oyama, Generals Viscounts Katsura and Nozu, Lieut.-General Baron Kodama, &c. Field Marshal Marquis Yamagata delivered a highly eulogistic address, applauding the work done by Generals Yamaguchi and Manabe and the officers under their command, assuring them that they had done honour to the flag of Japan, and promising that their services would not be forgotten by their countrymen. Baron Yamaguchi replied in the briefest terms. He said that he and his comrades had not done anything more than the things falling within the ordinary routine of a soldier's duty and that they were embarrassed to find themselves the recipients of so much praise.

THE LATE MR. A. O. GAY.

The death of Mr. A. O. Gay deprives Yokohama of one of its oldest and most respected residents. For many years Mr. Gay had been a representative of Messrs. Walsh, Hall and Company, which, in the old times, stood very near the head of the mercantile firms in the Far East, and is still a name synonymous with all the best traditions of business. As a managing partner in such a firm Mr. Gay had a thoroughly congenial occupation, for he was a man to whom might be applied in its fullest sense the pregnant description *integer vito scelerisque purus*. He associated himself thoroughly with Yokohama, and whenever any good, charitable, or useful enterprise was mooted, Mr. Gay's name always headed the list of promoters and Mr. Gay's active and earnest co-operation could be counted on. Never a man to whom boisterous or juvenile pleasure appealed, he had come to be regarded as older than he really was, and it will probably be a surprise to many that his tale of years did not extend beyond eighty-two. It is nevertheless a ripe age, and seeing that Mr. Gay had become incapable of walking several months before his death and had gradually wasted away, conscious that the end was approaching, though anticipating it with fortitude and resignation, we have at least the consolation of reflecting that the prolongation of his period of suspense would not have been a mercy.

The deceased gentleman, who was a native of Boston, U.S.A., came out to the Far East in the service of the firm of Augustine Heard & Co., about 1865. In 1868 he joined Messrs. Walsh, Hall & Co., being at first stationed

in Kobe, but by far the greater part of his long career in Japan has been spent in Yokohama. Mr. Gay for many years took a very active part in the public affairs of the foreign settlement but of late made way for younger and more active men. From the outset he was associated with the Public Hall Company, and almost to the last he was the ruling director in that concern. As Chairman of the Chamber of Commerce and on the committees of various other bodies he gave much time and labour to the community. He leaves a wife and one child.

The interment of the remains of the late Mr. Gay took place on Sunday afternoon, the burial service being read by the Rev. A. L. Sharpe, partly in Christ Church and partly at the grave-side. The pall bearers were Messrs. G. H. Scidmore, J. Lindsley, N. F. Smith, A. Coye, R. D. Robison, T. Thomas, F. Cummins, and Dr. Munro. There were numerous tributes from Japanese and foreigners.

A DEPUTATION.

A deputation representing the Six Sections of the Upper House waited upon the Cabinet Ministers on the 22nd instant. The deputation was headed by Marquis Kuroda, Viscount Soga and Baron Ozawa. Six questions were submitted. The first related to administrative reform, and the answer of the Cabinet was that no intention is entertained of appointing a committee of investigation as was proposed by the last Cabinet. The various departments are conducting the necessary investigations independently, and the practical results of their inquiries will soon be seen. Then the Deputation asked about the better control of local officials with a view to checking the corruption now believed to prevail. As to that, it was replied that due examination was being made, and that the Government would not hesitate to adopt such measures as the circumstances might demand. The next two questions related to the prosecution of Government undertakings during the current fiscal year and their cessation during next year. But no definite reply was elicited. The Minister President said that the matter was under consideration, and that he was not in a position to say anything conclusive. The official policy with regard to foreign affairs and education formed the subject of the fifth and sixth questions, but the replies were inconclusive, the Deputation being referred to Professor Kikuchi's speech for information about education, and the question of foreign affairs being left virtually unanswered. The press make no comments upon this incident, though one or two journals hint that the Deputation retired dissatisfied. There does not seem to be any valid ground for dissatisfaction, however, inasmuch as the Minister President informed his visitors that if they desired any further information, they might obtain it either by questions or by interviews.

KOREAN AFFAIRS.

It appears that the Korean Government has again reverted to its old habit of leaving its students without funds in Tokyo. There are forty of these youths now in the Japanese capital, and it is said that they have been without remittances for six months. All sorts of devices have been resorted to for the purpose of keeping the wolf from the door, but unless money arrives before the end of this month, the lads will find the doors of all the lodging-houses closed to

them. The *Jimjin* attributes this unfortunate state of affairs to the influence of Li Yong-ik, who holds that all Koreans studying in Japan are traitors, and that the best course to pursue is to starve them into returning home. Very likely Li Yong-ik is made responsible for a good many sins of which he is quite innocent. Our contemporary says that when Viscount Aoki was Minister of Foreign Affairs, the Korean students in Tokyo found themselves in a similar plight, and that ultimately pressure was brought to bear on the Sôul Government by the Viscount through the Korean Representative in Tokyo.

The Head-man of Gunjin in Korea recently issued an order against the exportation of grain from that district, in consequence of a bad harvest prospect resulting from drought, and, at the same time, he caused an embargo to be put on a quantity of grain and beans purchased by Japanese merchants. The latter action gave rise to diplomatic representations and the embargo was withdrawn after 10 days.

Mr. J. H. Gubbins arrived at Fusan on the 19th instant in a British gun-boat.

The Emperor of Korea has taken the step prescribed by treaty in the event of a probable failure of the grain crop; that is to say, His Majesty has issued an edict and has sent copies to the Foreign Representatives and Consuls, giving notice that in view of the long-prevailing drought and the consequently bad prospects of the grain crop, all export of grain shall be suspended from a date one month hence, and the import duty upon grain coming from abroad shall be removed. That step, being quite in order, must command foreign acquiescence. But it is said that the Japanese Representative has protested against the action of the governors of Chollado and Chungchang-do, who put an embargo on the export of cereals without waiting until the required forms had been complied with by the central government.

Mr. Horace N. Allen, U.S. Minister to Korea, was on June 22nd officially renominated to that post by the President.

Mr. Ozaki Saburo was to leave Kobe for Korea by the Shosen Kaisha's steamer *Kisogawa Maru* on the 21st inst.

Mr. Omiwa Chobei, of Osaka, was to leave for Korea on the 20th inst. for the purpose of commencing work on the Kei-fu Railway between the 15th and 20th of next month.

MAJOR-GENERAL REID.

Japanese journals contain detailed accounts of the landing of Major-General Reid at Bakan. The Major-General was in command at Shan-hai-kwan. He appears to have conceived a very high opinion of the Japanese officers, who organized a farewell banquet on the occasion of parting with him, and drank his health enthusiastically. The Major-General expressed himself profoundly touched by the attentions showed to him, avowed his hope of paying another visit to Japan, and said that if any Japanese officers visited England or India, he trusted that some return of their hospitality might be possible. A newspaper correspondent endeavoured to "draw" the Major-General on the subject of Russia, but he prudently answered that, as a military officer, it was not permissible for him to express political views.

VLADIVOSTOCK AND MAIZURU.

In the *Jiji Shimpô* a telegram is published from St. Petersburg giving the gist of an article in the *Noroe Vremya*. The subject of the article is Maizuru. In view of the fact that the port is opposite to Vladivostock the Russian journal interprets the establishment of a Japanese naval station there as an indication of a purpose on Japan's part to drive Russia from Far-Eastern Asia. But surely that expression of opinion is somewhat belated. Maizuru was selected in 1890 to be one of the chief naval stations in the Japanese empire, and though the work of dock-building and fortification erecting was not commenced until 1895, the *Noroe Vremya* should not have required 6 years to discover a fact which was never in any sense a secret. Besides, the criticism strongly resembles the case of the two wayfarers one of whom, happening to make an ejaculation as the other went by and being peremptorily challenged to know why he had said "Hem! hem!" when a stranger passed, replied by demanding why a stranger passed when he said "Hem! hem!" That Russia who has established herself at Port Arthur and Talien, and who, unless she is greatly belied, has made several attempts to establish herself in some Korean port, should draw sinister inferences from the building of a naval station by Japan within Japanese territory, does not rise to the dignity of even a pot-and-kettle rejoinder.

THE EMPEROR.

It is reported that Their Majesties the Emperor and Empress are likely to make a tour to Kyoto, remaining there until the late autumn. The reason journalistically assigned for this project is somewhat commonplace: His Majesty is said to be putting on flesh owing to his sedentary habits, and a journey is consequently recommended. The Emperor is known to be extremely averse to travelling. His Majesty has no sympathy whatever with folks that run off in summer to distant places among the mountains or by the side of lakes. The Prince Imperial, on the other hand, loves motion and change of residence.

NOTES ON CURRENT EVENTS.

Legal proceedings have been instituted against the *Kokuryo*, a periodical published by the *Kokuryo-kai* (Amur Society) for publishing matter calculated to subvert public morals. The magazine had an article extolling the murderer of Mr. Hoshi and encouraging others to follow his example.

It is expected that the preliminary examination in the case of Iba Sotaro, Mr. Hoshi's slayer, will be concluded by the 22nd instant, the Public Procurator having come to the conclusion that there is no occasion to seek further testimony.

The news is confirmed that access to Harbin is not permitted to foreigners at present. It is explained that some eight thousand bandits are infesting the district, and that the Russian Authorities can not undertake to protect the lives and properties of visitors. They have obliged all Japanese hitherto resident in Harbin to depart, and they are charged with resorting to extreme measures to effect the deportation. This veto is causing much inconvenience and loss to Japanese traders who

usually carry goods to Harbin at the present season.

A telegram from Berlin represents Count Tolstoi as at the point of death.

It is alleged that Mr. Komura is endeavouring to reconcile the difference of opinion between Russia and England with regard to the tariff. Great Britain insists that the tariff should not be raised to more than 5 per cent. for the purpose of the Indemnity without special considerations, whereas Russia takes the ground that an increase to 10 per cent. should be arranged as definite collateral security. Neither side being disposed to yield and the conference having thus been brought to a standstill, Mr. Komura has intervened, and it is said to be probable that some middle course will be struck out.

The Lama arrived in Tokyo on the 21st instant. The *Yomiuri Shinbun* urges that an exceptional reception be given to him, apparently for the reason that such a course would be likely to make Russia pause in her project of adding Tibet to her dominions. Some Japanese journals evidently regard Russia with very suspicious eyes.

The tea-house owners of Ryogoku have at length taken heart. They announce that the opening of the river will be on the 27th instant, and that, in case of rain on the latter day, it will be deferred to the following Saturday.

The Osaka Shosen Kaisha has sent representatives to China for the purpose of conducting investigations preliminary to opening a line of steamers on the Yangtze to Kiukiang, Hankow and Ichang.

The Governor of Formosa telegraphs that a case resembling pest having occurred on board the *Hiroshima Maru*, which left Bombay on the 25th of June, the ship altered her course and put in at Kelung. There it was found that the case was one of real pest, and the ship was accordingly placed in quarantine.

There have been two cases of sporadic cholera in Tokyo. Both occurred on the night of the 19th, one in the Asakusa district, the other in Kanda. The former ended fatally on the morning of the 20th.

The Chinese cotton crop is threatened with a very serious deficit. Owing to the great floods in the Yangtze Valley, the plants have been so much injured that their yield is expected to be not more than 20 per cent. of the average.

The Public Prosecutor has appealed against the extraordinary judgment recently delivered in the Tokyo District Court in the libel case of Matsumoto Kumpei against the *Hochi Shinbun*. Our readers are familiar with the facts of this case, and will doubtless share our satisfaction that it is to be carried to a higher tribunal.

Tokyo heads the list in the matter of rats destroyed. The following figures are published showing the number of rats killed during June:—Tokyo, 216,877; Osaka, 68,035; Kobe, 26,234; and Yokohama, 18,367. The Tokyo record is for fifteen days, ended the 26th of June, but the figures for the other places are stated roughly to be for the month of June.

It is said that the Department of Agriculture and Commerce has come to the conclusion that not more than one-third of the existing exchanges are really needed in Japan, and that many of them are sources

of commercial demoralization. Inspectors have been sent to examine into the facts and make a detailed report, after which drastic steps are expected. The exchanges at Mayebashi, Tochigi and Hachioji are indicated as the first to be suspended.

Correspondence from Shanghai to the *Chino Shinbun* says that a large paper factory was opened there on the 14th instant. Its president is said to be Sir Robert Hart, and among its subscribers are Japanese, English, Americans, French and Chinese. The correspondent alleges that this enterprise had its origin in a project elaborated by Mr. J. R. Morse in conjunction with Baron Shibusawa after the transfer of the Sôul-Chiemulpho Railway to Japan. The capital of the concern is 470,000 yen.

The *Jimmin* asks a very pertinent question which has presented itself frequently to ourselves and must also have occurred to many foreigners. Why are the newspapers allowed to publish eulogies of Iba Sotaro and his act? One small periodical, the *Kokuryo*, very little read and very little known, has been arraigned, but journals like the *Yorozu Choho*, the *Niroku Shinbun* and so on are allowed limitless license in this matter. Further, whereas the sale of Nishino Buntaro's likenesses was strictly forbidden after he had killed Viscount Mori, Iba Sotaro's picture is freely sold everywhere.

The Japanese Naval Authorities, it is said, have concluded that the establishment of stations round the coast for purposes of wireless telegraphy, is essential. They have been very successful with their experiments thus far, but there is still a difficulty in connexion with the leakage of the electric fluid. Hopes are entertained, however, that some device for overcoming that defect will soon be elaborated.

The Authorities of the Telephone Bureau have issued a circular which is very welcome. Hitherto when an application made for connexion elicits an answer that the wire is engaged, there has been no resource but to wait some minutes and then to repeat the application, by which time another person may have stepped in and the wire may be again occupied. The Bureau now directs that if the wire is found engaged, the applicant should wait 5 minutes and then repeat his application, when, if again unsuccessful, he should give an order for the desired attachment and the telephone operators will be bound to make it as soon as the wire is free, duly informing him of the fact. That arrangement is very convenient for the public, but it will entail heavy work on the operators, we imagine, for they may sometimes have to remember three or four applications and to satisfy them in order. Besides, the applicant will always have to give his own number, which is not necessary now except when telephoning to distances demanding an extra payment.

Rumours are beginning to circulate about next year's budget but the impression they produce is that their authors do not allow themselves to be hampered by arithmetic. The *Hochi Shinbun*, for example, alleges that the Departments have asked for a total of three hundred million yen and that the ordinary revenue would have to be increased by 100 millions to meet the demands. But the *Hochi* would be so much pleased to see dissensions in the Cabinet on this topic that we can not place much confidence in its stories. It is certain,

however, that an impression gains ground that the Cabinet will not cut down the expenditures on productive enterprises as much as was predicted and anticipated. The work of railway construction will not be seriously interrupted.

The Japanese Military Authorities are said to be now discussing the question of arming artillery-men. Hitherto the gunner has had no weapon but his gun. In cases of extreme emergency he is supposed to have recourse to his bayonet, but the theory is that such cases do not arise in practice, and that if the enemy threatens to come to close quarters before a battery can limber up and get out of the zone of danger, its protection is undertaken by the troops escorting it. There are grounds for thinking, however, that it would be advisable to give the men an arm of some kind, and the question now under discussion is whether it should be a pistol or a cavalry carbine.

An entertainment was given by the leading citizens of Tokyo to Admiral Rodgers on the 23rd instant at the Seijo-ken in Ueno. The Governor, the Mayor, Baron Shibusawa (President of the Chamber of Commerce), and other leading citizens promoted the arrangements. On the 20th the Admiral entertained the Governor and Mayor of Yokohama and other prominent residents at luncheon on board the Flagship, and a reception, largely attended, was held on board on Wednesday afternoon.

Admiral Rodgers and six officers of the United States Squadron were entertained at luncheon in the Seijo-ken, Ueno, by the Tokyo Municipality on the 23rd inst. His Excellency Colonel Buck and the members of the United States Legation were present, and the Municipality was represented by the Governor of Tokyo, the Mayor, Baron Shibusawa and other prominent citizens. A long address, signed by Barons Senge and Shibusawa and Mr. Matsuda, was read. It contained the usual references to the great effect produced by the coming of Commodore Perry, and was couched in terms which probably sounded somewhat extravagant in the ears of the sober-minded section of the audience. One part of the document went so far, indeed, as to represent Japan in an exceedingly unenlightened and unprogressive condition when Perry knocked at the door of her seclusion, but that picture was somewhat modified afterwards by a statement that had not the seed been ready, the planting would have been futile. All must agree, however, with an assertion contained in the address, namely, that whenever a Japanese hears the name of Perry, he thinks of the opening of his country, and whenever he hears of America, he thinks of a nation really friendly to Japan.

The *Hoko-kai*, a society formed by the exertions of Captain Gunji for the purpose of developing Chishima and organizing a volunteer fleet in connexion with that enterprise, held a very successful meeting in the rooms of the *Seinen-kai* on the 22nd instant. Captain Gunji spoke for two hours, but no reports of his lengthy speech are published.

The *Straits Times* says that owing to the collapse in Rauts and Temelongs, and consequent fall in other securities that had to be thrown on the market and sacrificed in order to "meet calls," the Settling Day at the close of the half year has revealed a very tight money market; and it is said that certain unfortunate investors were unable to meet all their engagements on time.

NEW BOOKS.

"Ancestor Worship and Japanese Law," by Professor N. HOZUMI.

This is a book of very exceptional interest. It shows much erudition, as indeed might have been expected from any work of Professor Hozumi's, and it possesses the charm of absolute explicitness and lucidity of exposition. The author sets out by discussing ancestor worship in general, and then gives a clear explanation of ancestor worship in Japan, after which he traces the affinities between this ancient cult and the modern laws of his country. At the outset he rightly combats the view expressed by some commentators that ancestor worship has its origin in dread of ghosts. It is certainly true that when the spirits of the dead are credited with exercising power over mundane affairs, men must inevitably regard with feelings of uneasiness and dread the supernatural potentialities of those whom, while present in the flesh, they treated as foes. That mood was strongly illustrated in the conduct of men during a part of the Heian epoch when even military magnates feared to trust themselves abroad after dark. But it was not to the spirits of their quondam enemies that the worshippers of ancestors originally prayed. It was to the spirits of their own fathers and forefathers whom they regarded with love and reverence. Propitiatory sacrifices are an adjunct of ancestral worship, not an integral part of its rites. With a passing allusion to the probability that all races of humanity were ancestor-worshippers in the infancy of their development, Professor Hozumi proceeds to define and explain the three kinds of ancestor-worship in Japan; the worship of the first imperial ancestor, the goddess of light, at the shrine of Ise, in the Palace, and in every household; the worship of the patron god of each locality at a shrine dedicated to him, and the worship of family ancestors before the god-shelf in each household. He shows that of the eleven Festival Days of Japan—the days which are national holidays—two only do not relate to ancestor worship. In short, he makes out his case convincingly that the supernatural element of *Shinto* finds almost its total expression in ancestor-worship. On the other hand, we understand him to suggest that the adoption of this cult by the Japanese people antedated their intercourse with China and must be regarded as having its origin in an independent instinct. But in order to establish that fact it would be necessary to fix the range of historical records with much greater accuracy than has hitherto been found possible. We do not know what portion of the bases of *Shinto* were suggested to the first Japanese historiographers by their acquaintance with Chinese annals. There had been intercourse between China and Japan for many centuries before the time when the *Kojiki* and the *Nihongi* were compiled, and since we know that some, at any rate, of the ideas embodied in those volumes were borrowed from China, and that the Chinese Sovereign had been called the "Son of heaven" long before that title made its appearance in Japanese script, it seems impossible to deny that the Japanese cosmography and the Japanese religious cult may have been largely the outcome of theories suggested by Chinese literature. There is another point which seems to lack persuasiveness in Professor Hozumi's retrospect. He contends, as we understand, that the clan was the original unit of the State, and that the family, or house, did

not possess separate existence in the eyes of the law until disintegration of the clan took place. Of course the Professor is aware that sociologists, as a rule, take a different view; that they regard the family as the first unit and the clan as a subsequent development. But he considers that such a theory is inconsistent with the natural order of things. To us, however, it seems that since the individual necessarily constitutes the first unit, and the family the second, the clan belongs to a later phase of social organization. Besides, before reading this essay we had always believed that evidences of clan organization are notably wanting in the early Japanese annals. We should have said that the absence of a clan name, or a totem, or any proof of social organization was conspicuously wanting. But Professor Hozumi asserts that each individual Japanese subject had originally an *uji*, or clan name, "which was the mark of descent from a certain ancestor," and he appears to draw no chronological distinction between the *uji* and the *kabane*. Surely the *kabane* ante-dated the *uji*, and does not all the evidence go to show that the *kabane* was nothing more than a species of official title—the name of an office, in short, rather than of an individual;—that the office being hereditary, the family holding it acquired a special status in the eyes of the law; that the family produced the clan, and that the *uji* did not come into existence until the practice of deriving names from natural objects or personal attributes began to find vogue? We should much like to learn Professor Hozumi's detailed views on these matters. He himself shows that whereas the system of house registration dates from 645 A.D., the first register of clan names was not compiled until a much later date. Of course clan names may have been registered long previously to the latter time, but the evidence, so far as it goes, appears to suggest a different order.

The learned author then goes on to show that even since the beginning of the *Meiji* era the tendency of the time has been to attach importance to the individual rather than to the house, until the latter has "entirely lost its corporate character" though in the eyes of the law it maintains its character as the unit of society. Thus, whereas formerly only the head of a house could fill an official position, serve in the army, or hold property, the members are now equally eligible, and whereas members are allowed to secede from a household and form a branch house, careful provision is made for the continuance of the house, since it is provided that a person who has become the head of a house by succession can not abolish such house except by permission of a law court and for the purpose of succession to, or re-establishment of, the main branch of the house. So, too, "the legal presumptive heir to a house may not enter another house or establish a new one, except in cases where the necessity arises for the succession to the main branch of the house." The effect of this restriction is plain in the realm of marriage, for it prevents the male head of a house from marrying a female who is the head of another house, unless a law court consents to disinherit the latter. In the matter of divorce, however, the new Code does not show respect for old principles. Japan's first code, that of the *Taiho* era (701-703), laid down seven grounds of divorce, the first being sterility and the second adultery. Sterility did not mean failure to bear children: it meant failure to bear a son; and adultery was not regarded

as an offence against morality but as a danger to the purity of the family blood. Now, however, since under the new system a female can succeed to the headship of a house, and since a different order of ideas has begun to prevail, the law does not recognise sterility as a cause of divorce, but places bigamy at the head of the reasons and adultery second on the list. Consensual divorce is, of course, a different matter. The law's care for the household is also very clearly shown in the importance it attaches to the consent of parents in marriage affairs. If a son under the age of 30 or a daughter under that of 25, marries without the consent of his or her parents, the latter can have the marriage annulled at any time within two years from the date of its registration.

We have said enough to give our readers an idea of the scope of this interesting and valuable book. Such works are immense aids to students of Japan and the Japanese.

"China under the Search Light," by W. A. CORNABY (Published by Mr. T. Fisher Unwin).

This is a most interesting volume. It has no flavour whatever of book-making or of globe-trotting. Mr. Cornaby is editor of the *Chung-si-chao-lui-pao*, and author of "A String of Chinese Peach Stones," so that in his last work he speaks as one known and qualified. It appears to us that his opening chapters on "Over-crowding," "Solidarity," "Humanity in Bundles," "Dead Levels," "Ruts" and "The Native Foreigner" are essays representing the outcome of calm reflection in times of peace and tranquillity, but that the succeeding chapters which deal with politics, especially and indeed almost wholly the politics of the past few years and of the recent crisis, were penned under the pressure of storm and stress, and that the writer has sometimes sacrificed impartiality to picturesqueness. But he is at all times graphic and powerful, nor can we doubt that his book, circulating widely as its attractions merit, will help materially to swell the tide of anti-Chinese sentiment in the Occident. At the outset of the delightful chapters which bear the character of essays, occurs a singular assertion. Mr. Cornaby says that the device on the Chinese flag is a dragon in the act of swallowing the Japanese sun, and he adds that, some centuries ago, the Chinese dragon fully intended to swallow the Japanese sun; that the attempt failed, but that the national banner was henceforth modified as though the deed had been done. Is that serious, we wonder. Of course the jewel which the dragon is depicted as in the act of swallowing has nothing whatever to do with the Japanese sun, or with any sun for the matter of that. There was indeed no such thing as a "Japanese Sun" in the sense of a banner-device at the time of the Mongol invasion, and the Japanese would be much surprised did they learn Mr. Cornaby's interpretation. As for the Chinese, they would indignantly scorn the suggestion that the device on their national banner was ever intended to refer to such an insignificant country as the land of the *Wojen*. These are details, however. We pass on with delight to Mr. Cornaby's description of over-crowding in China—over-crowding, be it noted, in special districts only, namely, the river basins, for, as a matter of statistics, the average density of the population in China is only one-third of the density in Germany—, to which he attributes the sordid, grasping, bargain-driving propensities of the people and their utilitarian

instincts; his description of "solidarity," which he attributes mainly to the operation of the principles inculcated by Confucius, in whose days China was a kind of Far-Eastern Europe, a congeries of mutually hostile States, so that the great sage conceived the idea of introducing the family cult with its final result that the Sovereign should be regarded as the universal parent of the people; his description of "humanity in bundles," the bundles being mainly local and each regarding every member of another bundle, above all every foreigner, as a potential enemy; his description of "dead levels," which he regards as the result of huddling together, the individual finding no room for expansion and development just as a young rice-plant, if not removed from the seed-plot and set out in the open, would remain always stunted; his description of "ruts," in which the people are held partly by ignorance and partly by conceit; and, finally, his description of the "native foreigner," a short but powerful essay which seems to us one of the most successful defences of the missionary that has ever been penned and one of the most complete answers to his detractors. Thereafter we come to Mr. Cornaby's political chapters, where, as we have said, there is an unsightly element of bias. If, indeed, all the things be true that he tells us—and doubtless he himself believes them—then his conclusions are beyond cavil. But is it really credible that the Empress Dowager deliberately plotted the extermination of all the foreigners in China; that she imagined it possible to close the country once more in the face of the world; that she and her advisers actually fixed a day for a general massacre of the "ocean fiends"; that on June 17th, 1900, she issued to all the Viceroy and Governors an edict saying:—"Whether foreign dwellings or doctrine-halls, all are to be consumed by fire; whether foreign official or merchant, missionary or convert and the like, all are to be destroyed by torture. There is to be no pity shown, as that would spoil the great undertaking"; is it really true that Hsü Ching-chen and Yuan Ch'ang altered the words "consumed by fire" and "destroyed by torture" into "strenuously protest," which act of patriotic contumacy cost them their lives by sawing asunder but saved the empire; and is it really true that the prime mover in all this madness was Yung Lu, who hoped to bring about the destruction of the Empress Dowager and his own elevation to the Throne? Mr. Cornaby offers no evidence in support of all these remarkable assertions. We should have expected to find such a text loaded with footnotes or appendixes quoting authorities or offering reference. But there are none. It is all a collection of *ipse dixit*. Yet the story will carry conviction to many minds so graphically and artistically is it told, and we apprehend that most readers, as they lay down the book, will share our regret that Mr. Cornaby did not give fuller scope to his pen.

"*Japan and the Comity of Nations*," by Baron ALEXANDER VON SIEBOLD; London, Messrs. Kegan Paul, Trench, Trubner & Co.

Baron Siebold is eminently qualified to tell the story of Japan's struggle to gain admission to the comity of nations, for he himself acted no small part in the drama and enjoyed the confidence of Japanese statesmen throughout. It appears that he undertook to write a series of essays on the subject in the *Ost-Asien*, and that he finally revised and republished them as a whole in a book

of which the volume we are reviewing is an English translation by Mr. Charles Lowe, M.A. It is a small volume containing only some eighteen thousand words, but a very large quantity of information is packed into that limited compass, and, on the whole, Baron Siebold's account seems to us the most commendable in many respects that has yet been published. He carefully disclaims any recourse to official records, but the fact is that his own memory is, in effect, an official record, and he is thus able to marshal his incidents and trace their interactions with exceptional correctness. At the same time, any one examining this book with the hope of discovering diplomatic secrets, will be disappointed. Baron Siebold observes strict and prudent reticence about everything not properly falling within the category of public property, and one consequence of his caution is that the volume presents little novelty to those that lived among the events he describes, though to any one desiring a succinct and cleverly synthesized version of a highly interesting story, the book is to be strongly recommended.

There are a few points calling for brief comment. For example, is it not too eulogistic to speak of pre-*Meiji* Japan as "a country where even the poorest could read and write: where literature, science and art had been cultivated, with a rare devotion, for nearly three centuries of peace"? Very hard would it be, we think, to adduce sufficient proofs of that laudatory verdict. Considering the great difficulty of reading and writing the Japanese language, it may perhaps be true that the total labour devoted to that branch of education in Japan exceeded the total, other things being equal, in most European countries. But as a matter of arithmetic there is much reason to doubt whether exceptional ability to read and write can be claimed for the Japanese nation in Tokugawa times. And what are we to say about "literature and science"? It is indisputable that a small section of the people devoted considerable attention to the works of Chinese philosophers, but surely such a narrow range of reading does not warrant Baron Siebold's dictum, and as to science, well, the least said on that subject the better. These are small matters, however. What we find more important is that the volume is written in a strain unfairly disparaging of England. No one could lay it down without feeling that England acted the part of an obstructionist all through Japan's long struggle for treaty revision, and that the motive of her obstruction was pure conservatism, whereas, on the contrary, Germany figured uniformly as Japan's helpful friend. It can not indeed be denied that England, having incomparably the largest interests at stake, showed herself eminently reluctant to take any step which might rashly jeopardise them. But, after all, England's course was proved by events to have been the most far-seeing and the most practical. Sir Harry Parkes from the very outset rejected the scheme for appointing foreign jurists to the Japanese bench. He did not condemn the project on its own merits, but he declared that the Japanese nation never could be induced to endorse it, whatever might be the case with a few Japanese statesmen of exceptional liberality. In that forecast Sir Harry Parkes showed his keen judgment. It was the Japanese nation that turned its back on the Inouye draft of 1886 and on the Okuma-German treaty of 1889. Besides, the foreign-judge condition assumed such a form in the treaty of 1889, that while retaining its objectionable features from a Japan-

ese point of view, the security it conferred on foreign suitors was practically worthless. England acted wisely when she looked askance at such a condition, and it is by no means fair to attribute her attitude of hesitation to pure conservatism. At all events, the fact ought to be noted that England was the first of all the Powers to agree to treaty revision unhampered by irksome conditions. The Japanese themselves, we believe, recognise that point, though a reader of Baron Siebold's brochure could scarcely fail to overlook it. However, the book was written for Germans. Probably if an Englishman undertook to tell the story to his own countrymen, the Germans would find his version defective.

But it can not be pretended that Baron von Siebold does anything like justice to the part acted by the United States with regard to treaty revision. No one could deduce from his brochure any idea of the friendly attitude maintained by America towards Japan. That can scarcely be called a satisfactory method of writing history which aims at exalting one country alone and ignoring all the rest.

NEW BRITISH WAR-SHIPS.

A chapter on the progress of the British Navy is contributed to *Brassley's Annual* by Commander C. N. Robinson, R.N. This, being largely descriptive of ships that have been launched during the past twelve months, and of operations on those now in course of construction, contains much matter that has already been published. The information, however, is very compactly arranged, so that we see, at a glance almost, what had been done and was being done when the paper was written.

Thus we learn that all the battleships of the 1896-97 programme are afloat—the *Cimopus*, *Goliath*, *Ocean*, *Glory* are in commission; that the *Albion* had been delivered by the contractors, and that the last of the class, the *Vengeance*, was completing at Harrow. Of the 1897-98 programme, all the three battleships provided for, the *Formidable*, *Irresistible* and *Implacable*, had been completed and had either undergone or were about to undergo their trials. The three battleships of the 1898-99 programme, *Venerable*, *Bulwark* and *London*, were completing, and of the four provided for in the 1898-99 supplemental programme, the *Russell* was launched in February and the *Duncan* in March this year, the *Cornwallis* was to be launched on June 18th last and the *Exmouth* was approaching completion. The battleships of the 1899-1900 programme, the *Montagu* and *Albemarle*, were both launched in March last. The 1900-01 programme included two battleships, the *Queen* and the *Prince of Wales*, which took the place on the stocks at Devonport and Chatham of the two vessels last named. These represent a reversion to the 15,000 tons displacement of the *Venerables* and *Formidables*, instead of a continuance of the 14,000 ton *Duncan* and *Albemarle*. They will also differ somewhat from all their predecessors in armament. Hitherto all modern battleships in the British navy have been armed in one way only: two pairs of heavy (13½, 12, or 10 inch.) guns in turrets or barbettes fore and aft, and ten or twelve 6 inch. guns on the broadside. In the case of the *Centurion* and *Barfleur* the broadside battery consists of 4.7-in. quickfiring. The two battleships just laid down will be the subject of an innovation inasmuch as, carrying four 12-in. wire wound guns in the barbettes, they will also mount eight 7.5-in. modified quickfiring and eight or ten 6-in. quickfiring in casemates, besides sixteen 12-pdrs. and other smaller pieces at various points.

Three battleships are mentioned in this year's programme but it is understood that the designs are not yet complete. The later battleships will steam 19 knots against the 18.25, and 18 of the *Ocean* and *Bulwarks*.

Three classes of armoured cruisers are in hand—only one, the *Cressy*—having completed her steam trials, and they number twenty in all. We have, first, the *Drake* class, consisting of the *Drake*, *Leviathan*, *Good Hope* and *King Alfred*, which are all of 14,000 tons, 500 feet long, 71 feet beam and 26 feet draught. Only the *Drake* and *Good Hope* have been launched. Next there is the *Cressy* class,—the *Aboukir*, *Cressy*, *Hogue*, *Sutlej*, *Euryalus*, and *Bacchante*, each of 12,000 tons, 440 feet long, 69½ feet beam and 26¼ feet draught. Of these all have been launched, the *Euryalus* since the *Naval Annual* was printed, on May 20th. The remaining ships are comprised in the "County" class, being the *Monmouth*, *Bedford*, *Berwick*, *Cumberland*, *Donegal*, *Lancaster*, *Kent*, *Essex*, *Cornwall* and *Suffolk*. The *Monmouth* was to have been launched in May last but we have seen no report of the event. All the others are still under construction except that the *Kent* was launched on March 6th. These vessels are of 9,800 tons.

As the *Cressy* is intended to join the China Squadron we may note that she and her class carry two 9.2-in. and twelve 6-in. guns, and are designed to steam 21 knots. The *Cressy*, at her contractors' trials, made 20.7 knots under adverse conditions of wind and sea. She in some respects, except as to armour of course, resembles the *Terrible*, having four funnels, her broadside battery similarly disposed, and embodying other features of that class. The *Drake* class, apart from their greater size, are not greatly different from that just referred to, having the same high forecastle as the *Terrible*, cut down like the *Cressys* aft; there are also four funnels; but a marked departure is apparent in the disposition of the broadside battery, which in these large cruisers is mounted in four double-storied casemates a side, an arrangement rendered necessary to accommodate their sixteen 6-in. quickfiring. The "County" cruisers, smaller than the other two classes, have but three funnels, and show the high forecastle and pronounced sheer of the *Terrible*; they are armed with fourteen 6-in. quick-firers, two forward, two aft and five a side all in armoured casemates. As to speed the *Drake* and "County" ships are to steam 23 knots. In addition to the above there are six armoured cruisers in this year's programme.

Of protected cruisers the only one remaining uncompleted was the *Spartiate*, built at Pembroke, which had to abandon her trials in consequence of her bearings becoming heated.

We pass over the references to second and third class cruisers and sloops, and content ourselves with noting that at the close of the financial year ten torpedo boat destroyers remained to be delivered, but five additional vessels have been purchased and are to be delivered this year. There are ten new destroyers in this year's programme.

It is satisfactory to be told on such authority that the alterations effected on the Royal yacht have made her perfectly seaworthy.

Reference is made to the five sub-marine boats ordered from Messrs. Vickers, Son and Maxin in 1900, the construction of which was kept a secret for some time. They are thus described by Commander Robinson:—

The dimensions of the boats are 63 ft. 4 in. length over all, 11 ft. 9 in. beam, and 120 tons displacement submerged. They will be provided with means of expelling torpedoes either with the boat stationary, during the run on the surface, or submerged at full speed. The armament consists of one torpedo expulsion tube situated at the extreme forward end of the vessel, opening outward 2 ft. below the light water-line. Interlocking safety devices are employed to prevent accident while operating valves, &c., on the expulsion of the torpedo. The general construction of the vessels is such that all portions of the exterior of the hull are free from projections of a nature to be entangled by ropes or other obstacles when submerged, and the lines of the vessel are specially designed to minimize resistance for surface cruising. The propulsion of the vessel on the surface is effected by a gasoline type of main engine, which is supplied with a sufficient amount of fuel for a run of about 400 knots with a maximum speed of about 9 knots. An electric main motor is provided for giving the vessel a speed of 7 knots when submerged. It is worked by storage batteries having a capacity which will admit of a speed of 7 knots for

a four hours' submerged run. Gearing is provided to allow for the charging of the battery, driving the propeller from the main engine, or moving the engine from the main motor, these combinations being effected through clutches which are operated as desired. The lighting of the vessel is effected by portable incandescent electric lamps. The ballasting system consists of apparatus and means for quickly changing the vessel from light to a diving condition and for keeping her displacement constant in different waters. Also for keeping the longitudinal trim under the control of the navigator, and for compensating for the variable weights installed or expended from time to time, such as discharging torpedoes, &c. The air supply and ventilation are secured by compressed air stored on board the vessel, the gasoline vapours from the engines being carefully excluded by suitable arrangements. Safety valves are arranged to relieve any excess of pressure in the vessel over that of the atmosphere. The steering and diving engines are provided with automatic means of moving the rudders to the desired positions to prevent the vessel from inclining to excessive angles during diving or rising, and to keep the depth of submergence constant, as well also as to bring the vessel to a horizontal position at the required depth, and to prevent diving to excessive depths. Steering and diving can be executed by hand gear if desired. The compasses are compensated and adjusted so that the boats can be steered with equal accuracy submerged as on the surface. The type is that which has been invented by Mr. Holland, and has been tried in America.

NAVAL CONSTRUCTION ABROAD.

Though the progress of foreign navies is certainly cognate to the subject, we must deal briefly with Mr. Leyland's chapter in *Brassey's Naval Annual* under this heading. The ruling features in shipbuilding abroad during the past year appear to have been a tendency on the part of foreign Powers towards larger displacements in battleships and the development of special interest in submarine or submersible boats.

In France a programme has been adopted providing for the completion before January 1907 of six battleships of 14,865 tons, five armoured cruisers of 12,416 tons, twenty-eight destroyers of 305 tons, and a number not yet fixed, of sea-going and submarine torpedo boats—probably about 112 of the former and 26 of the latter. In adopting this scheme, the Legislature also endorsed the strong expressions of M. Fleury-Ravarin and of the Minister of Marine (M. de Lanessan) in favour of big ships. The latter spoke of the short range of the torpedo and the long range of the gun, dwelling on the necessity for torpedo craft and battleships and armoured cruisers. He emphasized the importance of a stable platform in order that the gun should be given its full value, of that platform being armoured to secure protection, of speed and range of action,—and so he arrived inevitably at the large battleship.

One battleship, three cruisers (of which we have seen one, the *Guichen*, in these waters), four gunboats, four destroyers (of which one, the *Framée*, was lost in collision with the flagship *Brennus*), several sea-going torpedo-boats and the "submarines" *Morse* and *Naval* were added to the French Navy during 1900. Four armoured cruisers were launched during the same period. From the reports of the various trials and under the heading of "Disasters," the French Navy seems to have been somewhat prone to troubles. The *Jena*, battleship, has had many difficulties in her trials; the sea-going torpedo-boat *Troube* ran on a rock and was seriously damaged; the *Lausquet*, t.b., was too slow and had to be struck off the list; then there was the disaster to the *Framée*; the sea-going torpedo boat *Bouët-Willames* ran on a rock and sank, and the *Caravane* transport sank in Japanese waters after collision.

The trials of the submarines *Gustave Zédé*, *Naval*, and *Morse* are fully described, and there is extended reference to the periscope and other means of obtaining surface vision for submerged boats. We gather that in smooth water such instruments have been used with a fair measure of success, indeed M. Rousseau declared in the *Moniteur de la Flotte* that during the Cherbourg experiment the sea was very rough and that the appliance as employed on the *Morse* gave, nevertheless, a very clear view. Perhaps the state of the sea and the nature of the vision obtained are both somewhat exaggerated in the above assertion.

Apart, too, from visual difficulties there seem to be other impediments to the easy use of these craft. Only the other day (beginning of May) there was published a telegram from Cherbourg to the *Temps* reporting the death in the Maritime Hospital there of Lieutenant Guisnez, commander of the *Naval*. Lieutenant Guisnez had superintended the fitting out of the vessel, and had commanded it at its trials. His term of command was almost completed. The *Temps* correspondent added:—"The malady to which this officer has succumbed was not foreign to the fatigues entailed by his command." Now, what meaning is to be attached to that significant sentence? Is it to be concluded that the officer died from the effects of an accident such as occurs frequently on those boats? Or that certain kinds of illness are brought on by employment on board them?

After reading the alarmist paper of Colonel Willoughby Verner in the *Fortnightly*, nervous people will hardly be reassured to peruse Mr. Leyland's summary of the measures for the improving and strengthening of naval bases in the Mediterranean, on which of course Colonel Verner's article was largely founded.

Two battleships, one armoured cruiser, and four third class cruisers were launched in Germany during 1900; four battleships, one armoured cruiser and a gunboat were in hand at the close of the year, and two battleships will be laid down this year. It is expected that the armoured cruiser building will be launched in 1901.

While in the case of the French manoeuvres it was said that no ambitious strategic schemes were laid down and the commander-in-chief was content to put the fleet through a great many useful exercises, the German manoeuvres elicited the comment that the final operations involved a great deal of "make-believe;" there was thus, it was added, a certain air of unreality about them.

Russia sent afloat four battleships in 1901 and early in 1901. Of these the latest, the *Cesarevitch*, launched at La Seyne in February last, is described. She is a little over 13,000 tons, and is protected by a steel belt to emerge 20 feet above and to descend 5 feet below the water line, the thickness of which is 9.8-in. amidship at its edge and 6.6 in. at its lower, these measurements tapering off fore and aft. The main armament consists of four 12-in. guns (in pairs) in turrets fore and aft protected by 10 and 11 inches of steel, and twelve 6-in. quick-firers, also in pairs, in 6½ in. steel turrets. They are so arranged that for bow and stern fire there are alleged to be two 12-in. and eight 6-in. guns available, while for broadside fire four 12-in. and six 6-in. guns can be brought to bear. Four battleships have been laid down, as well as the coast defence ship *Admiral Bontakoff*. An armoured cruiser was launched at La Seyne during 1900, the *Bayan* of 7,800 tons, mounting two 8-in. six 6-in. and twenty 3-in. (12-pdrs.), and is meant to steam 21 knots. Five protected cruisers were launched in the same period, of which the *Rogatyr*, floated at Stettin in January last, is described as of 6,750 tons, carrying twelve 6-in. guns as her main battery, and steaming 23 knots.

In Italy, though a scheme of naval construction extending to 1912 and involving the expenditure of 342 million lire on ten 10,000-ton battleships, sixteen destroyers, four auxiliary vessels and eleven torpedo boats, and of 77 millions more to replace obsolete ships in 1910-1912 was projected, nothing definite has been decided on as to future ship-building. Italy, indeed, has fallen behind other nations in the matter of naval expansion. The intention to build four small battleships or armoured cruisers of 8,000 tons has been departed from, and, instead, three ships of 12,624 tons, well protected, heavily armed, and with a speed of 22 knots, are to be laid down. One will probably be put on the stocks this year. They are to mount two 12-in. guns singly in axial turrets, and twelve 8-in. guns coupled in six turrets, three a side. Two battleships, of 13,500 tons, will, it is expected, be launched this year—as a matter of fact one should now be afloat, but we have not seen her launch reported. These vessels, the *Regina Margherita*, and *Benedito Brin*, will mount four 12-in., four 8-in., and twelve 6-in. guns as their main and secondary batteries. In

the reports of trials we note that the Belleville boilers of the cruiser *Varese*, though in the hands of inexperienced stokers, and severely tried, gave perfect satisfaction.

In the United States three single turret monitors were launched in 1900. These ships, with a displacement of 3,275 tons, carry two 12-in. guns, four 4-in. quick firers, etc., and are heavily armoured on the barbettes and amidships. Six destroyers were launched in 1900 or the early part of 1901, as well as a number of torpedo boats.

Two submarine boats, the *Holland* and the *Plunger*, were under trial and there are already in hand or provided for, six others, all of which under contract should be completed before the 25th of this month.

Designs have been prepared for five battleships, of which at first three were to have their secondary armament in superposed turrets and the others their 8-in. guns in independent turrets. It was finally decided, however, that in all five the superposed turret plan shall be adopted. The displacement of these vessels will probably be 15,000 tons and they are intended to steam 19 knots. Mr. Leyland compares them with ships of the *Duncan* class, manifestly to the disadvantage of the latter so far as armament is concerned, for the American ships have the same main battery as the English vessels, eight 8-in. guns where the latter have none, the same number of 6-in. quick firers, 14-pdrs. where they have 12-pdrs. and twelve 3-pdrs. to their six.

Six armoured cruisers, described last year, are under way and 3 protected cruisers have been provided for. The latter will carry fourteen 6-in. quick firers, twenty 14-pdrs and a dozen 3-pdrs; they will displace 9,700 tons and should steam at 22 knots.

The section devoted to Japan contains hardly anything that is new to us in the Far East. A description of the battleship *Mikasa*, taken from the *Times*, is followed by an account of the trials of her sister, the *Asahi*, and reference is made to the presence of the *Hatsuse* at Queen Victoria's funeral, to the launch and trials of the cruiser *Awate*, the launch at Yokosuka of the *Chihaya*, and to the ordering of four 31-knot destroyers from England. With the completion of the *post bellum* programme naval construction has come to a practical, if temporary, standstill.

Austria-Hungary launched last year one coast defence ship of 8,340 tons, mounting three 9.4-in. and twelve 5.9-in. guns, and two battleships of similar displacement are in hand and will probably be launched this autumn. Two more ships of this class will then be laid down. A protected cruiser of 7,400 tons is also contemplated.

Naval expansion in Denmark consists of the construction of a torpedo transport, of 380 tons; Greece has been able to re-arm two armoured-clads, which process the war with Turkey prevented; the Liberian navy is no more, one ship having sunk at anchor and the other been wrecked; Holland has launched a coast defence ship of 5,000 tons and has ordered three torpedo boats, and so forth. Norway and Sweden continue the building of coast defence craft. Spain has launched two cruisers, one an armoured vessel of 7,000 tons, steaming 20 knots, and the other a smaller ship of 2,000 tons. Finally, Turkey is having a momentary revival of naval ambition. The old ironclad *Messoudieh* has been re-armed and engined; two small destroyers will be launched this year; and a contract has been signed with Krupp for 208 quick-firing guns, including four 8.2-in., fifty-two 5.9-in., fifty-six 2.9-in., and a number of smaller calibres.

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

	Air	Temp.	State of	Remarks in
	Max.	Min.	Weather.	General.
Sunday, 7th	66°	56°	72°	Rain...
Monday, 8th	62°	58°	72°	Rain...
Tuesday, 9th	68°	59°	72°	Fine...
Wednesday, 10th	64°	57°	72°	Rain...
Thursday, 11th	71°	61°	73°	Fine...
Friday, 12th	71°	63°	73°	Fine...
Saturday, 13th	72°	63°	73°	Fine...

KING ALFRED'S SCHOOL, WANTAGE.

The total lack of scholastic establishments suitable for the education of foreign lads which characterises Yokohama at present makes it imperative for parents to send their boys to the homelands if they are to be educated at all and given a chance in the battle of life. Among the many schools in England which would suit the pockets of the average Yokohama resident, none seem more attractive than King Alfred's School, at Wantage, Berkshire. Although, unfortunately, no authentic records exist of its foundation, this School can boast of considerable antiquity, for the Charter, renewed in the reign of Queen Elizabeth, implies that the school had already existed for a considerable period. There are also traditions of its existence in the reign of Henry VI. The school is capitally equipped, its endowments having been considerably augmented by large grants within recent years, and the buildings are thoroughly up to date. The education given at the school is an essentially modern one, in which science, mathematics, modern languages, and commercial subjects are the chief factors. Though part of the school is conducted as a school of science—the only one in the county of Berks—the original aim of the foundation has not been lost sight of, and purely literary work still receives its due share of attention. The fees are £2 per term for lads under 11 years, rising to £2.13.4d. for those over 14; extras are few. Boarders are taken for 33 guineas per annum, under 14 years; at 36 guineas for those over 14. Further information regarding the school can be had by applying to Mr. H. J. Neville, No. 57, Yokohama.

RECEPTION ON THE U.S. FLAGSHIP.

A large company responded to the invitation of Rear-Admiral Frederick Rodgers, the captains and officers of the united U.S. squadrons in Yokohama, to a party on board the flagship *New York* on Wednesday afternoon. The day was warm but a mild south-easterly breeze tempered the heat, and while the passage out was not unpleasant in the numerous launches provided for visitors, it was most enjoyable to spend an hour or two on the cruiser's quarter-deck.

The big ship was practically opened up to the inspection of the visitors, bluejackets and marines vying with officers in courteous treatment. The vessel was not dressed, but the quarter deck was screened in with bunting, and the band, playing on the port side the programme set down below, dancing was engaged in all the afternoon. It hardly needs to be said that the amplest arrangement was made for the guests of the squadron. These included many high Japanese officials, political, military and naval, and most of the leading residents of Tokyo and Yokohama. An excellent collation supplied by Clausen's Hotel was provided. We give below the dance programme:—

March.....	"Rocked in the Cradle of the Deep."	Lardeneau.
March.....	"Hands Across the Sea."	Sousa.
Waltz.....	"Dream on the Ocean."	Gun'l.
Mazurka.....	"One Heart One Mind."	Strauss.
Two Step.....	"Rastus on the Parade."	Mills.
Waltz.....	"The Fatal Rose of Red."	Smith.
Polka.....	"Honey Come Kiss Yo' Baby."	Boettger.
Waltz.....	"Lone Star."	Savasta.
Two Step.....	"When Reuben Comes to Town."	Mills.
Waltz.....	"Medley."	Smith.
Lancers.....	"U.S. Army."	Tobani.
Extra.....	"Plantation Songs."	Conterno.
Two Step.....	"Under the Double Eagle."	Wagner.
Waltz.....	"When the Harvest Days are Over."	Von Tilzer.
Two Step.....	"King Cotton."	Sousa.
Waltz.....	"Immortellen."	Gung'l.
Two Step.....	"Uncle Remus."	Bean.
Waltz.....	"Love's Dreamland."	Roeder.
Schottische.....	"A Southern Jamboree."	Lerman.
Lancers.....	"Kerry Mills."	Mills.
Cake Walk.....	"Every Race has a Flag but a Coon."	Boettger.
March.....	"Tommy Atkins."	J. H. S.

THE LATE MR. HERMANN MARCUS.

The *Kobe Herald* contains the following reference to the death of Mr. Hermann Marcus, which occurred at Kobe on July 22nd, and of whom it says that it is no exaggeration to say that everyone with whom he came in contact esteemed him for his many admirable qualities of head and heart. The deceased gentleman first came to Japan about 11 years ago, as the representative of Messrs. Joseph Lyons & Co., with which firm he had been previously connected in London. On the death of Mr. Lyons, Mr. Marcus joined Messrs. Strauss & Co., and has been with them ever since. He has not enjoyed good health for a long time and a few years ago went to Egypt, the climate of which benefitted him. Desirous however of resuming his position in the firm, he returned to Japan, only to find his health a further source of anxiety. A few months ago he sent home for a sister, to whose early arrival he was, as late as Friday last, when he was in the office, looking forward with the keenest pleasure. The seeds of the disease—consumption—however, had gained too firm a hold upon him and he breathed his last at 2.30 on Monday morning, just two hours before the steamer bringing his sister arrived in the harbour. Sincere sympathy is felt for Miss Marcus in the crushing blow which has fallen upon her.

Mr. Marcus was an old City of London School boy and had been chosen a musical or literary career would undoubtedly have achieved high distinction in either path, for he had rare musical capacities and literary capabilities of no mean order. He chose commerce, however, and in Japan won a host of friends through the sterling qualities of a happy, high-souled disposition which long-continued illness never seemed to blunt. His early death is mourned by a wide circle indeed.

JAPANESE PRISON STATISTICS.

Prison statistics published in the *Jiji* give the following figures:—

	Males.	Females.	Total.
Transportation for life	849	49	898
Transportation for a fixed period	3,242	249	3,491
Major confinement	3,855	610	4,465
Minor confinement	3,091	342	3,433
Major imprisonment	11	—	11
Minor imprisonment	3	—	3
Temporary—			
Exile	7	—	7
Below 7 years.....	1,072	17	1,089
Below 5 years.....	5,364	122	5,486
Below 3 years.....	9,067	334	9,401
Below 1 year.....	5,883	255	6,138
Below 6 months.....	10,396	787	11,183
Below 1 month.....	1,910	196	2,106
Total	33,692	1,711	35,403

Below 3 years.....	18	1	19
Below 1 year.....	56	1	57
Below 6 months.....	150	3	153
Below 1 month.....	803	42	845
Total	1,027	47	1,074

Detention	722	186	909
Discipline	3	—	3
Convicted of former offences	48	1	49
First offences	18,448	2,204	20,652
Convicts guilty of repeated offences	28,103	991	29,094

The following is a comparative table showing the number of prisoners at the end of May this year and at the same time last year:—

	At end of May 1901.	At end of May 1900.
Prisoners.....	49,746	50,878
Criminal defendants.....	7,804	7,837
Detained for correction.....	152	137
Detained in separate cells.....	845	894
Children.....	98	123
Total	58,645	59,869

Fire broke out in the house of a tub maker at Araicho, Honjo, Tokyo, on the night of the 17th inst. One house was destroyed and one damaged. A small boy was burned to death and two persons were injured.

DR. WATANABE ON THE FUTURE OF JAPANESE INDUSTRY.

Dr. Watanabe Watari, well-known as a professor of engineering, has contributed to the *Nichi Nichi Shimbun* a series of articles on the prospects of Japanese industry, which are worthy of the attention of foreign merchants. We confine ourselves to stating in as few words as possible the views of the writer under the headings of the original articles.

INDUSTRIAL SCHOOLS.

The establishment of a large number of industrial schools is absolutely essential if we aim at competing successfully with foreigners in the matter of industry. High Class Industrial Schools such as we have in Tokyo and Osaka are very costly, so that in the present state of our finances they can not be increased to any great extent. Elementary industrial schools in every part of the empire are a great desideratum. The education given at the University does not produce, as far as the Engineering College is concerned, as many practical men who are capable of initiating and superintending industrial enterprises as is desirable, and it is absolutely necessary that the Mombusho should study more the pressing wants of the country and shape their educational policy accordingly. In order to realise how poor Japan actually is one must live abroad for a short time. The avenue to wealth in our case lies through industry, but in order to be successful at this our young people must be better taught than they are. This question of industrial education is one which the Mombusho only can deal with effectually. The necessity of postponing the completion of certain undertakings, on which the Government has embarked, on account of shortness of funds is most unfortunate. It conveys a bad impression in foreign countries and thus injures our prestige. But such incidents cannot be prevented from recurring as long as the sources of national revenue are inadequate to the country's requirements. The fact of the matter is that we can never feel ourselves safe until we find a way of making sufficient money to enable us to hold our own against foreign countries. It must never be forgotten that increased self-assertion in foreign countries and in international affairs must have at its back material wealth in order to prove effective. It amounts to this, then, that the political situation in the Far East is such that the development to the full of our industrial resources is a matter of vital importance to us as a nation. In regard to industrial education we cannot do better than be guided by the policy adopted by the most successful Western nations. In very recent times there are no countries that have made more rapid progress in industry than the United States and Germany. In neither of these countries are there very many high grade industrial schools. High as is the reputation of Germany for advanced learning, for several decades she has made a special point of multiplying her elementary commercial and industrial schools. The consequence is that she finds herself now supplied with thousands upon thousands of thoroughly trained young men to engage in trade and push German interests the world over. This is the explanation of the rapid growth of German trade in the East. The Americans have adopted the same policy with similar results. England is beginning to realise that she is being left behind in the race and talks of paying more attention to the training of her young men. We are apt to speak of Russia as a barbarian country, but the trouble she takes to make her people acquainted with the best methods of doing business of every kind might well be imitated by us. She sends numbers of students abroad to study, and employs Germans and others to superintend various industries. If these efforts have been put forth by nations whose position is assured in the world in order to enable them to meet possible serious reverses with calmness, how much more are they required in the case of a people like ourselves who have only just been admitted to the council-boards of the great Powers and who in regard to wealth have still to make for themselves a name.

CHEMICAL TECHNOLOGY.

There are European countries like England and Germany where for a very long period special attention has been paid to this subject and the manufacture of such things as sulphuric acid, soda, and the like, has grown accordingly. America is a comparatively new hand at this class of business. When I visited the United States 14 or 15 years ago I was astonished at the little that had been done in this line of industry, but in recent years her large output of iron has been utilised for manufacturing purposes to such an extent that Europe is left far behind in the race. In accounting for this new development in America it is not enough to say that, being a new country, she is bound to be rich in minerals, and having a surplus of iron it was natural for her to work it into a saleable shape. There is another cause for America's progress. She has felt the necessity of putting a check on the large quantity of material and manufactured goods yearly imported from Europe. In a word she has the advantage of having a big home market for all she produces and can look forward to successful competition in foreign markets later on. With us the very reverse is the case. Our home market is extremely limited. The only foreign countries where we have a chance of competing with foreigners are China and Korea, and there the demand for manufactured articles is very limited. We may say, then, in this line of industry Japan stands little chance and it is perhaps best that we should recognise this and give our whole attention and strength to more promising fields.

JAPAN'S NATURAL PRODUCTS.

It is of no use our worrying ourselves over the import of articles which can be produced at a cheaper rate in foreign countries than they would cost to make here. Our best plan is to develop to the utmost those industries for the produce of which a ready foreign market is always found. First and foremost of these are:—

(1.) SILKEN WOVEN GOODS, the annual export of which now stands at 88 million yen. The prospects of this industry could hardly be brighter than they are. The growing wealth of Europe and America implies the growth of the luxurious spirit which revels in costly articles like silk. There is much imitation silk in the market, but nevertheless men of wealth and standing in society prefer to have the real article, and will go to any expense to procure it. The tendency to extravagant living in Europe and America is increasing every day. One striking proof of this I will cite here. In former days it is stated that 80 per cent. of the gold annually produced was turned into coins and the remaining 20 per cent. used for making various articles. Now the exact reverse is the case; no less than 80 per cent. of the annual output of gold, silver and copper is used for technological purposes and only 20 per cent. is turned into coins. We can then welcome the growth of luxury in the West, and our Government should do its utmost to push our silk manufacture more than it has hitherto done.

(2.) SALT.—This is produced in such quantity and at such a cheap rate in foreign countries that no amount of Government protection would suffice to enable Japanese to compete successfully in this line of business. Hence protection had better be withheld from this industry.

(3.) TEA.—There are hot countries like India where with little labour the class of tea for which there is the largest demand in the Western world can be produced in large quantities. So that Japan stands little chance of holding her own against foreigners in this industry. The demand for the high-class tea which Japan grows, known as 玉露 *Gyokuro*, is comparatively small, and hence it is waste of money for the Government to protect such an industry.

(4.) COAL.—Though we export annually 15 million yen worth of this product, it is no cause for gratification whatever. There are those who seem to think that anything and everything that can be converted into money should be exported, but statesmen should before all things take into consideration the permanent interests of the country in such matters. Although the ex-

port of Japanese coal were to stop to-morrow, the world would not be much inconvenienced thereby, our coal fields being very insignificant compared to those found in other countries. But regarding the matter from a national standpoint the failure of our home supply of coal might mean the death of our industries. How could we possibly compete with Western countries if the coal used by us had to be imported at a high price? The indiscriminate export of coal that is now going on is in our view a "penny wise and a pound foolish" policy. Although the sale of it yields a little ready money for the time being, it exposes us to serious risks in the future. A limit should be placed on the export of coal and what is exported should be sold at a good price.

(5.) COPPER.—The annual export of this metal and things made of it is valued at 13 million yen. The output of the world goes on increasing every year till now it has reached 470,000 tons, of which America produces 160,000 and Spain and Portugal about fifty or sixty thousand tons. Japan's output is probably about twenty-seven or twenty-eight thousand tons. She ranks third among copper producing countries. There is no fear of the copper supply of the world exceeding the demand for the metal. However much Japan produces, there will always be a market for it. The amount she uses annually is very small, so that should the supply run short she would feel little inconvenience therefrom. Here then is an export which, unlike coal, entails no risk of future loss and in which there is every prospect of increased gain. Hence the copper industry should be pushed to the utmost extent. This export has much brighter prospects than articles like cement or yarns.

(6.) THE AMOUNT OF KNOWLEDGE OF MINEROLOGY POSSESSED BY JAPANESE.—There is no denying that our people are quite behind the age in their general notions on the subject of mineral products and their connection with revenue. The crudeness and ignorance of the notions entertained by the masses on this subject are shared by members of the Imperial Diet, who invariably treat all these subjects with perfect indifference. The Government spends all its time and strength in devising means for extracting money from the pockets of the few who possess it and fails to devise measures for creating new sources of revenue. Though the majority of us are quite satisfied with the amount of produce sent to the market month after month, to those who know what might be done in the mineral industry alone the condition of affairs seems pitiable. It is true to say that the nation has not the faintest notion of how to become rich. All one hears on every side are sighs of despair. (*Komatta, komatta to awo iki wa haku bakari de sakoshi mo saigen wa hakken suru michi wa shiranai no de aru.*) "This mine is no good, and that mine is going to prove a failure." Men who talk thus confess their own ignorance and unresourcefulness; with such management as they are now under it is no wonder that mines should fail. As long as our people are ignorant of the methods being followed in the outside world they will remain satisfied with the puny mining efforts we are now making. One of the chief reasons of the enormous energy put into the working of mines in recent years in the outside world is the discovery of new modes of refining metals whereby they are made to yield profits undreamt of a few decades ago. But this is unknown to the majority of our mine owners, who do nothing but express wonder at the vast output of the outside world while condemning the mines of their own country—mines that in other hands would be made to yield enormous gains. (*Jitsu wa karera no dame de aru to kangae oru kōsan ga yaku ni tatsu yōna yo no naka ni natte aru no de aru. Sore wa Nihon bakari ga shiranai no de aru.*)

(7.) GOLD.—This is a metal which is very deficient in this country. Though known as a nation that has a gold currency we are practically without gold compared to other countries. Now there are two ways of procuring gold. (a) We can increase our exports and add to their value to such an extent that gold will come flowing into the country in large quantities.

For example, by adopting the new methods of refining copper we can double the value of this export, that is we can make it worth 26 million *yen* a year instead of 13 million. (6) The second method of obtaining gold is by encouraging the gold-digging industry as much as possible. The present yearly yield is only about 500 *kwan*. By a little more private enterprise and by Government help this quantity could be doubled without much difficulty. I am discussing all these questions from the point of view of the State and not from a commercial point of view. A *momme* (=58 grains Troy; 1,000 *momme*=1 *kwan*) of gold is now worth 5 *yen* in this country. Whether by the skilful development of such resources as we have we yearly increase our gold, or whether we dig more of it out of the earth, it matters little. But the money has to be made somehow and the sooner the authorities realise this the better.

(8.) THE DEPARTMENT OF AGRICULTURE AND COMMERCE.—What this Department is doing I don't know, but it is very certain that the country will never make rapid progress unless steps be taken by the State to facilitate that progress. Take a country like America. Has not the State laid out enormous sums in establishing cheap means of communication between places. It is wonderful how far you can ride in big American cities for 5 cents, and they talk of reducing the fares to 3 cents. In that country private enterprise and state aid, combine to make things "hum." But here the policy of the Government is to make means of communication as dear as possible. The railway fares on Government lines have gone up, and the postal rates have been raised. By adopting this policy the Government is hindering progress instead of aiding it. If this course be pursued no rapid development can take place. However earnest private individuals may be in this matter, the officials who alone have the power to put new life into the industrial and agricultural world are utterly listless. They have been supplied with endless reports on the existing state of affairs and the remedies that are required to meet them, but they disregard such reports entirely. I myself have presented such a report, but finding that it has led to nothing, I have now made up my mind to set to work in my professional capacity in the copper mines with which I am connected and by the adoption of new modes of working the ore to see whether I can't obtain a yearly yield that shall double the present output. My motto henceforth shall be *ron yori shigoto*, 'work rather than theory.'

(9.) THE COST OF PRODUCING.—This is a point of great importance, as upon it principally depends success or failure in competition with foreigners. One of the reasons of our being unable to place goods on the market as cheaply as our competitors is that owing to our awkward method of setting about things the cost of producing runs up to too high a figure. Since returning from abroad the year before last, I have been continually engaged in making investigations with a view to reducing the working expenses of various industries and have made many suggestions as to how this may be accomplished.

(10.) ORE POISONING.—This is a matter on which it is the duty of the Government to take prompt and decided action. The hindrances to business which are caused by widespread reports as to the ill-effects of certain mineral products on animal and vegetable life are very serious. This subject demands the most thorough investigation, and this should be followed by the adoption of strict preventive measures. To recommend the shutting down of a mine because a poisonous substance is discharged from it is quite absurd. Rich sources of national revenue are not to be dealt with in this fashion. There are antidotes for most of the poisons known and the business of the world does not stop on account of the existence of a hundred poisonous substances. The plea that mines should be stopped because the working of them causes the death of neighbouring trees is ridiculous, when the value of the minerals obtained is compared with the value of the trees. That charcoal burners and woodmen should complain is natural

enough, but that an industry which is enriching the country by millions of *yen* should be hindered by any such complaints is the height of folly. This ore poisoning agitation that we hear so much of is characterised by no little ignorance. Nevertheless it would have been better had the Government paid more attention to the matter and dealt with it in a business-like manner from the beginning.

(11.) THE PROGRESS OF THE WORLD'S GREAT ENTERPRISES.—One of the chief causes of the remarkable progress which the world has made in modern times is based on the principle that one thing helps another. Industry, agriculture, commerce all play into each other's hands in a properly conducted game of business cards. But in this country we have not yet reached the stage of the hand-in-hand progress of the wealth producing operations of mankind. If industry has made rapid progress, agriculture is just as it was in the Tokugawa age. Forestry is all behind and many other things that could be named. This is one of our greatest troubles and it differentiates us from the rest of the civilised world. If all our various enterprises advanced with equal step, there would be none of the friction that now exists between the progressists and the stay-behinds. If only the Government were thoroughly awake to the importance of bringing things more into line with each other it would augur brightly for the future.

But despite the difficulties we have had to encounter, the progress of the mining industry during the past 10 years has been something remarkable. Ten years ago our annual output of metal was only 2 million *yen*. It is now 42 million. I see no reason why it should not reach 60 or even 80 million. Other industries have not proceeded at the same rate, they having been influenced largely by market fluctuations and other circumstances.

THE MARQUARDT CONCERT.

Despite the great heat, a crowded audience gathered in the Public Hall on Thursday evening, attracted by the fair promise of good music. And for once in a way, a Public Hall assembly found its expectations more than realised. Herr Marquardt is a complete master of the violin and interprets the music of Vieuxtemps, Saint Labin, Sarasate, Fesca and other composers in a manner that borders on the marvellous; while in the hands of Madame Breitschuck-Marquardt the harp becomes an instrument endowed with the spirit of life. It was not long before the eminent merits of Madame Breitschuck-Marquardt were demonstrated and the house sat really spell-bound during the last few passages of the Mazurka which she gave as her first solo. Inheriting from her father, the famous harpist Breitschuck, peculiar aptitudes for this magnificent instrument, she has brought to her work a passionate delight in all things musical, together with an indomitable industry which has enabled her to surmount the many difficulties which strew the path of those who take up the study of the harp. And so it is that she can bend the instrument to her will and produce effects almost beyond the comprehension of even the initiated. No wonder then that she has won a foremost place in her profession, and that her audience last night echoed the verdict that has been passed upon her in the big musical centres of the Western world. If her solo work was good, quite as charming was her playing in the concerted pieces, and more especially in Gounod's "Ave Maria," the vocal part of which was taken by Mrs. J. Pender Mollison.

To Herr Marquardt too the audience is indebted for a rich musical treat. Seldom does a violinist of his eminence wander to the Far East. As has been remarked in other cities, Herr Marquardt completely merges his personality in his instrument, throwing all the enthusiasm of a rare musical temperament into his work. The result is seen in the perfection of a perfect art. Thus the whole evening was filled with musical delights, making one regret that this may be Yokohama's only opportunity of hearing the accomplished visitors in public, at least for some time to come. Mrs. Mollison sang as beautifully as ever, and was heartily thanked by her audience, being re-

called again and again. The baritone songs of Mr. Somerton were very pleasantly rendered and duly applauded; while Mr. Richter's contraltos at the piano and Mr. Schmidt's on the cello were quite invaluable. Two baskets of flowers were handed up to Madame Breitschuck-Marquardt during the evening; and Mrs. Mollison also received a floral tribute. It is with regret that we find pressure of time and space prevents a longer notice of one of the most enjoyable concerts ever given in the Public Hall. The programme is appended; it speaks for itself:—

Trio for Piano, Violin and Cello.....Fesca.
Herr MARQUARDT, Herr RICHTER, and Herr
RUDOLPH SCHMIDT.
Harp Solo—"Mazurka de Concert".....Schuecker.
Madame BREITSCHUCK-MARQUARDT.
Violin Solo—"Fantasie appassionata".....Vieuxtemps.
Herr MARQUARDT.
Baritone Solo—"Song to the Evening Star"
from "Tannhauser".....Wagner.
Mr. S. H. SOMERTON.
Violin Solo—"Fantasie" on sextett from
"Lucia di Lammermoor".....Saint Labin.
Herr MARQUARDT.
Soprano, Harp and Violin—"Ave Maria".....Gounod.
Mrs. J. P. MOLLISON, Madame BREITSCHUCK-MAR-
QUARDT, Herr RICHTER, and Herr MARQUARDT.
Harp Solo—"Fantasie on "Last Rose of
Summer".....Alexandra Marquardt.
Madame BREITSCHUCK-MARQUARDT.
Violin Solo—"Romance and Gavotte from
"Mignon".....Sarasate.
Herr MARQUARDT.
Baritone Solo—"The Arrow and the Song".....Pisniti.
Mr. S. H. SOMERTON.
Harp and Violin Duets—"Reverie".....Vieuxtemps.
Intermezzo from "Cavalleria Rusticana".....Mascagni.
Madame BREITSCHUCK-MARQUARDT, and Herr
MARQUARDT.

BASEBALL.

PEERS' SCHOOL VERSUS Y.C. AND A.C.

The return baseball match between a nine from the Peers' School, Tokyo, and a team of the Y.C. and A.C. took place on the Cricket-ground, Yokohama, on Saturday, and resulted in a defeat for the visitors by three runs, Yokohama scoring 9 runs and the Peers' School 6. Yokohama made one run in the first innings, Edwards reaching the home plate. Then nothing more resulted until the fourth innings, when the home team managed to get Blake, Hellyer, and Kilby home. The visitors, in the last half of this innings also scored a run, Iwamura making the point. Yokohama went out for nothing in the fifth innings, but the Peers' School piled up four runs, making them one ahead of the home nine. Yokohama tied the score in the next innings, Lowrie being the man to get home. The seventh innings saw the visitors make their last run, Saigo running in amid tremendous excitement. Yokohama scored four runs in the eighth innings, Kilby, McChesney, Edwards and Swan all getting home. From this point on nothing was made, the fielders and the battery having it all their own way. On the whole it was a capital game and an improvement on the first encounter. Positions:—

Y. C. AND A. C.				PEERS' SCHOOL.			
L. E. McChesney	C.F.	Y. Matsukata.
E. B. S. Edwards	3B.	Saigo.
E. C. Swan	C.	S. Matsukata.
W. L. Merriman	R.F.	Iwamura.
D. H. Blake	P.	Kuroda.
R. Richardson	L.F.	Shingo.
M. Lowrie	S.S.	Mizuno.
A. T. Hellyer	2B.	Y. Matsukata.
E. W. Kilby	1B.	Kamei.

SCORE.

INNINGS.	1	2	3	4	5	6	7	8	9
Y. C. and A. C.	1	0	0	3	0	1	0	4	0=9
Peers' School	0	0	0	1	4	0	1	0	0=6

SWIMMING RACES.

We understand that the swimming races, etc., of the Yokohama Amateur Rowing Club will take place on August 10th. There will be a 100 yards open race, a similar distance for non-winners, a quarter mile race, a long dive, a spring board, and standing and running headers.

YACHTING.

Four cruisers started on Saturday afternoon for the "Asagao" Cup, presented on handicap, and a second prize by the Club on club time.

The race resolved itself into a match between *Dainyo* and *Scanhild* which, especially towards the finish, was quite exciting. The wind was baffling but after working down the bay they rounded the Widow Buoy almost together, *Dainyo* ahead; thence they came back with spinnakers to the Lightship, reached in to the breakwater and beat up the harbour. *Scanhild* lost some time by the proximity of a steamer but as it was finished less than a minute late. Following were the times:—

	Finish. h.m.s.		Finish. h.m.s.
<i>Dainyo</i>	4-47.30	<i>Scanhild</i>	4-48.25
<i>Mosquito</i>	5-18.30	<i>Surprise</i>	5-32.45

Dainyo and *Scanhild* both sailed scratch for the cup and the former therefore won it. For the second prize both allowed the other two (*Mosquito*, 7.02; *Surprise*, 8.10) and were consequently well within their time and *Scanhild* therefore gained the second prize. *Dainyo* got 1 record point and *Scanhild* 2.

Five 12-raters, started for a race round the usual course with the result that *Vera* came in first, *Madelaine* second, and *Shamrock* third.

THE "KINSHU MARU."

The N.Y.K. s.s. *Kinshu Maru* is reported ashore on the coast of Quelpart Island. No particulars are yet to hand. It would seem that intelligence of the event was telegraphed from Mokpho, and as that place is 100 miles from Quelpart, two days elapsed before the news reached Tokyo. The *Omi Maru* was sent at once to take off the passengers of the *Kinshu*, and a Japanese gun-boat was also despatched by the Admiralty to render assistance. It is believed that the ship ran ashore during a fog, while en route between Moji and Shanghai. The telegram states that she is not making water.

COLLISION AT WOOSUNG.

A collision occurred at Woosung on July 19th between the Mitsui Bussan steamer *Aikawa Maru*, entering the river from Nagasaki, and the Nordd. Lloyd's tender *Bremen*, which lay alongside the steamer *Bayern*. The *Aikawa* struck the *Bremen*, her stem cutting into the tender right amidships on the port side. The *Aikawa Maru* immediately reversed her engines and went full speed astern, and in doing so, got into a native lanch, which was smashed up. The *Bremen* suffered considerable damage, both above and below the water line, and was leaking badly. The stem of the *Aikawa Maru* seems to have cut right into her, breaking the guard rail and driving through several planks of the upper deck and staving in several plates on the port side. Had she penetrated a foot further, she must have cut into the boilers of the tender. The *Bayern* suffered practically no damage. Two of her upper plates were bulged, but she sustained no damage to interfere with her departure at the proper time.

FOREIGN LOOTERS PUNISHED.

Mr. Ragsdale, U.S. Consul at Tientsin, held a Court on July 12th at his consulate for the trial of three Americans, James Winn, Richard Leslie Butler and Alfred Plant, who were alleged to have been concerned with others in looting a pawnbroker's shop at Chang-kee Chuang, about 30 miles N.E. of Peking. Mr. Ragsdale sat as judge, with Mr. C. D. Tenney, Mr. Drake and Mr. Standing as Assessors. Mr. Fames, barrister, appeared on behalf of the defendants. Mr. MacLay acted as interpreter. The case was in the first instance brought to the notice of the American Chargé d'Affaires in Peking by the Viceroy Li Hung-chang, who forwarded to Mr. Squiers a copy of a report by Brigadier General Li-an-tung, in charge of the

district of Tung-chao and Yung-ping-fu. The evidence showed that five foreigners (including the accused) with six Chinese, and accompanied by four carters with carts, went to the premises in question and having demanded Tls. 5,000, broken open safes and other receptacles and in this way obtained Tls. 500. All three were found guilty of robbery with violence. They were sentenced to four years' imprisonment each; which will be served in Shanghai.

NEWS OF THE WEEK.

2,909 tons of British coal arrived at Nagasaki on the 23rd inst.

Princesses Fumi and Yasu will leave Tokyo for Miyoshihita on the morning of the 21st inst.

Major-General Gascoigne left Nagasaki on the evening of the 22nd inst.

Mr. Futakuchi, Japanese Consul at Soochow, left Nagasaki for his post on the 22nd inst.

Mr. Justice Wilkinson arrived in Yokohama from Shanghai on Friday. He intends spending some time at Hakone.

A man named Nakamaru Kisaburo, living at Minami Otanachi, Yokohama, hanged himself at his house on the morning of the 23rd inst.

The Imperial Japanese post and telegraph office will open telephone lines to Kamakura and Oiso Post Offices about August next.

The Nippon Yusen Kaisha steamer *Takasago Maru* received some damage to her engines in the China Sea the other day and had to be towed to Chefoo.

Several prominent gentlemen of Choshu will give an entertainment to General Yamaguchi at the residence of Prince Mori, Takanawa, Tokyo, on the 29th inst.

The long-continued drouth in Great Britain was broken on July 1st. Violent thunderstorms occurred accompanied by torrential rains and lightning, which wrought much havoc.

Several students in the Kobe Commercial School, accompanied by a teacher, will leave for Newchwang and Tientsin by the Nippon Yusen Kaisha's steamer *Tategami Maru* on the 28th inst.

Schneider & Sons' clothing factory in White-chapel, London, covering a ground space of two and a half acres, was burned on June 29th. The damage is £100,000. Two thousand people are thrown out of work.

The Nippon Yusen Kaisha steamer *Matsuyama Maru* struck a fishing boat having on board 15 men, near Imboye light on the night of the 19th inst. The boat was capsized but the men were rescued by the *Matsuyama* and another fishing boat.

A list of Russian losses in China is published in St. Petersburg. It only goes as far as the storming of Peking, and includes 31 officers and 682 men killed or died from wounds. These figures amount to 15 per cent. of the Russian forces at the front.

Statistics published at Berlin show that the North German Lloyd coasting trade in the East Indian and Chinese waters has doubled in the last year and that there are now 42 compared with 26 vessels before.

The Japanese sailing ship *Yawata Maru*, laden with coal and timber, from Wakayama, ran on a rock near Miura Misaki on the 23rd inst. A steamer rescued the crew and towed the ship to Shinagawa the following morning.

A young woman named Suzuki Haru, living at Yoshihama-cho, Yokohama, has been charged with stealing yen 200 belonging to her parents on the morning of the 24th inst. She stole yen 50 from another woman some months ago.

An old lacquer maker named Koike Zenshichi, (67), living at Azuchi-machi, Osaka, committed suicide, accompanied by his wife Tsuji (60) on

the 22nd inst. They hanged themselves from the roof of their house, after writing a letter in which they said that they had no children and were too old to live longer.

The Goldsmiths Company of London has purchased for £10,000 Professor Herbert Somerton Foxwell's library of 30,000 volumes on economic literature, with a view to retaining it in Great Britain. He had an offer from the United States.

The Nippon Yusen Kaisha steamer *Tairen Maru*, with 350 troops returning to Japan from China, damaged her engines when in Choshu bay on the 22nd inst. and was reduced to a speed of only 3 knots. The steamer *Omi Maru* towed her into Ujina the following day.

A man named Kobayashi Shoryo, employed by Mr. Otsuka Seikichi, lawyer, at Nogemachi San-chome, Yokohama, was arrested by the Kumagaye police on the 23rd inst. charged with stealing some registration stamps while employed as a Secretary of the Kumagaye District Court some months ago.

About fifty farmers entered the residence of Major-General Tsuda Yuzuru, a member of the Peers, on the afternoon of the 21st inst. They were natives of Chiba and tenants of Mr. Tsuda, who sold his lands at Chiba some days ago. The farmers desired him to retake possession of his property.

The counter-actions filed by Dr. Munro, and Messrs. P. B. Clarke, and C. Glahn against Mr. J. H. Ranger, in connection with the management of the Maples Hotel, have, it is reported, been dismissed, the Court finding no ground of action. On the other hand the suit brought by Mr. Ranger against Mr. P. B. Clarke will be proceeded with shortly.

A farmer named Aoki Yeizaburo, living at Miyamaye-mura, Tachibana-gori, Kanagawa Prefecture, attempted to commit suicide in a house of ill-fame, at Kawasaki on the night of the 20th inst. He tried to blow himself up with a bamboo loaded with powder and small stones: an ingenious contrivance that was not successful in its workings.

The Secretary of the Peninsular and Oriental Company, in a letter to *The Times*, says the consensus of agreement on the Merchant Shipping Act sets aside the legislation of the Government of India in respect to Lascars, and that the Company, therefore, will not appeal against the judgment given in King's Bench Court on the 21st June.

A woman named Kawaji Yukiko, living at Kachi-machi, Shitaya, Tokyo, attempted to commit suicide by throwing herself before a train at Sakamoto-cho, on the evening of the 23rd inst. She injured her head and shoulder and was sent to Tajiro Hospital, where she remains under medical treatment. She is a niece of the Governor of Gifu.

An insane woman named Toki, wife of Ishikawa Bunkichi, living at Tomizakacho, Koishikawa, Tokyo, threw her daughter Kaku at the stone gate of the Imperial University on the 21st inst. The Police found the child and took it home. The following afternoon the woman threw the girl into a well but men of the neighbourhood rescued it in time.

A man named Tanaka Yataro, father of the boy who was run over by the tram at Omori on the 21st, went out of his mind after his son's death and attempted to commit suicide. He repeatedly threw himself on to the tram lines but was always rescued. He is now being watched by friends. It is reported that the Tramway Co. will send him yen 200 in a few days.

The Honorary Degree of Doctor of Law has been conferred upon Miss Weston, of the Royal Sailors' Rest, by the University of Glasgow, at the celebration of their 450th anniversary, in token of their warm appreciation of the great work carried on by herself and her coadjutors in the British Navy. It is not only the British Navy, however, that has reason to warmly acknowledge

Miss Weston's services. She has been the friend of many a Japanese crew which has come to this country to navigate new vessels for the Japanese navy to Japan.

Viscin is proposed by Professor Reihl, of Leipzig, as an adhesive agent for medicinal purposes. This material, consisting of several little-known substances, is yielded in considerable quantity by the berries and the bark of the white mistletoe, and its cost is about a tenth of that of rubber. Solutions in benzine produce no irritation when applied to the skin in medicinal mixtures.

Baron Kanda (Professor Naibu Kanda) who has been sent to Great Britain to inquire into the teaching of English in Japan, was asked by a *Daily Mail* representative what his impressions of England were, to which he replied that the longer he stayed there the less he seemed to know of the place. He was particularly charmed with Oxford, the like of which he had never seen in America or on the Continent.

A small boy named Yataro, son of Tanaka Toshichi, living at Iriyama-mura, Yebara-gori, Tokyo, while playing on the tram-lines at Omori, on the afternoon of the 21st inst. was run over and killed. When the neighbours heard of the tragedy some 300 of them started in to damage the tramway line by piling it with stones and timber. Eventually police protection was obtained and the trams began to run again.

"Bohemian papers," said a despatch to the *Daily Mail* from Vienna, on July 1st "report that three German tourists, Weisnile, Meixner and Fischer, were killed on the Erzgebirge, near Weihoth. They were roped together. One lost his footing and fell over a precipice. The others held him suspended. He urged them to save themselves by cutting the rope, but they refused, and, renewing their efforts to haul him up, all fell down the rocks."

In the course of some remarks regarding the late Prince Hohenlohe, M. de Blowitz, writing in the *Times*, says that the dead Chancellor told him, with regard to the Emperor William's famous telegram to Mr. Kruger at the time of the Jameson raid, that "If the Emperor had known that Jameson had so many sons of respectable English families with him he would not have sent the telegram. He thought Jameson had only filibusters, with him, and that it was an act of brigandage."

A man named Ogawa Tsunekichi, living at Sumiyoshi-cho Ichome, Yokohama, was to open a restaurant here in a few days' time. He engaged a woman of Chiba Prefecture as a waitress, and on the 23rd inst. crossed the bay to Yokosuka with her, on the small steamer *Fiki Maru*. As the boat was nearing the entrance to Yato river the man fell overboard and despite the search that was immediately made his body was not found till the following morning.

Messrs. Bandinell & Co., writing on July 13th, report:—During the last few days more than 4,000 river boats laden with grain and pulse have arrived from the interior, and prices have fallen considerably. 120,000 piculs remain unsold and a further decline may be expected. Tonnage is consequently required, but rates offered are as yet too low for business, local merchants fearing to clash with charters effected in the South.

In an interesting article in *Nature* on the Basque people, the writer refers to the survival of the convade among this curious people—a custom still very prevalent among the inferior races of men, whereby, when a child is born, the mother goes about her ordinary work, and the father is placed in the lying-in bed, where he remains to be nursed, doctored, and sympathized with or congratulated for a given period of time.

While the tendency on the part of British blue-jackets to go "a-biking" instead of spending their time and their money in saloons is greatly to be commended, it may be wished that they would take their pleasure a little less violently. One

rider knocked down two men near the Recreation ground, Yokohama, on Friday by reckless riding and another "bagged" a Chinese boy near the Chinese Consulate the same afternoon. As the Chinese had a leg broken the police arrested the offender but on the injured person agreeing to accept *yen 2* as solatium the bluejacket was released.

The *Vossische-Zeitung* has printed an editorial declaring that Germany, under no conditions, would permit France to acquire Morocco or a key to the Mediterranean near Gibraltar. "Were either to be accomplished," it says, "France would drive Italy into the arms of the Triple Alliance, and could shut out German ships from the Mediterranean in time of war." This declaration is significant, because obviously inspired, and the whole article is believed to reflect the views of German Foreign Office officials.

It is not generally known, says the *Free Lance*, that the King pays taxes under protest—that is to say, His Majesty, like Queen Victoria, claims to be exempt from impost, and yet is willing to contribute without prejudice to the rates. For instance, part of the Windsor farm land lies within the radius of the borough. The municipal authority issues demand notes for the rates. The Royal officials respond by paying a sum just under the amount requested, and the collector is satisfied. There is no question of going to law, for how can the King be summoned in his own courts?

An Odessa paper announces that the discovery of rich naphtha wells in the Petchora district is of far greater importance than was anticipated from the first meagre reports recently transmitted to St. Petersburg. The experimental borings have now gone down to 80 fathoms, at which depth enormous deposits have been tapped, with a natural flow as copious and powerful as that of the chief founts at Baku. The expert engineers confidently believe that the whole district is abundantly petroliferous.

At the annual general meeting of the German Colonial Association, held at Lübeck, under the presidency of Duke Johann of Mecklenburg-Schwerin, a resolution was passed "to beg the Imperial Chancellor to consider the advisability of increasing the number of German Consulates in the Yangtze Valley, and in particular of establishing a Consulate at Chungking." During the discussion the value of the work done by Herr Knappe, the German Consul-General at Shanghai, was warmly recognised.

We have good reason, said the *China Gazette*, to state that owing to the enormously increased expenditure of the Shanghai Municipality, it is now generally agreed inside the Council that next year will see the already high Municipal taxation increased all round, making the rate 12 instead of 10 per cent.—a truly deplorable outlook, which is altogether the result of departmental extravagance and the foisting of white elephants of various kinds upon the over-taxed and impoverished foreign community.

A fire occurred on 11th June at the Ramsden Dock, Barrow, whereby the new wooden pier, recently completed at a cost of £20,000, was almost totally destroyed. The first-class armoured cruiser *Euryalus*, which was lying alongside the pier, was also seriously damaged. H.M.S. *Euryalus* has only recently been launched, and hundreds of men were at work on her when she took fire. A panic arose, and several men jumped into the dock and swam ashore, while others swarmed up the ropes or rushed across the burning gangway. The cruiser was at length removed into the middle of the dock, and her threatened destruction was thus averted.

Der *Ostasiatische Lloyd* of Shanghai, states that the German steamer *Muenchen*, which went ashore at Yap, has been floated. Mr. Mersel, the manager at Hongkong, went there with two of the Company's boats and the German gunboat *Sorath*, and after floating her she was taken to Hongkong, when it was found that it cost the Company to get her off \$250,000. The Dock Company

in Hongkong asked \$355,000 to put the steamer in good repair, and after making inquiries at Shanghai it was found it would cost considerably more to repair her there. The value of the *Muenchen*, as she stood on the books of the Company was \$600,000, so that if they decided to repair her in Hongkong she would stand to cost \$1,200,000. It has therefore been decided to sell the vessel.

The P.M. steamer *City of Peking*, which should have left at noon on Wednesday, was detained because of the discovery of a case of illness supposed to be smallpox. She had gone to Nagahama to be disinfected, returned to the vicinity of the lightship in the afternoon of Thursday and left about 5.30.

The accident on the Usui Pass is thus described in the English section of the *Kinshu Himeido Shinbun*:—

"A train on the Shinyetsu section of the Nippon Railway Company left Takasaki on the 13th at 7 p.m. and advanced to very sharp inclination of Usui hill and after the twenty more tunnels were passed, an accident was found in the locomotive engine which was blowing up the steam pipe, when the said train passed about seven-tenth of No. 26 tunnels, the last one on having lost steampower, the said train began to go behind along the inclination and after then, the engine exploded; two engineers were blown out of the locomotive, one of whom lost his sense while another got bruised."

Two appeals against decisions of the Yokohama Superintendent of Customs have been adjudicated on by the Minister of State for Finance. Mr. F. H. Ziegfeld, Manager of the China and Japan Trading Company, Ltd., No. 89 Yamashita-cho, Yokohama, imported rubber covered copper wire (span in two ply) on the 16th March, 1901, on board the S.S. *Indravelli*, the article being intended for telegraph use. The Superintendent of Customs imposed 10 per cent. *ad valorem* duty, on the ground that being spun it was cord not wire, but the appeal has been upheld and 5 per cent. duty imposed. In the other case Mr. Wilhelm Vebhing of Messrs. Grosser & Co., No. 180, Yamashita-cho, Yokohama, recently imported five cases of fabrics. The Superintendent of the Yokohama Customs imposed an *ad valorem* duty of 10 per cent. according to No. 322 of the Conventional Import Tariff Table, on the ground that the fabrics imported had stripes on both margins and were twilled cotton Italians for umbrella use. The importers appealed but the appeal was rejected.

A robber entered a house occupied by Lieut. Colonel Shinagawa Banpachiro, at Bentencho, Ushigome, Tokyo, shortly after 3 o'clock on the morning of the 23rd inst. He stole a watch and several articles from one room, and then entered a *beta's* room where he changed his clothes for those of the *beta's*. He then opened a bottle of beer and getting rice from another room sat down to eat and drink. Just then a *beta* named Matsumura Mikuma returned and noticing the outer gate open, he supposed that some friends of his master's had just left and had forgotten to close it. He walked on to his room when he heard a noise as of someone coming out. The next moment a big man appeared carrying a parcel. The *beta* tried to stop him, but being a small man was unsuccessful. He accordingly called to his master who at once came to his assistance and the robber was arrested. It is thought that the man is the same as one under suspicion of killing a police constable at Aoyama a few days ago.

The amount of loans issued by the Tokyo Agricultural and Commercial Bank during the 1st half of this year reached, according to the *Shingyo*, 38,790 *yen*, of which 25,200 *yen* were loaned to 59 agriculturists, and 13,590 to 20 manufacturers. Sums redeemed amounted to 17,733 *yen*. Classified according to the districts for which accommodation was given, the figures were as follows:—Tokyo, 57,410 *yen*; Aihara district, 7,756; Toyotama, 9,871; North Toshima, 8,107; South Katsushika, 20,649; West Tama, 50,672; South Tama, 41,104; North Tama, 80,074; total 291,362. The above amount was distributed among 470 debtors, loans redeemable in annual instalments aggregating 246,042 *yen*, while for fixed periods they amounted only to 44,400.

AMERICAN TOPICS.

President McKinley is planning to make a trip to the North-west early next summer, visiting Washington, Oregon and the northern belt of States, taking in the Yellowstone Park, which he has never seen.

Several of the largest sugar refineries in Louisiana are reported to have arranged for using Texas oil instead of coal for fuel, and according to the estimates made at present prices \$50,000 worth of oil will do as much as \$150,000 worth of coal.

The Scotch iron and steel makers are preparing to send an influential deputation of manufacturers to the United States in September to study trade conditions, with a view of devising means for better meeting American competition in neutral markets.

A new horse disease is prevalent in New York City. It is said that out of the 28,000 horses reported in the horse census upward of 5,000 have had the disease so severely as to require treatment, and 10,000 more have had it in a mild form.

Mr. Vanderlip, formerly an assistant Secretary of the Treasury, who has just returned from Europe, is quoted as saying: "I think it not only possible but highly probable that Europe will agree to binding terms of trade combination against us within the next few years, and that the result will be the most gigantic and stubborn commercial war in the history of the world."

A cotton duck trust, taking in practically all the factories in the trade, has at length been formed after several months of negotiation, and been incorporated in New Jersey. Its authorized capital is \$50,000,000. All of the Baltimore factories are to be taken over, and the company, under the name of the United States Cotton Duck Corporation, will manufacture cotton goods of all kinds. Half of the capital stock will be preferred, with 6 per cent cumulative interest.

Lord Selborne, First Lord of the Admiralty, announced in the House of Lords on July 1st, that he had great gratification in informing the House that the hospital-ship *Maine*, which was fitted out by a Committee of American ladies for the use of the wounded and sick in South Africa, and which later was sent to Taku, where she took on board wounded and sick men of various nationalities, has been presented as a free gift to the British Navy.

Eleven boys were killed and another probably fatally injured at Chicago on the afternoon of July 1st by a single bolt of lightning. The victims were fishing in Lake Michigan, at the foot of Montrose Boulevard, on the north side. The fatal bolt struck the pier where they were seated, smashed the construction, and all were thrown into the lake. Only one body had been recovered when the mail left.

July 1st was one of the hottest days in New York on record. At 3.10 p.m. the mercury at the Weather Office reached 98 degrees. This was one degree more than the preceding day. The records show that in the 30 years preceding, only two years had a higher temperature. Those were July 9th, 1876, and July 3rd, 1898. On those days the thermometer reached 99 degrees. Fifty-three deaths and 131 prostrations occurred up to 10 o'clock at night.

Mr. John D. Rockefeller has given \$250,000 to Cornell university on condition that an equal amount is contributed by others. Dr. D. K. Pearsons has given \$200,000 to Beloit college, Wisconsin, making a total of \$500,000 given by him to that institution. He has also announced that he is preparing to make several gifts of \$50,000 to small colleges of the west. Smith college has received a conditional gift of \$100,000, and Brown announces that the endowment has been increased to \$2,000,000.

Upon being questioned as to whether savings banks in New York city would be obliged to re-

duce interest rates in the not distant future, Mr. McMahon, president of the Emigrant Industrial Savings Bank, one of the largest in the city, stated it as his opinion that the banks of New York city and state will, for some years to come—say five—pay dividends on the basis of 3½ per cent. It is probable, though, that new banks or banks with a limited number of depositors will be exceptions to the rule, as current investments do not yield so heavily as those made in days gone by.

Fortunately the recent flood disasters in Western Virginia have proved to be far less fatal than the sensational despatches first suggested. The estimates of a possible thousand deaths have narrowed down to rather under than over 40, including several missing persons. Except as regards loss of property the catastrophe has really been far less serious than the recent terrible plague of torrid heat in the Eastern and Middle States which seems up to date of latest news to have directly caused at least 1,500 deaths, in addition to adding greatly to the number of deaths due in part to previous sickness or bodily weakness.

Fishing with a pickaxe is a little out of the common order, remarks a Canadian paper, but it seems that big game can be caught in that way. At least George Morrow found it so the other day. He was hauling stone from the river at Gooderich and while he was working with his pick near the bridge, he caught sight of a sturgeon of immense proportions. He went after it and stuck the pick into its head, but it got away from him, and went some distance down stream, carrying the pick with it and leaving a trail of blood behind. He followed it and at last brought it up town. It weighed 92 pounds and measured 5 feet 7 inches in length.

In the presence of about twenty-five priests and laymen of the Catholic church, the Hon. Bourke Cockran was recently invested by Archbishop Corrigan with the Laetare medal, which is given every year by the University of Notre Dame, Indiana, to the person who it decides is the most distinguished Catholic layman of the year in America. Mr. Cockran is the youngest man upon whom the honour has been conferred. The medal is called the Laetare medal because the custom corresponds in the State to that followed by the Pope each year of giving on Laetare Sunday in Lent a golden rose to the most distinguished Catholic woman in Europe.

According to the American papers, says *Fairplay*, all insurance matters in connection with the wreck of the *Rio de Janeiro* have been settled. The underwriters have paid \$900,000 to the owners of the cargo, but the loss on the vessel is known only to the officers of the Pacific Mail Steamship Company. There was \$35,000 in treasure, on which insurance has been paid, and there was \$30,000 more, shipped by the collector of Customs at Hawaii, on which there was no insurance, besides a considerable sum belonging to the Mail Company. It can now be set down pretty accurately that the total loss was \$1,500,000. Raw silk, it is stated, was the article in the *Rio's* cargo that cost the underwriters most money.

In the first quarter of the current year France imported from the United States over 201,000,000 francs worth of goods, a falling off of almost 28,000,000 francs from the same period in 1900. On the other hand, France exported to the United States goods valued at 68,250,000 francs, against 94,750,000 francs, the value of the exports for the first three months of 1900. Though France imported 74,900,000 francs worth from Russia in the first quarter of this year, as against 81,900,000 francs in 1900, she exported to Russia goods valued at only 7,500,000 francs, a decline of 1,500,000 francs from the same period in 1900. During the period mentioned France exported to Great Britain goods worth 470,750,000 francs, while she imported from the United Kingdom material valued at 225,800,000 francs. Great Britain is the best customer of the French republic, Belgium next, Germany third, and the United States fourth.

An increase in the world's production of silver is recorded for the year 1900. In that year, ac-

cording to the *Engineering and Mining Journal*, the total output of the world amounted to 182,632,656 Troy ounces, a gain of 4,796,071 ounces as compared with the year preceding. The value of the silver product increased from \$105,900,000 in 1899 to \$112,205,000 in 1900, a gain of over \$6,300,000. The United States led in the production of silver as well as in that of gold, with Mexico a close second and Australasia third, though after a long interval. The value of the silver produced in the United States increased from 57,126,834 Troy ounces, valued at \$34,036,168 in 1899, to 59,561,797 Troy ounces, valued at \$36,579,900 in 1900; while Mexico's output increased from 55,032,000 ounces, valued at \$32,788,000 in 1899, to 55,804,000 ounces, valued at \$34,269,000 in 1900. The Australian product in 1900 was valued at only \$8,636,000, and that amount showed a decrease as compared with the preceding year. After Australia followed in order Bolivia, Peru, Germany, Spain and Chili. Among the states of the Union Colorado took first place, with somewhat over a third of the total production for the country, while Montana was second and Utah third.

THE KARUIZAWA ENGINEER FUND.

We have received the following letters:—

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have been a frequent visitor to Karuizawa, at all seasons for many years past and on no occasion have I seen two engines to a train.

There is another point which requires notice. When the line was first opened, it was said that even if the rack failed to work, as was evidently the case on this occasion, sufficient brake power was provided to stop the train within a very short distance. About 3 summers ago, I noticed a train leaving Karuizawa on the down journey without the automatic brakes being coupled. The Station-master, whose attention was called to the fact, said they were so often out of order as to be practically useless and that most trains went down without them. Perhaps in these happy-go-lucky methods lies an explanation of the recent fatal accident.

It is appears to me that much credit is due to the engine driver who held so pluckily to his post. A damaged engine, the long down hill run before, with its attendant risk, and the disappearance of his firemen into the depths of night were enough to take away the nerve of most men.

Probably among those who have journeyed to Karuizawa, there are some who, like myself, would like to show their appreciation of such heroism. I hope that you, Mr. Editor, will kindly take charge of subscriptions and I enclose herewith 15 yen, trusting that other contributions may bring the amount up to a worthy figure.

Yours faithfully,

KARUIZAWA.

Yokohama, July 20th, 1901.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Travelling Public, whether Japanese or Foreigners, must be in hearty accord with "Karuizawa's" suggestion in your columns of yesterday that some substantial reward should be given to the Engine Driver whose pluck and presence of mind saved the passengers in the above catastrophe. Had he, like his three mates, leaped off, all must have "gone to smash and smithereens." Your correspondent sent yen 15 as a beginning; I also enclose herewith my contribution and earnestly hope that many will follow it up. It is neither right nor politic that such heroism should pass without recognition,

Yours truly,

E. HAMILTON SHARP.

July, 23rd.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Enclosed please find yen 10, as my contribution to the plucky engineer who stuck to his post and thus prevented what otherwise must have been a terrible disaster.

Yours truly,

KYU KARUIZAWA.

Yokohama, 24th July, 1901.

The Fund now consists of the under-mentioned sums:—

	Yen.
Karuizawa	15
E.H.S.	5
Kyu Karuizawa	10
H. T. T.	10
"Box of Curios"	5

CORRESPONDENCE.

THE USUI-TOGE ACCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—With reference to an article headed "The Usui-Toge Accident," in yesterday's issue of your paper, may I be allowed to point out certain inaccuracies in your statement? By saying "the Railway Regulations regarding the use of two engines on the line should be strictly adhered to and not altogether ignored," you seem to be suggesting that there is an express provision requiring the use of two engines on the line in question which has frequently been disregarded by the railway authorities; while in fact there is no such provision in the existing Railway Regulations, nor has the use of two engines been ever considered necessary, as the Abt engine is always attached to the lower end of the train on the Usui-Toge, which it pushes from behind in ascending the gradient and leads in descending, this arrangement being sufficient for ensuring security. Beyond occasional trials connected with the haulage of goods trains, therefore, only one engine has been invariably used on this line, and the train which met with the recent accident was no exception to this custom. Trusting you will kindly make a due correction in your valuable columns.

Yours truly,
S. HIRAI, Director,
Tokyo, July 20th, 1901. Traffic Department.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—I am glad if my former letter on the above topic has helped to arouse the attention of the travelling public.

Thanks are due to Mr. Hirai, the Traffic Manager, for his courteous letter in your columns to-day in which he assures us that a second engine for ordinary trains is by the Railway Company deemed wholly unnecessary and is therefore never sent. He thus removes the misconception on that point which had erroneously arisen. But even if unnecessary might not such an additional locomotive be *expedient*. You, sir, also in your article to-day quote "a railway expert's" opinion that the brake power attached to the Usui trains is amply sufficient for any emergency. Yes, doubtless, if attached and applied. But "Karuizawa's" letter, also in to-day's issue, emphatically states that, in the writer's own knowledge, trains have been occasionally sent through the 26 tunnels without the brakes being coupled at all! And so absolutely useless!

What the Public demand is not that an accident be rendered theoretically impossible but practically so, which is a vastly different matter. If the company do not see their way to send a second engine, can they not effectually ensure the brakes being always in gear?

Yours faithfully,
A KARUIZAWA VISITOR,
Yokohama, July 22, 1901.

TO THE EDITOR OF THE "JAPAN MAIL."
SIR,—I have read with great interest your articles and the several letters in your columns on the above fatality.

I am specially struck by "Karuizawa's" letter of the 20th, from which it clearly appears that, however ample may be the brake-power provided by the Railway Company it is occasionally *uncoupled* and so practically "non est." This statement, to the public, appalling and such neglect simply scandalous!

Will the Traffic Manager, Mr. Hirai, whose courtesy is already shown by his letter, kindly allay the public panic by giving his guarantee that in future the brakes shall always be inspected by the Station Master before the train is allowed to start?

Yours faithfully,
"BETTER SAFE THAN SORRY,"
Yokohama, July 24th, 1901.

THE SOCIAL EVIL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is of interest to compare the two following statements:—

History shows, as indeed reason indicates, that the Japanese system was adopted for the purpose of limiting the evil and bringing it under official control. *Japan Mail*, July 16th, (Leader).

".....though there is reason to believe that in some cases (as in Japan) it (licentiousness) has been intentionally encouraged as a means of keeping down the population." Darwin: "Descent of Man," 2nd, Ed. 1860, p. 46.

I am Sir, Yours truly

BETA.

Nagasaki, July 19th, 1901.

(If Darwin had studied the legislation of the Tokugawa era, he would have arrived at a very different conclusion.—E. J. M.)

PERRY'S EXPEDITION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the "Chronology of Perry's Expedition" as published in the *Japan Mail* of 15th July, the

Squadron, is stated to have left Shimoda for Hakodate on May 12th, 1854.

In connection with the visit of the Squadron to this port a friend, some few months ago, sent me a copy of an inscription on a fan given by Commodore Perry to Matsumae Kageyu. Thinking this would be of interest at this time I send you a copy of the inscription:—

"The Deputy of the Prince of Matsmai Matsmai Kageyu has received the officers of the American Squadron, under the command of

Commodore M. E. Perry
via the *Prushatan* & *Mississippi* steamers
the *Macedonian*, *Vandalin*, & *Southampton*,
Captains McCheyne, Lee, Abbott, Pope &
Lieut. Commander Boyle
with great kindness, so as to get the
good will of all who
have met him.

Hakodate, June 2nd, 1854.

F. WELLS WILLIAMS,
Interpreter.

The two following inscriptions from Tombstones in the Foreign Cemetery, Hakodate, also refer to the time that the American Squadron visited this port in 1854.

Departed this life
May 29th, 1854
James J. Wolfe,
Seaman on Board
U.S.S. *Vandalin*,
Aged 50.

Sacred to the Memory of
G. W. Remick,
A Seaman on board
the U.S.S. *Vandalin*
May 27th, 1854.
Aged 19 years.

It would be interesting to know if the two seamen mentioned on these tombstones are the first foreigners who died in Japan after the signing of the first treaty with the outside world.

Yours truly, WALTER ANDREWS, C.M.S.
Hakodate, July 18th, 1901.

YOKOHAMA SEAMEN'S MISSION.

We have been asked to publish the following correspondence:—

[COPY.]

H.M.S. *Isis*,

Kobe, 10th July, 1901.

DEAR SIR,—Enclosed are *yen* 8.30, proceeds of the Smoking Concert given by this ship at the Public Hall, Yokohama, on Saturday last. Owing to the bad weather the attendance was small.

Captain Windham would be pleased if you would acknowledge the receipt of this money in the Yokohama papers.

Believe me, yours truly,

LEIGH MORRIS, Surgeon, R.N.,

Sec. to Dramatic Co., H.M.S. *Isis*.

The Chaplain,

Seamen's Mission, Yokohama.

[COPY.]

H.M.S. *Ocean*,

Yokohama, 16th July, 1901.

SIR,—I beg to thank you for the kindness and welcome which the liberty men from His Majesty's ship under my command have received at the missions to Seamen Institute, a kindness which the men themselves greatly appreciated.

I am, Sir, your obedient servant,

A. G. CURZON HOWE, Captain.

The Rev. W. T. AUSTEN,
82, Settlement, Yokohama.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the Parish Buildings, No. 54 Tsukiji, on Wednesday, June 26, at 4 p.m., the Rev. D. C. Greene, D.D., President, being in the chair.

The minutes of the previous meeting were taken as read.

The Chairman announced that the papers which would be brought before the meeting were a translation of the "Sumiyoshi Monogatari," by Harold Parlett, Esq., and a translation from Dazai's works, of which the subject was "*Sinshi*," or Worship, by R. J. Kirby, Esq.

In the first place he called the attention of the meeting to Mr. Parlett's paper.

Mr. Parlett proceeded to give a brief resumé of the story contained in the "Sumiyoshi Monogatari," reading at the same time various passages from his translation.

The plot is briefly as follows. In ancient days here lived at Kyoto a Chunagon. This man has two mistresses, of one of whom he is so passionately enamoured that he takes her openly to wife. In course of time she bears him a daughter, the heroine of the story, who grows up a maiden of surpassing beauty. Unfortunately while she is still a child, her mother dies, leaving her to the sole care of an old nurse: for the Chunagon, immediately after the expiration of the period of mourning, marries his other mistress. This latter, the "villain" of the story, has two daughters of her own, step-sisters of the Himegimi with whom the father would fain have the latter live, were it not that he is afraid lest the step-mother should ill-treat her. Eventually, however, being overcome by the loneliness of the Himegimi, he brings her to his own house, where all goes well, till the damsel grows up and the rumour of her beauty reaches the ears of a young General, the son of one of the Ministers of State. He is so fascinated by the description of her that he determines to win her, and, to this purpose enlists the services of a man who had once been in the household of the Himegimi's mother. All the General's efforts to get the maiden to reply to his love-letters are, however, unavailing, and things are in this pass, when the story comes to the ears of the step-mother, who is jealous of her step-daughter and easily persuades the General's messenger to carry the letters intended for the Himegimi to her own daughter, and to pretend that the latter is the lady of the General's desire. The ruse succeeds for a time, and the lover, though not as enthusiastic over the beauty of the maiden as he thinks he ought to be, is fairly satisfied. At last he discovers that he has been deceived and is thereupon plunged into such grief that he wants to depart this life. The recollection of the fact, however, that the Himegimi is still there to be won inspires him with fresh courage and he renews his endeavours to gain her affections, but always without success. While this is happening on the one side, the Chunagon on the other is busy trying to introduce his daughter into the household of the Mikado, to the infinite disgust of the stepmother, who, after consulting with a wicked nurse in her service, essays to bring her husband's plans to nought by telling him that his daughter is paramour of a low-born priest. The Chunagon at first refuses to believe her story, but, when she actually shows him a villainous looking person emerging from his daughter's apartments, he is forced to admit that appearances are so strong against her that he can no longer think of sending the maiden to the Palace. Nevertheless he determines that she shall be married to a person of suitable rank. Such an one is soon found and the step-mother is informed by her husband of his new decision. Outwardly she is careful to simulate intense joy: inwardly she fumes with rage and envy, and at once sets to work, with the aid of her accomplice, to frustrate her husband's wishes. The two decide that the only thing to do is to wed the damsel secretly to the brother of the wicked nurse, a hideous old man. Unfortunately for them a servant in the step-mother's household overhears the plot and reveals it to Jiu and her mistress, with the result that the two unfortunate girls flee for protection to the house of a nun, once in the service of the Himegimi's mother, and now living at Sumiyoshi. Here they live for two years, being eventually discovered by the love-sick general. When he first appears at their place of refuge the Himegimi is disposed to treat him coldly, but she is dissuaded from this by the nun. A few days elapse and then the Himegimi returns to Kyoto with the general, whom she has in the meantime married, but years pass before she reveals to the sorrowing Chunagon that she is his long-lost daughter. At the last all the good are rewarded and the wicked duly punished, both the step-mother and her accomplice dying in miserable poverty.

Dr. Greene thanked Mr. Parlett for his most interesting paper. Such papers formed useful contributions to the study of ethnic psychology. The best thanks of the Society were due to Mr. Parlett for his translation of the "Sumiyoshi Monogatari."

The Rev. A. Lloyd then read a paper by Mr. Kirby, which was a translation of Dazai's "Saishi."

SAISHI.

The word translated here as "Worship" is expressed by the Chinese character 祀 used for the Japanese word "Matsuri." According to Williams it is composed of the radical "Shi" "to declare," with the contracted characters "Shu" "hand" and "Niku" "flesh," and means "sacrifice," and 祀 also read "Matsuri" to sacrifice to the departed. The paper I now present to you is a further translation from the Political Economy of Dazai Jun, who lived 220 years ago. Worship is the worshipping of other Gods 外神 and Ancestral Worship 先祖ヲ祭ル. It is written in the Saden that the most important factors of a country are its Worship 祀 and Fighting men 戎. If there are Gods 祀 there must be worship, and if

there are fighting men there must be soldiers. These two are of the utmost importance to a country.

The Emperor worships Heaven and Earth, the famous Mountains and Rivers of the earth and the Gods of the Soil and Harvest. Princes worship the Gods of the Soil and Harvest, and the famous Rivers and Mountains of the country. Great men worship the five Shi 神 (Gods). The Gods of the Soil are the Sha 社. The Gods of the Harvest are those Gods of the five cereals. The five Shi 神 are the Gods of the House 戸, of the Furnace 竈, of the Gate 門, of the Roads 行, and of the Household Garden.

The soil produces all things and nourishes mankind, and in consequence of this our people are now happily alive. Of the five powers 五行 the good 德 of the soil is the widest reaching, and to repay this good the Gods of the Soil are worshipped in some countries, but not in Japan. This is a mistake. In China travellers worship the Sodo 祖道 on leaving the gates, so is the God of the Roads. On the departure of troops the Gods of War and Horses are worshipped. The God of War is called Shiyu (after a rebel 2637 B.C.). The God of Horses is the star called Tenshi (Heavenly Horses).

The Kami are Heaven, Earth, Mountains, Rivers, Soil, Grain, and the five Ki. The Shin 神 of heaven and Shi 神 of earth distinguish between heaven and earth, but Kami is the common name.

The spiritual soul 神靈 of the dead is called Ki 鬼, and this when joined together with 神 makes the word "soul" Kishin 鬼神.

In worshipping Kishin the Ceremonial Law must be observed very carefully so as to distinguish which Kishin ought to be worshipped and which not.

Those worthy of worship are the ones chosen by the Sages.

The Emperor (Tenshi), being the Lord of the Earth, worships all the Kishin of the earth, which have been chosen for worship, and these are called Shiten 祀典 (Lawful Worship). The Princes and those lower worship only the Kishin specified by the Emperor.

These are called Meishi 命祀 (Specified Gods). None but Meishi ought to be worshipped by the people.

All Gods have rank. The Tentei (Emperor of Heaven) of course is the highest of all. The Sun, Moon and Stars are all Gods of heaven and are above rank. All Gods of the earth come below the Tenshi (Emperor) and their rank can therefore be classified.

It is said in the Law of the Former Kings that the five Peaks ranked the same as the three Dukes 公, and the four Rivers as the several Princes 侯. The five Peaks were Jotai, Nanko, Seikua, Hokkoku and Chusu. These are the five most noble mountains of the earth and ranked with the three Dukes. The four Rivers are Ko, Ka, Wai, and Sai. Of Rivers these are the four most noble, and ranked with the different Princes. The Ko (Princes) were one rank below the Ko (Dukes). It can thus be seen that in addition to the five Peaks and four Rivers there were no Gods equal to the three Dukes and several Princes. Thus rank is no light thing.

To fear Heaven and grieve for man is a prince's part. It is too difficult a thing for the ordinary student to understand. In all worship there must be a head. All important worship the Emperor or Princes must perform themselves. At these times the Emperor or Princes are the heads. The inferior forms of worship may be entrusted to retainers and proxies. The person who acts for the lord is then the chief worshipper. Those in the service of Kishin (Spirits) are called (Fushiki), Priests and Priestesses. The Kannagi are what are now known as Miko. When speaking of Fu and Shiku, the former is a woman and the latter a man. The Shiku is the present Negi and the word means Hafuri (Brinkley) gives Hafuri as "An official of a Shinto Shrine). Those ordinarily called Kannushi and Guji are the same as these. From the middle ages Bozu have existed, these are at present called Betsuto 別當 by the vulgar. Betsuto and Shiku are the same. Both are in the service of the spirits, but are not chiefs of worship. The uneducated are not aware of this. To think that the Chiefs of Worship are the same as the Betsuto and Kannushi is to fall into error. Then again the Shinshu (written with the same Chinese characters as Kannushi) is the Spirit's true body; it is sometimes made of stone or wood. It is similar to the Ihai (rank tablet), but it is not the same thing. It is what the vulgar call Shintai (the Spirit's Body). In Japan Shu (Lords) of stone and wood are not made. The Nusa is made of paper, and it is the common custom of Japan to call this the Spirit's Body. This is the Shinshu. To call the Shiku by the word "Kannushi" is an error. Nearly all Shinrei (Spirit Souls) are placed in Byo or Shi (Shrines). The meaning of a Byo is Miya, and of Shi

Yashiro, but really they are both the same. In China the Shrines of the Five Peaks, and Four Rivers are called both Byo 廟 and Shi 祠.

The Shrine where the souls of Sages, Princes, Dutiful Retainers, Honest Samurai, True Women, and Chaste Wives, etc., are worshipped are called Shi. The two names are joined together and the Shrines called Shibyo.

At present the restrictions against Tenshukyo (Christianity) are very strict. All without distinction, high and low must by law honour Buddhism, and thus they think that only Buddhist rites for mourning and worship ought to be observed, and so they look upon the teaching of the Sages of the Middle Kingdom as one and the same with Christianity and therefore to be prohibited. And this idea that everything ought to be left to Buddhism was acted on. This was a mistake of the people. The prohibition of Christianity is for the best interest of the country. But how is it that the teachings of the sages have been confounded with it?

But at present as a proof that one does not believe in Christianity, it is the law of the country that Buddhism must be worshipped, therefore if not every year at least once in three or five years it is necessary to go to a Buddhist temple and worship or to send for a Buddhist priest and have the worship carried out.

In worshipping ancestors and parents, the Shinshu and Shinhai are used. The Shinshu is the dead person's true body, or shade image, and the Shinhai is the tablet on which is written the whereabouts of the dead person's Shinrei (soul). Though both are made of wood, the meaning and law with regard to them is quite different. On the Shinshu the name of the dead is written, on the Shinhai is written the Shini (spiritual rank). The Shinhai is also called Shinhan (spirit board). This is what is called the "Ihai" by people of to-day. The Taifu and those of higher rank having Sobyō (ancestral shrines) and Shido (worshipping halls) should erect Shinshu, those having no Shido ought to erect only Shinhai, and not Shinshu. The reason is that the Shinshu being the real body of the dead person is the dwelling place of the soul. There is usually some one guarding it, so that in the event of fire, floods or other catastrophes it can be moved to some other place, the crime of allowing it to be carried away accidentally by flood or burnt by fire is just the same crime as injuring the body of a relation. The Shinhai only shows the rank, and is of no great importance to the soul, and should it be accidentally burnt or swept away no crime of injuring the body of a relation has been committed. In Yeddo, where fire is specially dangerous, many samurai and Taifu live only as lodgers and even the rich can not erect Shinshu. Amongst the vulgar of to-day it is thought that the Shinshu and Ihai are one and the same thing. Even scholars through not thinking, get the terms of Shu and Hai mixed.

The Chairman thanked Mr. Kirby for preparing the paper which, in his opinion, was of value to the Society.

THE BANKING REGULATIONS.

The evils consequent upon the facility with which small banks may be organised under the present law have now assumed serious dimensions, remarks the *Nippon*.

Mr. Sone, Minister of Finance, in his address to a recent meeting of local Governors in Tokyo, stated that owing to the adverse condition of the money market, banking troubles had sprung up everywhere, which would seem to have resulted chiefly, if not entirely, from the imperfect system of inspection adopted by the authorities.

It is safe to assert that the prosperity of a bank leads to the prosperity of the locality where it exists, and it is therefore to be desired that the authorities should exercise greater discretion in regard to the preliminaries for its organisation, the amount of capital to be raised, the personal credit of its promoters, its methods of business, the reputation of its directors and other officials, &c.

Private instructions from the Minister of Finance as to these points, from time to time, may to a certain extent, improve the situation. On this point the ex-Minister of Finance, Viscount Watanabe, has expressed his opinion much to the same effect. Both condemn the existence of small banks. A large number of the newly organised banks are, in fact, the result of fraud, being institutions brought into existence by taking advantage of gross imperfections in the present regulations. The existing law does not provide against capital being paid in any form but cash: it simply requires the payment of one-fourth of the gross capital before the bank is opened. A syndicate of cunning usurers, which so many bankers actually are, is thus enabled to "institute a bank, by converting the bonds of their debtors into its capital and transferring their credit to its accounts on the day of its opening.

The most notorious instance is one connected with

some curio dealers who are known to have paid the capital of their bank in bric-a-brac instead of money. Banks of this kind, while pretending to have paid-up one-fourth of the gross amount of the capital, as required by law, are in reality possessed of no reserve even for business purposes, their object being evidently to entrap the unwary into depositing their money. The originators of such banks, as soon as they have secured share certificates in exchange for their loan-bonds or the articles in their possession, undertake the sale of the same, with little or no consideration as to the fate of the banks which they have organised. That is a result of the undue liberality shown by the existing regulations in regard to the establishment of banks in general. Another defect lies in the absence of all provision for compulsory reserves to be made against deposit. Advocates of the present system may excuse themselves by reference to similar institutions in London, but Japanese banks ought not to be treated in the same light as those of London. Some time ago, we called the attention of the public, says our contemporary, to the expediency of revising the present banking regulations, on the points as set forth below:—(1) The capital of a bank should under no circumstances be less than 100,000 yen. (2) All the existing small banks should be amalgamated into one big concern. (3) The payment of capital should be restricted to money, and the use of bonds from debtors or articles of trade for such a purpose should be strictly forbidden. (4) A certain amount of reserves to be retained by compulsion against deposit. Finally, referring to the banking laws in Canada, our contemporary recommends the Government to compel the banks to put a portion of their capital in trust against future contingencies, and adds that strict supervision should be exercised at all events.

THE FINANCIAL POSITION OF JAPAN.

(FROM "THE TIMES" CORRESPONDENT.)

Tokyo, April 24.

Japan has been passing through a political crisis. Quite unexpectedly, so far as concerned the general public, the Minister of Finance announced that it would be necessary to postpone some of the enterprises included in the extensive *post bellum* programme drawn up in 1896. Funds for carrying out the unproductive items of the programme—that is to say, military and naval expansions and fortifications—were to be taken entirely from the Chinese indemnity; but funds for the productive items, railways, telegraphs, telephones, riparian improvements, harbour constructions, and so forth, were to be obtained partly from surpluses of revenue, partly from a series of domestic loans, and partly from the indemnity. In publishing the details of this programme *The Times* foretold that the Treasury would ultimately find difficulty in floating its domestic loans, since it could not afford to pay the high rate of interest ruling in the open market and since money was steadily growing scarcer in Japan. That forecast has been verified. Last year issues aggregating 18 million yen (10 yen=£1) should have been floated, but the Treasury perceived the hopelessness of making the attempt, and this year loans aggregating some 30 million yen stand on the programme, with a still more unfavourable outlook. Thus every one understood that, failing some unforeseen source of revenue, a part of the enterprises for which these moneys were needed would have to be abandoned or postponed. Nevertheless, when the Minister of Finance recently announced the suspension of certain enterprises, much excitement was caused, not because his difficulties were unappreciated, but because the Diet had been invited to pass a Budget including these very loans. The Minister of Finance must have known that the floating of such loans would prove impossible; yet he inserted them in the Budget and allowed the Houses to vote a document which, ten days after their adjournment, he declared to be practically invalid. Here were grounds for a serious indictment. Yet, had only the Opposition raised their voices, not much attention would probably have been paid. The clamour came mainly, however, from the leaders of Marquis Ito's own party (the Seiyu-kai), some of them being genuinely indignant that they should have figured as prominent supporters of an abortive Budget, while others welcomed any opportunity to attack the Minister of Finance, Viscount Watanabe, who entered the Cabinet in circumstances that greatly impaired his popularity.

The incident illustrates the tightness that prevails in the Japanese money market. The Government's Five per Cent. Consols, as sound securities as any one need desire, which were quoted at 105 seven years ago, scarcely find buyers to-day at 80; and, were a domestic loan of 40 or 50 million yen asked for, the rate of subscription would not exceed 85 or 86, if, indeed, the bonds could be sold at all. Yet nothing suggests that the people are suffering from impecuniosity. House building, garden making, social entertainments, and all the normal indications

of affluence are everywhere visible, although enterprises of the most promising nature languish or are neglected owing to lack of floating capital. An idea frequently expressed by European and American journals, that the nation is overtaxed, is not borne out by scrutiny. It is quite true that the State raises a revenue of 201 million yen now, whereas it was content with 85 millions ten years ago; and these figures seem to warrant the common assertion that the people's burdens have been more than doubled in a decade. But several corrections have to be applied. In the first place, the ordinary revenue in Japan includes the gross receipts from Government undertakings and properties, such as posts, telegraphs, railways, forests, and various factories. These receipts constitute a naturally-expanding factor, and thus an item which superficial observers class among the people's burdens is really an evidence of growing prosperity. That it is an item of considerable importance will be evident from the fact that, whereas this source of revenue stood at only eight million yen in 1891, it now represents approximately 47 millions. To put the matter shortly, the income now raised by actual taxation is not 201 million yen but only 135 millions; and even to the latter figures two important qualifications must be applied before it is taken as a basis of comparison. The first correction relates to *sake* (rice beer). Ten years ago this, the one intoxicant of Japan, yielded only 15 million yen to the State. To-day it yields 55 millions. Such an increase seems immense, but in practice the *sake* tax is scarcely felt by the nation. It is an impost which no one need pay unless he can afford the luxury of drinking *sake*, and the best judges are of the opinion that the limit of taxation has not been nearly reached in the case of this article. Here, then, we have a difference of 40 million yen. In fact, the increased revenue derived from *sake* pays the increased cost of armaments expansion. The second correction relates to Customs duties. These, under the old tariff, yielded only four million yen ten years ago, whereas they now yield nearly 16 millions. *Sake* and import duties thus account for 52 million yen of the increased revenue; and we arrive at the conclusion that the nation's direct taxes instead of being doubled in ten years, as is commonly asserted, have only risen from 53 million yen to 83 millions, an increase of less than 60 per cent.

There is also another important point, namely, that the sterling equivalent of 53 million yen in 1891 is equal to the sterling equivalent of 86 million yen in 1901; so that, if these taxes be converted into gold, the Japanese actually pay less now than they paid 10 years ago. It may be urged that for purposes of domestic finance the Japanese have nothing to do with fluctuations of exchange. That is true in a sense; but it is not true so far as it suggests that the appreciation of gold has not affected Japan. The appreciation of gold is one of the factors that have operated, in conjunction with commercial and industrial expansion, the development of communications, and the scattering of large sums on account of public works, to produce such a change of values that the average of present-day prices is the double of what it was ten years ago. Labour and all its products have appreciated nearly 100 per cent. in terms of local currency, so that the working man can now sell his toil and its fruits for twice as many yen as they brought him in 1891. From that point of view, to say nothing of the country's rapid strides in all branches of productive enterprise, the national wealth and the income derived from it have increased 100 per cent. The 53 million yen of direct taxes collected by the Treasury in 1891 was no lighter burden than 106 millions would be to-day, and the conclusion is thus reached that, even on a highly conservative estimate, the people's present contribution to the State exchequer is comparatively 25 per cent. less than it was ten years ago. It should also be remembered that the incidence of taxation in Japan is graduated so as to bear lightly on the lower orders, the result being that at no period of their history have the masses been in such easy circumstances.

On the other side of the account must be set the fact that Japan has been almost entirely self-supplying in the matter of capital since she commenced her career of development 35 years ago. She has sunk many hundreds of millions of yen in enterprises which, though they yield a handsome return, have, nevertheless, absorbed nearly the whole of her floating capital; and she now finds herself, not only debarred from undertaking numerous other enterprises which would be equally lucrative, but also compelled to work many of her existing enterprises with ruinously expensive working capital. Investments which must sound almost incredible in English ears go abegging in Japan. Railways offer preferential stock at 10 per cent. to complete their construction; wealthy corporations are willing to sell 6 per cent. bonds at a considerable discount for the building of waterworks; and banks of the highest class gladly pay 7 per cent. on fixed deposits for six months. The reasons which seem to deter British capitalists from utilizing these tempting opportunities are too long to discuss here.

GRAND HOTEL, LIMITED.

The following is the report of the Directors of the Grand Hotel, Limited, to be submitted at the twenty-fourth semi-annual ordinary general meeting of shareholders, to be held at the Grand Hotel, Yokohama, on Friday, the 26th July:—

The Profit and Loss Account, and Statement of Assets and Liabilities, for the half year ended June 30th, 1901, accompany this report.

The net profit for the half year, including balance brought forward from December 31st, 1900, and after providing for general expenses, Directors' and Auditor's fees, bonus to Manager, and Sundry Creditors, and after writing off bad or doubtful debts, amounts to—46,852.53 which it is proposed to apply as follows:—

In payment of a dividend of yen 9.00 per share for the half year.....22,500.00
For Depreciation.....20,000.00
Carried forward to new account.....4,352.53

It is proposed that the dividend shall be payable on the 27th day of July, when warrants will be issued.

C. H. H. HALL, } Directors.
MARSHALL MARTIN, }

Carried forward to next account	11,691.82
	¥12,991.82

Directors:—Kanazawa Saneyemon, President, Managing Director, Sunaga Kiyoshi, Higuchi Takichi, Kato Tokuzo, and C. K. Marshall Martin. We have examined the above statement and found it correct.

NAKAJIMA YUKITAKA, } Auditors.
TACHIKAWA YUJIRO, }

THE NAGASAKI HOTEL, LIMITED.

The Directors beg to lay before the Shareholders a statement of the Company's Accounts for the six months ended 30th June, 1901.

Including a balance of yen 7,147.80 brought forward from 31st December, 1900, the Profit and Loss account shows a balance of yen 19,756.57, which the Directors propose to deal with as follows:—

To payment of Debenture Interest due 1st July, 1901	Yen. 9,205.00
To pay a dividend of 2½ per cent. for Half-year	3,250.00
To write off Building Account	782.35
To write off Repairs and Renewals Account	3,487.90
To carry forward to New Account	3,031.32
	19,756.57

The Company's property has been improved by painting the corridors and dining room. A new bar has been added and a hairdressing saloon is now attached to the hotel.

J. M. Dow, Auditor.
Nagasaki, July 12th, 1901.

YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

The following is the report and accounts of the Yokohama Engine and Iron Works, Ltd.:—
The Statement of Accounts for the year ended the 31st May last accompanies this Report.

The net profits for that period, including the sum of yen 17,860.64 brought forward from last year, after writing off for depreciation of buildings, plant, and machinery and making provision for bad debts and payment of Directors' and Auditors' fees, amount to yen 67,228.43 from which amount the following payment has been made:—

	Yen.
On the 30th January, 1901, an Interim dividend of yen 10 per share	13,000.00
	54,228.43

Transfer from Capital Reduction account to Profit and Loss account..... 65,000.00

Leaving a balance to credit of Profit and Loss account of..... 119,228.43
The Directors now propose to declare a final dividend for the year of yen 15 per share, which will absorb..... 19,500.00
To give a Bonus to employees of..... 1,293.80
And to carry forward to new account..... 98,434.63

119,228.43
An Extraordinary General Meeting was held on a requisition of leading Shareholders on 12th April last, for the purpose of considering Resolutions that were directed towards treating the yen 65,000 standing at credit of Capital Reduction account as Profits, distributing the same amongst Shareholders, while at the same time increasing the Capital by yen 65,000, bringing it up to yen 130,000. A strong objection to the legality of such a course was raised by a Shareholder and the Meeting was adjourned. The Directors then thought it desirable, under the circumstances, to obtain, for the information of Shareholders, a special Report from Mr. Guinness, one of our Auditors, on the position of our Accounts and copy of same accompanies this Report. On this the Directors had, as far back as May last, a case stated for opinion of Counsel in Hongkong and his opinion, which has unfortunately been long delayed, is due here on 24th inst. Meanwhile, being convinced that an error has been made in dealing with the item mentioned, and being strengthened in this opinion by the Report of Mr. Guinness the Board have re-instated same in the Profit and Loss Account, to which it properly belongs, pending receipt of Counsel's opinion in the wider question of the method of proposed increase of Capital, which the Directors favour.

BOARD OF DIRECTORS.—Messrs. Johnstone and Howard retire by rotation, but offer themselves for re-election.

AUDITORS.—Messrs. Fearon and Guinness retire in accordance with the Articles of Association, but offer themselves for re-election.

Yokohama, July 20th, 1901.

THE "KUMANO MARU."

The steamer *Kumano Maru*, built for the Nippon Yusen Kaisha, was launched on June 1st from the yard of the Fairfield Shipbuilding and Engineering Company (Limited), Govan. The general dimensions of the vessel are:—Length over all, 415 ft.; breadth moulded, 48 ft. 6 in.; depth moulded, 30 ft.; gross tonnage, about 4,800. The new vessel, which is of the three deck type, has been built of steel to class 100 A1 at Lloyd's, with additions to meet the Japanese Government rules, and the British Board of Trade regulations for passenger certificate. The first-class staterooms are arranged on the upper deck amidships, and the dining-saloon, social-hall and smoking-rooms are fitted up in the houses on the bridge deck. Second-class accommodation is fitted under the poop, with a smoking-room in the house on the deck above. Steerage berths are fitted for a limited number of passengers in the forward and after compartments on the main deck. A special feature of the vessel is the ventilation and heating and cooling of the cabins, which is on a most elaborate and complete scale. Stewart's patent thermotank system has been adopted for all living spaces, four thermotanks, with the necessary electric fans, &c., being fitted in conjunction with steel trunks led to the various apartments. Each cabin will have its own adjustable louver, so that the amount of air to be admitted can be regulated; and by this means the passengers will be supplied with fresh air, heated to a suitable temperature, without the discomforts of cold draughts and steam-heating pipes. A further improvement has also been effected by fitting a system of brine pipes from the refrigerating machine connected with the thermotank coils, so that the air to be circulated through the cabins may be cooled. By these means the passengers can be supplied with air either at the natural temperature of the atmosphere, or higher or lower according to the climate in which the vessel may be sailing. The propelling machinery consists of one set of triple-expansion surface-condensing engines, having three inverted cylinders working on three cranks. The high-pressure cylinder is 31 in., the intermediate 51 in., and the low-pressure cylinder 85 in., in diameter, with a stroke of 4 ft. 6 in. The crankshaft is in three pieces, each piece being built up and interchangeable. Steam will be supplied by three double-ended and two single-ended steel boilers worked at 185 lbs. Each of the double-ended boilers has six Morrison furnaces, and each of the single-ended three, making a total of 25 furnaces.

Luncheon was after wards served, when speeches were made by Admiral Morant, Capt. T. H. James, Dr. Elgar, and Captain Brown.

CIVIL GOVERNMENT OF THE PHILIPPINES.

Thursday, July 4th—says the *China Mail*—was a memorable day in the history of the Philippine Islands, the government of the archipelago passing from military to civil hands. Since American occupation, Manila has never decorated so much, nor had the streets been more crowded. The inauguration ceremony, a brilliant function, took place in the Palace Square. From a grand stand, in which were seated the officers of the civil and military government, the Consular Corps, and other invited guests, General MacArthur announced the Hon. William H. Taft as the appointed governor. The oath of office was then administered by Chief Justice Arellano, after which a great cheer was raised and the 9th Infantry band played "Hail to the Chief," while the guns of Fort Santiago boomed forth the Governor General's salute of seventeen guns. His Excellency Governor Taft then rose, and addressing the Filipinos as "My Fellow Countrymen" delivered an eloquent speech. He said that however provisional the change made that day, the President by fixing the natal day of the Republic as its date has manifested his view of its importance and his hope that the day so dear to Americans might perhaps be also associated in the minds of the Filipino people with good fortune. He then proceeded to refer to certain other important changes to take effect in September, by which Filipinos, educated and able, would be given appointments which would enable them to materially assist the Commission in its work by their intimate knowledge of the people and of local prejudices and conditions. Of the twenty-seven provinces organised, four, possibly five, and small parts of two others in which armed

insurrection continued, would remain under the executive jurisdiction of the Military Governor and Commanding General. There were sixteen provinces or districts in which there was entire freedom from insurrection which the Commission had not had time to organize. Of the unorganized provinces and districts, including Mindoro and Paragua, the latter just occupied by the Army, there were four that were not ready for civil government. In the organized provinces nearly all the towns had been organized under the Municipal Code; and some towns had been similarly organized in unorganized provinces. With the change made that day the civil governments must be prepared to stand alone and not depend on the Army to police the provinces and towns. This would be accompanied also by the ceasing of the jurisdiction of military commissions in criminal cases. The difficulties of communicating between provinces must be met by the organization of a fleet of small steamers. These would assist in the revenue and postal service. Commercial railroads, mortgage, loan and land companies, banks and steamship companies only awaited government sanction to spring into being. These might remedy the poverty and suffering that a patient people had now to bear. A thousand American teachers would arrive in the next three months to educate the people, even the humblest of whom was eager for knowledge. Referring to tariffs, His Excellency said the people might reasonably entertain the hope that Congress would give them a tariff suited to the best development of business in the Islands. The finances of the Insular Government were in a satisfactory condition but the cost of Government was bound to increase as the establishment of peace and civil government extended. Still the increase of business due to returning peace and prosperity would doubtless keep pace with the needs of the Government.

THE MESSAGERIES MARITIMES.

The report for 1900 presented to the annual meeting refers to the two losses the Board has recently sustained by deaths, first of the chairman, M. Lefevre-Pontalis, who had been a member since 1884, and president since 1896; and of M. Henry Bergasse. M. Lefevre-Pontalis has been succeeded in the presidency of M. Charles Tranchane, vice-president, and M. Lecat, general manager, occupies the vacant seat of M. Bergasse as director.

The fleet on Dec. 31 last comprised 62 vessels of 246,277 tons and 207,550 horse-power, an increase of 3,397 tons and 4,800 horse-power on the year. The new steamer on the stocks at La Ciotat, intended for the Indo-China Commercial Line, is the only one the company has building. The year 1900 was one of exceptional activity. With the same number of boats the distance travelled was 1,014,464 sea leagues. The balance-sheet shows receipts from all sources amounting to £72,146,200, including a sum of £44,940 brought over from 1899. The expenses, including amortisation, amounted to £67,581,199, leaving a gross balance of £4,609,940, from which has to be deducted £1,872,373 for interest and redemption of debentures, reducing the net balance to £2,737,567. The dividend of £220,500 per share of £500, the same as paid for 1899, takes £2,700,000, leaving a balance of £37,567 to carry forward. A comparison of the receipts in the last two years shows a gain of £6,232,932 in 1900, but the additional 56,646 leagues run entailed a corresponding increase in the expenditure. The net profits would have shown a notable augmentation but for the rise in coal and particularly coal freights. The company restricted the use of English coal and employed a greater proportion of Asiatic, the quality of which is unfortunately inferior, but the cost of which is relatively moderate. The company burnt in 1900 163,000 tons of Asiatic coal. It may be noted that from 1896 to 1900 the outlay for coal increased £18,000,000.

The report remarks that the company has now been working for 50 years, having commenced the execution of mail services in September, 1851, when it ran to Constantinople, and was undertaken by 13 wooden paddle-wheel steamers, built in 1856 and 1841, and purchased from the State, and three iron paddle-wheel steamers bought from the Rostand Company, which had attempted a service of free lines in the Mediterranean. The total tonnage of the fleet of 1851 was 13,264 tons of 2,980 horse-power. The distance then run was 105,216 sea leagues, corresponding to an average of 6,576 leagues per steamer. During the year 1900, with the present fleet, the average per steamer was 16,362 leagues. The average speed in 1851 was eight knots; it is now from 14 to 15 knots on the principal lines. The increase of 56,646 leagues in the distance run in 1900 compared with 1899 was due to supplementary voyages during the exhibition and to voyages to China with troops and war material. These last represented a distance of 49,522 leagues.

HENLEY REGATTA.

To the disappointment of all the Americans at Henley, said a correspondent on July 5th, the Leander Rowing Club this morning defeated the crew of the University of Pennsylvania in the final heat for the Grand Challenge Cup; time 7 mins. 4 4-5 secs. There was bright sunshine and puffy cross winds blowing from the Bucks shore, slightly favouring the Leander's station. The followers of the British crew evinced the greatest confidence and Leander money was everywhere available, but this confidence never exceeded anything beyond even money. A Philadelphia occupant of a boat house is said to have invested £500 in favour of his crew. The following are the names of the two crews:

Leander—C. A. Willis, bow; H. J. Duvallon, W. Dudley Ward, G. M. Maitland, C. D. Burnell, J. E. Payne, C. J. D. Goldie, R. Hetherington Smith, stroke; C. S. MacLagan, coxswain.

Pennsylvania—R. R. Zane, bow; R. H. Eisenbray, F. L. Davenport, N. Crowther, Jr., A. H. Flicker, G. S. Allyn, W. G. Gardiner, J. P. Gardiner, stroke; L. J. Smith, coxswain.

The Pennsylvanians reached their boat house at 11 o'clock, apparently as fit as possible; while many of the followers of the Red and Blue showed marks of the intense strain. Ellis Ward, the American coach, placed a miniature American flag upon the rudder of his boat as the coxswain came to the boat house, and said to Smith: "Keep that as far ahead, my boy, as you can."

Both crews, at the start, showed no trace of nervousness and were sent away in capital style, the Pennsylvanians rowing 43 to the minute and the Leanders 42. At the end of Temple Island the Americans led by three feet. At Fawley the time was 3 mins. 25 2-5 secs., with Leanders half-a-length ahead, which they increased to three-quarters of a length at the Ishman.

The Pennsylvanians made a desperate spurt, but it was no good, and two men weakened perceptibly opposite the grand stand. The Leanders won by a length, time 7 mins. 4 4-5 secs. "It was a grand race," said Coach Ward, as the Leanders crossed the finish line. "We were simply outrowed and have no other explanation to make." It certainly was the best and most exciting contest ever seen at Henley. There was scarcely the advantage of three feet in the Leanders' station. The cheering for the contestants as they struggled for the lead was terrific. Even Henley had never before heard such wild applause as greeted the Pennsylvanians and the Leanders all down the course, and the cheering was delicious from the partisans of the Leanders as the latter's boat crossed the line at the finish ahead of the Pennsylvanians.

The boats came to the pontoon before the appointed hour, and all the Pennsylvanians seemed happy and comfortable, especially No. 6, (G. Allyn) and stroke (J. P. Gardiner). Captain Flicker watched the wind carefully, but it was worth only a quarter of a length at the most, for the first quarter of a mile, and it became a following breeze, but no advantage to either as soon as the boats went past the Farm. The ropes used to hold the boats steady were hardly pulled taut as Umpire Williams leaned over the breast of the launch and said: "As soon as this puff of wind has passed I will start you. I will say: 'Are you ready?' once. If there is no answer, I will say 'Go.'" The Pennsylvanians then squared their blades and the coxswain put a megaphone to his mouth, while everything was quiet. Williams' words came with the shock of a cannon. "Are you ready? Go."

The Leanders' second stroke was in before Gardiner's, and for a short time the pink oars were a few feet ahead. But the Pennsylvanians soon wiped out that difference, and at the end of the first minute both Zane (bow) and Eisenbray (No. 2), could see the back of the Leanders' bow. At this sight all the first four oars rowed like demons, and the Pennsylvanians were going faster than they ever did before. But they also had a faster crew beside them, for now the gap between the boats stayed still, and now it lessened inch by inch, for Payne and Burnell, of the Leander's, were swinging out and putting their oars through in great style, and Flicker was beginning to watch them, and as both at highest pressure passed the Farm the Leanders were up exactly level. Then came that crisis in the race which I foretold. It was a splendid sight to see the American boys refuse to let the Leanders up. They slashed their big blades through the water and put in all the steam they knew, Allyn, Crowther and Davenport being especially efficient, and the boat fairly rushed under their efforts. Still the Leanders stayed where they were. It was no further forward, but it was further backward and every man was swinging right up to his work, as elastic and free as at the start. And now that long swing began to tell. But only by inches, and it was but two feet advantage at that the Englishmen had, as the boats passed Half-way (the half-way post) in 3.25. Gardiner, (the Pennsylvanians)

stroke) then put on a magnificent spurt, and worked his crew up to 42. But they could not do it. The Leanders only lengthened out at a slower rate of striking and went further away with every stroke. They were half a length ahead as the mile was finished.

Never have I seen such frantic and continuous cheering as greeted both crews while they raced down that brilliant line of excited spectators, even one of whom was wearing colours and shouting as Pennsylvania made still another effort, just after the Leander lawn was passed. But two of the first four oars were nearly finished. They had worked like heroes at the impossible task that had beset them, of using arms and legs alone against the English boat, and now exhausted nature claimed her tribute and several men lost the full power of their drive. They had done splendid work during the first half mile, and I was surprised to see Davenport and Allyn too spent to row the men in front of them. Crowther, too, seemed terribly distressed, and how Zane and Flicker did so well I cannot understand. The boat rolled a little as it she felt the crew might crack her at any moment. Stroke side began to pull bow side around, and the indomitable Gardiner called on his men for the final effort; they could not respond. Humanity could do no more; the Pennsylvanians had never let up for a second since the start. There had been hope of that paddling which helps a crew so much to get its wind, and there was, therefore, no spurt finish, as there had been in the first two heats. But no crew could have rowed more pluckily or had a fairer trial, and when the Leanders won in 7 minutes and just over 4 seconds the losers were cheered just as heartily as the winners. This must convince Ellis Ward that the best crew in England or America which uses the professional sculling style should change it for the one which gives the men more chance.

AUTO-MOBILE RACING.

The arrival at Berlin on June 30th of the Paris-Berlin racing motors, with Fournier the winner, was generally recognised as the great sporting event of the season. As evidence of this, from 8 in the morning the high road from Spandau to the west end was thickly lined with people. From Berlin thousands of bicyclists and automobilists, and very many of the most fashionable turnouts, toiled up the hill leading from Charlottenburg to the west end suburbs, about six miles from Berlin proper. There, in Germany's largest trotting park, the victorious participants in the Berlin-Paris race arrived, one by one, before a fashionable, sport-loving assemblage of some 10,000 persons. Stands decorated with flags and bunting, French, German and Belgian colours intertwined, were erected at the goal where the judges, officers of the automobile clubs of France, Germany, Austria and Belgium, and the most distinguished guests were waiting. Two military bands played inspiring music.

Fournier was first seen a great distance in a thick cloud of dust, approaching the goal like a whirlwind. The enormous crowd outside and inside the park began cheering wildly, and at the same time bands struck up the "Marseillaise," while all the French people present waved small tri-colored flags, and as Fournier halted before the goal an immense wreath of laurel, decorated with ribbons of the German and French colors and in German with the word "Victory," was handed to him. Then Fournier completed the circle of the track and left his autowear, the bands playing Sousa's marches. The victor was then taken hold of by a score of lusty young French and German athletes, who lifted him upon their shoulders and carried him across the field to the main stand. To the correspondent of the Associated Press, Fournier said:

"The weather for the last four days has been splendid. Not a drop of rain since we left Paris. The plans made for finding roads were fruitless, and our reception everywhere was enthusiastic, more so in Germany than in France. But the roads in Germany are decidedly worse than in France. They were good to Montjoie. Thence to Muenster they were execrable. To Dusseldorf they were good. Thence to Bielefeld they were awful. With the air thick with soot and smoke, we looked like chimney sweeps. It was owing to these conditions that the trip has not beaten the Bordeaux-Paris race."

From that time on the racers began coming in fast. The first five were Frenchmen, but every time the same deep-throated hurrah went up, and each man was carried in triumph upon the shoulders of enthusiastic German and French sportsmen. All the arrivals complained of the heat, dust and poor quality of the roads.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

BRITISH POLITICS.

Shanghai, July 19.

The Finance Bill has been read a third time by a vote of 291 to 121.

Mr. Chamberlain, replying to the pessimistic criticism of Sir William Vernon Harcourt, expressed a sanguine view of the political and financial future. He believed that the Boers, when thoroughly beaten, would settle down peacefully.

EARL RUSSELL'S BIGAMY.

Earl Russell pleaded guilty before his Peers of bigamy and was sentenced to three months' imprisonment as a first class misdemeanant. Two hundred Peers assembled in their robes, and Lord Salisbury presided.

COST OF EASTERN CABLES.

The Chairman of the Eastern Telegraphs Company says that there is reason to hope that there will be a substantial reduction in the tariff for telegrams to India shortly.

STEYN'S VIEW OF THE SITUATION.

Shanghai, July 20.

From letters captured in Steyn's laager at Reitz, it is ascertained that on the 10th of May the Transvaal leaders informed Steyn that their position was desperate and that the time had come for them to take a final step. They proposed to appeal to Kruger, but Steyn indignantly replied that they were not yet in the last extremity, adding that he was convinced that foreign complications would ensue in a few months.

BRITISH COLUMBIAN FISHERIES.

The Japanese trouble in British Columbia has been settled. The Japanese are fully protected.

ECLIPSE STAKES.

The following is the result of the Eclipse Stakes run at the Sandown Meeting:—

Epsom Lad.....	1
Ian	2
Disguise	3

[NOTE.—The value of the Eclipse Stakes is about £10,000. The race was instituted about 15 years ago.]

THE CORONATION OATH.

Shanghai, July 20.

Lord Salisbury has presented a bill to the House of Lords modifying the Coronation Oath.

THE THIBETAN MISSION.

It is semi-officially stated in St. Petersburg that the object of the Thibetan Mission is merely to procure privileges for the Buddhists in the Russian Empire.

DEATH SENTENCE COMMUTED.

Lord Kitchener has commuted the death sentence on 24 criminals to penal servitude for life in Bermuda.

THE "SOBRAON."

The Board of Trade Enquiry into the loss of the *Sobraon* entirely exonerates the Captain and other officers.

THE MAX MÜLLER LIBRARY.

Baron Iwasaki has bought the Max Müller Library for the Tokyo University.

DEATH OF MRS. KRUGER.

Shanghai, July 22.

Mrs. Kruger has died at Pretoria, of pneumonia after an illness of three days. It is understood that Mr. Kruger was informed privately by wire of her death before the publication of the fact.

THE LATE MRS. KRUGER.

Shanghai, July 23.

The newspapers respectfully sympathize with Mr. Kruger in his bereavement.

DIPLOMATIC COURTESIES.

Count Lamsdorff is expected to visit Paris in September, when he will return M. Delcassé's visit to St. Petersburg.

ENGLAND'S BILL OF COSTS.

Sir M. Hicks-Beach has informed the House of Commons that the total cost of the Chinese expedition was £4,350,000 exclusive of the naval expenditure.

LASCARS AND MAIL STEAMERS.

The Orient line has decided to employ Lascars.

HEAT WAVE IN AMERICA.

A fresh heat wave is passing over the American corn-belt.

THE CHINESE INDEMNITY.

Shanghai, July 24.

It is announced in Washington that a plan for the payment of the Chinese Indemnity has been definitely adopted. The amortization bonds begin to be paid in 1902 and the principal and interest will be entirely liquidated by 1940. It is expected that China can raise 23 millions sterling annually.

REWARDING EARL ROBERTS.

Mr. A. J. Balfour has announced in the House of Commons that a grant will be proposed for Earl Roberts.

The Times believes that the grant to Earl Roberts will be one hundred thousand pounds.

A GREAT ENGLISHMAN.

Lord Cromer, the British Agent in Egypt, has been created an Earl.

FIELD-MARSHAL VON WALDERSEE.

Field-Marshal von Waldersee has arrived at Suez.

LORD MILNER A LONDON FREEMAN.

The freedom of the city of London has been presented to Lord Milner at the Guildhall.

THE KING'S OATH.

The House of Lords has read a second time the Bill modifying the King's accession declaration.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, July 19.

It is announced from Marseilles that the quarantine of the *Laos* has been removed.

Since the policing of Peking was handed over to the Chinese, disorder has increased considerably in the city.

Saigon, July 20.

M. Doumer, having concluded the administrative business upon which he was engaged in France, will embark on the 28th of July for Saigon in the *Indus*.

FRENCH NEWS.

Saigon, July 22.

The elections for renewing one half of the General Councils in the Departments have taken place in France. Calm prevails everywhere.

Madame Kruger has died of pneumonia at Pretoria.

M. de Lamotte, First-class Governor, is to replace M. Picaune as Lieut.-Governor of Cochin China.

THE FRENCH ELECTIONS.

Saigon, July 24.

In the elections for the General Councils, the Republicans gained 47 seats. Radical and Governmental journals affirm that 11 seats have been lost by the Left. The Moderates and Conservatives declare that the success is above all for the Progressists.

(RECEIVED IN TOKYO.)

CHINESE NEWS.

At a meeting of the Foreign Representatives in Peking, on the 16th instant, it was decided that, with the exception of such troops as will be absolutely required, all the foreign forces shall be withdrawn by the middle of August. When that is accomplished, the total force remaining will not exceed 2,000 of all arms.

On the occasion of the return of the Court from Hsian to Peking, it is said that some twenty thousand troops will be required to guard the cardinal points along the route.

England objects strongly to the raising of the tariff above 5 per cent., whereas Russia advocates raising it to 10 per cent. and over. Russia is supported by most of the Powers, and the consequence is that the discussion of the Indemnity question is at a standstill.

The new Chinese Minister to Japan, Mr. Tsai Kin, will leave Shanghai on the 10th of August for Tokyo.

THE JAPANESE TRANSPORT SERVICE.

The Japanese transport service has worked smoothly, and the last batch of troops will leave Taku on the 22nd inst.

THE YANGTZE IN FLOOD.

The Japanese Consul at Hangkow reports that the water in the Yangtze has steadily increased since last month and that by the 7th instant it had risen 40 feet above the normal level; on the 10th, 46 feet were reported from Kiukiang. All the environs of Hangkow were inundated, but happily the town and the foreign settlement escaped. Lower down the River, however, the whole country was flooded and great loss of life resulted. At Kiukiang there is 2 feet of water in the streets of the foreign settlement. At Anking the houses outside the walled city are all flooded, some up to the roofs. Lower down as far as Wuhu the same terrible state of affairs prevails. The boatmen say that twenty thousand people have lost their lives in Kiangsi, but the story is probably exaggerated. It is certain, however, that many tens of thousands of houses have been inundated, and that if the water continues to rise Hupeh, Hunan, Kiangsi and Anhui will be completely inundated. Kiangsi and Hunan will probably suffer most as the floods are caused by the overflow of the lake.

(FROM THE "N.-C. DAILY NEWS.")

THE PLAGUE.

Hongkong, July 11.

Captain Primrose and his son were stricken with plague yesterday.

The petition to Mr. Chamberlain is being sent to the Governor to-day. It is the strongest petition in the matter of signatures ever sent from the colony. Nearly all the doctors, architects, and engineers have signed, and it bears over a thousand signatures altogether. The Governor, Sir Henry Blake, wrote home last mail asking for a sanitary expert to be sent out. The agitation has so far had this successful result, though there is a wide-spread opinion that the Governor has tried to steal a march on the petitioners.

THE ARREST OF COLONEL POWELL.

Newchwang, July 11.

Colonel Powell, who was arrested by the Russians between Moukden and Tieling in Manchuria, is very reticent about his adventures. He leaves Newchwang to-day in the N.Y.K. steamer *Sensai Maru* for Nagasaki. The Russians deny that he was arrested.

THE HONGKONG BANK ROBBERY AT SINGAPORE.

Singapore, July 12.

Abdul Kader and fourteen other prisoners charged

with being concerned in the robbery of bank notes from the Hongkong and Shanghai Bank were proceeded against in the Police Court yesterday. The charges against five of the prisoners were withdrawn. The principal witness is one of the prisoners who has turned King's Evidence. The case was adjourned for a week.

THE FLOODS IN THE SOUTH.

Hongkong, July 13.
The Canton correspondent of the *Hongkong Daily Press* writes that the North and West Rivers are woefully flooded. The rice fields and the mulberry plantations are all destroyed and the value of property lost amounts to several lakhs of dollars.

THE EMPEROR'S BROTHER.

Tientsin, July 13.
Prince Chun and suite with Chang Yen-mao passed through Tientsin yesterday and sailed from Taku in the C. M. S. *Anping* this morning.

RUSSIAN CELEBRATIONS.

The Russians are celebrating the taking of Tientsin city to-day, also the departure of the Russian Minister, with banquets at the Astor House.

FRENCH CELEBRATIONS.

Extensive preparations are being made for the French festivities on the 14th of July.

THE SIEGE CHILDREN CELEBRATING.

The Tientsin siege children are celebrating the capture of Tientsin city at the Gordon Hall to-day.

THE ARRIVAL OF THE MISSIONARY PARTY.

Taiyuanfu, July 10, via Chinkiang, July 14.
The party of missionaries who have come to settle the Protestant claims, etc., has been well received here. Great preparations were made for their reception by the Governor, H. Tsen Chun-hsuen, who is determined to adopt any measures towards a good understanding that may be advisable.

THE P. AND O. CO.

Hongkong, July 15.
Mr. H. A. Ritche, superintendent of the P. & O. Company in Hongkong, has accepted the post of manager of the West End branch of the Company in London, and will probably leave Hongkong in November. His successor at Hongkong has not yet been nominated.

THE HONGKONG COMMANDER-IN-CHIEF ON LEAVE.

Hongkong, July 16.
General Cascoigne is going to Banff, B.C., for a holiday, leaving to-morrow in the *Empress of Japan*.

THE BRITISH CONTINGENT IN THE NORTH.

Tientsin, July 16.
Generals Gaselee and Creagh leave for Shanhaikuan to-morrow, and go thence in H.M.S. *Orlando* to Weihaiwei.

Sir Alfred Gaselee goes home via Japan and Canada.

General Reid, who has been in command at Shanhaikuan, leaves to-morrow.

THE KING OF SIAM ON TOUR.

Singapore, July 16.
The King of Siam landed at Singapore to-day and had an official reception, and lunched with the Governor.

The King is to entertain the Governor at dinner to-night.

THE PLAGUE.

Hongkong, July 17.
There have been no fresh cases of plague or deaths in the last twenty-four hours, ending on Tuesday at noon.

LOSS OF A GERMAN LAUNCH.

Messrs. Jensen & Co.'s steam launch *Kiautschou*, which left Hongkong more than a month ago under the command of Captain Koch for Tsingtao with a cargo of thirty tons of coal, never reached her destination. Her whereabouts were unknown until the 14th instant, when the *Dagi Maru* brought in two Chinese survivors, whose story is that the launch was destroyed by fire near Dodd Island Lighthouse, near Amoy.

(FROM THE "OSTASIATISCHE LLOYD.")
NEWS FROM EUROPE.

Berlin, July 10.

The Government of Singapore has prohibited the introduction of Chinese steerage passengers with other than British ships. The Hamburg-America line at once handed a protest against this measure to the Foreign Office at Berlin, requesting them to intercede, as the new rule would practically give a monopoly to the P. & O. Company for the transport of Chinese beyond Hongkong to the South.

Germany has decided to establish a German-Chinese head post-office at Shanghai. Councillor

Puche, until now an officer of the Postmaster-General's Office at Berlin, will be in charge thereof. Councillor Puche starts at once for East Asia.

Berlin, July 15.

The celebrations of the National festival in France were very brilliant, and passed off quietly.

The heat in Germany and America remains very extraordinary. Every day numerous cases of sunstroke are reported.

Transports with reliefs for the German occupation-troops in China have left Bremen and Hamburg.

Berlin, July 18.

The report cabled by Reuter's correspondent at Peking about the discord amongst the Foreign Ministers is discredited here, as being circulated for interested motives. On the contrary, the proper authorities think it very probable that the Negotiations will very soon be brought to a satisfactory conclusion.

The Russian poet Count Tolstoi is dying.

The Duke of Manchester made on June 28th, what he hoped would be his last appearance in the bankruptcy court, as his creditors formally accepted the composition of 12 shillings and 8 pence in the pound, which offer was approved at a meeting of the creditors. Although the accounts showed that the unsecured debts amounted to £30,710, the trustees submitted that the sum could be cut down. In the course of his final examination the Duke of Manchester reiterated that his failure was due to the loss of several thousand pounds in theatrical speculations. Miss Portia Knight, the American actress who has brought suit against the Duke of Manchester for breach of promise, had her lawyers present at the Duke's examination but they were not permitted to question the debtor, and consequently they were unable to obtain information of much value to them.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 3RD, 1901.

BIRTHS.

On the 25th July, at Nikko, Mrs. H. L. FARDEL, of a Son.

At 245, Bluff, on August 1st, the wife of F. T. GAUSE, of a Daughter.

MARRIAGE.

At Ichigaya, Tokyo, on July 29th, 1901, in the presence of G. H. Scidmore, Esq., Deputy Consul-General of the United States, by the Rev. William Imbrie, D.D., assisted by the father of the bride, CHARLES SUMNER GRIFFIN to MARY AVERY, daughter of the Rev. D. Crosby Greene, D.D., of Tokyo.

SUMMARY OF NEWS.

MADAME SAGOKO, mother of Mr. Inukai Ki, died at her residence in Tokyo, on the morning of the 25th July.

THE mad dogs belonging to Viscount Matsudaira Tadamasu, at Rokubancho, Kojimachi-ku, Tokyo, were killed on July 28th.

THE father of the boy who was killed at Omori on the Kawasaki-Tokyo tramway the other day has received yen 250 from the Electric Tramway Company.

THE dead body of a young woman was found near Senshubashi, Chojamachi, Yokohama, on Tuesday morning. The corpse has not yet been identified.

A MAN named Watanabe Kinzo, a native of Chiba, stabbed to death a woman named Katsu-

yama, in a house of ill-fame at Yoshiwara, Tokyo, on the morning of the 25th July. He confessed at once to the police.

THE Japanese standing squadron (*Shikishima, Izumo, Asahi, Asama, Kasagi, and Tokiwa*) left Sasebo for North China via Korean waters on July 29th.

AN explosion of coal damp took place in a mine at Takamatsu, Yengagori, Fukuoka Prefecture, on the 27th July. Two coolies were badly injured.

COUNTERFEIT 5 *sen* nickel coins have been circulating in several places lately, though mostly in Nagasaki. It is stated that the coins were imported from China.

A DEAF and dumb farmer named Imai Kichigoro, living at Kozu-mura, Naka-gori, Kanagawa Prefecture, was run over by a train and died at Kozu, on the morning of the 25th July.

A WOMAN named Haru, wife of Koinuma Watsuke, living at Inamurada, Tachibana-gori, Kanagawa Prefecture, gave birth to three sons on July 23rd. Mother and children are doing well.

A *jinrikisha* man named Nomura Tomokichi, living at Iriyamachi, Shitaya, Tokyo, was arrested by the Shitaya police on July 28th charged with stealing several articles valued at over 500 *yen* from various houses in Fujimicho, Kojimachi.

KUMAZAWA KANJI, who stole 30,000 *yen* from the Government Printing Office was, after trial in the Tokyo Local Court on the afternoon of the 27th July, sentenced to five years' imprisonment with hard labour and to one year's police surveillance.

A TELEGRAM has reached Kobe that the Nippon Yusen Kaisha steamer *Sendai Maru*, which left Chefoo on her way to Newchwang the other day broke a blade of her propeller on July 27th. She experienced a similar accident in the Inland Sea not long ago.

A PICK-POCKET named Suzuki Kinjiro, living at Nogenmachi, Yokohama, was given in charge by a foreign missionary living at Iidamachi, Tokyo, on a charge of stealing a silver watch belonging to the foreigner, at Yokohama station on the night of the 26th July.

A WOMAN named Tsunoda Fude, staying at a boarding house at Hanacho, Honjo, Tokyo, was arrested by the police on the 27th ult. on a charge of disposing of a gold watch which she found in Yoshicho in November last, by selling it to man in the same street.

A WOMEN named Ohashi Iku (39) a native of Chiba, living at Kakigara-cho Nichome Tokyo, was arrested by the Nihonbashi police on July 27th ult. charged with stealing several rolls of silk valued at over 3,000 *yen* from dealers in Tokyo during the past few months.

A JAPANESE tug-boat laden with coal, and having on board a *sendo*, his wife and a child, sailed from Fukugawa for Senju on the afternoon of the 25th ult. The boat struck the pillars of the Ryogoku bridge at low tide, but the persons on board were rescued by another boat before the vessel sank.

THE dead body of a man was found near the Hama Detached Palace on the afternoon of the 27th July. It was found to be that of a cook named Suzuki Kyushiro employed by the Imperial Hotel, who attended the Perry ceremony at Kurihama but who disappeared on the return journey to Shinagawa on the 14th ult.

THE O. S. K. steamer *Dairi Maru* ran on a bank in the Yangtze, 80 miles above Woosung, on July 19th. She sustained no damage. The cruiser *Yoshino* was to have been sent to the scene from Hankow on July 25th to tow her off. The *Dairi Maru* went off her course owing to the flooded state of the river.

A YOUNG man named Nakagawa Gihachi, a native of Nagano, who it is alleged swindled shopkeepers and stole bicycles, being assisted in his operations by pretending that he was a student, was arrested by the Nihonbashi police on July 27th on his return from Hokkaido, where he had spent his gains.

A MAN named Suwa Shigesaburo, employed in a spirit shop at Hatchobori, Tokyo, was arrested by the police at a hotel in Fukagawa on July 28th. He had collected *yen* 515 at Sakura, Chiba Prefecture, on June 24th for his employer and then disappeared. He spent nearly all the money at Susaki.

A MAN named Saito Yazayemon, living at Naka Kachimachi, Shitaya, Tokyo, committed suicide by throwing himself before a train at Goinden, early on the morning of the 25th ult. He had previously cut his throat with a sword. The suicide left a bloodstained sword, a letter, and a poem near the railroad.

A FARMER named Hirose Kunizo, living at Setani-mura, Kumakura-gori, attempted to murder his sister-in-law, Shima, on the night of the 24th ult. He stabbed her in the stomach with a swordstick, and then confessed to the Totsuka police. The woman is under medical treatment and is not expected to recover.

A WELL-KNOWN character named Tsukuda Kin, living at Odawaracho, Tokyo, together with Sakurai Ichinosuke, Yoshida Hongiro, and Otsuka Chujiro, of Tsukudajima, have been summoned to the procurator's office and charged with fraudulently obtaining over 300 *yen* from the widow of Hoshino Hachizo, at Tsukudajima.

AN engraver named Fukai Setsu, living at Aoyama, Tokyo, was arrested by the police on the 28th inst. on a charge of having pawned or sold six *kakemono* by Buncho and Hoitsu, valued at *yen* 150 entrusted to him by a man belonging to Morimoto, Shiba, some months ago for sale. He is alleged to have appropriated the proceeds.

A COOLIE named Ichikawa Chotaro, living at Sasugayacho, Koishikawa, Tokyo, attempted to murder another coolie residing in the same house on the evening of July 27th by stabbing him with a knife. The would-be murderer was arrested; his victim is hardly expected to recover. The cause of the affair was some trouble about Ichikawa's wife.

THE One Hundredth Bank for the half year to June 30th shows that the net profits were *yen* 104,523.139 of which *yen* 16,000 is put to reserve, *yen* 10,000 to reserve for building purposes, *yen* 50,000 is appropriated for payment of a dividend at the rate of 25 per cent. per annum, the sum of *yen* 28,523.130 being carried forward to next account.

A MAN who has not been identified died in an ice-shop in Isezakicho, Yokohama, on July 28th after partaking of a cup of crushed ice. The incident took place in the morning and the body lay during a great part of the day in the shop while the usual investigations were being made, in consequence of which the proprietor lost his whole stock of ice purchased in expectation of a warm day—for though many came to look at the unknown corpse few cared to eat ice in its presence.

CHINESE AFFAIRS.

Monday, July 29.

The Anglo-German syndicate formed for the purpose of constructing the Tientsin-Chinkiang Railway, is said to have succeeded in making the necessary financial arrangements with the Hongkong and Shanghai and the German Asiatic Banks, so that the work will be commenced at once. The route of this railway runs nearly parallel to the coast through a great part of its length. It passes through Tsi-nan, the capital of Shantung, and then turning south-west along the bank of the Yellow River, strikes the Grand Canal at Tung-ping, from which place it follows the line of the Canal until it reaches Chinkiang on the Yangtze. It is one of the most important lines in China, and the fact that German and English capitalists are to undertake the enterprise in combination can not but be welcomed. Rumour says that it has been decided to divide the part of the line running through Chili and Shantung into sections, and to entrust the work on the sections to English and German engineers independently. Possibly that may mean that Germany does not intend to have work done in Shantung by any engineers except those of her own nationality, her contention—against which Great Britain's written protest stands on record—being that she has secured for herself a monopoly of railway, mining and manufacturing privileges in Shantung. But such a restriction, in view of the fact that the whole enterprise is on joint account, would be straining at a gnat and swallowing a camel. It appears that some forty acres of the land destined for increasing the foreign settlement at Tientsin, has been appropriated for the purposes of the railway terminus. The guarding of this line through such turbulent districts as Chili and Shantung will be a task.

If the sentiment of the Japanese people may be inferred from the writing of the *Nichi Nichi Shinbun*, there is a strong feeling against Russia's attempt to have the Chinese tariff raised to 10 per cent. for the purposes of the Indemnity. It is justly contended by our contemporary that the decision of such a question should rest with the Powers in whose hands the bulk of the trade lies, and that a country like Russia, whose commerce with China is practically nil, ought not to be the one to insist upon any tariff arrangement. One of the reforms most urgently called for in China is the abolition or reduction of the *likin*, which, according to the *Nichi Nichi*, amounts to an *ad valorem* duty of some 30 per cent. It is plain that any large increase of the Customs tariff should be made to depend upon the *likin* question, which is the prudent and practical view taken by England, whereas Russia, without any thought for the problem of reform, would raise the tariff at once.

Of course this is purely a piece of diplomacy on Russia's part. The tariff is nothing to her. Her imports into China do not amount to 4½ million taels annually, whereas British imports aggregate 160 millions. It is almost a farce that any dispute should be possible on such a question between two Powers so differently circumstanced. An additional 5 per cent. on Great Britain's import trade with China means 8 million taels, whereas for Russia it means less than a quarter of a million. Naturally the St. Petersburg Government can afford to play fast and loose with such a matter. Of course Russia's object is plain enough. She will

have laid the Chinese Government under a great and substantial obligation if she can materially reduce the burden of the Indemnity by transferring a part of it to the shoulders of British trade, and since the operation costs her nothing, having no appreciable interest for her either in the present or in the future when the *likin* problem has to be solved, she makes what capital she can out of it. To accuse her of any sin on that account would be silly. She is playing her own diplomatic cards for all they are worth, and she is quite entitled to do so. It is for England, on the other hand, to maintain her point, unless, as perhaps may be feared, she resolves to make a heavy sacrifice rather than interrupt the course of the negotiations. It must be confessed that Russia's action in promoting the concord of the Powers and the progress of the negotiations has not been very effective.

Telegrams from Shanghai says that the Tsung-li Yamen is henceforth to be called the "Foreign Office." It will be under the presidency of Prince Ching, and the business of the office will be discharged by Wang Wen-shao, who will have the title of Minister. These officials are not to hold any other posts: their sole duties will be connected with foreign affairs. Probably among all the changes consequent upon the recent troubles, none will be more welcome to the Foreign Representatives in Peking than this metamorphosis of the Tsung-li Yamen from a Protean body devised for the obstruction rather than the discharge of business into an office presided over by one responsible official and organized on Western lines.

Nothing has been heard of the Lien-chuan-tui for some time, but news now arrives that they are losing strength every day, and that their leader has gone from his head-quarters with a few followers for the ostensible purpose of enlisting the assistance of General Tung.

Rumour persists in alleging that the Chinese Prince Imperial has left Hsian. The latest statement is that he reached Nihon on the 14th instant, and there had a meeting with his father, Prince Twan. The latter, it is added, then addressed a letter to Liu Tien-ling in Hsian, urging that if the Court returns to Peking, it will be merely falling in with the plot of the Foreign Powers and will find itself a prisoner in the hands of their troops. The Prince conjures Liu to use all his influence for the purpose of preventing such a catastrophe.

It is alleged that the French are unwilling to transfer the Lu-Han Railway to the Chinese, and that they propose to guard it jointly with the latter. That would be a good arrangement doubtless from the point of view of security, but if once the precedent be established that any line in the interior of China upon which foreign capital has been expended ought to be guarded by foreign troops, a new and very powerful wedge will be driven into that loose structure called the Chinese empire.

Tuesday, July 30.

An interesting explanation is now offered as to the origin of the *Lien-chuan-hui*. It is that the disturbance was caused by an attempt on the part of the authorities to collect from the inhabitants of Chili a sum of four million taels, on the ground that such an amount was needed to meet the claims of Christians who had suffered during the Boxer riots. When five hundred thousand taels had been collected, popular indignation expressed itself in the form of the *Lien-chuan-hui* revolt. It can not be considered

wonderful that the people of Chili rebel against such imposts. Upon them the whole brunt of the trouble has fallen. Not only were they pillaged by the Boxers, but thereafter the foreign troops came along and devastated the country on a wider and more ruthless scale. There can not be much tax-paying capacity in Chili at present, and it is hard that the wretched people should now be required to provide a large sum for such a purpose as the above.

Rumour finds ample materials in the doings of the Hsian Court at this crucial moment, when the world is watching whether the Empress Dowager has any real intention of returning to Peking, or whether, conceding the intention, its consummation will be permitted by the conservatives. The latest story is that Wang Wen-shao has received orders to proceed to Peking in advance of the Court for the purpose of making the necessary preparations, and that the step is regarded as a device of the conservatives to get Wang away from Hsian, so that they may remain masters of the situation there. Viceroy Li, however, is said to have publicly denied that Wang's mission is due to any such cause. It will be remembered that Wang is to be one of the Vice-Presidents of the newly organized *Tsung-li Yamen*, Prince Ching being the President.

Independent reports from China confirm Lord Cranborne's statement in the House of Commons, as telegraphed by Reuter, that the Indemnity question is on the point of being settled. It may be inferred, therefore, that some compromise has been effected with regard to the tariff question, since there is little probability that either party has given way completely.

It is rumoured that a disastrous conflagration has occurred at Foochow, and that the office of the Osaka Shosen Kaisha is among the buildings destroyed.

Wednesday, July 31.

General Yamaguchi tells the *Asahi Shinbun* that Mr. Na Tung, who is to come to Japan at the end of August conveying the apologies of the Chinese Court for the death of Mr. Sugiura, is a strong advocate of progress and a firm believer in the necessity of China's utilizing Japan to lead her into the new path. Na enjoys the full confidence of Prince Ching, who is to be President of the re-organized *Tsungli Yamen*. His own nominal position is that of Vice-Minister of Finance, but he really presides at the Board of Finance. It seems just possible that under the new regime China's interest in Japan may pass from the academical to the practical stage.

Concerning Tung Fuh-shang, General Yamaguchi does not believe in the rumours of his rebellion. He thinks that Tung is a greatly discontented man, but there is a long interval between private discontent and public rebellion. Tung was a prominent General at the time of the Boxer outbreak, and he undoubtedly thought that the moment had then come to crush the troublesome foreigner finally. But in all his acts he merely obeyed the orders of his Government. That is a general officer's plain duty. Whatever his own views may be, he has nothing for it but to obey the orders of those that are entitled to issue orders. From his own point of view, then, Tung's only fault is that he did his duty, and for that he has been disgraced and cast off by the very Government that he served. It can not be a matter of surprise that he should be profoundly discontented.

Li Hung-chang's physical condition is very pitiable. He can not walk without aid,

and he never enjoys a week of uninterrupted health. But he is nevertheless obliged to continue the negotiations with the Foreign Representatives. He continues also the various schemes and plots which have become second nature to him—a *rusé* old contriver.

There are many Japanese and foreign stores in Peking, and there has consequently been no lack of edibles and other luxuries. Parties at which ladies are present are numerous, and their conviviality is increased by music. The Germans have a band with every battalion. The Japanese band is one of the best. It was sent by the Government in compliance with a special request, in order that Japan's equipment might not seem inferior in that respect.

The Viscount has a very poor opinion of educational facilities in China. He says that the one great aim of educationists is to teach the ideographs. Things are much as they were in the days of the *tera-koya* (temple school) in Japan. Foreigners are working hard to effect some improvement. The Buddhist priests that have gone over from Japan limit their instruction to Japanese troops.

Thursday, Aug. 1.

The leading principle adopted by the Foreign Powers in mapping out the distribution of the troops that are to remain in Chili seems to be railway protection. No second opportunity is to be furnished to Boxers or other insurgents to effect wholesale wreckage of railways and destruction of lines of telegraph. All points of vantage connected with the iron roads are to be held by troops. The finale of such a state of affairs is not easy to perceive. It occurs to the onlooker that the Chinese Plenipotentiaries should have endeavoured to fix some date for the withdrawal of the troops. They certainly would have found the task difficult, but, on the other hand, the Foreign Powers are not deaf to reason. They must have recognised the proposition, had it been submitted to them, that when a country is required to agree to the indefinite posting of foreign troops here and there throughout her metropolitan province, her independence becomes illusory. Perhaps the protocol will be found to contain some provision of a limiting character, but nothing of the kind has yet been made public. Meanwhile, although the British Government justly says that England is not in a position to dictate to the other nations in China, it seems evident that England does not intend to be "left." News comes that she is carrying on extensive works of iron-pier building and dock construction at Ching-wan-tao, and that she will soon have a coal-landing station there in communication by rail with the Kaiping mines. She is apparently working rather than dictating.

It would seem that when Russia withdraws her troops from Shan-hai-kwan, she will not retire them farther than Port Arthur, whence they will probably be distributed at various important points in Manchuria. In former years the interesting subject of conjecture in the Far East used to be the number of Russian troops stationed in and about Vladivostok. Then Port Arthur became the field of surmise and now it is Manchuria. What will be the next point of observation? Meanwhile France is pushing forward steadily in the south under the influence of the indefatigable M. Doumer. It only remains for Germany to resume her career of aggression in Shantung. Then China will be fairly *en route* to disintegration.

THE PEKING COUNCIL.

Now that the labours of the Peking Council are drawing to a close, so far as concerns the arrangements for the restoration of peace, an uneasy feeling begins to haunt some Japanese that if the Council rises without making some definite settlement of the Manchurian affair, peace will not have been secured by any means. The *Nichi Nichi Shinbun* echoes that feeling in forcible language. It points out that since Russia has declared her resolve to adhere to the concert of Powers, and since she also presented her bill of Manchurian expenses to the Council of Ministers, the final settlement of the Manchurian problem undoubtedly devolves upon the latter and is a main part of their business, which if they leave undone, they will have signally failed in the discharge of their duty. Every impartial observer must agree with the Tokyo journal's view, especially since, as it further points out, the 11th of the conditions imposed by the Powers and accepted by China is that such arrangements are to be made as shall, in the opinion of the Powers, be conducive to the promotion of trade and industry, and since China is pledged to a satisfactory adjustment of her finances, from which adjustment Manchuria can not possibly be excluded. But it is when a question of this kind crops up that the impractical character of the Council of Ministers becomes apparent. The Council has had at least as much difficulty in preserving its own union as in disposing of the problems submitted for its discussion. Very great credit belongs to it for its success in the former respect. Six months ago no one would have ventured to predict that the Representatives of so many Powers with so many divergent interests would sit in harmony at the same board and come to unanimous decisions about matters offering a large margin for differences of opinion. That is a very remarkable feat. But suppose that it were now definitely decided to bring the Manchurian problem before the Council, is it not quite certain that Russia, France and Germany would refuse to debate it? France will go with Russia to a certain distance. She will go with her very much further than is demanded by the contingency we are considering. Germany has made it explicitly known that she does not care a row of pins about Manchuria, and that she will not raise a finger in opposition to Russia on account of that wide district. As for Russia, confronted by such a question, she would merely recall,—and perhaps with some show of not unnatural indignation,—her previous declaration that so soon as peace and good order are restored in Manchuria, she will evacuate the place. Could she be asked for more explicit pledges, with France and Germany supporting her and with England's right hand tied in Africa? It is Russia, as we ventured to predict more than a year ago, that emerges the only solid gainer from this unhappy war with China, and if she herself did not foresee how largely her probable advantages outweighed her apparent risks, she failed to exercise the astuteness that generally characterizes her proceedings.

A Japanese cook named Tani Shichizo, a native of Fukui, employed by a tea merchant at Honcho Nichome, Yokohama, attempted to commit suicide on the morning of the 30th July, by stabbing himself in the stomach and throat with a big fish knife, but was discovered before he had succeeded in his intent and sent to Juzen Hospital.

THE KOREAN EMBARGO UPON CEREALS.

Saturday, July 27.

There appears to be an impression in some quarters that the Korean Authorities have been premature in deciding to put an embargo upon the export of rice and deans. That the country, or at any rate the northern part of it, has suffered greatly from dry weather is not denied, but it is thought that much of the crop might still be saved if rain fell and that longer observation of climatic conditions should have preceded the issue of a veto. Some critics contend that under no circumstances is it wise policy for Korea to stop her exports, since her people can get rice from abroad at cheaper rates than those demanded for the home-grown article. The *Jiji Shimpō* further points out that resort to these embargos is a favourite device with Korean officials, who find in them an opportunity to enrich themselves. That interesting statement is explained thus:—The veto against the export of rice applies not only to shipments abroad but also to interprovincial transactions in Korea. Thus, although it may happen and does often happen, that one province has a plentiful crop while another is almost in a famishing condition, the inhabitants of the former are interdicted from openly disposing of their produce to the latter, and consequently while high prices rule in one district, the very opposite state of affairs exists in another. Local officials, however, can always elude these vetoes. They purchase large quantities of grain in the regions of plenty and sell it in the regions of scarcity, to their own great advantage. Hence they naturally welcome any conditions justifying the imposition of an embargo, and, on the other hand, it becomes correspondingly necessary for the Japanese to scrutinize the grounds of such official action. For that reason the Japanese Representative in Sōul has declined to endorse the Emperor's recent edict until inquiries have satisfied him of its necessity. This question has long been a source of friction between Japan and Korea. It was one of the prominent troubles before the war of 1894. The unjustifiable and almost continuous interference of the Chinese Authorities, who supported the Korean Government in its arbitrary proceedings, very nearly exhausted Japan's patience. Japan annually purchases some five million *yen* worth of rice and 2 million *yen* worth of beans from Korea, and it is a serious thing for the comparatively small number of merchants engaged in the trade as well as for the ships that carry the cereals, to have this commerce indefinitely stopped. Other cereals are included in the veto, but rice and beans are far the most important staples.

Monday, July 29.

There is no room to question the right of the Korean Government to issue an edict against the export of cereals. All the forms demanded by the treaties have been complied with. But the economical wisdom of such a step is more than doubtful, and upon that ground representations have been made to the Authorities in Sōul. Unquestionably if it suits the pecuniary convenience of holders of rice or beans to sell the cereal abroad rather than at home, the greatest good of the greatest number is promoted by allowing the sale to proceed without interruption. The people know their own business far better than officialdom knows it. To forbid regrating is one thing, but to forbid export is quite another.

The Japanese Representative in Sōul, according to the latest intelligence, has pointed

out to the Korean Foreign Office that the issue of an edict forbidding the export of cereals is premature at this juncture, and the Minister of Foreign Affairs has replied that the arguments of the Representative shall be duly considered. It is further telegraphed that the Japanese merchants in Fusan are sending a delegation to the capital to protest against the edict. The British Chargé d'Affaires also has made a protest, his contention being that beans can not be properly included in the veto. That contention certainly seems consistent with the language of the Japanese treaty which plainly limits the power of the veto to bread-stuffs, but it is not consistent with the history of the past.

Tuesday, July 30.

The Japanese Chamber of Commerce at Chemulpho is busying itself about the decree imposing a veto on cereals. The view taken by the Chamber is that if once the decree is translated into local action, there will be much difficulty in getting the embargo removed and that a timely protest is therefore necessary.

Wednesday, July 31.

The question whether rice alone or cereals in general should be regarded as referred to in Korea's treaties with foreign Powers is evidently occupying attention in Seoul. The language of the British Treaty is this:—"Whenever the Government of Korea shall have reason to apprehend a scarcity of food within the Kingdom, His Majesty the King of Korea may, by Decree, temporarily prohibit the export of grain to foreign countries from any or all of the Korean open ports, &c." It can hardly be disputed that "grain" is not limited to rice alone. But it may fairly be disputed whether "beans" can be included in "grain." The Japanese Treaty is less ambiguous. The term there used is *kome-ryô*, or "rice for food." Such a description certainly does not, or ought not to affect other cereals, unless it be argued that the ideograph *ryô* does not qualify *kome* and that the true significance of the definition is "rice and food stuffs," an explanation which appears impossible on the face of the characters, and which is also inconsistent with the fact that in other articles of the same Treaty the words *oyobi zakkoku* ("and the various cereals") are added to the term *kome-ryô* where a generic signification is intended. Japan's difficulty appears to be that she raises this question of interpretation for the first time, though it is not by any means the first time that she has had to deal with the problem of a veto upon the export of all kinds of grain and of beans from Korea. None the less, that the treaty has been wrongly read in the past is not a valid reason for continuing to misinterpret it. The question is of cardinal importance, for this embargo, if enforced, would signify the virtual paralysis of Japan's trade with Korea.

THE LAMA IN TOKYO.

Saturday, July 27.

Count Okuma, with his usual hospitality, entertained the Lama and his suite together with a large party of Japanese, at his Waseda villa on the 24th instant. The Count's house at Waseda was destroyed by fire some time ago, as our readers are aware, and the new building has only just been commenced. But such a detail as the lack of a house does not appear to interfere with Count Okuma's exercise of hospitality. He caused a marquee to be erected in the garden, and there his

visitors were entertained, perhaps more agreeably than they could have been under a roof on a day so warm as last Wednesday. No particularly interesting conversation seems to have taken place. The interpreting was a very troublesome business, the Lama's words having to be translated first from Thibetan into Chinese by a Chinese priest who has spent 26 years in Thibet, and subsequently from Chinese into Japanese by a Japanese priest. The Lama visited the Waseda School, and was apparently much struck by the arrangements for conducting the instruction of students at a distance, which is effected by printing the lectures and appropriate parts of the text books month by month and distributing 30,000 copies of the magazine. Tokyo journals say that the visitor was evidently greatly impressed by his host's wooden leg, such feats of surgery being unknown in Thibet. As to the difficulty experienced by foreigners in entering Thibet, he explained that the opposition of the people certainly counted for something, but that the main obstacle was the presence of numerous bandits among the mountains on the frontier who regarded travellers as their special prey. The Lama himself was once obliged to fight for his life against these outlaws, most of his attendants having deserted him at the moment of danger.

Monday, July 29.

Much continues to be made of the Lama in Tokyo. He has been entertained by Mr. Okura Kihachiro and by various societies, including the Educational Society. Speaking to the latter, he made one or two interesting statements. He had always heard, he said, that Japan was a Buddha-reverencing nation, and it had therefore caused him some surprise to learn that her troops were fighting side by side with those of foreign Powers against China. But it subsequently appeared that the conduct of the Japanese was very different from the conduct of their comrades, and that they had behaved with great kindness and consideration, protecting the persons and property of Chinese subjects. It was through their influence that the Lama Temple in Peking had been saved from anything like destruction or outrage. It happened to fall within the Japanese lines, and the result was that it emerged scathless from the crisis. He had desired to visit Japan in order to return thanks in all the proper quarters for such effective protection, but, as his hearers were aware, the income of the Lama Temple was derived entirely from the Imperial Treasury in Peking, and during the absence of the Court the resources of the Temple did not permit any such expenditure. On communicating his wish and the impossibility of carrying it out to Count Otani of the Hongwan Temple, the latter had provided the necessary funds and he was thus enabled to present his thanks in person.

The Lama was entertained on the 26th inst. at Hoshigaoka by the *Towa Dobun-kai*, the *Kokumin Domei-kai* and the *Doshi Club*, Count Shimazu presiding, and Messrs. Sasa, Toyama, Minoura, Konuchi, &c., being among his hosts. The Lama seems to have steered clear of politics up to this entertainment, but he was finally drawn into them, for in his speech replying to Count Shimazu's welcome, he said that he had previously heard of the existence in Japan of societies formed for the purpose of protecting the integrity of the Chinese empire, and that it gave him great pleasure to make the acquaintance of such associations.

Tuesday, July 30.

There appears to be an impression that the Lama was received in audience by the Emperor. That is not so. The Lama waited upon the Minister of the Imperial Household, and asked Viscount Tanaka to transmit to the Sovereign a statement of thanks for the protection extended by the Japanese troops to the Lama Temple in Peking. He afterwards had some conversation with the Minister, who remarked that as Japan and Thibet followed the same creed, their perpetual friendship was to be hoped for. His Excellency advised the Lama to visit Nara, and the Lama, accepting the advice, leaves Tokyo by train to-day. He will sail from Kobe on the 2nd proximo.

THE CONSPIRACY IN THE NIPPON YUSEN KAISHA.

The *Nichi Nichi Shimbun* and the *Kokumin Shimbun* concur in alleging that a party of shareholders of the Nippon Yusen Kaisha are employing every means in their power to obtain sufficient support for calling an extraordinary meeting of the Company's shareholders in September, their object being to effect some reorganization in the sense of reducing the authority of the principal shareholders, as the Imperial Estates Bureau, the Iwasaki and the Mitsui, and increasing that of the small shareholders. That project has a certain sentimental element which may appeal to romantic folks. But the true aim of these agitators is well understood. Not content with receiving dividends of from 10 to 12 per cent., they seek to compel the directors to distribute the greater part of the reserves among the shareholders, thus sacrificing the stability of a great national enterprise to the greed of a few individuals. The public must have observed with astonishment that chief among these agitators are the names of Baron Ozaki Saburo and Mr. Kishimoto Tatsuo, the former a prominent member of the House of Peers, and the latter an eminent jurist. Onlooking foreigners watch such proceedings with wonder and regret. It really seems as though no Japanese enterprise, however well managed or successful, were safe against the assaults of conspirators who attach no value whatever to the permanent prosperity of the enterprise compared with their own temporary gain. The acme of sentimental silliness seemed to be reached recently when the *Mainichi Shimbun* assailed the Nippon Yusen Kaisha for accumulating large reserves at a time when the country was suffering from dearth of floating capital, which was equivalent to arguing that since a great deal of distress existed in business quarters for want of money, one of the few really sound business concerns in the country was to be reprehended for not abandoning the principles of solid enterprise and reducing itself to the general level of impecuniosity. But these conspiring shareholders, headed by Baron Ozaki and ex-Judge Kishimoto, outdo the *Mainichi Shimbun*, since they merely want fat dividends for themselves without even the flimsy pretext of succouring the money market. Such incidents are most disheartening to the friends of Japan. Truly it seems as though the people of this country, or, at any rate, a considerable section of them, were quite deficient in business instincts. Success does not appear to stimulate fresh effort but rather to create a mood of shortsighted and suicidal greed.

IBA SOTARO.

The finding of the judge engaged in the preliminary examination of Iba Sotaro's case has been published. It will excite some comment among foreigners, though the requirements of law have apparently been strictly complied with. The judge remands Iba for trial on a charge of wilful murder, and explains the nature of the wounds he inflicted on Mr. Hoshi and the steps he took to reach his victim. We learn from the document that the story of Iba's having asked whether he repented, and of Mr. Hoshi's having replied by the command *sagare* (stand down), is not true. Iba, as he leaped upon his victim, ejaculated one word only—*soku* (thief)—and then delivered a stab which pierced Mr. Hoshi's heart. The latter raised his right arm to defend himself, and Iba, with remarkable quickness, then plunged the dagger under that arm also. These and other details are all proper and necessary. But the setting forth of Iba's motive furnishes food for thought. Again the public has presented to it the old story that Hoshi was a corrupter of public morality, a pernicious factor in the world of education, a taker of bribes and so on, and that he had attained such a position politically and socially as to be beyond the reach of the law. Therefore nothing remained but to remove him by violent means. It is understood to be the duty of the examining judge to record the motive of a crime, and in this instance the judge has done only what is required of him. But it is hard to be reconciled to the fact that Iba Sotaro's plea is thus once more published broadcast throughout the country and that a fresh assault is made upon the reputation of his victim.

It is usually the practice of prisoners awaiting trial on a capital charge to avail themselves of every pretext for delay offered by the law. Thus under such circumstances, an appeal is generally lodged against the finding of the *juge d'instruction*, on the ground of either an error of law or an error of fact. Iba Sotaro, however, has no intention of resorting to this device. He declares himself entirely satisfied with the verdict of the examining judge, and well he may be satisfied, for his own motive is there set forth in the fullest and most explicit terms.

THE REFORM OF THE JUDICIARY.

It is stated that the committee engaged in discussing the draft bill for the reform of the judiciary is continuing its labours throughout the hot weather, and that the bill will certainly be ready for submission to the Diet next session. The principal changes now contemplated affect the system of collegiate courts. It is proposed to reduce the number of judges for trying a case in the Supreme Court from 7 to 5; and the number in Courts of Appeal from 5 to 3, but as to courts of First Instance it is uncertain whether the collegiate system (3 judges) will be abolished altogether, or whether it will merely be modified in the sense of employing 3 judges in important cases and 1 in ordinary cases. Another question relates to appeals. According to the existing arrangement, a case originally heard by a District Court (*Ku-saiban-sho*) is appealed, first, to a Local Court and finally to an Appeal Court; it never gets to the Supreme Court. That system was copied direct from Germany without taking note of the fact that in Germany such a method is dictated by the peculiar composition of the

Empire, which consists of a number of federated States. It is therefore unnecessary in Japan. But what kind of change is proposed we can not tell. Apparently the idea is that cases originally heard in District Courts and subsequently appealed to Local Courts should then be appealable to the Supreme Court direct, without going before an appeal court. Such an exception could scarcely be rationally made with regard to those paltry issues which involve sums not exceeding 100 *yen* or offences punishable with not more than 2 months' imprisonment. Reverting to the proposed changes, it appears that the Committee are unanimous in thinking that the competence of District Courts should be extended to civil cases involving sums up to 300 *yen*, but as to the limits of these tribunals' penal jurisdiction there is much discussion. There are many other proposed amendments, but enough has been said to give a general idea of what is contemplated.

According to the *Nichi Nichi Shinbun*, the draft bill for the re-organization of the Judiciary—a *resumé* of whose chief provisions is given above—has been rejected by one vote in the Committee of Examination. The opponents of the measure are said to consist of the judicial members of the Committee, who foresee that the bill, were it passed by the Diet, would have the effect of reducing their numbers.

THE OPPOSITION JOURNALS.

The Opposition journals are beginning to attack the Cabinet on the subject of finance. Their assault would doubtless be stronger if they had any ground but conjecture. It happens, however, that the Cabinet has not announced any policy. It has merely declared that it will prosecute the various State enterprises with all the vigour permitted by the country's finances. What the public, especially the critical section of the public, want to know, however, is whether the Government has any definite scheme for augmenting those finances. A foreign loan, which is believed to be favoured by the Minister of Finance, certainly could not now be effected on terms even approximately favourable. The domestic loans, which constituted an integral part of the *post-bellum* programme are not at present possible. Thus it is understood that the Finance Department has no resources except to inaugurate a system of premium-bearing bonds in connexion with the post-office savings banks and to bring greater strictness to bear on the system of tax-collecting. That kind of thing does not satisfy the Opposition. But they are as usual silent as to the course they would themselves adopt. They want a weapon of attack, but they don't want to construct a weapon for their own discomfiture. It is a pity that finance should continue to be a bone of political contention. The inevitable consequence is that foreign distrust is strengthened all the while.

REGISTRATION OF FOREIGN LIFE INSURANCE COMPANIES.

Japanese newspapers report that, on the 25th instant, the Department of Agriculture and Commerce definitely granted the applications of four foreign life insurance companies, and duly registered them. The companies were, the Equitable of New York, the Manufacturers, the Standard and the Sun. These are the first foreign life insurance companies ever registered in Japan. The delay in granting the applications caused some im-

patience and prompted suspicions in which foreigners are only too apt to indulge where the action of Japanese officialdom is concerned. It also furnished material for attacks by Japanese journals which, not unnaturally, condemned these companies for carrying on business without being registered. The reasons of the delay have been fully explained in these columns and the groundlessness of the suspicions has been demonstrated. It is pleasant that the incident is closed for it threatened at one time to cause some scandal. The officials of the Department of Agriculture and Commerce showed much courtesy and consideration throughout, and certainly they did not deserve the animadversion of which they were the victims.

THE CZAR AND HIS JAPANESE VISITORS.

Mr. Suzuki Otobei, whose career has hitherto been connected with Russia, returned recently from a visit to that country. In a speech made at a friendly gathering of the Economical Society in the Tsukiji Seiyoken on the 29th instant, he had a great deal to say about an audience to himself and Mr. Yezaki by the Czar. The two Japanese were shown into an apartment of medium size, where a Court official received and conversed with them for some time. Presently a door opened and the Emperor, wearing an undress uniform and smoking a cigar, walked in, His Majesty's entrance being the signal for the immediate departure of the Court official. The Czar astonished his visitors by his complete want of *façons* and his affability. He told them that he was very fond of collecting Japanese works of art and that he had brought with him from Japan a quantity of objects which were stored in an upper chamber of the Palace. His Majesty then proceeded to examine the things that his visitors had carried with them, taking the articles one by one in his hand and asking various questions about them. He told Mr. Yezaki, who is a native of Nagasaki, that that place occupies a bright spot in his memory, and he sent away the two Japanese with a conviction that a more affable Sovereign does not exist.

INSURANCE.

It is rather surprising to read in the columns of the *Nichi Nichi Shinbun* a note couched in a distinctly alarmist tone; a note evidently intended to stir up Japanese insurance companies and impel them to unite against foreign companies. The paragraph ends with a mysterious warning that unless steps are taken vigorously, that ominous *yuyushiki naru daiji* which does duty so often as a bugbear, will soon become an accomplished fact. The truth is, however, that Japanese life-insurance companies are quite inadequate to meet the needs of the situation. Not one of them will grant a policy of more than five thousand *yen*. Conceivably insurance business conducted on such a scale: £500 the limit! Perhaps it may be replied that very few Japanese want to insure their lives for larger amounts. That is true, but what is the reason? Is it not that the pettifoggish methods of the life-insurance companies have created a feeling of insecurity, so that a wag recently proposed to change the term *Hoken Kaisha* (insurance company) into *Kiken Kaisha* (perilous company)? The best thing that can happen in the interest of the Japanese public is that some solid object lessons should be furnished by foreign life insurance companies.

STRANDING OF THE "KINSHU MARU."

In connexion with the stranding of the Nippon Yusen Kaisha's steamer *Kinshu Maru* on the Quelpart coast, the gunboat *Sai-yen* received instructions to proceed from Chemulpho to the assistance of the steamer. Preparations to comply with the order were immediately made. Captain Fujiki of the gunboat, with 64 men, proceeded by steam launch to obtain supplies from the shore, but at half past nine on the night of the 24th the launch collided with a steamer bound from Chemulpho to Chefoo. The launch was cut to the water's edge. All the men on board her were saved, but Captain Fujiki, although an excellent swimmer, disappeared, and his body had not been found up to the time when news of the catastrophe was despatched. It is conjectured that he must have been injured in the collision.

The corpse of the late Captain Fujiki has been found near Chemulpho. Captain Fujiki was lost in a collision between the steam-launch of the *Sai-yen* and an outward-bound steamer. He was a good swimmer, and as all the men with him at the time were saved, it was conjectured that his disappearance was due to his having been disabled by a blow. The telegram announcing the recovery of his body does not say anything as to whether its condition bears out the theory of an injury received at the moment of the collision.

The *Kinshu Maru*, which went ashore off Quelpart on the 20th instant, was floated off successfully by jettisoning cargo. She left Quelpart on the 27th and reached Shanghai on the 28th, so that when the *Omi Maru*, which had been sent to her assistance, reached Quelpart, she found no traces of the *Kinshu*. It is not yet known exactly what injuries the vessel has received, but they must be very slight as she only made 4 inches of water in her after-tank in 24 hours. She will probably be docked at Nagasaki.

The cargo of the stranded steamer *Kinshu Maru*'s was almost wholly of spinning cotton and matches and was insured by the Tokyo Marine and Imperial Marine Insurance Companies.

SIR ALFRED GASELEE.

The Mayor of Kobe in addressing Sir Alfred Gaselee when the latter landed in Kobe, said that the reputation and achievements of the distinguished visitor were familiar to the Japanese, and that they appreciated the part he and the British troops had acted in quelling the Boxers and relieving Peking. The Mayor also spoke of the close commercial relations existing between England and Japan, and of the debt owed by the latter to the former in all matters of technical knowledge. He welcomed Sir Alfred in the name of the people of Kobe, and said that although the hot season was ill-suited for travelling, he trusted that Sir Alfred would be able to visit some of Japan's mountains and lakes. Sir Alfred, in reply, remarked that he had enjoyed the friendship of many Japanese officers in Chili, and had been enabled to acquaint himself with the excellent organization of the Japanese army. He deprecated as quite undeserved the eulogies uttered by the Mayor and, thanking him heartily for his kind reception, expressed the great pleasure he experienced in visiting a country which he had learned to regard with so much friendship and respect. The President of the Kobe Chamber of Commerce (Japanese)

also read an address, and General Gaselee, having briefly replied, drove off, in company with Mr. Consul Hall and Captain Hiraoka to the Prefectural offices where he was received by the Secretary in the absence of the Governor, and after drinking a glass of champagne, he proceeded to the Oriental Hotel to attend the entertainment organized in his honour by the British residents and the China Association. He left for Kyoto by the 3.47 p.m. train. It is expected that he will remain in Japan until the middle of August, during which interval he will visit Nikko and other places of note.

Lieut.-General Gaselee arrived at Kobe on July 29th and landed at the American Hatoba at 11.30 the same morning. Captain Hiraoka of the War Department, Mr. Tsubono, Mayor, Mr. Tokonami, Secretary of the Ken, Mr. J. Carey Hall, H.B.M.'s Consul, Mr. S. S. Lyon, U.S. Consul, Mr. Ishikawa, Assistant Mayor, Messrs. Soyeda and Nakamishi, Councillors of the Ken, Captain Tashiro, Harbour Master, Mr. Hamada, Chief Inspector of Police of the Ken, Mr. Yamamoto, President of the Kobe Chamber of Commerce, Mr. Yatsui, Manager of the N.Y.K., and many other Japanese and foreigners received the visitor at the landing place.

At the Customs building an address of welcome signed by the Mayor was presented to General Gaselee and a speech was given by the President of the Chamber of Commerce. To both the distinguished visitor replied briefly. Later he called at the Kencho.

General Gaselee was entertained at tiffin by some sixty foreign residents at the Oriental Hotel. Mr. A. H. Groom, President of the China Association, was in the chair. The toast of the guest of the occasion was given by Mr. J. C. Hall, H.B.M. Consul, who in the course of his speech said:—

We are not here to discuss the diplomatic epilogue that is now slowly unfolding itself. What is before us and what was before us is the fact that the envoys of the civilised powers of the world were in danger, night and day, of massacre by an infuriated mob, not merely of civilians, but of soldiers of the Government to which these Envoys were attached, and that the work to be done was the rescue of these Envoys. It was a glorious task for a soldier to be sent upon (applause). Our honoured guest, Sir Alfred Gaselee, was chosen as the man for the situation and I think, gentlemen, you will agree with me that events have justified that choice (loud applause). His plans were laid, his preparations made, he put his hand to his work, and in one brief fortnight the British and all the Legations were relieved ("Bravo" and loud applause). That was an exploit for which not the British nation alone but every other civilised nation represented in Peking owes him a debt of gratitude which can never be fully recognised (applause). Now gentlemen, I have spoken only of the British share in the expedition. It is not that I forget that it was an expedition of Allied Forces (applause). The sections of the Allied force were each under their own Commander. You can imagine, gentlemen, how that complicated the task before our worthy guest (applause). In any position of command other qualities besides the mere capacity for fighting were required there—the capacities of diplomatic tact, ability, discretion and patience, which, I venture to say, General Gaselee has displayed in the fullest measure (applause). Yes, gentlemen, we were not alone on that occasion. We had allies, and we who are living in Japan—we are not likely to forget that foremost of these were the troops of the gallant nation in whose midst we dwell (loud applause). We know, gentlemen, from the authentic information given us in Sir Claude Macdonald's public despatches, the important part played by the little Japanese force in Peking under the command of Colonel Shiba (applause). I venture to say, gentlemen, that a no less distinguished part was performed by the Japanese troops, in co-operation with our guest of to-day, under General Yamaguchi, (applause). That I can leave to General Gaselee himself to speak to. But gentlemen, as I was saying, the Expedition, even although it was complicated by the necessity for co-operation amongst the Allies, succeeded without a hitch (applause). It succeeded without a breakdown or a failure of any kind, and the fact speaks for itself. Not only do we, his countrymen, feel proud of Sir Alfred Gaselee's exploits upon that occasion, but the presence to-day at this British "country gathering," as I think I may call it—the presence of representatives of all grades of the Japanese government—the central government, the provincial and the Muni-

cipal—shows that General Gaselee has been as successful in winning the good-will and hearty recognition of his Japanese allies as he has been in securing the grateful recognition of his countrymen (loud applause).

General Gaselee in his reply, after expressing his appreciation of the honour done him, said:—

I am afraid I cannot take to myself much that Mr. Hall has been good enough to ascribe to me, but as regards our Japanese colleagues I can only endorse all that has been said. I don't think we should have managed the relief of the Peking Legations unless it had been for the ability and energy mainly of our Japanese allies (hear, hear, and applause). The Japanese forces that went from this country under General Yamaguchi and supported by his Chief of Staff, General Fukushima, were most fully equipped in all particulars, and I need hardly tell you that in the work we have had it is not all a matter of men but quite as much of equipment and of the way the forces were put into the field. Nothing could exceed the manner in which our allies (the Japanese) sent their contingent equipped for war. The result was that when they arrived anywhere they were able at once to go forward, as also was our force—which, although it was small, was also I think very well equipped—so that we were, between us, in a fair way of showing the others the lead (applause). I can answer for my friends, the Japanese Army, that they were only too anxious to go forward and carry out the work which was eventually done. It was a great day for us all when we found we were able to relieve the garrisons of Peking, and found them all in a much better condition than we expected (applause). Even up to the very moment when we got there we were uncertain as to their state, and therefore the tension at that time was very great, and the relief consequently great in proportion.

The health of General Gaselee was also proposed by Mr. Tokonami, representing the Governor.

The Chairman proposed the British Navy and Capt. Burke of the *Orlando* in replying said:—

It is a proud thing for me to be privileged to return thanks for the British Navy. It is a still prouder thing that I am privileged to join with the British navy our confreres of the Japanese Navy (applause), with whom it has been our honour and pleasure to serve through a very critical time. It so happens—you may allow me to say—that my ship was the first that arrived at Taku and also the last to leave it, so that probably I was there longer and saw more than any other. It was owing to our being the first ship there that we were able to send our men. That was how our men were in Peking—and two were honoured specially—it was simply the accident of circumstances. During all the time that I was in Tientsin—all the critical time—I can quite bear out the remarks of General Gaselee as to the cordial co-operation we all received from the Japanese. One instance I can mention among others. In the capture of the native city on the 13th and 14th—finally on the 14th—the Japanese led the way, accompanied by the British. The whole of the British with the exception of some Welsh Fusiliers and the Chinese regiment, were naval men—marines or blue-jackets, and as marking the appreciation of the Navy, I may say that one naval officer, who has since been rewarded, made the remark, "Why this thing has been done by the Japanese." I can assure you that this was perfectly true and with reference to their excellent arrangements I can bear out every word that Sir Alfred Gaselee has said (applause). We were many days under very hot firing and amid arduous fighting and the Japanese suffered heavily, but they were always ready with their medical arrangements for the wounded, with their food supplies and their general organisation (applause). I can assure you that I do most fully appreciate what they did, and we did all we could to co-operate with them. We should have been handicapped, from the paucity of our numbers, without their co-operation.

THE CITIZENS OF TOKYO & THE OFFICERS WHO FOUGHT IN CHINA.

The citizens of Tokyo entertained Lieut.-General Baron Yamaguchi, Major-Generals Manabe and Fukushima, Admirals Dewa and Yendo and several other officers of the Army and Navy who had fought in China at the Imperial Hotel on the 26th instant. Baron Shibusawa presided, and there were present the Minister President, the Ministers of State, Marquis Saigo, Counts Soejima and Kawamura, Viscount Yenomoto, etc., the hosts and guests making a party of about five hundred. Baron Shibusawa,

after expressing the citizens' appreciation of the services rendered by the Army and Navy, explained that the object of the meeting was two-fold: first, to welcome back the officers who had served throughout the Chili campaign and to thank them for protecting the lives and properties of Japanese subjects; secondly, to express the hope that in the commercial relations now established with China, similar protection might be counted on. Lieut.-General Yamaguchi returned thanks in the briefest possible terms, declaring that the military and naval forces, owing to the virtues of the Emperor and the assistance of the nation, had been enabled to discharge their ordinary duty, but that they had not done anything more and that they did not deserve any thanks. During the course of the luncheon which was subsequently served, Baron Suyematsu made a witty and eloquent speech, but the gist of his remarks has not been reported.

MARQUIS ITO.

Marquis Ito has abandoned his projected political tour to the northern provinces, and the Tohoku Dai-kai has accordingly postponed its meeting which was to have been held in Akita on the 15th instant. Journals opposed to the *Seiyun-kai* seize upon this incident as a means of discrediting the Marquis. The latter, as may well be supposed, acts upon the advice of his medical attendants. A provincial lecturing tour in days of such sweltering heat as are now succeeding each other without any apparent prospect of a change, would be a rash undertaking for a man in the prime of life and in robust health. Marquis Ito is neither young nor by any means strong, and it is welcome news that he has postponed his tour. But the Opposition journals allege, in effect, that he fears to go, the northern regions having shown themselves so dangerously inhospitable to liberal politicians in the past that it seems more prudent to give them a wide berth. That is an agreeable sort of comment. Just what might be expected from schoolboys, but not the kind of criticism that becomes grown men.

Another matter of momentary interest is that Marquis Ito does not show any alacrity to accept Count Itagaki's suggestions as to re-organization of the *Seiyun-kai*. The Marquis is represented as holding that no occasion for re-organization has shown itself, and that any step of that kind must be taken with the utmost deliberation. He thinks that to begin tinkering at the constitution of the association within less than a year of its creation would be hasty, ill-judged and unseemly. Probably many people will be disposed to add that Count Itagaki's competence to give conclusive advice on such a point requires demonstration. It was partly because the political parties organized by Count Itagaki and others had been proved unsatisfactory that Marquis Ito came forward to indicate a new route. Were he to change front now in deference to the view of Count Itagaki, the fact would amount to a species of admission that the old groove was the best after all.

Count Okuma, speaking through the columns of the *Asahi*, censures Marquis Ito for limiting himself to lectures on the interpretation of the Constitution during his provincial tours, instead of discussing the really cardinal questions of the time. The Count, if we may read within the lines of his comments, hints that Marquis Ito, by that manoeuvre, avoids bringing himself into immediate collision with the present Cabinet.

FIELD MARSHAL WALDERSEE.

It is stated that the Emperor of Germany intends to confer the Order of the Black Eagle on Field Marshal Count von Waldersee and to raise him to the rank of Prince. The Field Marshal will certainly have no reason to complain of his reward. But his treatment will suggest some contrasts. It can scarcely be claimed that he achieved any military renown in China. There was, in fact, no opportunity. He was already regarded as an officer of high distinction in a country where military competence counts for much and is closely scrutinized, and his charming personality is attested by every one that had the pleasure of being brought into contact with him. But the solid fact remains that the labour and heat of the day were completely over before he and the bulk of the German troops reached the scene of operations, and that the only fighting which fell to their lot was of a petty and desultory nature, such as might have been planned and executed by an officer of comparatively inferior rank. Had operations on a large scale been necessary, it may be taken for granted that they would have been ably carried out by the Field Marshal, and that the fine contingent of troops sent from Germany would have made a worthy showing. But no such operations were required, and it must be confessed that the services for which the Field Marshal is to be raised to the rank of Prince and to receive the Black Eagle do not present themselves clearly to public sight. At all events, the question of contrast will press for an answer. What rewards are to be conferred on the Generals that organized and conducted the really important and arduous work of capturing Tientsin and relieving Peking? It is not reported that England, Japan, America or Russia contemplates conferring any signal distinctions in connexion with those exploits. The Japanese officers, indeed, have not even received a step in rank. Their reward has been to have their decorations raised by one or two grades. Thus a very flagrant difference will appear in the points of view of the various Powers.

MESSRS. MURAI BROTHERS AND COMPANY.

Messrs. Murai Brothers and Company have decided to move their chief establishment from Kyoto to Tokyo. They are now engaged in erecting new premises in Tamachi, the Shiba district of Tokyo. The building will cover nearly three acres and is to be four storeys high, with elevators and all the conveniences of an edifice in a modern city of the Occident. A year will be required to complete the work, but in the meanwhile a temporary office was opened yesterday. Messrs. Murai Brothers look forward to the time when their cigarettes will completely take the place of the imported article.

KOREA.

There is a vague rumour that a party of Russian troops are apparently about to undertake some enterprise in the province of Ham-yong-do, having assembled for that purpose at Heung-kyong. What the story means we can not pretend to decipher, nor do we think that any importance whatever attaches to it.

FOREIGN FUNDS.

Tokyo journals continue to write columns about attempts on the part of the Cabinet to obtain foreign capital. Our readers remember what a circumstantial story these journals recently published about Count Inouye's having commissioned Mr. Robert Irwin to sell fifty million yen worth of war bonds in America, and about Mr. Irwin's astral body having arrived in Yokohama to announce the success of the measure, while the steamer by which that gentleman travelled was still a thousand miles distant. The same papers now explain that Count Inouye's commission to Mr. Irwin did not extend beyond a request that as he was about to visit the United States, he would make some inquiries into the condition of the money market there, a task for which no one could be more competent. That matter disposed of, the papers go on to explain that an attempt was made to approach French financiers through Messrs. Hirayama and Sawaki; that it failed, but that Mr. Kodama is now continuing the quest in Paris; that Baron Iwasaki Hisaya, who recently sailed for England with his brother, was asked to try and arrange for the sale of the Indemnity bonds which Japan will presently receive from China, and that she will probably succeed. Concerning the latter story, our readers will observe that it does not relate to the procuring of foreign capital by way of loan, in the ordinary acceptance of the term. Concerning the French story, we find difficulty in believing it. The Japanese do a great many things that are not conducive to their financial credit, but really that they should approach the Paris money market through gentlemen of the standing of Messrs. Hirayama, Sawaki and Kodama would be too unwise. We do not mean to raise any objection as to the moral and technical competence of these gentlemen. What we mean is that they are not men of any standing in Japan, and that to employ them for such a purpose would be as though a man were to send his clerk to a neighbour to borrow a sum of money. It is very unlikely that the present Cabinet would fall into a blunder of that kind. There will be some other journalistic explanation presently.

THE LABOUR QUESTION.

Several of our Tokyo contemporaries write in very strong terms about the treatment of the women employed at the Kanegafuchi Cotton Spinning Factory. There is no law at present for regulating these matters, and in its absence great abuses are said to take place. The Kanegafuchi mill is probably no worse, possibly even better, than other works of the same character elsewhere. Over three thousand women and girls are employed there, some of them only 12 years of age. The hours of work are reported to be twelve daily; the sanitary arrangements are glaringly defective; the food is of the coarsest description, and the girls are not allowed to have any liberty whatever. Attention has been attracted to the place by the number of pulmonary patients that it produces, and the above facts are said to have been ascertained by police examination.

Capt. A. C. Loggin, R.N.R., commander of the P. and O. steamer *Arctadia*, has been promoted Commodore of the Fleet in succession to Capt. Reeves, R.N.R., retired.

NOTES ON CURRENT EVENTS.

Tokyo journals state that the sum—1,210,000 *yen*—required for completing the Yokohama Water Works is to be advanced by an American capitalist. It will be remembered that the rate of interest is 6 per cent. and that the bonds are offered at 92 *yen*, redemption, according to the original plan, to be effected yearly by drawing lots and to be concluded in 30 years. The last condition has been objected to by the foreign capitalist, his wish being that the money should be returned in fixed amounts at the end of every 5 years. The sanction of the Finance Department having been sought for that change, the Department suggested that the desire of the lender might be complied with for the first 10 years, after which the Water Works Office should have the right of repaying the principal at such times and in such amounts as might suit its convenience, provided that the whole be paid off in 30 years. To that modification the representative of the American capitalist is said to have agreed.

It is announced that the Department of Agriculture and Commerce will send 84 students abroad next month for practical training. Of these 25 will go to America, 1 to Mexico, 27 to Europe (namely 10 to France, 9 to Germany, 3 to England, 1 to Russia, 3 to Belgium and 1 to Austria), 2 to Australia, 21 to China, 2 to Vladivostok, 1 to Singapore, 2 to the Philippines, and 2 to Hong-kong.

Viscount Aoki appears to have publicly constituted himself an advocate of the State purchase of private railways for the purpose of releasing the large sums of capital that have been fixed in these enterprises. The Viscount also opposes the policy of retrenchment and contraction of imports advocated by Counts Matsukata and Inouye. We have not ourselves examined the brochure in which these views are expounded. Our information is taken from the columns of the *funmin* which gives a somewhat vague synthesis of the book, not even taking the trouble to tell the public whether Viscount Aoki advocates the hypothecation of the railways for the purpose of a foreign loan. It is at all events evident that he does advocate the introduction of foreign capital, and that his policy in financial affairs is essentially positive.

A man picked up a bundle of Bank-of-England notes on a level crossing of the Tokyo-Yokohama Railway at Shinsen-za, in the Shiba District. He handed the notes to the police. It is conjectured that they were either accidentally dropped from the train by their owner, or thrown from it by a pick-pocket who deemed them a dangerous possession.

On the 27th instant, while the Prince Imperial was inspecting troops on the Aoyama Parade Ground, the horse ridden by Major Kawabata Heikichi, of the Infantry, took fright, and after galloping wildly for a considerable distance, entered from the back gate of the Aoyama Palace, and colliding against a pine tree opposite the *genkwan*, dashed its rider's head with such violence against a thick branch that he was taken up dead. The Major was a distinguished officer. He held the Fifth class of the Golden Kite, and enjoyed a high reputation for professional ability.

Japanese newspapers announce the arrival in Tokyo of Mr. D. W. Stevens, Foreign

Secretary of the Japanese Legation in Washington, but they add that he is to replace Mr. H. W. Denison at the Foreign Office, a statement which has no basis of fact. Mr. Stevens merely comes to Japan on leave, and does not expect to remain more than six weeks or two months. His last visit to this country was made in 1894.

The new Italian Representative and Madame Meligari, reached Yokohama on the 24th instant and proceeded at once to Tokyo. It is expected that they will pay a visit to Chiusenji pending the preparation of the Legation for their reception.

There is in Osaka a committee for investigating trade questions. It recently held a meeting and resolved to petition the Government for the formation of a Bank of China and Japan, the Government lending 10 million *yen* of the Chinese indemnity and the public being asked to contribute 20 millions. Probably the Government will have uses enough for this money without entertaining any such proposition. The first thing to be done is to replace the capital funds which the law requires to be kept at their original figure.

Japanese journals allege that a cabal has been formed among the shareholders of the Nippon Yusen Kaisha with the object of compelling the Directors to distribute a part of the reserves as a special dividend. Among the advocates of this suicidal course the name of Baron Ozaki Saburo is mentioned, but it is difficult to imagine that a man of his reputation and position would lend himself to such a scheme. The *Nichi Nichi Shimbun* and the *Nippon* both denounce the project in uncompromising terms, and every one interested in the sound development of the Japanese mercantile marine must endorse their strictures.

A Government Commissioner, who has just returned from a tour of inspection to Hachijo-jima and Ogasarawa-jima (the Bonins), reports that the condition of education there is highly satisfactory. The attendance of school-age children in Hachijo-jima is 85 per cent. and in the Bonins over 90. The people are all imbued with strongly progressive ideas, and for purposes of communication with the mainland they find it absolutely necessary to be able to read and write. But the expense of keeping up the schools is considerable. In Hachijo-jima the national and local taxes aggregate 7.80 *yen* per household on the average. In the Bonins things are easier, as education receives Government support to the extent of 1895 *yen*, and further the schools have lands attached, the produce of which goes far to support the institutions. There are a number of naturalized foreigners who used to hold themselves aloof from the people, take no part in the national fetes, and refrain from sending their children to the school. But, owing partly to the influence of a Mr. Joseph, there has of late been an improvement in that respect.

Even the fine weather that has prevailed since the beginning of the *Doyo* season has not fully restored confidence in the prospects of the rice crop, though all grounds for serious uneasiness are now removed. Doubtless the imposition of a veto on the export of cereals from Korea has influenced the Japanese market, for the price of rice is still quoted at 13 *yen* from various districts.

The market price of rice has suddenly tumbled down, this hot damp weather being

ideal for the growth of the young plants. From all sides come reports that the crop is rapidly developing vigour, and that if the fine days continue, as there seems to be every reason to anticipate, the apprehensions recently entertained will prove groundless. Apart from thermometrical readings, the feelings of the old resident must assure him that this spell of heat is considerably above the average of the first week of the *doyo*.

Tokyo journals confidently state that a sale of fifty million *yen* worth of War bonds has been arranged by the Cabinet with foreign banks. It is alleged that this plan was regarded by the last Cabinet also as the only feasible method of carrying on the State enterprises, and that Count Inouye, who strongly advocated it, was induced to assist the present Cabinet. He enlisted Mr. Robert Irwin's services, and the latter succeeded in negotiating the matter on favourable terms. We do not think that any reliance can be placed in this story.

Very bitter complaints come from New Caledonia about the treatment of Japanese labourers sent there by the *Toyo Imin Kaisha* to work in the mines of a French Company. If even a part of the statements published be true, a very disgraceful state of affairs exists. Tokyo newspapers are disposed to blame the emigration company as much as the French firm. They say that responsibility for the serious troubles which impend when the men are driven to desperation, will have to be borne by the agents as well as by the employers.

Japan will have to hold her hand soon in the matter of creating peers. No less than 275 have been added to the number during the seventeen years that have elapsed since the system was inaugurated. In 1884, when peers were first created, patents were granted to 11 Princes—excluding Princes of the Blood—, 24 Marquises, 73 Counts, 321 Viscounts and 74 Barons. Now the numbers stand, 11 Princes, 34 Marquises, 89 Counts, 363 Viscounts and 281 Barons. The total in 1884 was 503; to-day it is 778. The increase in Barons is the most striking.

On the afternoon of the 27th, as the celebrated actor Ichikawa Danjuro was returning from a dentist at Surugadai, the horse in his carriage, started by the action of an animal drawing a baggage cart, ran away and on reaching Sukiya-bashi, the wheel becoming entangled in the rails of the overland-railway construction works, the carriage was upset. Danjuro received various cuts and contusions, but unless fever supervenes it is not thought that there will be any bad consequence. Another actor, Mr. Ogasawara, who was riding with him, had an arm broken.

His Excellency the new Italian Representative had audience of the Emperor on the 31st instant to present his credentials. M. Meligari was received in the Phoenix Hall, and subsequently the Empress gave audience to him and Madame Melegari in the Paulowna chamber.

The first section of the Hachioji-Shiojiri Railway, namely, 14 miles from Hachioji to Uye-no-hara, is to be opened to-day. Hachioji is already in communication with Tokyo by rail, and the project is to carry the connecting line westward until it strikes the State central road at Shiojiri. The State central road, as most of our readers probably know, runs from Nagoya to Nao-yetsu.

RELIGIOUS POLITICS.

THE Buddhists are to be congratulated upon the cleverness displayed by them in their manipulation of the LAMA incident. There was certainly an opportunity to make a display. The conduct of foreign troops in China and the unjust assaults that have been made by foreigners themselves on the missionaries, both as having caused the trouble by injudicious and masterful methods, and as having behaved at the moment of victory in a disgraceful manner, have undoubtedly brought great discredit on the cause of Christianity; whereas, on the other hand, the self-restraint shown by the Japanese troops, their abstention from outrage or pillage and the protection afforded by them to peaceful Chinese subjects and to the property of non-belligerents, offered a contrast which might easily be interpreted so as to reflect lustre on Buddhism. It would, perhaps, be extravagant to allege that the visit of the LAMA to Japan was deliberately planned for the purpose of giving emphasis to that contrast, but that it has been utilized in such a manner can scarcely be doubted. The Buddhist prelates who, in the first place, provided funds for the coming of the LAMA, and, in the second, regulated his reception and arranged the complexion of the various entertainments given in his favour, have shown remarkable sagacity. They have contrived a crescendo of speeches and declarations to which the public listened almost unconsciously until the climax was reached and the key furnished. That did not happen until the 28th ultimo, when, at a great meeting held in the Kinkikwan—a meeting including some 800 Buddhist priests—Viscount MIURA, who represented the hosts, and the LAMA himself, delivered speeches which, without any very close analysis, show plainly that the purpose of the Buddhists has been to utilize the coming of the pontiff of their creed by way of public declaration, first, that the circumstances of the time dictate a close union between Japan, China and Korea, the three countries of the Orient using the same script and deriving the beginnings of their civilization and enlightenment from the same source; secondly, that in order to make the union effective these peoples must be united by a common sentiment, and that the necessary sentiment is furnished by Buddhism alone, the faith which they all revere and which, for three thousand years, has been steadily spreading its influence throughout the world; and thirdly, that the inferiority of Christianity to Buddhism has been plainly demonstrated by recent events in China, where the great principles of mercy, integrity and justice were conspicuously obeyed by the troops of a Buddhist country and as conspicuously outraged by the troops of Christian States. Had the contrivers of the LAMA's coming been men of less astute tactfulness, they would probably have showed their hand too plainly at the outset, and would thus have alienated

public sympathy by openly associating Buddhism and politics. But their process has been gradual and well devised. One by one the notes of the diapason were sounded, and not until the last moment was the full chord allowed to become audible. It is scarcely necessary to describe the distribution of parts assigned to the leading performers on the 28th instant. Viscount MIURA confined himself to declaring the imperative necessity that China, Japan and Korea should stand shoulder to shoulder, and to alleging that the only influence capable of uniting them effectually is Buddhism. The LAMA added the rider that all three derived their creed from the same pure source, and that its superiority to Christianity had been amply demonstrated during the recent troubles in China, when the troops of Europe and America showed that their religion had no power to check ferocious displays of elementary passion, whereas the troops of Buddhist Japan behaved with exemplary forbearance and charity. The LAMA added naively that having now discharged the various duties which brought him to Japan, he should be able to sleep soundly that night for the first time since his arrival. He has indeed discharged his duties and suffered himself to be very deftly manipulated. The Buddhists deserve a word of congratulation. They have associated themselves with a living cause and have made for their religion whatever capital might be borrowed from the Chinese complication. But they have left one question unanswered, namely were the Boxers Buddhists. If so, how does Buddhism clude responsibility for their shocking cruelties?

THE TANKO TETSUDO KAISHA.

TEN years have passed since Dr. MAYET, whose economical investigations used to occupy much attention in Japan, created a brief sensation by predicting great things for the Tanko Tetsudo Kaisha. He would certainly be able to claim the merit of having prophesied truly if he had an opportunity of examining the latest statistics about the company. They are interesting statistics as showing what signal success has attended some of the Japanese enterprises started in recent times. The Tanko Tetsudo Kaisha—or coal-mine railway company—was organised 12 years ago (in 1889) with a capital of 6½ million yen, and it has now a paid-up capital of 18 millions. It commenced operations in Hokkaido with the Poronai mine and the Poronai railway, which properties it purchased from the Government for the extraordinarily small sum of 247,950 yen. Starting with such a valuable property acquired at such a low figure, the Company could scarcely fail to be successful, but even when all due allowance has been made upon that score, its record is remarkable. For not only is its paid-up capital now 18 million yen, but also it has added to its mining property the Ikushimbetsu, the Sorachi and the Yubari mines; it has built railways from

Mororan to Iwamizawa and Sorachibuto, with branches to Sorachi and Yebari, the total length of lines in its possession being 212 miles; for the last 7 years, it has never paid a smaller dividend than 12 per cent., sometimes rising as high as 15 per cent.; its gross income from railway traffic rose from 490,486 yen in 1893 to 1,771,499 yen in 1900, and whereas its output of coal was only 303,085 tons in 1893, it was 601,158 tons in 1900; it has assets aggregating over 16 million yen, at a very conservative rate of calculation; its shares (50 yen paid) are quoted at over 77 in the market, and it is now about to spend a further sum of 7 million yen upon the construction of two lines, aggregating 69 miles, the opening of two new coal mines and the building of new steamers. Two hundred and fifty-two million tons of coal is the modest quantity calculated to be easily obtainable from the Company's mines, and as they are all, or soon will be, accessible by rail, and as the lines communicate with Mororan, the best harbour in Hokkaido and the third best in the Japanese empire, not only is the coal within convenient reach of good markets, but all the traffic of the northern half of Hokkaido is bound to pass ultimately over the Company's roads. Indeed the large extensions forming part of the Government's programme cannot fail to bring much additional freight to the Tanko Tetsudo Kaisha's lines. Hokkaido is slowly but surely justifying the hopes inspired by its resources and vindicating the wisdom of the Government's policy in spending large sums for its development in the days of the Colonization Department. When (1889) emigration thither from Japan proper began, the whole population numbered only 58,467, whereas the figure for 1899 was 922,508. There is said to be ample room for 9 millions more, and if the growth of the population continues at anything like the rate indicated by the returns for the past ten years, the place will soon have great importance and be a principal wealth-producing district of the Japanese empire. A certain area of uncultivated land is granted to any Japanese subject on application, free of taxes for 20 years; it becomes the property of the immigrant after cultivation and may be registered as his property without the payment of any fee. Special facilities are also given for the conveyance of agricultural produce over the lines of the Government and of the Company, and it is plain that these methods of encouragement are having their effect, for the value of the agricultural products in 1899 was nearly 22 million yen. That, indeed, is only a fraction of what it will be one of these days, for whereas the total area of arable land is estimated to be 7¼ millions of acres, the area now actually under cultivation measures but 537,000 acres. There appears, also, to be a good prospect for the sericultural industry, since although it was started only 5 years ago, the quantity of cocoons produced in 1900 totalled 3,735 koku. Lumber is one of the island's almost undeveloped resources. The supply of fine

timber seems to be virtually inexhaustible, yet in 1899 the export barely exceeded a million *yen*, and that too of inferior varieties. Only within very recent times have the fine woods of Hokkaido begun to be used in the construction of the better classes of buildings in Japan, and they will doubtless be employed henceforth in constantly increasing quantities owing to the rapidly growing scarcity of the timbers hitherto prized. Altogether the island appears to have a great future, and it is not surprising to find that the Imperial Estates Bureau and many of the Princes, nobles, banking houses and leading merchants are shareholders of the Tanko Tetsudo Kaisha.

NEW BOOKS.

Japanese Plays and Play-fellows, by OSMAN EDWARDS; London, William Heinemann; Yokohama, Messrs. Kelly and Walsh, Ltd. Price, *yen* 6.50.

IN putting down, after perusal, this well printed and attractively bound volume one is impressed with the truth of Emerson's observation that "each man is some man's debtor." Mr. Osman Edwards writes as one who has thoroughly investigated for himself the subjects he treats of, but had not Mr. W. G. Aston, Mr. B. H. Chamberlain, Mr. Lafcadio Hearn and a score of other profound analytical students worked in the fields of Japanese literature, psychology, sociology, and kindred subjects of research, his book could not have been written. To the old resident who takes an interest in such things—and there are numbers of them among the foreign communities despite all the hard things that have been written—the indebtedness of our author to his predecessors is apparent on every page. Of course he makes acknowledgement in his preface; and in all fairness we admit, before going further, that the pattern of his patch-work is remarkably attractive, having been woven by an artist of no mean literary skill. When all is said, the conclusion is irresistible that the six months spent by Mr. Osman Edwards within the bounds of the Empire of Japan were six months of patient observation the fruits of which are well-worth the plucking. Many persons who have spent just that number of years in the country could not have seen more than he did, nor have reduced their impressions into more vigorous, clear-cut English. He presents, in fact, to stay-at-home folks, a pleasant picture of this Far Eastern land and its interesting people, giving a remarkably true impression of what a charming holiday region it still remains for those of moderate means, fairly adequate leisure and sympathetic instincts. Mr. Edwards is a very good type of the genus globe-trotter of that large section denominated the middle-class, which wishes to see something of the life of the people among whom they are temporarily sojourning, and for whom the political and commercial side has no interest. In fact, he can be put down as the average man who desires to enjoy the holiday which a beneficent providence has casually thrown in his way in his own fashion—and then record his impressions for the benefit of a public ever-willing to read about something which does not come immediately within the circle of their own more restricted lives.

The book begins with a chapter entitled "Behind the Scenes," in which our author

seeks to give the other side of the shield, the side most generally seen by the foreign resident of Japan. We need not epitomize it, for he but recapitulates the every-day experiences of foreign merchants, the growls which have appeared in the local press, the prophecies of dark days ahead for foreigners under the new conditions—and the tale though true in many particulars grows wearisome by too constant repetition. Then he passes on to the main subject of his book, and give two exhaustive chapters on "Religious Plays"—the *No* and others—and "Popular Plays," summarizing the information scattered through a host of books, transactions, and publications of learned societies and learned men, in Japan, England and Germany. Thence he wanders on to a description of the Geisha and their calling, telling very brightly their origin and the manner of their present day occupations. His history, drawn from good sources, is accurate and is supplemented by a wealth of detail diligently gleaned and excellently applied. An interesting chapter is that devoted to "Vulgar Songs," wherein we drop across scores of couplets whose acquaintance we first made in much weightier pages, though Mr. Edwards rather gives the impression that they are his own translations from the original. All through his pages, we might remark, *en passant*, he is inclined to boast of his acquaintance with the language. Well, let it pass. The *dodoitsu* are full of peculiar charm whether they are translated by an Aston, a Chamberlain, a Clay MacCauley, or touched up by an Osman Edwards. After this chapter the book assumes the form of a globe-trotter's reminiscences and the reader goes with him to Ikao, across to the coast of Echigo; then off to Kyoto, thence to the Inland Sea. Miyajima, etc., to Dôgô, which boasts of a palatial bath-house and the most reasonable of hotel-keepers; thence to Kobe, and back to Tokyo. Everywhere Mr. Edwards makes a companion worth travelling with, and one is sorry when the journey ends. An interlude entitled "Playing with Fire" tells of a temporary arrangement made between a maiden of Japan and a young French connoisseur of chromo-xylographs, on the lines laid down by Pierre Loti in "Madame Chrysanthème"—an interlude rather unnecessarily included, unless to illustrate the second part of the book's title, "play-fellows." Another portion of the volume that need not have intruded is sandwiched into the very readable chapter on "Afternoon Calls," in which a once notorious resident of Azabu is introduced as Dr. Silenus. An interview with Danjuro is noteworthy in that the author has faithfully reflected the veteran's view of the modern aspect of the Japanese theatre, his delight in the ancient traditions of his craft, and his contempt for Kawakami, the *soshi*-actor, over whom London is temporarily crazed. The concluding chapter is entitled "The Scarlet Lady" and deals in sympathetic fashion with a phase of life which, in any land, requires delicate handling. On the whole the book can be recommended.

Mr. J. B. Millet, of Boston, the well known publisher, has just commenced the issue of a magazine, "The Musical World," which ought to be of great interest to lovers of music. It seems to have for contributors the ablest critics of the day, and its pages embody clever articles on subjects connected with music, its ancient and modern development and so on, together with all current musical news and lists of the latest compositions and publications. Beautiful photogra-

phs are added of the musical celebrities of the time, and as these are on separate pages, they may be taken out and collected to form a valuable album. We do not know whether the magazine is for sale in Yokohama, but the cover shows that a number costs only 10 cents, and that it may be obtained from the publishers, Messrs. J. B. Millet Company, Boston, Mass.

Customs Practice for Japan, by J. E. DE BECKER; Yokohama, Messrs. Kelly and Walsh, Ltd. Of this book it must be said that it should find a place in every merchants' office in Japan, and also in those houses in the home-lands which have mercantile dealings with this Empire. It is a veritable *code mecum* on the subjects with which it deals. Within its ample pages will be found the Customs tariff of Japan, with corrections brought down to date; the conventional tariffs arranged with various countries: the Customs Duties Law, and all the allied laws; the harbour regulations of the different ports and their accompanying notifications; translations of various laws dealing with mercantile transactions; tables reducing various national weights and measures into the weights and measures of other lands—in fact, Mr. de Becker seems to have forgotten nothing. The book should have a ready and wide sale, for it thoroughly deserves it.

Sidelights on the March, by H. F. MACKERN; London, John Murray. This is one of the latest additions to Murray's Imperial Library, and deals in a lively fashion with the experiences of an American Journalist in South Africa. The author at the outset disclaims all literary effort, his intention being "to describe the little things that happened by the way, interspersed with some 'philosophical' reflections." A second motive was to give the public "some conception of the hardships, mental and physical, undergone by the war-correspondents, fully thirty-five per cent. of whom were either killed or incapacitated." The illustrations, from photographs, are truly illuminating.

On Peter's Island, by ARTHUR R. ROPES and MARY E. ROPES; London, John Murray. The authors attempt to present a picture of life "as it might have been in the early years of the reign of Alexander III." This accounts for the prominence given to the Terrorist secret societies, which were at that time active and formidable. But Russia has changed greatly during the past twenty years, particularly St. Petersburg, which is now almost as cosmopolitan as Paris, so that in reading the novel we feel that we are gazing upon scenes that have quite passed away.

The Helmet of Navarre, by BERTHA RUNKLE; London; Messrs. Macmillan and Co., Ltd. Within the last few years a new school of historical novelists has arisen in America and their output so far has been of no mean order. Miss Runkle's latest volume is decidedly well-written and the illustrations by A. Castaigne are fairly good.

China and the Allies, by A. HENRY SAVAGE-LANDOR. London, Wm. Heinemann; Yokohama, Messrs. Kelly and Walsh, Ltd. Two volumes.

THE time has not yet arrived for an impartial, accurate, and exhaustive historical account of the disturbances in China in the closing year of the nineteenth century. Perhaps the man who is to produce such a book has not yet appeared in the literary firmament. Meanwhile the two volumes compiled by Mr. A. Henry Savage-Lan-

don fill the gap temporarily and help to illuminate, if even a little faintly, the dark and tortuous doings which set the world agog from June till late autumn in the year 1900. Mr. Landor writes as one who passed through most of the scenes which he describes, and for such other material as he obtains from other sources he makes due and ample acknowledgement. In a brief foreword the author says: "The aim of this book has been to give a record of events as they occurred, and to avoid national or personal prejudice." The intention is laudable: the pity is that Mr. Landor succumbed to human frailty more than once before he put down his pen. We refer more particularly to his treatment of Sir Claude Macdonald. It may be unintentional, but through both volumes are scattered many disparaging remarks about the British Minister to China, and even in one case his dress and personal appearance are made subjects of sarcastic comment. Otherwise we find little to take exception to. Certainly Mr. Landor's style is very mediocre, hardly rising above the "newspaperese,"—to borrow a word of the moment—of the average correspondent of the daily press; and to mediocrity he adds an irritating diffuseness and a *penchant* for describing every shocking and disgusting sight which met his eyes, making parts of his book painful reading. The work of course—in accordance, we presume, with the tendency of the age, which induces authors to "take the market at the boom"—has been hastily flung together and hence many errors have crept in which might have been prevented. For instance on page 103, referring to the Pei-tsang fight on June 21, 1900, of the Seymour expedition, Mr. Landor says:—"Unhappily the brave Flag-Captain Jellicoe, of the *Centurion* was mortally wounded." Now it is a matter of deep and sincere rejoicing that Captain Jellicoe was present on July 2, 1901, at a banquet given in Government House, Victoria, to Admiral Seymour by Sir Henry Blake, while next day, at a tiffin given by the China Association in the Hong-kong Club, the "mortally wounded" flag-captain actually returned thanks for the Navy. Again the spelling of Chinese names might have been more carefully attended to by a sinologue of Mr. Landor's pretensions. Yung-lu seems a veritable pitfall for his compositors. One other word and we have done with fault-finding. Owing to the number of photographs—nearly every page almost having an illustration—the paper used by the printer is of the heavy, glazed variety, causing the book to be abnormally weighty and thus making its perusal from this point of view alone very wearisome; while it will, from the same cause, break away, all too soon, from its elaborately ornamented cover.

The story of the disturbances begins with the murder of Mr. Brooks, of the S.P.G., in January, 1900, and thenceforward Mr. Landor takes his readers through the stirring scenes which followed so thick and fast after June 18th. He arrived in China in time to proceed with the column which relieved the Legations and was in the firing line continuously. Others were killed or wounded all round him, but he and his camera seemed charmed and he escaped scatheless. At the outset of Volume I, we are given a description of the Boxers, or *Ii-liao-chi-uan*, the author tracing their rise and suppression in previous reigns; their revival under the apparent approval of the Empress Dowager, and their subsequent doings up to the very end of 1900. He insists strongly on the Buddhist element in

their fanaticism and says that "They hypnotised young boys, and then at night left them in a state of catalepsy in some thoroughfare," representing the action as due to the devilry of the foreigners which they (the Buddhist priests) could circumvent, and proceeded at once to do so by reviving the lads in view of the mobs. "It was this simple hypnotic expedient, carried out on a large scale, that induced the Boxers to fling themselves in the field against modern rifles under the belief that Buddhist monks had made them bullet proof." Another thing which we have not heard of before is that the Boxer Buddhist hunted for Christians with a magic mirror slightly convex so as to show a luminous cross when placed in a powerful light. This mirror held over the head of a convert was proof positive of a man's Christianity, for which he was ruthlessly put to death. Mr. Landor can find no words sufficiently weighty to express his detestation of the Buddhist monks of China, and it is but reasonable to suppose that the recollection of the sufferings he endured at their hands in Thibet must occasionally have lent gall to his pen. His conclusion is:—

Knowing what I do know of Buddhist monks and their exclusiveness, their violent hatred for all and everything foreign * * * * I maintain that, no matter what other theories are brought forward regarding the present trouble in China it cannot be better defined than as a fanatical Buddhist movement, mixed to a certain extent with Shamanism.

Again he writes:—

The most active leader, after Prince Tuan, was a man of great influence, energy, and ability, a native Buddhist of Shensi, by name Li-Lai-Chung. His lieutenants and agents were the Buddhist monks, the Lamas, a lazy class of parasites, criminals who, by hiding under the cloak of religion, escaped from the claws of justice, and who were the riff-raff of the country.

The principal agitators undoubtedly came from the north, but all alike met with protection and support, financial and otherwise, from the corrupt class of officials all over the Empire.

It was thus that this religious and political movement for the extermination of foreigners and their influence assumed such alarming proportions. No doubt when that nest of immorality and disgraceful corruption, the Buddhist monks, have been wiped out, not only in China, but in all Asia, Western civilisation will have no difficulty in penetrating to the remotest nooks of that immense continent, and peace will be for ever assured.

We do not dispute the point, but pass on to the book. Numerous Boxer proclamations are given, as well as Imperial Edicts, and a graphic description of the state of unrest which prevailed in Peking all through the spring months. The complacency of the British and other Legations at the outlook despite the many warnings sent in by missionaries and other non-officials scattered throughout China regarding the strong possibilities of an outbreak against foreigners, is well pictured. On May 19 Bishop Favier wrote his now historical letter to the French Minister, yet two days later Sir Claude Macdonald writes to Lord Salisbury, "I confess that little has come to my knowledge to confirm the gloomy anticipations of the French Fathers." He was soon to be terribly enlightened, and in Mr. Landor's pages we can very clearly trace the series of events which finally culminated in the siege of the Legations.

Admiral Seymour's plucky attempt to relieve the foreigners shut up in Peking is graphically told and illustrated; then comes a well-told tale of the taking of Taku forts. "The effects of the shelling were appalling. Although the forts fell in a few hours, the officers present in the fight were unanimous in their praise of the unexpected way in which the Chinese had defended themselves."

Following hard after this was the attack on and capture of Tientsin, a piece of strenuous work which has hardly received just acknowledgement so far from the pens of ready writers; and then the second and successful Peking expedition, the tale of which has been told over and over again in the Far East. Mr. Landor is full of praise for the bravery of the Japanese and supplements his photographs by many incidents:—

As we advanced from one trench to the next under this heavy fire, the plucky little Japanese dropped down killed or wounded. Then a poor corporal whom I snapshotted, rolled down a victim to a bullet. . . . A most tragic scene had occurred in a few seconds. The one to the right wavered ahead of us, apparently mortally wounded. His companion stopped for a moment to support him, when he, too, fell dead by the side of his friend.

With regard to the looting of Tientsin, Mr. Landor writes:—

It is difficult to decide whether looting is at any time right or wrong, but in all fairness it must be kept in mind that the case of Tientsin was a special one. The main portion of the city was already on fire, most of the houses had already been broken into and looted by the Boxers and Chinese soldiers, and presently every thing that remained would be destroyed by the flames. It certainly seemed a pity to let so much beautiful and valuable property be wasted. Was it not, then, the lesser evil to allow these men, who had fought hard, to reap what benefit they could from the misfortune of others, especially since "the others" were doomed to misfortune in any case? To prevent looting was impossible. The authorities, therefore, seem to have followed the only sensible line, by giving the soldiers and marines a day's free hand.

It seems that Tommy Atkins preferred, after foraging for the camp kettle, to secure embroidered silk gowns and articles of jewellery, for the "girls at home;" Jack Tar had similar tastes. The Japanese soldier was more artistic and preferred ancient scrolls, old porcelain, etc.

Such was their admiration for the wares they handled that, instead of smashing them, as less artistic troops did those objects that could not be carried away, these Japanese soldiers carefully replaced each article on its shelf.

One could not help being struck, especially when small, delicate articles were handled, by the dainty, artistic touch of the Japanese soldiers as compared with the clumsy, sausage-like fingers of American, Russian, French or British soldiers. The Japanese picked up and laid down the smallest and most minute articles with such neatness and grace that it was a real pleasure to see them, whereas the Yankee, or the French, or the British or Russian, not to mention German, could touch nothing that was not solid bronze or stone without breakage or twisting or soil or injury of some sort.

The Russian was a "dead-nuts" on musical boxes, repeater-watches, etc. The American, however, preferred sycee. He did not "care a cent" for porcelain: rather he smashed it whenever he got a chance. Yet despite all that has been written, "in regard to looting the American soldier was no worse, indeed, but decidedly no better, than any other soldiery present." The French troops looted for food, particularly ham, and gim-cracks. But the principal looters of all were Chinese, and they did more wrecking than all the allies and foreign civilians put together. It was the same in Peking: "only more so." What the *canaille* left undone in this direction the Boxers and Imperial troops finished, and besides applied the torch to hide the traces of their work.

Before passing on to Volume II., we crave leave to make another quotation. Mr. Landor says:—

I was particularly impressed by seeing how clever and sensible the British, the Russians and the Japanese were in selecting their resting-grounds, and how shockingly unhappy was the American General in the selection of a suitable camp for his men. . . . Whether by carelessness or otherwise, the poor American fellows, who suffered terribly on the road, to begin with, were invariably made to settle down at night in fields of thick Indian corn, which varied in height from four to six feet. Now, if there is one place where no sensible person would

ever settle for a night's sleep, it is a corn-field, for, besides the want of air, there are myriads of mosquitoes, midges, and every other possible kind of plague such as one generally tries to avoid.

Such were the camps the brave American boys occupied all the way from Tientsin to Peking.

He (the American) is a splendid soldier and there is no reason why he should be made to suffer unnecessarily. The number that fell out of the ranks on the march was appalling, and it was a common saying that if you wanted to find your way—not the shortest—from Tientsin to Peking, all you had to do was to follow the trail of blankets, water-bottles, haversacks, and other articles that the American boys had thrown away on the march, as they had not sufficient strength to carry them.

(TO BE CONTINUED.)

COMPARATIVE NAVAL STRENGTH.

As usual a chapter in the current *Naval Annual* is devoted to "Comparative Strength." Referring to the British Mediterranean squadron, the writer, Mr. Leyland, remarks that the addition to it of eight destroyers and four first-class torpedo boats is timely but certainly not too considerable in view of the large augmentation of the French flotillas in those waters, and of the new importance which is being given to the stations of the mobile defence not only in France but of Corsica, Algeria and Tunis. Yet, he says, in both the Channel and the Mediterranean the number of cruisers attached to the squadrons leaves very much to be desired. There certainly seems to be some truth in this criticism—especially when we note that in his list of the French Mediterranean squadron two first class cruisers, *D'Entrecasteaux* and *Chateaufort*, are set down merely as coast defence ships because they are, for the present, at Toulon and not attached to the squadron. The British fleet consists of ten battleships of the first class with a coast defence ship each at Gibraltar, Malta and Alexandria. To these there are attached two 20 knot first class cruisers, the *Theseus* protected (of the *Edgar* type), and the *Andromeda*, which resembles the *Terrible* but has a couple of 6-in. guns fore and aft where the latter has single 9.2-in. pieces. Also three second-class cruisers, the *Diana*, *Gladiator* and *Vindictive*, 5,800-ton ships armed with 6-in. and 4.7-in. guns and steaming up to 19½ knots. Plainly these five vessels are quite inadequate for the operations of a great squadron such as this. For seven battleships the French have seven such craft, the smallest of which are of 3,900 tons. And in this no account is taken of the Russian squadron, for the purposes of which, under present and probable future conditions, the Black Sea is merely a naval harbour, of somewhat large distances, it is true, but still a fortified harbour of the Mediterranean. Mr. Leyland gives Russia's force in the great inland sea as consisting of a battleship, the *Alexander II.*, of 10,000 tons built in 1887, and about to be reconstructed at La Seyne, one small armoured gunboat, one small cruiser, a torpedo gunboat and two destroyers, but if Russia's naval power in the region indicated is to be discussed at all it must be with fuller information as to her present resources there than seems to be available.

In the Channel Squadron the weakness in cruisers is hardly so marked. There eight battleships are attended by six cruisers, the 11,000-ton *Diadem* and *Niobe*, and the sisters *Arrogant* and *Furious*, *Pelorus* and *Pactolus*. Against these the French northern squadron of seven battleships is backed by the heavily armed *Dupuy de Lome*, *Bruix*, and *Tage*, (the two first named being armoured) the second class *D'Assas* of 4,600 tons, and the third class *Surcouf*. But the naval manœuvres year after year demonstrate the paramount importance of cruisers as the scouts of a squadron, and it is to be hoped that we shall soon see both the Mediterranean and Channel fleets better equipped than they are at present with fast ships of moderate tonnage.

Mr. Leyland contents himself with classifying the ships on the various stations and producing tables showing their names against the respective headings of "battleships," "cruisers, 1st class," and so forth, refraining from any comparison of armament, or protection, or speed. That may be good enough for some when he is dealing with the

European fleets, but when he takes up the squadrons in Far Eastern waters they would like to know a little more. Yet, as a matter of fact, if we take by way of example the five battleships that respectively represent Russia and Great Britain, though there is lacking any indication by which the lay reader might gather an idea of the comparative usefulness of the two squadrons in action, the ships are so uniformly armed that investigation shows them to be of almost identical strength—on paper. Let us take those ten vessels. They are:

BRITAIN.
Glory.
Ocean.
Goliath.
Centurion.
Barfleur.

RUSSIA.
Petropavlovsk.
Pollava.
Sevastopol.
Navarin.
Sissoi Veliky.

In the matter of displacement, so far as that applies in the comparison, the advantage is on the side of Britain with 59,850 tons, Russia having only 51,966 tons. The British ships are all faster than the best Russian vessel, having a speed of 18.25 knots, while only one Russian steams 17.5, and for the purposes of fleet operations the movements of this group of vessels is limited to the speed of the *Navarin* and *Sissoi*, which can not exceed 16 knots.

With greater speed, the British also seem to be capable of maintaining it for a longer space of time. That is to say, they have, according to the published information, the advantage in coal endurance. For while the *Navarin* can carry 1,200 tons as her "normal coal supply"—that is how Brassey puts it in the case of the Russian vessels—the *Sissoi's* capacity is only 550, and the others are set down at 900 tons a piece. This works out to an average of 890 tons. The British ships, against this, carry "on load water draught" an average of 976 tons—three having a capacity of 800 tons, and two, the *Barfleur* and *Centurion*, of 1,240 tons each. Moreover the former—of course at a considerably reduced speed—are credited with provision for more than doubling their capacity (to 1,850 tons) while no statement to a similar effect is made in the case of the Russians. It would be absurd to assume that the latter could not, if the occasion seemed to require it, far exceed their normal coal supply, but it is sufficient for the purpose of these remarks to have noted that under conditions favourable to the development of full speed in both squadrons, the British ships have greater coal endurance, and apart from maximum speed they have certainly a greater radius of action.

We come now to the main point in any comparison of war ships—armament. To that all else is subsidiary. When the ships have been built; engined to steam at a high speed; filled up with coals to keep those engines going; covered with steel plates to protect their vital parts, and so brought face to face with an enemy, it is the gun that decides the contest. What are the respective offensive powers of the two squadrons of battleships which, by way of illustration, we have selected for comparison? This used to be settled by reference to the number of guns that each ship carried, and it is a very short time indeed since writers on this subject began to take notice that rapidity of fire and weight of metal were important factors. Actually the quick-firing gun had been in existence and in use on British ships for years before some newspaper critics of naval affairs realised how enormously this invention increased a weapon's value. Now-a-days intricate calculations are based on the number of projectiles that may be fired in a given time, but we will be satisfied to compare the effectiveness of one discharge from all the main and secondary batteries of each group of ships. This would further seem to be sufficient, because, with the exception of the *Navarin's* 6-in. guns, the secondary batteries of all the ships concerned are quickfiring.

We have, then, on the British side twelve 12-in. guns, each throwing a projectile of 850lbs.; eight 10-in. guns (*Barfleur* and *Centurion*) giving each 500lbs. of metal; thirty-six 6-in. quickfiring, each representing a shell of 100lbs., and twenty 4.7-in. quickfiring, the projectiles of which are 45lbs. in weight. The total for one discharge of the main

batteries is 14,200lbs. and of the secondary batteries 4,500lbs.—together 18,700lbs.

On the part of the Russian ships there are twenty 12-in. guns which, assuming all to be of the latest pattern, throw each a missile of 720 lbs. (much lighter than the British shell and having greater muzzle velocity but at 2,000 yards apparently less penetration) giving a total of 14,400 lbs.; fourteen 6-in. guns (of which only six are quick-firers) representing, with the lighter Russian projectile, 1260 lbs., and thirty-six 5.9-in. quick-firers, which are mounted on the *Petropavlovsk*, *Pollava*, and *Sevastopol*. These last are not included by Brassey in his tables of Russian ordnance—the only reference to them being the remark "there exist also 15 and 10.7 cm. Krupp guns." We may take it that the 15-cm. arm here mentioned forms the secondary battery of the three ships named, and it will be safe therefore to suppose that it fires 100 lb. shells or under. That gives a total for the thirty-six 5.9-in. pieces of 3,600 lbs. which, added to the other figures, makes a grand total of 19,260—some 500 lbs. more than that of the British ships. Here, then, we have a basis of comparison which any one may understand. If the figures are correct they show that at one discharge a greater weight of metal issues from the Russian than from the British guns. So far the superiority would seem to lie with the former. But readers who have followed us thus far in this sketch will not fail to have noted that the apparent weakness of the British squadron arises from the 10-in. and 4.7-in. armaments of the *Centurion* and *Barfleur*. A discussion of the ballistic conditions which some at least think render the seeming advantage of the Russians nugatory would lead us too far afield.

We started with the object, not of contrasting the respective strength of the fleets on this station, but of showing that we seem to have returned to the days when battle ships of similar rate carried batteries of practically similar power. Space will not allow us to deal with the matter of armour, or to enter upon comparisons with regard to cruisers.

We conclude this by reproducing Mr. Leyland's summary of comparative strength—specifically with regard to the navies of England, France and Russia:—

From the list of first-class battleships it will be seen that our situation is generally satisfactory in regard to numbers. It includes, in effect, thirty-eight vessels, while three more are in the programme of 1901-2, as compared with thirteen ships for France and fourteen for Russia, making twenty-seven in all. It will be observed that not less than fourteen out of our thirty-eight ships are still uncompleted, though some should soon be ready for the pennant, in comparison with eleven uncompleted ships in the case of the Powers of the Dual Alliance. It may also be pointed out that France and Russia have lost their lead as the great foreign ship-building Powers, and that Germany and the United States are taking their place. Most friendly relations happily exist between Great Britain and these two Powers, but it should not, nevertheless, be lost sight of that, contrasted with their combined strength, our situation does not appear in a light so decidedly favourable, while the vigorous shipbuilding policy adopted by these Powers promises most rapid expansion. As an indication of this promise and of the recent character of the development, it will be instructive to note that while of battleships actually on the stocks or just about to be commenced, we have four, Germany and the United States have six and eight respectively.

It is not enough, however, to consider first-class battleships only; the list of second-class ships is instructive. It includes eleven British ships and twenty French and Russian, while, of the ten French vessels, nine have recently been or are now being reconstructed, receiving new armament and new machinery, and the tenth is a new ship just on the point of completion. Moreover, three of the Russian ships are quite modern; only two of the British ships can be so described.

Turning now to the cruiser list, we find that we have forty-three of the first-class built and building, as compared with thirty-two in the case of France and Russia. This would seem encouraging, but many of our vessels have been delayed; and, looking to the whole cruiser class and realizing the great demand for such vessels in time of war, it cannot be said that the position is yet satisfactory. Indeed during the last ten years, the Powers of the Dual Alliance have begun almost as many cruisers as ourselves. In reckoning cruiser needs we have, however,

to consider rather the vast demands of the fleet than the lists of other Powers.

There is a difficulty in estimating the comparative naval strength at the close of the present year, but the following statement is probably accurate in regard to completed battleships:—

Battleships.	ENGLAND.	FRANCE.	RUSSIA.	FRANCE AND RUSSIA.
First-class.....	26	10	8	18
Second-class....	11	10	10	20
Third-class ...	10	11	1	12
Total.....	47	31	19	50

It may therefore be concluded that we shall have a distinct superiority in completed first-class battleships over the Dual Alliance, but that, in view of the modernizing of the second-class battleships of France, the practical equality of numbers in the first two classes possessed by England on the one hand and France and Russia on the other, is not reassuring, and that the need is urgent for pushing forward the ships in course of construction.

INSURANCE AFFAIRS.

Commissioners appointed by the Department of Education have been engaged since last year investigating the state of the various insurance companies. The result is that four companies—the Kwanto Kasai, the Teikoku Chohei, the Naigai Seison and the Kyokyu Seimei—have been ordered to suspend business, and the following ten have been forbidden to issue any new policies:—

Shuka Seimei Hoken Kaisha.	
Kokoku	"
Bukkyo	"
Chuo	"
Daito	"
Dai Nihon Yeiyeiki Seimei Hoken Kaisha.	
Naikoku Kwasai Hoken Kaisha.	
Chugai	"
Teikoku	"
Fukui-Shohin	"

YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

The fourteenth yearly general meeting of the shareholders of the Yokohama Engine and Iron Works, Ltd., was held on Wednesday afternoon at No. 78, Main Street.

Mr. JAS. DODDS occupied the chair and there were also present Messrs. M. Kirkwood, B. Gillett, F. S. James, E. J. Cowan, P. Morris, A. M. Knapp, G. Philip, C. Guisani, B. C. Howard, C. B. Bernard, W. K. Tresize, J. Weaver, etc.

The notice calling the meeting was read by the Secretary, Mr. W. Friedlander.

On the motion of the Chairman the minutes of last meeting, and the report and accounts, as also the report of Mr. Guinness, one of the auditors, were taken as read.

The CHAIRMAN then said—I am sorry that Mr. Johnstone, your Chairman is not here but as some of you are aware he has been ailing and was compelled to go on Saturday into the country, to recruit his health. With pressure of other business since I have not had time to prepare for the meeting to-day, as I should like to have done. I hope, therefore, you will excuse any shortcomings on my part. The Report and Accounts, however, now put before you will, I hope, appeal in a sufficiently eloquent manner to you without any special remarks from me. The Directors have now much pleasure in submitting them to you and hope they will be considered satisfactory by all shareholders. As you will observe the Company has not lacked business, the gross earnings showing a substantial advance on those of last year and a corresponding addition of profit. The item of Stock may be worthy of remark as running into a larger account than last year, the increase being necessitated by the requirements of our business and showing in a practical manner the necessity of an increase in our capital. I may add that this Stock has been most carefully checked and verified by Mr. Johnstone in conjunction with the manager, Mr. Tresize, and they are satisfied that every item has been taken at a very moderate valuation, in some cases much under cost. With yen 17,800 brought forward from last

year, the balance shown at credit of Profit and Loss on the year's working shows an available balance of yen 54,228.43, with which the Board proposes to deal as recommended in the Report. A paragraph in the Report will doubtless attract your special attention, to wit, that relating to the dealing with the vexed item of Capital Reduction, of which yen 65,000 you will observe has been transferred from the account named to credit of Profit and Loss Account, from which it was originally taken and to which it properly belongs, which increases the balance carried forward to yen 98,434.63. It will be observed that in doing what they have done the directors have not acted solely on their own convictions, but are supported by the opinion expressed in the very clear and able report of Mr. Guinness, while they are pleased to find that their action is fully borne out by the opinion of Mr. Francis of Hongkong, received since the Report was drawn up. It is too large a document to cite here, but it is open to the inspection of every shareholder at the Company's office. Meanwhile I may state the substance of it:—

(1) That the appearance of the item of yen 65,000 among the liabilities of the Company under the head of Capital Reduction account cannot by any possibility be right. That the accounts should be re-stated and as re-stated approved by the shareholders in general meeting. That the sum of yen 65,000, being profits, may be legally divided amongst the shareholders by way of bonus or dividend and that the capital of the Company may be increased to yen 130,000 by the issue of 1,300 new shares of yen each. So far Counsel's opinion.

We have, as will be observed, anticipated Counsel's opinion and in conformity therewith the re-stated accounts show the sum of yen 65,000 removed from liabilities and appearing as profits. The Directors now ask the shareholders to affirm this action of theirs by passing the accounts as so stated. With respects to the future, the Directors propose to give further effect to Counsel's opinion, to their own views, and to what they believe to be the wishes of the large majority of shareholders by declaring an interim dividend or bonus of yen 50 per share, thus distributing yen 65,000 of the profits. The date of the distribution will depend upon the date fixed in the resolutions which they hope to see passed at the extra-ordinary general meeting to be held to-day for the increase of capital. With these remarks I now propose from the chair the adoption of the Report and Accounts as now presented. Meanwhile they are open to remarks.

Mr. JAMES seconded the motion for the adoption of the report and account.

Mr. KIRKWOOD said he saw an item of \$1,466.67 in the accounts as Directors' and Auditors' Fees and asked how that peculiar sum was arrived at—odd dollars and cents. It seemed to him that this should be a lump sum.

The CHAIRMAN said the directors' fees had been paid this year on the same system as in the past, namely \$200 to each individual director serving on the board. Of the amount mentioned \$300 was auditors' fees and the odd sum arose from the fact that one of the directors had retired, Mr. Woolley, going to Europe in the course of the year, being paid *pro rata* for the broken period. He agreed that it was an unusual way of fixing the directors' fees and thought perhaps the article of association might afterwards be modified, with others that required modification under the altered circumstances.

Mr. KIRKWOOD thought the article in question pointed to a lump sum, and that it should be left to the directors to fix how much each they should receive. It appeared this meeting could do no more than sanction the amount set down in the accounts, but he would suggest to the meeting that in view of the excellent state of the accounts the directors should for the current year set aside a round sum of remuneration and that that sum should be fixed at \$1,500 no matter what the number of directors might be.

Mr. PHILIP supported this and on being put to the meeting it was adopted unanimously.

The report and accounts were adopted.

Messrs. JOHNSTONE and Howard, the retiring directors, were re-elected.

Messrs. Fearon and Guinness were re-appointed auditors.

This closed the meeting.

The same shareholders afterwards held an extra-ordinary meeting, adjourned from April 12th, Mr. Dodds still presiding.

The notice calling the meeting having been read,

The CHAIRMAN said:—There has been considerable delay in convening this meeting adjourned from 12th April last, but under the circumstances the Board desired to act with due circumspection and caution, and it has taken time to thoroughly investigate the position in order that they might act strictly in accordance with law. As you have become aware through the annual report and what has been stated at the annual meeting, the Board has in the meanwhile taken counsel's opinion on the various points raised by the resolutions before this adjourned meeting, as their legality had been questioned under circumstances which will be fresh in your memory. That opinion, as has already been stated, considers the yen 65,000 as having been quite improperly entered as a liability, that it is profit that may be divided and that the capital may be increased from yen 65,000 to yen 130,000 by the issue of 1,300 new shares of yen 50 each. The directors have frequently considered the matter and they are unanimously in favour of the distributing of yen 65,000 of the profits to the shareholders and of the increase of capital by a like amount. This being so, as Chairman of this meeting, and on behalf of the Board, I would make the following suggestions to the proposer and seconder of the resolutions before the meeting. I think that as it is the Directors' intention to distribute a sum of yen 65,000 of the profits by way of interim dividend (or bonus) at the rate of yen 50 per share, Resolutions 1 and 2 should be withdrawn. With regard to Resolution 3, as this accords with counsel's opinion and the views of the Board, it may be proposed as it stands. With respect to Resolution 4 a slight amendment will be necessary and I would suggest it should be amended to read as follows:—

"That such shares be offered at the issue price of \$50 per share to holders on the registered list of shareholders on the 31st July, 1901, in the proportion of one new share for each old share held by them respectively, such offer to be made by notice and to be deemed declined unless accepted in writing within fourteen days. Shareholders accepting to take up and pay for their shares on 30th August."

I may mention that it is the intention of the Board, if the Resolution is passed, to declare the interim dividend of yen 50 per share to be payable on the 31st August. Any shareholder who has accepted new shares and not paid for the same on the 30th August will on the 31st, be indebted to the Company yen 50 for each new share and the Board will, under their powers apply his dividend in payment of his debt. With respect to Resolutions 5, 6, and 7 there are no remarks to be made, and they will stand as they are.

Mr. JAMES said that as proposer of the resolutions he was perfectly agreeable that they should be amended as stated and Mr. Cowan, the seconder, was also willing that it should be so. He then read the resolutions as amended. They were as follows:

"That the capital of the company be increased to \$130,000 by the creation of 1,300 new shares of \$50 each.

"That such shares be offered at the issue price of \$50 per share to holders on the registered list of shareholders on the 31st July, 1901, in the proportion of one new share for each old share held by them respectively, such offer to be made by notice and to be deemed declined unless accepted in writing within fourteen days. Shareholders accepting to take up and pay for their shares on 30th August.

That all new shares not so applied for shall be issued by the Directors at such premium and to such persons and in such time and manner as the Directors may think fit.

That the holders of new shares be entitled to dividend for the year beginning 1st June, 1901.

That for the purposes of these Resolutions the Japanese yen shall be treated as equivalent to the Dollar.

In reply to Mr. Kirkwhod, The CHAIRMAN stated that the articles of association simply said "dollar," and the word "mexican" was therefore deleted from the resolutions.

Mr. GILLET said it would be remembered that at the meeting in April last he was in favour, instead of issuing new shares of yen 50, that the old shares should be called in and yen 100 shares substituted. Subsequently he found it the general impression that it was better to have the yen 50 new shares, and that was backed up by Counsel's Opinion:—

(6) As to undoing the mischief done by the reduction of the Nominal Capital of the Company from \$130,000 to \$65,000, it seems to me that the simplest way would be to pass a resolution at an Extraordinary Meeting, specially called for the purpose, under Article II. of the Company's Articles authorising the increase of the Capital of the Company by the creation and issue of new shares of \$50 each. If you want to get the shares back to the nominal value of \$100 it would be necessary to consolidate and redivide the share capital in 650 shares of \$100 each, but then you would still have to make a fresh issue of shares. There are no means of reconverting your present \$50 shares into \$100 shares with \$50 unpaid on each. Better keep to the \$50 shares now you have them.

Under those circumstances he felt that he could do nothing else than withdraw the remarks he then made. Of course he had still some feeling about the matter, but with the opinions now before him he was glad to fall in with the general view of the meeting (applause).

The CHAIRMAN understood Mr. Gillett withdrew the amendment he proposed at last meeting.

Mr. GILLET assented.

The CHAIRMAN put the resolutions to the meeting and they were carried unanimously.

It was added by the CHAIRMAN that although they were advised that it was not strictly necessary to hold a confirmatory meeting yet they thought it better to have one and they proposed to hold that on August 14th.

Mr. GILLET remarked that the old shares bore on their face that the capital was \$65,000 and therefore would have to be called in.

The CHAIRMAN said the directors would advise themselves on the subject.

On the motion of Mr. Guissini a vote of thanks to the Chairman closed the proceedings.

THE GRAND HOTEL, LTD.

The twenty-fourth half-yearly ordinary general meeting of the shareholders of the Grand Hotel Ltd. was held at the Grand Hotel on Friday for the purpose of receiving the Directors' Report and statement of accounts for the half-year ended 30th June, 1901, and the declaration of a dividend. Among those present were:—Dr. C. H. H. Hall (chairman) Messrs. B. C. Howard, C. K. Martin, M. Kaufmann, L. Mottet and G. C. Booth (secretary).

The CHAIRMAN said:—The Directors' Report and Statement of Accounts having been in your hands for some days will be taken as read, if there is no objection. The continued prosperity of the Company is indicated by the statement under review; it seems needless, therefore, to detain you for presentation of details, such as that the number of guests has been larger than usual but expenses somewhat heavier. A part of this increased expenditure is included in the account for New Buildings, which has been increased by nearly yen 2,300, and a further payment on this account is provided for in the cash balance carried forward, although it is not included among Bills Payable because the creditor's statement has not yet been received. You will note in the report that a change has been made in the form of expressing the dividend,—a change from a percentage of the nominal capital to a definite number of yen. This latter form is more in harmony with the growing practice of public companies,

and perhaps diminishes chance misapprehension of the actual return from an investment, for the latter is naturally regarded from the point of view of the price of shares rather than from that of a nominal basis. The change is not important, however, for the rate of earning may be readily computed on a basis of nominal capital, of actual assets or of the market quotation for shares. Some inquiries having made as to the amount recommended to be written off, it may be well to add a word concerning this. The Directors desire to carry out the wishes of the shareholders as far as may be consistent with the interests of the company but on some points of policy these wishes are at times so conflicting as to be incapable of being executed. This conflict of opinion appears especially with reference to writing off or carrying forward estimated profit which is not represented by cash. In such a contingency the Directors feel called upon to exercise their own judgment after consultation with the Auditor, and they are the more ready to do so because neither writing off nor carrying forward finally disposes of property, but leaves it available for any disposition that may be decided upon at a later time. They have, therefore, laid before you the more conservative showing.

The CHAIRMAN then proposed that the Report and Accounts be adopted.

Mr. M. KAUFMANN seconded.

There being no discussion, the motion was unanimously adopted and the meeting terminated. The report and accounts have already appeared in our columns.

BASEBALL.

"NEW YORK" VERSUS Y.C. AND A.C.

The team of the Y.C. and A.C. which met the baseball nine of the U.S. flagship *New York* on the Cricket ground on Friday were outplayed in every point of the game and as a result the visitors piled up an enormous score. The sailors began to score in the first innings, making one run, but their biggest totals were made in the second, fourth, and sixth innings, when 6, 5, and 8 runs were made, chiefly through the weakness of the field, though it must be acknowledged that one and all are splendid hitters. Yokohama did not score a point after the second innings. In the fifth innings Blake retired from the pitcher's box and Hellyer took his place. The new pitcher achieved a record, we imagine, seeing three men go down with three consecutive balls, neither of the first two reaching first base, and the third being held on a fly. This was Yokohama's last bit of luck, if we except a capital catch by Thorne in the right field in the seventh innings. The players were:—

YOKOHAMA.		"NEW YORK."	
McChesney	L.F.Vandermaast.
Edwards	3B.Richley.
Merriman	2B.Snyder.
Swan	C.Bruff.
Blake	P.O'Brien.
Hellyer	S.S.Hurley.
Lowry	C.F.Shean.
Kilby	1B.Cogswell.
Thorne	R.F.Lelonde.

The score by innings was:—

	1	2	3	4	5	6	7	8	9
New York	1	6	0	5	0	8	2	0	3=25
Y.C. and A.C.	1	0	0	0	0	0	0	0	0=2

YACHTING.

The 30-raters race on Saturday was rather unsatisfactory, the wind being changeable and light. In consequence of the absence of a flagboat at Tsurumi all the yachts rounded a fishing boat anchored about the spot—all except *Kingfisher* which put about and came home. Later *Spray* also gave up. *Mary* finished at 4.14.3; *Maid Marion* at 4.26.05; *Haidiee* at 5.07.40. *Maid* thus secured second prize, failing to win first on her allowance of 5m. 13s.

The 21-raters contest was also disappointing from the same causes. *Edna* came in first with a long lead, *Vixen* second and *Daisy* third. *Daisy* took second prize on her time allowance of 9m. 34s.

CHRISTIAN TROUBLES AND FLOODS IN THE YANGTZE VALLEY.

The *N. C. Daily News* quotes a private letter from Kiukiang dated 20th July as follows:—

The *Decidee* (French gunboat) is going up to Nanchang on the Lake, owing to friction between Roman Catholic and Protestant converts. H.M.S. *Woodlark* left for the same place a few days ago.

"Watermark 44 feet 11 inches (record).

"The river burst its banks on Sunday evening in the neighbourhood of Nganking, and has caused great desolation. The Kiangkwan is badly on shore on the bund a little below the Tunglin Pagoda, also one of the Japanese steamers (the *Tairi Maru*), and it is reported one of Melchers & Co.'s also, the *Meilee*."

Writing on the 23rd the *N. C. Daily News* said:—The recent heavy rains are accountable for a considerable rise in the water and consequent damage to the country between Siking village and the Hills. The country in places is flooded, and homesteads, haystacks, and trees are to be seen standing in the waste. Banks upon which one could walk with ease a short while ago and which were some ten or twelve feet high, are now almost submerged, and trackers have frequently to wade almost up to their waists through creeks which in ordinary times could be jumped. Many houses are collapsing and others are likely to do so shortly. Natives are to be seen pumping water out of the rice fields, and they say such a flood has not been known in that vicinity for over twenty years.

The *C. M. S. Kiangyung* reported on July 25th at Shanghai: *Sual* and *Meishan* ashore below Hankow on the 21st; *Kiangkwan* ashore above Christmas Island on the 22nd; and *Talce Maru* ashore on Fitany Island on the 22nd.

Our Shanghai contemporary was informed on July 25th that the *Kiangkwan* was badly ashore in a farmyard some 50 feet above the ordinary level of the river. In attempting to tow her off the *C. N. S. Taitung* which went into dock at Shanghai on Tuesday, got damaged by coming in contact with the river bank. The *Cores de Vries* which left for Hankow on Monday will probably attempt to get the *Sual* off, and the *Meilee*, which also left here on Monday, will try to do the same for the *Meishan*. On the 22nd two Japanese boats were standing by the *Talce Maru*, but she was still aground. The watermark at Hankow on the 20th instant was 46 feet 2 inches, but it is not likely to rise any more. If the above-mentioned boats do not get off this week, they are likely to remain fixtures for some time.

MR. R. IRWIN.

A curious statement was published in Yokohama on Wednesday evening to this effect:—"But it is undeniable that Mr. Irwin came ashore immediately and repaired to the Yokohama United Club, where he stayed until late the same evening, so that if Count Inouye interviewed him, it must have been at midnight."

As a matter of fact Count Inouye met Mr. Irwin on the arrival of the steamer. Mr. Irwin did not stay in the United Club until late in the evening; he proceeded at once to Tokyo and if Count Inouye desired conversation with him that could have taken place long before midnight.

CLOSING EXCHANGES.

The authorities have taken a step which will to some extent check the gambling which has prevailed in many provincial exchanges. The result of official investigations going to show that these institutions were little better than gambling-houses, it was determined to close the exchanges in Chiba, Tsuchiura, Hachioji, Kawagoye, Mayebashi, Takasaki, Isezaki, Utsunomiya and Tochigi. First, however, a suggestion was sent through the respective governors advising voluntary dissolution. Four exchanges took this course. The Hachioji Exchange was transformed into a public warehousing company. The exchanges in Mayebashi, Takasaki, Utsunomiya and Tochigi proved refractory and therefore were officially dissolved. It is understood that the Government intends not necessarily to limit or reduce the number of exchanges, but to extend its enquiries so as to purify the business methods of those already existing.

NEWS OF THE WEEK.

H. M. S. *Pique* and *Orlando* are shortly due in Yokohama.

Traffic between Hachioji and Uyenohara was opened on the 1st inst.

The libel suit brought by Mr. J. H. Ranger against a Director of the Maples Hotel, Ltd., has been sent to trial.

A workman was run over by a train near Ueno, on the night of the 30th ult. The body has not yet been identified.

The Japanese standing squadron of ten vessels, including torpedo-boat destroyers, arrived at Ninsen on the 31st July.

The first number of a magazine entitled *Shoko Kikan* will be published at Yamashirocho, Kyo-bashi, Tokyo, on the 15th inst.

Seven officials have been censured in England as being responsible for the blunders made in the building of the new Royal yacht.

A robber entered the station master's room at Kokubuji station on the evening of the 29th ult., and stole a cash box containing over yen 40.

Fifty members of the Young Men's Association, Shizuoka, propose to explore an old cave on Fuji-yama (*Fuji-no-hitoana*), on August 1st.

Generals Mahar and Lucban, the two last insurgent Generals in the field, are both negotiating for surrender, which will end the war in the Philippines.

The Frenchman Luyat, who is charged with obtaining goods by fraudulent pretensions, has been committed for trial in the Yokohama local court.

In a thunderstorm which occurred in the district of Tokushima Prefecture on the morning of the 30th ult. several persons were killed by lightning.

Prince Michi will leave Tokyo for the Nikko Detached Palace on the 4th inst. and will stop there until the end of the month or beginning of September.

At the tenth half-yearly meeting of the shareholders in the Nagasaki Hotel, Ltd., held on Saturday last, the accounts, which we recently published, were duly passed.

Miyazawa Kanji, the man who stole yen 30,000 from the Government Printing Office, appealed to Supreme Court against his sentence of five years' imprisonment, on the 30th ult.

It is reported that pirates in Bacninh have murdered a French engineer, M. Martin, and stolen from him \$2,000, which he had with him to pay his subordinates.

Two Japanese boys aged 9 and 12 were drowned while swimming in the Negishi canal with other boys on the afternoon of the 31st ult. The corpses were found a little later.

The Japanese cruisers *Itsukushima* and *Hashidate* with training students on board, arrived at Otaru from Vladivostok, on the 31st July; they will reach Yokosuka on the 4th or 5th inst.

Their Majesties the King and Queen of Siam left Singapore for Bangkok by the *Maha Chakkri* on the 17th July. The Royal yacht was escorted by the two Siamese gunboats *Bali* and *Sigrib*.

Fire occurred at Kagawachi-mvra Nishitamagori, Tokyo, on the evening of the 26th July. Thirty-five houses and one hundred and thirty store houses were destroyed. Three men were injured.

According to a London dispatch of the 8th ult., *The Times* is satisfied with the report of the Admiralty on the condition of the British Navy as showing that the Admiralty is strenuous, vigilant, and progressive.

A matting-maker named Akimoto Fukutaro, living in Kobikicho, Tokyo, was arrested by the

police and sentenced to 10 days' confinement in the lock-up station, for beating his father on the head with *geta* on the 30th ult.

Matsuzaki Zenshichi, of Chojamachi Kuchome, Yokohama, has presented the following articles to Admiral Rodgers and staff:—14 embroidered silk handkerchiefs, 24 silk fans, and 24 paper stove-ornaments.

The young woman named Suzuki Haru, who is charged with stealing 200 yen belonging to her parents, was arrested by the Kagakuchi police on the afternoon of the same day at Isezakicho. She had then only 20 yen remaining.

A chair-maker named Hanazuka Shigezo, living at Miyoshicho Shichome, Yokohama, was arrested by the Isezakicho police on the 29th July on a charge of having stolen several signboards from various prominent restaurants of Yokohama during November last.

Nos. 6, 7, and 8, Victoria Road, Hongkong, were burnt down and gutted on the 20th July, dead bodies, three men and three females, being found on the back staircase of No. 7. They were evidently suffocated before the actual fire reached them.

A London message of the 9th ult. says that French papers are publishing long statements regarding the origin of the Marchand mission, which show that the purpose was to establish a foothold on the Nile, so that France would have a voice in the future settlement of Egypt.

The U.S. transport *Sheridan*, which arrived at Yokohama on Tuesday morning from Manila via Nagasaki, with leave expired troops leaves here on Saturday for San Francisco. She has called chiefly for the purpose of meeting General McArthur, who proceeds home in her.

A coolie named Suzuki Sanzo, staying in a boarding house at Minami Yoshidamachi, Yokohama, attempted to murder another coolie named Tachibana Tsunetaro, on the afternoon of the 25th July near Miyoshicho. The man cut Tsunetaro's head and arm and then disappeared.

A pick-pocket named Furuhashi Shigenobu and three comrades living at Hisakatacho, Yokohama, beat with *geta* a policeman named Naito Naohisa, an employee at the Yokohama station, on the night of the 30th July, and injured his head and face. Shigenobu was arrested but the others escaped. Naito, it appears, had caught them stealing at the station.

In the Yokohama Chihō Saibansho, on Saturday morning, the Peterson Engineering Co. sued Mr. T. H. Box, claiming payment of yen 420, house-rent for six months from Nov. 1st, 1900, with interest at 5 per cent. until the execution of judgment. It was contended for the defence that a claim similar to this had already been withdrawn. The case was adjourned.

A man named Takamatsu Kyugoro, aged 71, living at Kirigaya, Yeburagori, Tokyo, confessed to the police on the morning of July 29th that he had murdered his wife by hanging her at their house. The old woman, it seems, was insane and, being very poor, he could not find means to have her watched. She revived the same evening by the medical treatment of the two police physicians.

The Al-Vista panoramic cameras advertised by Messrs. C. and J. Favre-Brandt, appear to be quite remarkable instruments if one may judge from the photographs that result from their use. When it is remembered that the camera takes in a scope of about about 180 degrees, it will be seen how valuable is the swinging lens for making views of scenery, sports, races, marine views, etc. Yet the instrument, it is contended, is so simple that a child can operate it.

Five armed burglars, named Yendo Mitsutaro, Shimada Matsuzo, Shiraiishi Kentaro, Iida Kurugi and Kubota Yonekichi, who were staying in a head-gambler's house at Shimami, Shiba, were arrested by the police on the evening and morning of the 29th and 30th ult. They had broken

into several hundred houses at Akasaka, Azabu, Nihon-bashi, and Fukagawa within the last few months, and it is expected that they had stolen articles valued at several thousand yen.

There left the Tyne on the 20th June a self-docking pontoon dock, the largest of the kind afloat, built to the order of the Spanish Government by Messrs. R. Stephenson & Co., of Hebburn. This huge structure has been built in six sections, and is capable of lifting a ship of the weight of 13,000 tons. It was taken down the river to sea in charge of seven tugs. Its destination was Port Mahon, in the island of Minorca, and three tugs were to tow it to that port.

A newspaper deliverer named Muraki Koma-kichi, employed by a newspaper agency known as Hinodeya living at Wakabacho, Yokohama, attempted to murder his wife Katsu on the evening of the 31st ult. He took her and their son to a deserted spot and then drawing a sword cut her on the right shoulder and arms. She ran off some distance and fainted. He then cut his own throat but was arrested by the police before he could inflict fatal injuries. The woman will recover.

It is stated that the cost of the German Expedition to China amounts to m.139,500,000, exclusive of the expenses of the German warships in Chinese waters, the cost of bringing back the German military force, the pensions to be paid to disabled soldiers and to the families of the killed, the damage done to the legation at Peking, to the German settlement at Tientsin, and to German missions and the interest on the sums spent in connection with China. The indemnity of m.240,000,000 demanded by Germany is, therefore, stated to be below the real cost of the German operations in China.

The Rt. Rev. Bishop Foss and Miss Ovens, of the S.P.G. Mission, were married at Kobe on Wednesday. Previous to the ceremony there was a celebration of Holy Communion at All Saints' Church, at 8 o'clock, when Bishop Partridge of Kioto and the Chaplain (Rev. G. H. Davies) officiated. The wedding service was conducted by Bishop Awdry and Bishop Partridge. The service was read and was throughout of the simplest character, there being no music. The bride was given away by Mr. Henry Hughes, and Archdeacon Price undertook the office of groomsmen.

The steamer *Loongsang* (Messrs. Jardine, Matheson & Co.), which arrived in Hongkong on July 22nd from Manila, had on board one hundred tons of cargo—eighty tons of pig lead and twenty tons of hides and wool—saved from the Japanese steamer *Futami Maru* wrecked in the Straits of Mendora. The sunken vessel's cargo was bought by Mr. Chan Hewan, secretary of the Chai On Marine Insurance Company, of Hongkong, who sent down by the *Loongsang* a month ago about forty divers to save the cargo. The work has been prosecuted with great energy and that by the *Loongsang* was the first of what is confidently expected to be a series of profitable consignments.

Miyanaga Kikujiro a member of the staff of the Koyama Bank at Tochigi, was robbed of a parcel containing yen 12,000 while in an ice shop, near Ueno station, on the morning of the 30th July. He reported the matter to the Shitaya police station at once, and the Inspector of the station telephoned to all the stations to search for the robber. A little later an employee of the Tokyo Bank, at Tadokoro-cho, Nihonbashi, found a parcel on a table in the same bank, on opening which with another man it was found to contain yen 9,000. This was reported to the Nihonbashi police station at once, and then the Nihonbashi police summoned Miyanaga and showed him the parcel and money, which he identified as part of that stolen. The balance of 3,000 yen has not yet been recovered.

Sir George Warrander, sixth baronet, died at his London residence, Eaton-square, in his seventy-sixth year, after an illness of some duration. He was formerly a captain in the Coldstream Guards, but of late years had passed most

of his time in the Scottish capital. The family is of French extraction, and settled in Scotland in the time of James V. Sir George's only son, Captain George Scott Warrender, now assumes the baronetcy in his forty-first year. He has seen considerable service with the Royal Navy in South Africa and in China, and his wife, Lady Maud Warrender, a sister of the Earl of Shaftesbury, has of late taken a very active interest in the affairs of the Primrose League. Captain Sir George Warrender is in command of H.M.'s battleship *Barfleur* on this station.

Dysentery is extending in Kanagawa Prefecture day by day, 20 to 40 new cases being reported every twenty-four hours. The following figures were compiled by the police on the 25th July:—

	Cases.	Deaths.	Under medical treatment.
Yokohama.....	60	5	21
Kuraki-gori.....	1	0	0
Tachibana-gori.....	3	0	3
Tsutsuki-gori.....	1	0	0
Miura-gori.....	39	6	27
Kamakura-gori.....	64	12	33
Kôza-gori.....	129	27	78
Naka-gori.....	30	6	11

On same day last year...	572	82	329

The Royal Humane Society of London has a gold medal which it awards annually to the man who, in its opinion, may be rightfully regarded as "the bravest man of the year." The award was made recently for 1900, and the medal went to William Allen, a Sunderland sailor, who left the sea about three years ago. On March 15, 1900, word was brought to Allen that three men were overcome by the fumes of tar gas and were lying unconscious at the bottom of a still. Allen fastened a rope around himself and dashed into the still, and a few seconds came out with one of the men. A second time he entered and yet a third, until the three men were rescued. Each time Allen risked his life in the venture. The case was brought to the attention of the Royal Humane Society and it was resolved to award the medal to Allen as "the bravest man of the year" among all those whose gallantry in saving life had been brought to the society in 1900. Allen is said to be a typical seaman—quiet, modest and of excellent character.—*Leslie's Weekly*.

AMERICAN TOPICS.

When the bids for the new \$9,000,000 3 per cent. issue of the city of Philadelphia were opened a few days ago it was found that only one offer for \$5,000,000 had been made. Recent mismanagement in the city's affairs is charged with having damaged its credit.

Mrs. Eliza Rogers Potter, wife of the Right Rev. Henry C. Potter, Protestant Episcopal Bishop of New York, died suddenly on June 30th at the family residence, New York. Mrs. Potter's death was due to heart failure, superinduced by the intense heat. Bishop Potter was at his wife's side when the end came, but none of her six children were present.

Mr. Pierre Lorillard, the famous tobacconist and race-horse owner, died soon after landing at New York on July 7th. He was taken ill in England but wished to die in his native land. Various estimates have been made of the value of Mr. Lorillard's estate. It is believed to be more than \$25,000,000. As long ago as 1884 it was said to be from \$15,000,000 to \$20,000,000.

Eleven murderers made a daring escape from prison at Hilo, on July 3. Their flight was discovered almost immediately. They put to sea in a small banca and a detachment of the prison guard fired several volleys at them. One of the men was washed ashore drowned and another came floating in with a bullet hole through his head. It is expected that the boat capsized and that none of the assassins escaped.

The *Chicago Tribune's* annual compilation of the dire effects of the popular celebration of the

Fourth of July throughout the United States contains the following figures: Deaths—By cannon explosion, 4; by fire-works, 2; by firearms, 3; by toy pistols, 1; by runaways caused by explosions, 1; total, 11. Injured—By fireworks, 333; by cannon explosions, 176; by firearms, 139; by toy pistols, 160; by gunpowder, 145; by runaways, 11; total, 964.

According to the estimates of the *New York Mining and Engineering Journal*, which are based, as a rule, on the most reliable data obtainable, the total value of the mineral output of the United States in 1900 amounted to \$1,365,608,583. This is a gain over the output of 1899 of \$147,393,945. Coal and iron constitute the leading mineral products of the country. There was an increased production of both during 1900 as compared with the value of the output of 1899. The increase in the output of coal amounted to 6 per cent.

The death was reported on June 16th of Rear-Admiral Belknap, of the United States Navy. The cause of death is stated to have been blood-poisoning. Admiral Belknap, who was in his seventieth year, had seen much service, being in command of a gunboat at the capture of the Canton River forts in 1856. He distinguished himself during the Civil War. Admiral Belknap served a term as Commander-in-Chief of the Asiatic squadron. He was largely engaged in deep sea surveying and a section of the Pacific bears his name—the Belknap Deep.

The Cripple Creek gold camps, with their June output, reached the enormous production of \$104,365,270. On this the net profits have been \$62,000,000. The camp is but ten years old, dating from the location of Stratton's Independence Mine, July 4th, 1891. The area from which the yield has been secured is about five miles square, while the average depth of the workings is close to 400 feet. Perhaps no camp in the history of gold mining has made an equal showing. Cripple Creek in 1891 was a stock pasture. The pasture to-day has 50,000 population, 8,000 miners, five railroads, four electric power plants, twelve mills and smelters and hundreds of great mines.

The beginning of the fifth fiscal year of Mr. McKinley's administration shows, according to Secretary Gage, cash on hand exceeding one billion dollars, or \$76,000,000 more than it was a year ago, and the figures present a surplus of over \$75,000,000 remaining out of last year's receipts of \$585,848,309. These are record figures. The aggregate of cash in the United States Treasury, including the reserve fund of \$150,000,000, available cash balance of \$176,000,000, and other items, amounts to \$1,181,868,911 against \$1,105,496,490 on June 30, 1900, when the reserve fund was the same and the available cash balance amounted to \$155,705,654.78. The net gain in cash aggregate is thus \$76,372,420.87.

Mr. Gustave Whitehead, of Bridgeport, Conn., has invented a new flying machine after the model of a bird or bat. It is 16 feet long, 3 feet deep, and 2½ feet wide. It is well stayed with wooden ribs, braced with steel wires, and covered with canvas. It stands on four wheels, each a foot in diameter, and a 10-horse-power engine starts it from the ground. The wings, or aeroplanes, can be folded up. A rudder corresponding to the tail of the bird steers the machine horizontally. The machine once in the air is moved by another 20-horse-power engine driving two propellers, which can also assist in steering, by one turning faster than the other. The apparatus is now ready for preliminary trials.

It has been estimated that the combined interest and dividend payments made in New York on July 1st was anything from \$120,000,000 to \$125,000,000, the largest on record, and furnishing a striking evidence of the prosperity of the agricultural, industrial and manufacturing interests of the country. A year ago the interest due on bonds having face value of \$3,307,056,178 was \$66,949,326 and the dividends due then on stocks having par value

of \$1,741,488,682 amounted to \$38,621,252. That made a total of \$105,570,578, and that was a gain of more than \$11,000,000 over July, 1899. And from all sides come reports of the tremendous development of the nation's industries. The Government itself will pay more than \$1,500,000 in interest on its 2 per cent. and 4 per cent. bonds.

A statement prepared at the U.S. Pension Office shows that for the fiscal year ended June 30th, 1901, 49,612 names were added to the pension rolls, of which 44,861 were original issues and 4,751 were restorations. The original issues included the following: Invalids, Civil War, 20,443; invalids, war with Spain, 2,795; survivors of the Mexican war, 15; survivors of Indian wars, 7; widows, Civil War, 19,842; widows, war with Spain, 1241; widows, Mexican war, 352; widows, Indian wars, 323; widows, "old wars prior to 1861," 6; widows, war of 1812, 3; nurses, 25. The increases, re-ratings, etc., numbered 60,043, making the total number of certificates issued 109,665, as against a total of 105,591 in 1900. The increase in the number of pensioners on the rolls June 30, 1901, compared with the previous year, was about 2,500. The number of claims pending May 13, 1901, was 415,409, and on June 30, 1901, 635,059.

Says the *San Francisco Chronicle*:—"To thousands of Californians the news of the sudden death of the venerable Dr. Joseph Le Conte in the Yosemite will come with a sense of personal loss. No educator in the State was so well beloved; none had established stronger claims to public regard and affection. For over thirty years he had held the chair of geology and zoology at the University of California and he had made his lectures so full of his own fine humanity and individuality that the largest classroom scarcely gave space for the hundreds of students who thronged to listen to his words. In an age when science has become hard and materialistic Professor Le Conte preserved the spirituality of the old school, and his personal influence was of incalculable value in enforcing the lesson that character is the highest fruit of education. Aside from his regular University work Professor Le Conte found time to write the books on geology and evolution that gave him world-wide fame. He also made regular yearly vacation explorations among the high Sierra, and the results of these journeys were of great value to science.

In Prof. John Fiske, who died at East Gloucester, Mass., on July 4th, American historical literature has lost its ablest writer since Parkman laid down his pen. Parkman planned a greater scheme of historical work than any other American historian and he carried it out to the end, despite long illness and many infirmities, but John Fiske will be ranked very close to Parkman in scholarship and in the rare faculty of giving life to the dead and dusty past. The colonial period of American history Fiske made his own, and certainly in this field he had no superior. His style was clear, forcible and full of charm. He lacked something of Parkman's imagination, but he added the qualities of a great jurist, and his summing up of characters and events is exceptionally fine. As a lecturer he was known all over the country. During the last years of his life Mr. Fiske devoted his time almost exclusively to American history. Among his books on this subject may be mentioned "American Political Ideas," "The Critical Period of American History, 1783-1789," "The Beginnings of New England," "The War of Independence," in the Riverside Library for Young People, "Civil Government in the United States for Schools." He spent much time in travels about the country lecturing. He was a member of the board of overseers of Harvard University, and from 1872 to 1879 he was assistant librarian in that institution. He visited Europe several times, remaining once for an entire year, and lectured before the Royal Institution in London and the Philosophical Institution at Edinburgh. He numbered among his friends most of the men in England eminent in science and literature, who were first attracted by the skill with which he expounded the philosophy of Spencer.

VISCOUNT AOKI ON NATIONAL ECONOMY.

The following is a full translation of views expressed by Viscount Aoki and published in vernacular papers, on the subject of national economy in Japan:—

In order to develop the economy of a nation, or rather to open a way for its development, it is necessary in respect of economic principles, that suitable methods should be adopted for the supply of capital and for the selection of enterprises for which such capital is to be utilized. Any errors in the application of that capital are sure to exhaust the sources of revenue and deteriorate the country's strength. In the same way failure to select suitable enterprises will not only render capital unfruitful, but will ultimately lead to national bankruptcy through abuses inherent in its extravagance. How can we restrain ourselves from entertaining serious apprehension for such a result? A glance at the condition of our country shows that although the economic system of the nation is now suffering from stagnation yet the source of revenue is not exhausted, while anything like bankruptcy is out of the question.

The direct causes of the stagnancy in question, however, are to be ascribed to the want of discretion in the adoption of methods for the supply of capital and to the failure to select proper enterprises for its utilization. The question of financial remedy as discussed by the public at present involves schemes quite incompatible with the tendency of the age, the principles advocated being the encouragement of thrift on one hand, and the total abandonment of the use of imported articles on the other. These propositions are likely to obstruct the development of economy, and we cannot but express our regret in this respect. For myself I am inclined to believe that the amelioration of the present financial condition can in no way be effected with any degree of success, unless steps be taken to raise a national loan or introduce foreign capital. With regard to the advantages and disadvantages attendant upon the raising of national loans, the opinions of ancient thinkers are divided: the advocates of loans asserting that if the enterprises to be undertaken at a given period are designed to promote the interests of future society, or at any rate, if they are of such a nature as to involve prospects of profit for the future, the liabilities borne by a nation during a given period must be shared by the people of the succeeding generation, just in the same way that the successor to an inheritance is required to bear responsibility for the debts left by his predecessor.

Their opponents assert that the funds to be acquired by means of national loans differ in nature from the taxes absorbed from a portion of the working funds existing in a country or of currency in circulation. In so far as immediate requirements are concerned, it is utterly inexpedient to raise national loans against products which are to be increased only in the future. It will be far better to absorb the necessary funds from currency in circulation or from products actually in existence, by the imposition of new taxes. Under no circumstances should posterity be burdened for several generations. Moreover, new taxes are merely temporary in character, and do not create interest like national loans.

In arriving at a correct judgment on the opinions thus expressed by two distinct classes of thinkers, it is necessary to investigate the nature of capital and industry.

Capital is, in fact, a general name given commodities having a value and to be consumed or utilized for the production of new articles. It is termed either fixed or floating capital according to the length of the period during which it is appropriated for the manufacture of the valuable articles referred to.

The public is often inclined to regard capital and currency in the same light, but nothing can be a greater error than such a view, inasmuch as the latter is only a portion of the former; still as money is qualified to represent capital, it is received or delivered as the medium of commerce.

Fixed capital is to be consumed by degrees so long as it performs its function for the production of new commodities. When it is properly appropriated, it can be permanently maintained without difficulty, as in the case of land, buildings, ships, rolling stock, various tools, utensils, and machinery.

On the other hand, working capital is consumed in one or several years, sometimes in a month or a few weeks, as in the case of beverages and foods, materials for manufacture, and various other commodities which admit of easy consumption. These two forms of capital are really dispensed for the sustenance of mankind. To satisfy the requirements of the people,—food, clothes, and habitation,—in a densely populated locality, the gross amount of capital must be very large. In the case of tribes who have not yet attained any degree of civilization, their means of living consists chiefly in hunting, and therefore the capital they possess does not exceed a thatched hut, with perhaps some broken sandals and a few instruments for the chase. The Indians, for instance, re-

quire an extensive tract of land for hunting animals necessary for the support of their families, but they are unable to preserve the spoils of the field for any length of time. Hence their families are frequently on the verge of starvation. In fact, they have neither the working funds, nor the fixed capital to produce new commodities. The greater the accumulation of the two forms of capital in a country, the larger the amount of the production of new commodities, at the hands of labourers. And as these labourers are thus enabled to procure abundant food for themselves, such of them as are strong and healthy will have no difficulty in developing their muscles and limbs, and will become able to undertake any hard work. This being the case, there is no doubt that the productive power of their country will be far greater than that of a country where two sorts of capital are insufficient. Indeed, the system of production can only be carried into effect by means of a uniform organization, order, and procedure. A few words may illustrate this fact.

In maintaining the population actually in existence there must be a suitable number of farmers who will provide the necessary food for it every year. Then there must be houses for it to live in. Then again a certain number of artisans and craftsmen must be retained to give their labour in the production of materials for its clothing and utensils. Also it happens that the so-called working capital serves to secure the employment of a certain class of people, especially the workmen, while the fixed capital helps them in the execution of their labour. In this way alone, the population of a country can not only be maintained, but also increased.

At the same time the working capital consumed is duly restored by the production of new commodities, while the fixed capital performs the functions of repair, and enables the other class of capital to continue to exercise its functions. When in a certain year the people of a country have worked less than in the previous year, or the amount of working funds have decreased in consequence, for example, of the failure of crops, or the fixed capital meets with a similar fate on account of unexpected occurrences such as fire, earthquake, or inundation, if the population has increased at such a period, the people in general will experience no small difficulty from insufficiency of food.

When, on the other hand, the work of cattle-breeding as well as other agricultural pursuits have been successful, bringing about a corresponding increase in the amount of working capital, the surplus thus acquired may be appropriated for the construction of houses, ships, and railways, as well as for the manufacture of machinery.

An improvement in the cultivation of land may thus follow, with the result of an augmentation in the amount of the consolidated capital. The people will then be in a position to lead easier lives than they did in the previous years.

In short, if a country desires to secure systematic progress, it must endeavour to increase its capital, instead of being content with the amount actually in hand. The Government ought, therefore, to refrain from adopting any restrictive measures as to any earnest attempt of the people to engage in productive enterprises. Looking into the history of civilized nations, we find that the condition as indicated above constitutes the path to civilization—so long, that is, as the country remains undisturbed by civil or foreign war, or by tyrannical laws and institutions. Indeed we are more forcibly convinced of this fact, when we consider that as a result of the development of scientific theories Providence has enabled men to study the works of nature with greater accuracy, and to utilize them at trifling cost towards encouraging or promoting productive undertakings.

If productive enterprises, instead of being limited to supplementing the floating capital needed by the public every year, to maintaining the fixed capital in a suitable state or to providing the people with the actual means of living, be so managed as to extend or develop with abnormal rapidity by special processes, so that the amount of supply may exceed the demand, leaving a surplus in commodities, society will be enabled not only to consume them in abundance, but also to utilize them for the augmentation of fixed capital. That the increase of fixed capital will tend to augment revenue, is taken for granted; but if actual people are not to change their habits, and are to apply a fixed amount of their floating capital to meet the requirements of their lives, it is certainly inexpedient to appropriate the fixed capital, in conformity with the former custom, for the production of commodities beyond the amount needed; inasmuch as over-production will cause the market to be glutted, and the value to be extremely depreciated. In such cases, namely, in the case when the amount of fixed capital is abnormally increased, measures must be taken to give a fresh impulse to society at large towards creating a new spirit of demand, on the one hand, and to gratifying the improved taste of the higher classes of the people, on the other, by the manufacture of new and excellent

commodities, and endeavouring at the same time to supply the lower orders with new but ordinary commodities at a cheaper cost, by undertaking their manufacture on a large scale. The elaborate scrutiny of economic history will show that such were the stages of development through which society had to pass. Years ago, the suit of cloth was an exclusive object of luxury for the rich; a girl who carried with her more than two suits of clothes for summer and winter, on the occasion of her marriage, was regarded as belonging to a wealthy family. At present, however, any person destitute of such articles or clothes is thought poor. In the west too, a similar state of affairs prevailed, when the English Sovereign was envied by the peoples of the world as being rich enough to wear silk stockings. Again, a little more than a hundred years ago the watch was regarded as a useless article of luxury; now it has become a thing of absolute necessity for the middle classes of society. Thirty or forty years ago a majority of our people seldom journeyed out of the limits of the town or village in which they lived; now they fearlessly undertake tours of inspection over Europe and America across thousands of miles.

In short the last century enabled people in all parts of the world to attain a higher state of enlightenment, and to improve or extend the scope of their requirements. The present style of living, therefore, which, a hundred years ago, would have been regarded as the extreme of pomp and luxury, enjoyable by the wealthy class alone, is not envied even by the lowest classes. Unfortunately, however, all these facts are in many cases looked upon as something extraordinary by persons not well versed in the principles of the development of national economy and civilization. Some of these persons are inclined to assert that, while they themselves indulge in the highest luxury and opulence, principles of economy or thrift adopted by their forefathers should be made a model to guide the lives of others. They condemn the actual standard of living as involving elements of luxury and pomp, but assertions of this nature must surely be the result of indiscretion on their part. Our ancestors, being possessed of only a small income, were unable to spend large amounts of capital for the gratification of higher requirements, but the fact must not be overlooked that the expenditures they appropriated for food and beverages, and the employment of a large number of servants, were far above the standard of living adopted by us. On the other hand, as for ourselves we have an abundance of high tastes and requirements which we are in a position to share with rich and poor alike. We are, in particular, possessed of invaluable treasures secured by sciences and arts, the two noble gifts of civilization which our forefathers could never have been able to imagine even in a dream.

If the people of any country would for a succession of years endeavour to increase the amount of their fixed capital by the appropriation of surpluses from their revenue, and so be in a position to produce in greater abundance articles of high quality to satisfy the requirements of the cultivated mind, they might eventually become able to reach at length the basis of abstract capital (or the capital fund as it is called). Although the capital so secured does not take the form of concrete substances that may be submitted to immediate sale or purchase, yet as the people at large are enabled to derive immense benefit from it, it is evident that they occupy a superior position in point of knowledge as well as in productive power, in comparison with others who are differently circumstanced. To illustrate this in connection with commercial matters: the abstract capital (or capital fund) in question constitutes the reputation or patronage attained by a mercantile establishment: the manufactures of a previously civilized people who by the development of a certain industry in the course of many years have succeeded in attaining the highest perfection, are much more valued than those of a people whose civilization is of a later date, but whose products are of the same quality and often offered at a smaller cost. Certain manufactures of England and France are in no way superior to those of other countries, but on the contrary, are higher in value, yet they find a ready market, and this is simply accounted for by the circumstances noted above.

Thus analysed, it is clear that the government of any country is called upon not only to remove all obstacles to productive power and augmentation of capital, but also to promote these sources of national wealth by the adoption of every conceivable measure. In other words, the government ought not only to impart education, both physical and intellectual, to the rising generation whose efforts will be needed for the production of the higher classes of commodities; to aid or protect new machinery for communications; to extirpate elements of obstruction, especially severe laws and old fashioned customs, which are highly detrimental to the interests of various occupations, otherwise likely to attain rapid development with the greatest facility; but also, advancing a step further, it should exercise the utmost precaution against the outbreak of disturbances, domestic or foreign, and

protect the lives and properties of the people, in order that the national schemes of administration together with the *Raison d'état* transmitted from generation to generation, may be successfully maintained.

In short, if the annual expenditures of a country are disbursed with a view to the maintenance of industries and communications, the circulation of capital, and its preservation, on the whole, for material as well as immaterial purposes, such expenditures can not be regarded as unproductive. The public, however, is frequently inclined to assert, — though that is simply the result of failure to investigate the nature of the question — that both the military and naval outlays are in most cases unproductive.

This error is really too serious to be commented upon. A moment's consideration should convince any one that if one country "A," attempts to subjugate another "B," taking advantage of the latter's defective means of defence, millions of lives may be lost and millions of capital plundered or destroyed. Nor does the calamity end here. The conquered country, as a matter of course, will be required to acquiesce in a position of bondage, and its people are likely to be made the slaves of their conquerors.

Having thus far expressed my opinions, the question at issue, as to national expenditures necessary for the attainment of the ends noted above, has to be reduced to this: whether resource will be had to new taxes or to national loans. In either case the necessary funds must be absorbed from currency in circulation. It is true that national loans require payment of interest, and are supplied by wealthy people alone. Things are different with new taxes.

Both the wealthy and the poor throughout the empire are equally called upon to bear the burden, the result being that the people at large find their working funds so considerably reduced as to hamper their operations, which circumstance must in turn lead to a diminution in the output of their products.

Even supposing that at such a time they can still succeed in obtaining the funds necessary for the carrying on of their business, with aid from the rich, the funds thus obtained will surely involve the disbursement of expenses equal in amount to the interest payable on national loans, in so far as the interest on their capital as well as fees and commission, together with losses to be sustained through compulsory taxation, are taken into consideration. It must be clearly understood that the above remarks refer only to domestic loans. As for loans to be appropriated for military requirements, different views are advanced, details of which I do not undertake to give here for the present. Below, however, I will endeavour to make some remarks on national loans to be raised abroad.

Since Japan opened commercial intercourse with foreign nations about forty years ago, her capital, whether fixed or floating, has rapidly increased, and a section of the people who were engaged either in commerce or industry, with a thorough knowledge of the principles of national economy, fully appreciated the benefits attending the opening of the country, and endeavoured, with fair prospects of success, to attain the development of civilization on a wider scale, — a fact which tended to strengthen the friendly relations with foreigners. Strange to say, however, schemes for the introduction of foreign capital or the issue of national loans are condemned by a certain section of society at present. The prejudice seems to have had its origin in the fact that old fashioned notions of economy as propounded by the so-called mercantile classes were still allowed to have a hold upon their minds, which were thus ignorant of the true condition of the world's economy. In Europe, too, various absurd opinions of a similar nature were prevalent but a century ago, when people shrank from raising foreign loans. At the present time, however, not only men of letters and politicians, but all men not wanting in common sense do not hesitate to ridicule the strange opinions harboured by their ancestors. It appears that men in old times were utterly ignorant of the nature of capital, especially of its cosmopolitan character which renders it possible for them to secure the highest rate of interest in the course of its circulation throughout the world. From the standpoint of politicians the utilization of foreign capital towards cultivating and strengthening the resources of their own country must be regarded as anything but inexpedient. To assert that a country "A" floating loans in a country "B" will be obliged to take a subordinate position towards the latter is extremely absurd, and is utterly incompatible with the actual conditions of human life. It is our firm conviction that the reverse is the case. If "B" lends capital to "A," "B" will find it expedient to do everything in its power to promote the prosperity of its debtor. If a country is already possessed of abundant capital which virtually places it in a position to subscribe to loans offered by another country, the former's interest of course will be to raise domestic loans in cases where they are needed for its own purposes, for then it is under no obligation to pay in-

terest outside its boundaries. It is worthy of notice, however, that Japan has not yet attained such a position in matters of finance. Setting aside events prior to the Restoration, we have to remark that the people of our country have never experienced such serious financial embarrassment as at present, since the beginning of the *Meiji* era. The greatest thinkers of the day have, in view of these deplorable circumstances, propounded opinions as to what they supposed to be the direct cause of the present situation. Judging, however, on the basis of my own convictions, I assert that as an enormous amount of floating capital was, on one hand, invested in railways, buildings, ships, and machinery, thus converting it into the form of fixed capital, instead of being applied for the production of new commodities, and on the other hand was utilized to provide cost of warships in the 27th and 28th years of *Meiji*, the disbursements so made still remaining unredeemed, the present embarrassment must have arisen chiefly, if not entirely, from the circumstances just stated.

The Indemnity exacted from China in the years above mentioned was indeed a large amount, but unfortunately for Japan she was unable to devote the amount to the cultivation of her national resources or to the development of the national economy, the larger portion being spent for the purchase of battleships and arms and being thus re-transferred to foreign countries. It is true that she has by virtue of it, become enriched in fixed capital to a certain extent, but she has failed to increase the amount of currency in circulation, in proportion to the growth of her population, which increases by several hundreds of thousands every year. The manufacturers had to obtain a larger supply of materials as well as machinery from abroad, year after year. They found, however, that the system of transactions between domestic and foreign banks had not yet developed to a satisfactory extent, and on each occasion they were compelled to buy necessary articles in cash, with the result of a diminution in specie and a consequent stringency of the money market. To make matters worse, the commercial code of the empire, though based on principles of freedom applicable to the world at large, was seriously hampered by, and made incompatible with, the conservative spirit of the Civil Code, which is now characterized by defects in the direction of restricting the economic operations of the people.

A glance at the trade returns of some five or seven years ago shows the imports to have been in excess of exports as a whole, but the remarks I have made above fully convince the public, that the capital of the country had been increased thereby instead of decreased. Nor is it an exaggeration to say that the exports were by no means articles absolutely indispensable for us, whereas the imports consisted chiefly of materials and machinery. If that be so, we must strive to extend the limits of the utilization of our capital, and more particularly to facilitate the processes of its employment by the establishment of new laws, in order that individual and material credit, as well as the general reputation of the country may be consolidated and strengthened.

At present commercial and industrial circles in Japan are not only embarrassed in the maintenance of their former occupations, but are not in a position to inaugurate new enterprises or to extend those actually on hand, even though they may themselves be wealthy, or possessed of a fixed capital. As for the Government it had to pay the high rate of interest of 7 per cent. per annum for a paltry loan of \$5 million *yen* which it recently raised.

Such being the actual condition of the economic world of Japan, how can we avoid the remark that our situation of embarrassment has already reached a climax?

Indeed several persons have suggested schemes of amelioration, some asserting that habits of economy and thrift should be encouraged, while others urge the necessity of placing the imports and exports on an equal footing of value.

In each case the opinions expressed may seem commendable, but they are in substance, as criticised above, extremely old fashioned and utterly incompatible with the fundamental principles of economy recognised by the world at large: they are, in fine, too absurd to be adopted. To attempt to restore order to the economic community by such absurd schemes is to "try to find fish on a tree." We ought to turn our eyes upon the outside world, and note the general trend which it is now taking. Since the middle of the last century the tendency of national economy has completely changed throughout the world.

After the year 1830 or 1840 the various nations succeeded not only in developing the arts and sciences relating to steam, electricity, and chemistry but also in persuading their governments to adopt principles of freedom and to open their countries to foreign intercourse. They energetically revised their civil and commercial codes and their laws of navigation; in order to remedy all the defects in these institutions; altered all rules and usages of civil administration involv-

ing an anti-foreign spirit, so as to ensure the more effectual protection of their own properties as well as those of others; to promote their credit and reputation; to develop the production of new commodities; and to facilitate intercourse with other nations, — facts which have ultimately tended to augment the volume of commerce, to induce or rather to encourage the world to utilize its funds in the form of commercial loans, by virtue of which universal economy was brought to the highest development. How is it possible for Japan at such a period to adjust or improve her national finance by her pertinacious adherence to her singularly conservative policy? For these reasons I have urged, for several years past, the advisability of introducing foreign capital. In short, the remedy now open to the Government consists in purchasing on one hand, by means of a foreign loan, all the private railways in the interior, so as to relieve the people from the burden of having their capital fixed in those enterprises, and on the other hand, in securing the completion or repair of the Government lines, of harbours and national roads. As for the people, they should endeavour to combine their own capital with that of aliens with the object of carrying on industries and commerce on a more extended scale. Although a foreign loan may reach several hundred millions of *yen*, if it is appropriated to the proper enterprises, there can be no cause for regret or apprehension.

In short, we have only to devote our energies to our enterprise with the greatest care and caution and, guarding ourselves against any errors in execution of our programme, urge the labouring classes towards the production of commercial and industrial commodities. With regard to national loans to be raised for such productive purposes, our countrymen will not hesitate to bear the obligations of a new tax. More particularly is this the case when we consider that the financial calamity by which the country is now afflicted is simply the result of gross imperfections in the system of its national economy, instead of being attributable to the people's inability to pay the tax. A glance at the world's economic history shows the existence of two nations who since the middle of last century attained marked development by means of foreign capital.

America, for instance, by obtaining an immense amount of loans in Europe, adjusted her finances, disordered by a war between the south and north, and at the same time succeeded in developing the various branches of her industry and perfecting the organization of her national economy. She is now recognized as the wealthiest nation in the world, taking the lead, as it were in matter of finance. Another illustration may be furnished with reference to Roumania. This country, too, after 1867 or 1868, utilized vast sums in the form of a foreign loan, for the construction of railways and the cultivation of waste lands, — a fact which has brought about its present strength and opulence. Japan, indeed, cannot claim to be a large country, but her people are endowed with both wisdom and courage. Surely there must be for such a people a certain definite place of usefulness in the Heavenly plan! The political ocean is not altogether free from tempests, but we have only to acknowledge our duty, and do our best to bring to perfection all our political organizations. Then the goal that we strive to reach will not be far away.

MR. NA TUNG.

The following letter, which was signed by "Persona Grata to Na Tung," and appeared in the *Peking and Tientsin Times* of July 13th, refers to the Special Envoy to Japan:—

Na Tung (ex-Boxer Chief) is coming to the front at a great rate, both financially and officially. He seems to be pursuing the only method of advance, i.e., the Manchu double game of diplomacy. On account of his anti-foreign proclivities, he is in great favour with the Dowager Empress. But at the same time, he is well aware that his name has been more than once on the lips of the Foreign Ministers, and therefore he must curry a certain amount of foreign favour. The Japanese, it is said, have come to his aid by the acceptance of 100,000 *yen* which the "bold bad" Na has kindly loaned them in exchange for Japanese bonds. In further remuneration for this kindly loan, the Japanese will no doubt accept the ex-Boxer as special Envoy to the Mikado's country, to express the regret of the Emperor of China for the murder of the Japanese Secretary. Na Tung, it will be remembered, was Minister for Finance, and at present holds some high position connected with the Tsungli Yamen. Prince Ching seems to be worried over this latest move of Na Tung's to get to Japan, and it remains to be seen how the old Dowager will take the matter of her 100,000 *yen* leaving the country. Na Tung informed me he would start for Japan about the 20th July.

THE FIFTH NATIONAL EXHIBITION.

By notification No. 92 of the Department of Agriculture and Commerce are published rules to regulate the Fifth National Exhibition. They are nineteen in number and deal exclusively with the forms to be observed by exhibitors. We note that the first article reads:

"Exhibitors shall, in accordance with the objects of this Exhibition, present only such articles as are likely or designed to benefit industries in general, while refraining from the display of objects of mere curiosity or ornament."

KARUIZAWA ENGINEER FUND.

We have received further contributions towards the fund being subscribed as a testimonial to the engineer whose plucky behaviour averted what might have proved a terrible disaster on the Usni-toge Railway. The list now reads:—

	Yen.
Karuiwaza	15
E. H. S.	5
Kyu Karuiwaza	10
H. T. T.	10
"Box of Curios"	5
Mrs. E. S. Patton	5

CORRESPONDENCE.

SEEKING FOR LIGHT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have been in Japan since last fall. On moving to my present residence I notified the district police office, giving them the full particulars required.

Though I have been here ten months, or so, as yet I have had no tax bill and no tax blank to fill out. What is my duty in the premises? Should I go to the Tax office and notify the officials of my presence, or simply wait till I hear from them. By kindly answering the above enquiry you will greatly oblige.

A CONSTANT READER.

Osaka, July 24th, 1901.

The tax collectors always send for what is due, or, at any rate, forward a statement of the amount. Our correspondent has only to wait. If he wishes to make assurance doubly sure, he should address a letter to the district tax officials reminding them that he is in their district. Ed. J. M.]

NIPPON RACE CLUB.

AUSTRALIAN SUBSCRIPTION HORSES.

A new lot of Australian horses arrived on Tuesday by the steamer *Alexandria* and were drawn for yesterday at No. 83. There were 29 animals to be drawn altogether, one having died soon after the steamer arrived here. The draw resulted as follows:—

1. Bay mare, by Pantaloon, 6 years, Mr. Nishimura.
2. Brown mare, by Speculation, 6 years, Mr. Hirayama.
3. Black mare, 6 years, Mr. Bianchi.
4. Chestnut mare, by The Spot, 8 years, Mr. News.
5. Bay mare, by Knight Templar, 7 years, Mr. Iris.
6. Bay mare, by Golden Drop, 7 years, Mr. Hugo.
7. Black mare, by Box, dam Woodbine, 3 years, Mr. Tatsuta.
8. Black gelding, 6 years, Mr. Scherz.
9. Brown gelding, 7 years, Mr. Dodds.
10. Bay mare, by Vengeance from Antenella, 6 years, Mr. Elliott.
11. Bay mare, 6 years, Mr. Marshall.
12. Bay mare, 5 years, Mr. Russia.
13. Chestnut mare, by Conventionier, 6 years, Mr. Hugo.
14. Dark Bay gelding, by Plunger, 6 years, (Died).
15. Black mare, by Tempest by Snowden, 5 years, Mr. Sphinx.
16. Dark Bay gelding, 6 years, Mr. States.
17. Bay gelding, 6 years, Mr. Satsuma.
18. Bay gelding, by Glengarry out of a mare by Findlay, 6 years, Mr. Starlight.
19. Bay mare, by Caramot (by St. Albans, sire of Malua), 6 years, Mr. Sphinx.
20. Bay mare, 6 years, Mr. Riddle.
21. Bay gelding, by Coronet by St. Albans, 6 years, Mr. May.
22. Bay mare, by Euclid, 7 years, Mr. Mogi.
23. Bay mare, 6 years, Mr. Iris.
24. Bay gelding, 6 years, Mr. Avis.
25. Brown mare, 6 years, Mr. Russia.
26. Black gelding, by Glen Dhu, 6 years, Mr. Hugo.
27. Chestnut mare, 5 years, Mr. States.
28. Bay mare, 6 years, Mr. R. Field.
29. Bay mare, 6 years, Mr. Yodo.
30. Bay mare, by Knupp, dam, Gift by Pickwillow, 6 years, Mr. Morris.

CRICKET IN ENGLAND.

On the 7th July the positions of the leading English counties in the Cricket Championship were as follows:—

	Played.	Won.	Lost.	Drawn.
Yorkshire	16	14	0	2
Middlesex	5	3	1	1
Sussex	10	6	3	1
Surrey	13	6	3	4
Lancashire	15	8	4	3
Warwick	9	3	2	4
Notts	10	3	3	4
Hants	8	2	3	3
Essex	11	2	3	6
Worcester	12	4	7	1
Somerset	7	2	5	0
Gloucester	12	2	5	5
Kent	10	2	6	2
Leicester	9	1	7	1
Derby	9	0	6	3

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

	Air	Temp.	State of	Remarks in
	Max.	Min.	Lake.	General.
Sunday, 21st	64°	56°	73°	Fine... Few drops rain at 6 p.m.

Saturday, 27th	75°	61°	74°	Fine...

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

SOUTH AFRICA.

Shanghai, July 25.

Lord Kitchener reports that Commandant Scheepers captured and burned a train with 113 details near Beaufort West. Three men were killed and thirteen wounded.

Kirtzinger's Commando, near Craddock, attacked Crabbe's column, who retired on Mortimer after fighting all day. The casualties were slight.

THE CHINESE SITUATION.

Lord Cranborne, Under Secretary of State for Foreign Affairs, speaking in the House of Commons, said that the temporary presence of foreign troops in Shanghai did not constitute an alienation of Chinese territory or an infringement of Chinese assurances to Great Britain with regard to the Yangtze.

ADMIRAL SCHLEY AND SANTIAGO.

The American Admiralty have acceded to Admiral Schley's request for a Court of Inquiry into his conduct at the battle of Santiago, a recent history of the U.S. Navy having accused him of cowardice and mendacity.

CROP PROSPECTS IN AMERICA.

Shanghai, July 26.

Heat and drought are unabated in the central and western parts of the United States. The loss to the crops in Iowa, Missouri, Nebraska and Kansas is estimated at 312 million bushels, being half of last year's production.

HONGKONG NAVY YARD.

Mr. Arnold Foster has announced that the naval adviser to the British Admiralty has fully considered the suggestions concerning the removal of the Hongkong Naval Dockyard to the mainland and, acting on his report, the Admiralty has decided to retain the present site, the area of which has been much extended.

THE SHANGHAI QUESTION.

Lord Cranborne, Under Secretary of State for Foreign Affairs, says that he has no reason to believe that foreign Governments desire to retain their troops permanently in Shanghai.

SOUTH AFRICA.

Shanghai, July 28.

Various reports state that the Boers are again preparing for an invasion of Cape Colony on a large scale.

CANADA'S WHEAT HARVEST.

It is expected that a phenomenal wheat harvest will be reaped this year in Canada.

BRUNEI AND WEI-HEI-WEI.

The *London Gazette* publishes an Order-in-Council dealing with the administration of justice in the Sultanate of Brunei; also an Order-in-Council regulating the Government of Wei-hai-wei under a Commissioner.

CHINESE QUESTIONS.

Lord Cranborne announces that the negotiations with regard to the Chinese Indemnity are on the point of conclusion.

A later telegram says that Lord Cranborne, speaking in the House of Commons, said the Government understood that the occupation of Shanghai by foreign troops was temporary. The British Government was in no position to dictate to foreign Powers regarding China. There was no reason to believe that Russia at the proper time would not give up the section of the Northern Railway outside the Great Wall.

NEW GERMAN TARIFF.

Later.

The new German Tariff has been published subject to Parliamentary sanction. It increases the duty on all cereals and agriculture produce, as well as on cattle. The duty on tea is 100 marks per 100 kilogrammes; that on coffee 40 marks; spices, 50 marks; sugar of all kinds 40 marks.

INDO-CHINA.

Shanghai, July 29.

M. Paul Doumer has started to resume the Governor-generalship of Indo-China.

SHOOTING THE WOUNDED.

The War Office publishes statements by Lieut. Hern, three soldiers of the Derbyshire Regiment and three of the Imperial Yeomanry describing the shooting of the wounded by Boers at Vlakfontein.

AUSTRALIA AND EMIGRATION.

Shanghai, July 30.

Mr. Barton has introduced a Bill before the Australian Parliament containing drastic restrictions on emigration and including an educational test.

REWARDING EARL ROBERTS.

The King has sent a Message to Parliament. His Majesty says that in consequence of Earl Roberts' eminent services he desires to confer a signal mark of favour upon him, and recommends a grant to the Field-Marshal of £100,000.

THE MAD MULLAH OF SOMALI-LAND.

The Mad Mullah has been defeated with heavy loss.

DROUGHT BREAKS IN AMERICA.

Shanghai, July 31.

The drought has broken in the United States and the crop news is better.

BRITISH PARLIAMENT.

There was a scene in the House of Commons during the debate on the Ratings Bill. Messrs. William Redmond and Patrick O'Brien were suspended for the sitting because they disregarded the ruling of the Speaker.

SOUTH AFRICA.

Gen. French's assumption of the command in the Cape Colony has had a marked effect; larger offensive operations have been organized and block-houses have been established along the railway.

THE PACIFIC CABLE.

Shanghai, August 1.

The House of Commons has voted a loan of two millions sterling as Great Britain's share of the cost of the Pacific cable.

BRITISH EDUCATION.

The Education Bill has been read a third time in the House of Commons.

DOCK STRIKE AT SAN FRANCISCO.

There is a dock strike at San Francisco and business is at a standstill.

EARL ROBERTS' REWARD.

The House of Commons passed the grant to Earl Roberts by a vote of 281 to 73. The minority consisted of Irishmen and a few Radicals.

RUSSIAN SUBMARINE BOATS.

Russia is constructing some submarine boats similar to those of the French, but smaller.

TREASON AT THE CAPE.

Mr. Van Rhyn, member of the Cape Parliament, has been arrested on a charge of treason in connection with the Boer invasion.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH ELECTIONS.

Saigon, July 26.

The telegram dated Saigon July 24th published in our last issue, should read:—

As the elections for the General Councils the Republican gained 47 seats. The radical and governmental journals affirm a marked evolution towards the Left. The moderate and conservative journals estimate that the success is mainly for the Progressists.

RUSSIA AND CHINA.

Saigon, July 26.

According to information in the *Standard* from Shanghai the Chinese rebels have inflicted a defeat on the Russian troops and on the regular Chinese troops in the South-east of Manchuria.

GREAT HEAT IN AMERICA.

The heat is intense in Washington.

At Saint Louis 40 persons died in one day in consequence of the excessive temperature.

NEWS FROM FRANCE.

Saigon, July 27.

General Voyron will leave China on the 15th of August, handing over the command to General Suillon.

Saigon, July 29.

M. Pichon, arriving in France *via* America, was received at the station by M. Delcassé and representatives of President Loubet.

It is asserted from Peking that the definite protocol will be signed in a few days.

INDO-CHINA PROJECTS.

Saigon, July 29.

President Loubet gave audience to M. Doumer, who left Paris that afternoon and is to embark to-day for Indo-China at Marseilles. M. Doumer announces that his sojourn in Indo-China will not exceed 8 months, and that he expects to complete within that period the work he has undertaken.

FIELD MARSHAL WALTERSEE.

Saigon, July 31.

Field Marshal von Waldersee called at Algiers on his way from China. He paid a visit to the authorities, proceeded through the town and received a sympathetic welcome.

SOUTH AFRICA.

Saigon, August 1.

It is announced from Pretoria that the Eng-

lish have swept the region east of the Transvaal as far as the Orange River. Fifty Boers were killed. The official reports concerning the loss of the English show that during the last three weeks there have been 37 killed and 123 wounded.

(RECEIVED AT THE FOREIGN OFFICE.)

THE KOREAN CEREALS EDICT.

The Japanese representative at Seoul telegraphs under date of the 25th instant that on the 23rd the Korean Government issued an edict declaring that in consequence of drought throughout the country the export of rice and beans is temporarily forbidden and the import duty on cereals is abolished.

KOREA BUYS RICE.

The Korean Government has given a commission to a French agent for the purchase of twenty thousand *koku* of rice from Annam at 5.29 dollars (gold) per *koku*, delivered in Korea, and has paid ten thousand dollars bargain money.

HAWAII.

Correspondence from Hawaii says that there is a great want of labour and that the arrival of the new batch of Japanese emigrants is anxiously expected. The progress of the examination into the question of compensation on account of sanitary measures is proceeding extremely slowly.

(RECEIVED IN TOKYO.)

THE CHINESE INDEMNITY.

No conferences of the Foreign Representatives in Peking are taking place at present, the reason being the collision between England and Russia on the question of the tariff. A change has been made in the method of paying the indemnity. Instead of three terms, the payment is to be in five terms, beginning in 1902 and ending in 1940.

LATEST CHINESE NEWS.

The Chinese Government has changed the name of the Tsung-li Yamen to "Foreign Office," and has appointed Prince Ching to be President and Wang Wen-shao and another to be Vice-Ministers.

The question of the collision between England and Russia with regard to the tariff was discussed at the Council of the Foreign Representatives on the 26th instant. The compromise proposed chiefly by Japan involving a concession on Russia's part, was endorsed by the Powers, and the matter will doubtless be settled to England's satisfaction. The same Council discussed and approved the resolution previously adopted by the meeting of staff officers, namely, that the withdrawal of the foreign troops should commence from the 15th of August.

The problem of the duration of the veto on the import of arms and munitions of war also came up for discussion but was not decided.

The Foreign Powers have endorsed the proposal as to the term of paying the Indemnity and have probably instructed their representatives in that sense.

CHINA AND THE POWERS.

The Foreign Representatives held another conference on the 27th instant and carried their work to the point of drafting the definite protocol.

MANCHURIA.

It is reported that the chief of the Manchurian bandits has made act of submission to Russia.

KOREA AND SAIGON RICE.

Two Frenchmen were passengers by the Nippon Yusen Kaisha steamer *Genkai Maru* which yesterday reached Nagasaki from

Fusan. They said that they were on their way to Hongkong to purchase Saigon rice for importation at Jinsen.

(RECEIVED AT THE WAR OFFICE.)

GENERAL GASELEE.

General Gaselee arrived in Kobe on the 28th instant at 2.25 p.m. and on the 29th left Kobe for Kyoto. On the 1st proximo he will leave Kyoto by the night train and will reach Shimbashi on the morning of the 2nd.

(FROM THE "N.C. DAILY NEWS.")

THE CHINESE MISSION TO GERMANY.

Hongkong, July 24.

Prince Chun is expected here at daylight tomorrow.

THE PLAGUE.

The Welsh Fusilier who was attacked by plague has died. Mrs. Brownhill who was also attacked some time ago died yesterday.

[Captain and Mrs. Brownhill were both attacked by plague on the 10th of June last, and Captain Brownhill died on the 14th of June.]

THE HERMIONE'S RELIEF.

Singapore, July 24.

H.M.S. *Eclipse* left Singapore for China at noon to-day.

[H.M.S. *Eclipse* is a 2nd-class cruiser of 5,600 tons' displacement and 19½ knots' speed, with 30 guns including 4 Maxims and a complement of 477.]

THE HONGKONG BANK ROBBERY.

Singapore, July 25.

Ten of the prisoners in the bank note robbery case, including one woman, were committed for trial at the assizes to-day.

TERRIBLE FIRE AT FOCHOW.

Fochow, July 26.

A disastrous fire broke out at 1 o'clock to-day in the centre of the foreign business quarter. The hongs burnt are Gilman & Co.'s; John Gittins & Co.'s, old and new; Odell & Co.'s; Robert Anderson & Co.'s; the Chartered Bank of India, etc.; F. Cave Thomas & Co.'s; and Fraser, Ramsay & Co.'s.

The fire is still raging.

CHESS.

(All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 55, Main Street, Yokohama.)

SOLUTION OF PROBLEM NO. 529.

1—Q to K B 2 1—Any move
2—R, or P takes either Kt=Kt, dis. ch. mates.

PROBLEM NO. 531.
By MOTTO: "Fantôme."
(From *La Stratégie*.)
Black—Five Pieces.

White—Four Pieces.
White to play and mate in two moves.

GAME NO. 645.

A brilliant little game played in the "Extra Tournament" at the Folkstone Congress between Miss Fox and Mr. Reginald Jones. Lady readers will observe that Mr. Jones played like a mere man:

ENGLISH KNIGHTS' OPENING.

White—Miss Rita Fox. Black—Reginald Jones.

WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	13 Kt Q2	Q Kt5
2 Kt KB3	K OB3	14 B K2	Q K3
3 PB3	P Q4	15 Castles	P QK4
4 B Kt5	Q O3	16 BxP	Kt Qsq
5 P O4	B Kt5	17 Kt K4	Kt Q
6 O R4	BxKt	18 BxKt	QxK
7 Pxb	KtNP	19 KR Ksq	Q K3
8 QxOP	Kt K2	20 Kt B5	Q OKt3
9 P K5	O K3	21 RxBch	K Bsq
10 B KB4	P QR3	22 BxPch	Rxb
11 Q R4	Q Kt7	23 Q K8 mate	
12 R Bsq	Q BP		

Black should have played 4.....P takes P; 5—Kt takes P, Q to Q4. After White's 5—P to Q4 he had nothing better than 5.....P to B3. Miss Fox could have played more forcibly 6—OP takes P. If 6.....B takes Kt then 7—P takes Q, B takes Q; 8 K P takes P, P to Q R 5; 9 P takes Kt, P takes B; 10.....P takes Kt P, R to Rt sq; 11—P takes P and wins. If 6.....Q to B 4 then 7—Q takes P, with two pawns ahead. White gets the best of it in other variations also. Miss Fox, however, obtained quite a good enough position, Black precipitating matters with 15.....P to Q Kt 4 (instead of 15.....Kt to Kt 3). Miss Fox then finished the game brilliantly.

KEROSENE.

The Kerosene market is unchanged.

American... 82.79
Russian...
Langkat... 2.60

SUGAR.

There has been some activity in Refined and a fair amount of business has resulted at advanced prices.

Brown Takao... 5.50 to 6.25
Brown Manila... 5.90 to 7.20
Brown Datong... 4.80 to 5.00
Brown Canton... 5.00 to 7.00
White Java and Penang... 7.20 to 8.70
White Refined... 9.30 to 10.60

EXPORTS.

RAW SILK.

There has been a considerable business, restricted, however, by the high askings of holders. Fine-sized Filatures were in demand, but as supplies were limited business has not been large. Prices are firm with an upward tendency.

Quotations.
Filatures—Extra, Fine... 920 to 930
Filatures—Extra, Coarse... 910 to 920

Kiliso—Joshiu, Good...
Kiliso—Bushi, Fair...

TEA.

There is a fair business at declining prices, the quality on offer being poor.

Quotations.
Choicest... 40 & upwards
Choice... 30 to 40
Finest... 34 to 35
Fine... 30 to 33
Good Medium... 28 to 30
Medium... 26 to 28
Good Common... 24 to 25
Common... 20 to 23

COPPER.

There is nothing new to report in Copper, of which, however, 2,100 piculs were shipped during the week.

FISH OIL.

Some 3,300 piculs of Fish Oil have been exported during the week. Quotations are rather weaker because of the duller market reported from home and also of the satisfactory news as to the season's catch.

BISSET AND URE'S SHARE REPORT.

Yokohama, August 1.

Engine and Iron Works can be placed at yen 230. Grand Hotels have buyers at yen 216. Kinn Breweries were sold to-day at yen 133.50 for forward delivery. Offers for Langfeldts are wanted. Helms are obtainable at yen 50. Laundries have sellers at yen 22.

SAVE YOUR SKIN

How to Preserve Purify and Beautify the Skin and Complexion.

To preserve, purify, and beautify the skin, and prevent pimples, blotches, blackheads, redness, roughness, yellow, oily, mothy skin, chapping, and many other forms of skin blemishes, no other skin or complexion soap is for a moment to be compared with CUTICURA SOAP, because no other soap reaches the cause, viz., the clogged, irritated, or inflamed condition of the PORES.

SAVE YOUR HAIR

How to Prevent Falling Hair Scalp Humours and Dandruff.

Cleanse the scalp and hair thoroughly with a warm shampoo of CUTICURA SOAP, rinse with warm water, dry carefully, and apply a light dressing of CUTICURA, purest of emollients, gently rubbed into the scalp. This simple, refreshing, and inexpensive treatment will clear the scalp and hair of crusts, scales, and dandruff, soothe irritated, itching surfaces, stimulate the hair follicles, supply the roots with energy and nourishment, and make the hair grow upon a sweet, wholesome, and healthy scalp, when all else fails.

SAVE YOUR HANDS

How to Make the Hands Soft and White in a Single Night.

Bathe and soak the hands on retiring in a strong, hot lather of CUTICURA SOAP. Dry thoroughly and anoint freely with CUTICURA Ointment, the great skin cure and purest of emollients. Wear during the night old, loose kid gloves with the finger ends cut off. For red, rough, chapped hands, dry, fissured, itching, feverish palms, shapeless nails, with painful finger ends, this one night treatment is simply wonderful and a blessing to all afflicted with sore, chapped, rough, or tender hands.

Cuticura Complete External and Internal Treatment for Every Humour, The Get

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A FIVE-DAY SET is often sufficient to cure the most obstinate, disfiguring, and humiliating skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Agent, Japan: H. TOWNE & Co., Sydney, N. S. W. - So. Africa: De la Motte & Co., Cape Town. "All about the Skin, Scalp, and Hair," post free. FORTES & CO. LTD., Sole Props., Boston, U. S. A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 10TH, 1901.

DEATH.

On June 20th, at Belfast, Ireland, Rev. HUGH WADDELL, formerly of Azabu, Tokyo.

SUMMARY OF NEWS.

VISCOUNT MIMURODO, 80 years of age, died on the 3rd inst.

THE 122nd National Bank of Kuwana has decided on dissolution.

THE Japanese standing squadron left Ninsen for Chefoo on the 5th inst.

THE Osaka Shosen Kaisha steamer *Tatei Maru* was launched at Nagasaki on the morning of the 3rd inst.

DURING a thunderstorm in Saitama Prefecture, on the evening of the 30th July, a young man

was killed by lightning and seven others lost their hearing.

SEVENTY-ONE Japanese emigrants will leave Japan for Hawaii by the *Hongkong Maru* on the 10th inst.

SOME one dropped kerosene into a public well at Matsuzumicho, Kanda, Tokyo, on the night of the 3rd inst.

It is stated that Mr. Nabekura Nao will be appointed chief of the Peking branch of the Yokohama Specie Bank.

MR. ABE Moritaro, second secretary to the Japanese Legation in London, will leave for his post on the 10th inst.

NINE men were arrested by the Asakusa police while engaged gambling in the grounds of the Yoshiwara Hospital on 1st inst.

SHORTLY after eight o'clock on Monday evening fire broke out at Hatsuncho, Ota, Yokohama, and several houses were destroyed.

A PLASTERER named Nomura Torakichi living at Miharucho, Yokohama, was attacked by cholera on the 31st. He was sent to the Manji Hospital.

A BRUSSELS paper of July 15th said it was reported at Mons that an American manufacturer had proposed to buy up all the Belgian glass works.

THE Emperor and Empress have contributed yen 600 towards the relief of poor persons who suffered through the disastrous flood in Fukuoka prefecture some days ago.

KIN, wife of Watanabe Renjiro, living at Koyasumachi, Hachioji, was arrested by the police on the 2nd inst. charged with having thrown her daughter into a well and killed her.

SUZUKI YURARO, employed in a shop at Yagen-bori, Nihonbashi, Tokyo, committed suicide in a house of ill-fame known as the Osakaro, Yodocho, Yoshiwara, on the night of the 2nd inst.

A FOOCOW telegram received by the Central Post Office in Tokyo states that the Japanese Post Office in that city was destroyed by fire on the 26th ult. All postal matter was saved.

AN armed burglar entered a house occupied by Yagi Kojiro, at Nakano-mura, Tsukui-gori, Kanagawa Prefecture, on the night of the 5th inst. He killed the proprietor and disappeared.

A CHEQUE for yen 400 sent in a registered letter to the head office of Asano & Co., in Tokyo was abstracted in transit. The thief attempted to pay the money into the Tokyo Savings Bank but was arrested.

YAMADA ZENSUKE, a native of Iwate prefecture, was sent back to Nagasaki on the *Yamashiro Maru* on the 4th inst., by the Russian Government charged with committing a murder at Nicolai-vesk, Siberia.

THE training ship *Kaiyo Maru*, built at Ishikawajima, and belonging to the Sea Products Bureau of the Agricultural and Commercial Department, had her trial trip off the Boshu coast on the 1st inst.

A COOLIE named Ichioke Sentaro, staying at a boarding house at Miyoshicho, Yokohama, was arrested by the Kotobukicho police on the 2nd inst. charged with assaulting another coolie named Sakurai Sangoro of the same house.

TANAKA RISUKE, a native of Ibaraki, employed in a watch factory known as Seikosha, Yanagishimacho, Honjo, Tokyo, was arrested by the

police on the night of the 2nd inst. He is charged with stealing several thousand brass clock wheels belonging to the factory, the thefts extending over some months.

A DISPATCH to the *Pall Mall Gazette* from Constantinople on July 16th says great frauds have been discovered in the Turkish customs. The embezzlements are said to exceed £120,000. Several of the higher customs officials have been arrested.

KOMIYA MIKI, wife of Kumezo, living at Miyagawacho, Yokohama, went to her father's house at Wada-mura, Kamakura, on the morning of the 2nd inst., and while on her return to Yokohama was assaulted by a highway-man. He knocked her down and stole 3 yen.

INABA SENKICHI, a native of Miye, murdered a woman hair-dresser, Okada Gin, and her mother, Miye, and badly injured her maid servant Asa, at her house Hiroi-machi, Nagoya, Aichi Prefecture, early on the morning of the 4th inst. The murderer effected his escape.

A YOUNG man named Watanabe Yeihiro, living at Yanagicho, Koishikawa, Tokyo, was arrested by the Ushigome Police, on the night of the 2nd inst. on a charge of stealing a pair of bronze cranes from the front of the grave of an actor, Nakamura Kodenji. He sold the vases to another man.

A YOUNG man named Nishigori Shinzo, employed in a spirit shop at Kanaguchi, Shiba, Tokyo, was arrested by the police on the morning of the 1st inst. at a house of ill-fame in Shinagawa, on a charge of stealing 58 yen belonging to his master which he had collected the previous day.

KANAI SOROKU, living at Atsugimachi, Aikogori, Kanagawa Prefecture, was arrested by the Kanda police on the 2nd instant at the Tokyo Savings Bank, and after examination confessed that he broke into the Hachoji Post Office on the night of the 31st ult. and stole yen 400 in cheques, etc.

A CABLE has been received in Shanghai from London announcing the probable loss of the steamer *Nimidia* on a voyage to Calcutta from the United Kingdom. She is a steel screw steamer belonging to the Anchor Line, 6,280 tons gross or 4,118 net. She was built in 1900 by D. W. Henderson & Co., Ltd., Glasgow. Her length is 450 feet by 55 feet beam.

THINGS are not apparently as peaceful in the Philippines as one is led to believe, in spite of Aguinaldo's proclamation exhorting his countrymen to accept American rule and bury the hatchet. Three provinces, viz., Batangas, the Island of Cebu, and Bohol, which had been placed under civil administration quite recently, have had again to be placed under military rule.

CENTRAL and northern Europe were being visited by a heat wave about the middle of last month. The weather on July 15th was reported to be the hottest known in Berlin for several years. A number of people died of sunstroke. Russia also experienced terrible heat, the temperature over a wide territory reaching 100 degrees Fahrenheit in the shade. Fruits and vegetables on a large scale were destroyed.

AFTER a round of most successful visits to the chief cities of Australia and New Zealand, the Duke and Duchess of Cornwall are now well on their way to the northern portions of the British empire. They have yet to stop at Cape Town, however, before crossing the equator, for the telegraph now notifies us of their arrival at Mauritius, whence they go direct to the Cape. Afterwards they will visit Canada and then proceed home.

CHINESE AFFAIRS.

Saturday, Aug. 3.

Mr. Noma Gozo, a prominent member of the Progressists, has just returned from a two months' trip in China. Stating the result of his experiences in that country, he told a meeting of his party on the 1st inst. that, although he was unwilling to place himself in apparent opposition to the policy of the Progressists, he could not but declare that the disposition of the Chinese themselves offered no encouragement to those who advocated the preservation of the ancient empire's integrity. The average Chinaman appeared to have become thoroughly permeated with the spirit of submission. So soon as he saw a master, his impulse was to bow his head to the yoke. There were some Chinese who spoke of an alliance with a foreign State for the purpose of saving China, but their ideas on the subject seemed to be very perfunctory. In short, Mr. Noma could not discover any disposition on China's part to help herself.

Two months' observation may be thought inadequate for the formation of such views as Mr. Noma enunciated, but his declaration of faith will prove rather disturbing for his Party. Count Okuma regards China and its potentialities for self-defence with very different eyes. The great question now is, what sort of estimate will Prince Konoye and his companions bring back from China. Their thoughts will be to some extent governed by their wishes, but if they should happen to undergo the disillusionizing process which has overtaken Mr. Noma, the pro-China party will receive a crushing blow.

General Yuan's troops, to the number of five battalions, have left Chili *en route* for Peking and the remainder will start on the 6th it is said. Also Wang Wen-shao and his party will leave Hsian on the 10th. If these incidents be correctly reported, it is evident that all the rumours about the Court having abandoned its intention of returning to Peking are untrustworthy. But truly it is impossible to tell what may be believed.

The Russian commander in Kirin is said to have reported to head-quarters at Shan-hai-kwan that another rising has taken place in Shinking, and that when an expeditionary force was sent against the insurgents, the latter fled in the direction of north Shinking.

It is expected that the peace treaty will be signed on the 15th inst.

Prince Konoye and his party left Tientsin for Shan-hai-kwan on the 1st inst.

Yung Lu is said to have been appointed Minister of Finance.

A telegram from London published by the *Fiji* says that German and British shipping companies are projecting a combination to monopolise the coasting trade of China.

Monday, Aug. 5.

The latest suggestion is that England and Japan should jointly guarantee the Indemnity bonds received by them from China. At first sight such a procedure seems calculated to inure to the advantage of Japan only since England's guarantee would greatly enhance the value of Japan's bonds, whereas Japan's guarantee would have no such effect in the case of England's bonds. But the other side of the question is that if any provision is to be made for holding China to her engagements, the British navy and the Japanese army constitute precisely the forces that would be required. Japan's position is such that she could land a powerful military force at any point on the Asiatic Continent,

and England could command the sea for such a purpose. The two Powers would make an ideal combination. But whether either of them is prepared or willing to form such an union, it is not easy to conjecture. We do not believe that the project will ever pass beyond the region of suggestion.

The question of how to dispose of the silver captured by the Japanese troops in China has been under discussion, says a Tokyo contemporary, and is not yet definitely settled. It has, however, been practically decided that a million *yen* shall be set aside as a fund for the maintenance of the Suikoshu and the Kaikoshu, in other words, the Naval and Military Clubs. The money is said to have been lodged in the Bank of Formosa. That appears to us to be a very good way of disposing of the money.

Tuesday, Aug. 6.

Prince Konoye and his party arrived in Peking on the 21st of July and were received by a number of Japanese, whose presence is naively attributed by the reporter to the fact that many of them had nothing better to do, the day being Sunday. The Prince's subsequent movements are accurately detailed, but the record may be abbreviated without serious loss to our readers, who are probably not much interested in hearing that his Highness worshipped at the tomb of Confucius or visited the Yong-ho-kung. The Prince will doubtless have an interview with Viceroy Li, and if a competent reporter could be secreted in the chamber so as to give an accurate account of what passes, the public would listen to his story with *empressement*. For the old Viceroy, who, in conversation at all events, is essentially practical, will surely want to know the precise methods which Prince Konoye proposes to follow in pursuit of his pet scheme, the preservation of China's integrity, and that is what the public also want to know.

Governor Yuan is said to be still sojourning in Chinan, though his presence in Peking is earnestly urged by the Chinese Plenipotentiaries, in order that he may take immediate steps for organizing the defence of the city after the withdrawal of the foreign troops. Yuan's delay is attributed by rumour to the fact that the period of mourning for his mother, though greatly abbreviated by Imperial decree, is not yet over. But there is an alternative and not less reasonable supposition, namely, that he is wisely unwilling to lead his troops to Peking until the very last moment before its evacuation by the foreign forces.

Another charge of cruelty is brought against the Russians. Fighting against the bandits in the Kwantien-hien district of Manchuria, they are reported to have slaughtered 200 peaceful subjects whom they mistook for *hazouks*. That version of the story is said to have come from a French missionary. Another statement, however, is that 500 *Bazouks* were mercilessly put to death. The vagueness of the story suggests a hope that it may prove to have little foundation.

Wednesday, Aug. 7.

The Chinese Plenipotentiaries, Li and Ching, have memorialized the Throne, representing that if the intention of postponing the Court's return to Peking be adhered to, they will be unable to discharge the responsibilities of their posts. They aver that the Court has nothing to fear from the European Powers and they beg that the original intention may be carried out as to the return.

The striking point in this memorial, if it

be rightly reported, is the statement as to the Foreign Powers. It was understood that the reason of the delay in the Court's return was that the departure of the European troops had been deferred, but the language of the Plenipotentiaries suggests that the Court entertains some general apprehensions about the integrity of the Powers' intentions. In other words, the cause of the Court's hesitation is not temporary but permanent. It has always seemed to us that something of the kind might be expected. From the point of view of the Chinese Court, it really makes very little difference whether or no the surplus foreign troops are withdrawn from Chili, seeing that the force retained there will be quite sufficient to control the situation. And that it should be sufficient, no one can pretend to deny. If foreign troops are to be retained at all in Chili, they must be retained in such numbers as to defy any renewal of Boxer outrages or any want of good faith on the part of the Chinese Government. Their presence in that strength, however, means that the Court, by returning to Peking, places itself in their power. Whether the Court of any European State would agree to take such a risk is a doubtful question, and truly, considering that it is the habit of human beings to make their own sincerity a gauge of the sincerity of others, it does seem extravagant to expect that the Chinese will be so very trusting.

Another report is to the effect that Yung Lu and Wang Wen-shao have addressed Viceroy Li and Prince Ching in the sense that the Court's hesitation is entirely due to the intrigues of Liu Tien-ling and the conservatives, and that it would be wise for the Plenipotentiaries to impeach these obstructionists. Li and Ching are said to have replied that the time for such a step has not yet come.

On Tuesday we published a Saigon telegram to the effect that the Boxers are waiting outside Peking, with the intention of re-entering the city as soon as the foreign troops are withdrawn. It was a laconic and startling announcement, but it received confirmation from a London telegram saying that the Boxers are assembling and drilling in the south and west of Chili and that it is their purpose to renew the riots after the departure of the foreign troops. Of course there will be no departure of foreign troops in the sense contemplated by the Boxers. A sufficient number will remain to deal effectively with any recrudescence of the trouble, unless, indeed, the Government troops throw in their lot with the insurgents. Still it is quite possible that when the Boxers see the foreign garrison of Peking reduced to a couple of thousand men, they may form a false estimate of the opportunity.

LORD ROBERTS.

It can not be denied that Lord Roberts has been munificently rewarded. From the House of Commons and the London Chamber of Commerce he has received a total of a hundred and twenty thousand pounds, and as a grant of thirty thousand had been made to him for his service in India, he has had altogether £150,000 of public money, that is to say, a million and a half of *yen*. Besides, he has received an Earl's coronet. It is conceivable that some critics will take exception to the magnitude of his reward on the ground that he left the war unfinished, and that its conduct has required a continuous and costly effort ever since his departure from South Africa. But the unques-

tionable fact is that Lord Roberts completely broke down the organized resistance of the Boers and reduced them to a guerilla condition. When he landed in South Africa, all the north-eastern portion of the Cape Colony was in the hands of the Boers; Ladysmith with a garrison of ten thousand men was closely besieged and reduced to considerable straits; Kimberley and Mafeking were both invested. Not a square yard of Boer territory was held by the British, and on the east, the south and the west their territory was invaded by the Boers. When Lord Roberts left Capetown, all the beleaguered places had been relieved; the Boers had been driven out of British territory; the Orange Free State and the Transvaal had been over-run by British troops, and the Union Jack was floating over Pretoria and Bloemfontein. It was a complete metamorphosis. And it had been effected by a series of operations well conceived and brilliantly carried out. Whatever we may profess to think, there can be no doubt that Lord Roberts landed in South Africa at a very dark moment in English history. The troops were ready to fight, but they must have lost heart to some extent, and they must also have lost confidence in their Generals. Lord Roberts was the one man to deal with such a situation, and if England did not feel grateful to him, she would not deserve to have men like him.

TRACTION IN WAR.

The war in South Africa is the first war in which traction engines have been used to any considerable extent. Although they have taken but a subordinate and experimental share in the general system of supply, enough success has attended the use of mechanical traction in the British operations to justify the serious consideration of the military student. From papers recently received from England we find that Major A. H. Bethell has been drawing the attention of his brethren in the scientific corps to the advantages and disadvantages of the automobile in warfare. As far as artillery is concerned the disadvantages of mechanical traction appear to be no greater than those that recent experience has shown to be inherent in animal traction. The cost of the motor is estimated as, roughly, seven-twelfths of the six-horse team it would supplant. The time required to start a motor is about ten minutes, at most, more than that required for a team of horses. This is supposing the horses are, during the operation of harnessing, &c., as sedate as the motor will certainly be. The steam motors hardly ever break down with skilled drivers, and wide tyres effectually diminish the danger of sinking in soft ground. A gun is effectually put out of action by the death or crippling of three of its horses. The chance of this happening is about the same as the chance of the boiler of the motor being hit. The steam motor has the pull in every sense when the question of ammunition arises, for it could carry 100 rounds, six men, and haul in addition a high-velocity, quick-firing 15-pounder, with axle-tree shields. Similar motors would draw wagons sufficient to place 300 rounds and twelve men per gun in the firing line. Other cars would carry the staff of the battery, the range-finders, travelling kitchens, &c., and all motors would be able to draw the guns if required. With advance and rear guards of cyclist scouts the whole would be complete. Complete in reality, and far better than a horsed battery, for the guns would be more powerful, the ammunition would be

doubled, its baggage would be on the spot, and it could cover 100 miles a day if required. The French and German armies are, so far, much better equipped with motor-cars than the British.

Apropos of this question we read in the *Berliner Tageblatt*, that the inspector of troops of the lines of communication, at Berlin, has ordered the manufacture of another lot of military motor-cars. That journal quotes the following three models, viz., (1) a motor-car with only one seat, provided with two Maxims, protected from bullets by nickel steel shields; (2) a motor-car having in front a seat to hold two persons, and at the back, seats arranged as in a brake, to hold four persons, with a small table for staff officers to unfold their maps upon; and (3) one to be used at artillery drill grounds, in order to get about rapidly so as to effectively control the artillery fire. In the approaching grand manoeuvres of the German army we learn that twice as many motor-cars, of various types, will be used as was the case last year.

THE BOERS.

The Boers are evidently reduced to desperation. Their shooting of the wounded at Vlakfontein was the act of men who have lost all hope and are resorting to reckless ferocity. Of a similar character is their irruption into Portuguese territory, and now comes news that Kritzinger has notified General French of his intention to kill all natives in British employ, whether armed or unarmed. That is mere brutality, the ferocity of the hunted beast. Evidently Kritzinger's object is to deter the Kaffirs from serving as transport coolies and waggon-drivers for the British. But no civilized enemy thinks of slaughtering the baggage bearers of the enemy. Besides, the Boers themselves have been freely using the Kaffirs, and are still using them. They know, however, that the British will not think of retaliating in kind, and at the same time, the question of transport has ceased to be of much importance to them, as they have lost most of their waggons, and are obliged to carry their provisions and their ammunition in their saddle-bags. If they are driven to slaughtering the wounded and killing unarmed camp-followers, their capacity for resistance must have become small.

LORD BRASSEY ON NAVAL AUXILIARIES.

Speaking before an international conference of the Institution of Naval Architects, held at Glasgow in June, Lord Brassey, taking for his text "Mercantile Auxiliaries," urged upon the British Government a vigorous policy in relation to the subject. It was the fixed resolve of the people and the first duty of British statesmen to keep the Empire secure from attack and to give protection to the commerce on which British existence depended. In pursuance of that policy, Great Britain had more than doubled the expenditures under the Navy Estimates, and still they seemed to fall short of the full requirements for the naval defence of the Empire. If the cruisers were fewer than could be wished we must look to the mercantile marine, and out of the abundant materials there to hand might be organised a supplemental fleet of armed cruisers such as no other State could furnish. The Admiralty should utilise these resources by liberal subsidies. The standard requirements should be high. The speed should not be less than 22 knots at sea. Mercantile auxiliaries

should be protected by a deck or belt of Harveyised armour. Calculations of cost could hardly be attempted in an address in which nothing more was attempted beyond suggesting a policy, but it at least was certain that the cost of the adaptations and protective arrangements necessary in a mercantile auxiliary would be small in comparison to the first cost of a regularly-built vessel of war. It was due to naval authorities to admit that they had recognised that there were many British vessels which could easily be converted into cruisers. There was, however, one fatal flaw in the Admiralty plan. They wanted to have the use of ships without paying adequate consideration. The policy of liberal subsidies to the mercantile marine had given to the merchant navies of foreign Powers a decided advantage in the possession of the types of vessels most suitable for naval purposes.

Commenting on this speech, *Engineering* says:—

The policy of liberal subsidies to the Mercantile Marine has given to the merchant navies of foreign Powers a decided advantage in the possession of the types of vessels most suitable for naval purposes. The Germans have taken the lead. They have two ships now running—the *Deutschland* and the *Kaiser Wilhelm*, of 14,000 tons and 150,000 tons respectively—which exceed in speed by nearly 2 knots our best ships. No vessel now building for the British flag will rival in speed the *Kaiser Wilhelm II.* and *Kronprinz Wilhelm*, under construction in Germany. Of ships capable of a regular sea speed of over 18 knots, France has 4, Germany 8, and Great Britain 10. It is an ominous fact that in the last eight years we have added only one ocean-going 18 knot ship to our Navy, while Germany has built four in the last four years. It is another ominous fact that, while we equal the combined merchant navies of the world in aggregate tonnage, of the 157 ships of 16 knots and over, less than one-half the number are under the British flag. If we examine the lists of mercantile auxiliaries of the several Powers we find that France has 33 vessels, the latest additions, the *Lorraine* and *Savoie* having a displacement of over 11,000 tons. The speeds of the French subsidised steamers have been constantly increasing from the 15 knots of twenty years ago to the 17, 18, and 19 knots of modern types. The armaments provided for each ship include seven 5.5-in. guns and smaller quick-firers. In numbers the German auxiliaries do not compare with the French. There are, however, six ships of the first class, which, as it has already been observed, hold the record in the international competition on the North Atlantic. The armaments prepared for the German mercantile auxiliaries include eight 5-in. guns, four 47-in., four smaller quick-firers, and fourteen machine guns. The Russian fleet of auxiliary steamers consists of twenty-five vessels. In displacement each of these ships exceeds 10,000 tons, with speeds of 19½ to 20 knots. The British list of reserve merchant cruisers compares unfavourably with those of foreign Powers. It consists of twenty-nine vessels, none being fitted with special protective arrangements.

THE GERMAN ADMIRAL AND LIEUT.-COLONEL HATTORI.

On the morning of the 31st inst. Captain Bauer of the German cruiser *Gier*, accompanied by several officers of his ship, proceeded to the grave of Lieut.-Colonel Hattori and laid upon it some beautiful wreaths, the gift of Admiral Bendemann and the officers of the German Squadron. Captain Bauer read an address at the grave, announcing that he took this step in compliance with the directions of Admiral Bendemann, and alluding in high terms to the gallant conduct of the deceased officer. It

appears that Captain Bauer also addressed a letter of condolence to the widow of Lt.-Colonel Hattori in the name of the Admiral. Colonel Ishida acted as guide to the German naval officers and thanked them heartily, saying that their act of courtesy would be fully appreciated by the Japanese Army and Navy. A photograph of the scene was taken and sent to the widow. Captain Bauer explained that Field Marshal Waldersee had paid honour to the grave on behalf of the German Army, and Admiral Bendemann now performed the same function on behalf of the Navy. We should think that these thoughtful acts will considerably impress the Japanese.

THE "KOKUMIN SHIMBUN" ON ENGLAND.

The *Kokumin Shimbun* has a very sympathetic and eulogistic article about England. It insists that the South African war, though suggesting the desirability of certain improvements of organization and armament in the British army, has constituted a striking object lesson as to England's strength and resources. The immediate text of the article is the arrival of Sir Alfred Gaselee, for whom our contemporary would fain secure a public welcome. It says that if Sir Alfred saw reason to applaud the organization and equipment of the Japanese troops in China, the Japanese, on their side, were not without appreciation of the excellences of the British arrangements, and can fully endorse the verdict that other countries had much to learn from England in the matter of practical details. Therefore as an evidence of the close relations between Japan and England, the *Kokumin* advocates a public welcome. It is difficult, however, to endorse such a suggestion. That Field Marshal Waldersee should have been publicly welcomed and made much of was quite right and proper, not only on account of his high rank and because he had acted as Commander-in-chief of the allied forces in China, but also because he is an officer of European reputation. But Sir Alfred Gaselee, though the marks of honour he has won bear witness to his military attainments, has no exceptional claim upon Japanese attention, and to give him any public welcome would be carrying that kind of demonstration a little too far. Were Japan to do so, it would be unavoidable that she should behave similarly to every one of the allied commanders who chanced to visit this country. Englishmen fully recognise these points, and while sensible of the *Kokumin Shimbun's* goodwill, would be the first to deprecate any unreasonable display.

THE TOKAIDO RAILWAY.

The usual complaint is preferred that although the railway authorities must be well aware that a great concourse of travellers may be expected to visit the sea-side on Sunday in weather such as is now oppressing us, they make no provision of extra carriages. On Sunday last the crowd in the carriages was truly outrageous, and the journey to the sea-side became an ordeal not to be compensated by any pleasures in its sequel.

Another point to which attention is directed by a correspondent, is that the couplings of the last train from Kozu on Sunday evening were so defective after leaving Ofuna station, that a really alarming shock was given to travellers every time the train started.

"JAPAN AS A FIELD FOR FOREIGN CAPITAL."

The *Times* of June 24th publishes an interesting letter "from a firm engaged in business in Japan," advocating the formation of a British syndicate for the purpose of investing money in Japan. With the greater part of the points made by the correspondent there will be no disposition to disagree, but in a few particulars his assertions seem open to query. Thus, in analysing the "causes of the position," he says:—"Foreign banks and foreign capital have no place in the internal commerce of the country, and thus the commercial system is severed from that of other nations. This severance is largely due to the policy which in recent years has withdrawn all Government business from foreign banks, leaving them with no interest in the finances of the empire, and placing instead a powerful weapon in the hands of their Japanese competitors." These words convey a manifest censure of the Treasury's policy. But is it a just censure? It appears to us that, in the first place, the foreign banks have not been excluded from a share of the Government's business. Two of them had a very large share in negotiating the last foreign loan. Putting that aside, however, the question presents itself, are foreign banks competent to take part at present in Japanese business? They can of course do Government business, but would that give their capital "a place in the internal commerce of the country"? No Japanese merchant and manufacturer can obtain accommodation from a foreign bank. Doubtless the general distrust of Japanese commercial integrity has much to do with that state of affairs. But it is with the fact, not with its cause, that we have to do here. The fact is indisputable. While the demand for money in the country is so keen that Japanese banks can afford to pay 7 per cent. on six-monthly deposits and from 5 to 6 per cent. on daily balances of current account, the foreign banks continue, as of old, to offer 4 per cent. on deposits and 2 per cent. on daily balances. So completely did the foreign banks formerly stand aloof from the Japanese that they declined to cash cheques made payable to a Japanese by name, and we are not aware that they have changed their rule in that respect. It is obvious that such a state of affairs could not be remedied by entrusting Government business to the foreign banks. That method of giving them "a place in the internal commerce of the country" does not promise much. Indeed, one of the most disheartening features of the situation is this aloofness on the part of the foreign banks. If with their opportunities of forming judgments at first hand and their accessibility to Japanese clients, they still refrain from investing any part of their capital in Japanese business, the plain inference is that some very strong barrier exists.

The letter sent to *The Times* by "a firm engaged in business in Japan" and the comments of *The Times* thereon are noticed by Tokyo newspapers. The *Chuo Shimbun* and the *Kokumin Shimbun* concur in endorsing the remarks of the London journal, though the former takes some exception to the first of three recommendations made by *The Times*, namely, "simplification of Japanese commercial law." It appears to be thought that this advice of *The Times* refers to the general nature of the Commercial Code, and naturally there is some surprise

that *The Times* should find a weak spot in that direction. But of course what *The Times* means when it speaks of "commercial law" is that foreign enterprise in Japan is subjected to legal restrictions which seriously impede the influx of capital. Foreigners may not own land, they may not own mines, they may not own shares in State railways, and the provisions of the law are such that, owing to these vetoes, even the liberty nominally granted is not practically enjoyable. The situation is so plain that to analyse it seems an insult to our readers' intelligence. At the head of all objections stands distrust of Japanese business integrity. Perhaps it is an exaggerated sentiment, but that is a point scarcely worth discussing except for the sake of its ethical interest. The only material fact is that the distrust exists. Consequently foreigners will not invest money in purely Japanese enterprises. No rate of dividend will tempt them. There may be—indeed there are—a few exceptions to this rule of reluctance, but the feeling of the average foreigner may be truly summed up in the statement that he will not think of jeopardising principal for the sake of interest; that his experience of Japanese business methods indisposes him to place any confidence in Japanese undertakings, and that he therefore prefers to put his money into some safe European or American enterprise even though the returns be a fraction only of Japanese quotations. Evidently the only way to meet that difficulty is to give to foreign investors a right to control the use of their money—not a special right, but precisely the same right that Japanese investors already enjoy. Foreigners have never been allowed to exercise any administrative control in Japan. Those most trusted have been used merely as advisers, generally uninformed even whether their advice has been accepted, and always ignorant of the practical organization and financial management of the concerns with which they are connected. That plan might work so long as the foreigner was merely a paid *employee*, but so soon as he puts his money into a Japanese enterprise, he must know how things are carried on, and must be in a position to protest against any abuses he detects. Until that degree of really practical participation is assured to him, the foreigner will not bring his capital to this country. He will lend it to the Government fast enough, because, in spite of superficial criticisms uttered by political partisans, he knows that the State's finances are sound, and because he has learned to trust the Government. But he will not lend to a private firm which persists in treating him as an outsider, and whose very accounts are unintelligible to him. The Japanese, however, seem reluctant to admit the foreigner to anything like genuine partnership. They want his money, but they have an objection to placing him upon their boards of directors, or allowing him to exercise control jointly with themselves. The reasons of their reluctance are well appreciated. We ourselves sympathise with them, and are by no means disposed to allege that their hesitation is wholly due to unreasoning conservatism or unpractical sentiment. But the situation has to be faced. It is a question of striking a balance. If the foreigner's capital is really needed, then things must be so arranged that he shall be able to look after the spending of the money, and to follow closely the course of the enterprise in which he has invested it. If, on the other hand, it be thought that the advantages accruing from access to his capital would not compensate for the increased

prominence thus given to him in the business world of Japan, then all further talk about the introduction of foreign money is futile. Many far-seeing Japanese must be fully sensible of these things, and must be anxious for the advent of the time when the gain resulting from direct cooperation with the experienced foreign business-man will be regarded as largely enhancing the value of his contribution to the capital of an enterprise.

THE WEATHER.

Saturday, Aug. 3.

Since the 20th of July, four centres of depression have been reported from the neighbourhood of Korea, but all have travelled away without touching Japan. At 10 p.m. on the 31st ultimo, however, a depression which had been lingering for several days in the vicinity of Formosa, suddenly moved up to the Riukiu Islands, and at 6 a.m. on the 1st instant, violent rain and wind were reported from Naha. It is thought that this storm will pass over Japan on the 3rd and 4th, but up to the moment of going to press there is no sign of any change in the weather.

Tuesday, Aug. 6.

The storm of wind and rain which was to have visited Japan on the 3rd and 4th inst., according to the forecast of the meteorological authorities, and which certainly got as far as Naha in Riukiu, appears to have been deflected thence westward. Its ultimate movements are, of course, uncertain, but the prediction now is that it will not reach this part of the country for 3 or 4 days longer.

Wednesday, Aug. 7.

The weather is becoming a topic of absorbing interest, for if the present heat continues, exhaustion must be the fate of many an unfortunate whose business ties him to his desk. Typhoons have been pirouetting in our neighbourhood, and one of them, as our readers know, got as far as the Riukiu Islands, but there changed its mind and headed westward, hurling itself with considerable force on Shanghai whence a report, dated the 4th instant, says that a heavy blow was experienced on that day and that much injury was done to the cotton crop. The same typhoon swept over the northern part of Formosa on the 31st of July, the immediate results being a rise of the Tamsui River by 12 feet, the flooding or dismantling of 800 houses in Taipei and the wreck of over 20 vessels. Japan, however, remains outside the circle of disturbance, and though it was confidently expected, first, that the typhoon would work its way northward over this empire from Riukiu, and, secondly, that it would take a circular direction after visiting China, and return thence to Japan, the meteorological reports from all part of the country on the 5th instant showed that, with the exception of an occasional thunder-shower, there are no symptoms of any serious atmospheric disturbance. The possibility of the typhoon's retracing its steps from China has not yet entirely disappeared, but experts think that even if it does so, it will have expended its worst virulence before it reaches these shores. Thus far Monday, the 5th, was the hottest day this season. The thermometers at the Central University registered 96° F. at noon, and if such a reading appeared on a cool, elevated position like that of the Observatory, the record in the low-lying streets must have been nearly 100°. There has been no such heat since 1886, when the

maximum thermometrical record was 98° F. at the Central Observatory. The *Doyo*—hot season—commenced on the 20th of July and will end on the 8th of this month. In other words, autumn commences on the 9th instant. The Japanese say that after the middle-day of the *Doyo* has passed, an autumn breeze should be an occasional visitor.

During the dog-days (*doyo*) every year, the Tokyo Tram Company loses some horses. But since the company was organized, it has not had any experience like that of this year. Scarcely a day passes without six or seven horses dropping in their traces, and on the 4th instant, no less than 14 fell on the line, 4 of which died. The record for the 5th instant is not to hand, but it was probably worse, for the thermometer ranged 3° F. higher on that day than on any previous day.

Thursday, Aug. 8.

Owing doubtless to the approach of one or other of the depressions of which we have had notice, a very sudden drop in the temperature took place on Tuesday evening. During the night a fresh breeze sprang up from the northward and by morning the weather had cooled wonderfully. In some parts of the Settlement a fall of temperature registering 14 to 13 degrees took place and altogether the change was most acceptable. How long this weather will last is of course, a moot question, but the barometer is remarkably steady.

Friday, August 9.

The curious cold snap that visited the east of Japan from daylight on the 7th instant, is not regarded as presaging any radical change of weather. It is attributed to the approach of a centre of depression which had been lingering somewhere in the Pacific, but which has now taken its departure oceanward. Probably the public are getting somewhat sceptical about meteorological forecasts. In scarcely any case lately have events verified predictions. We are now assured that a brief interval will see the warm weather of the *doyo* restored, but at this moment of writing the rise of the barometer is the only indication of such a change.

THE QUESTION OF A FOREIGN LOAN.

It is now taken for granted that the Cabinet intends to continue the post-bellum enterprises without any departure from the original programme. To do so, however, a sum of some fifty million *yen* is required and no one seems quite certain whether the Minister of Finance will endeavour to procure the money at home or abroad. The *Kokumin Shinbun*, using guarded language, suggests that the Government is injuring its own prospects of success by employing in the capacity of agents third-rate banks and persons of no financial standing. It also points out that Viscount Watanabe's action has greatly injured the credit of the country. Undoubtedly it has. When the statesman holding the portfolio of Finance publicly announces that national ruin must be the issue of prosecuting certain productive enterprises to which the Government and the Diet pledged themselves five years ago and which have already been carried far towards completion, the world at large must be excused if it regards Japan's financial situation as parlous. Viscount Watanabe dealt a grievous stroke to his country's finance. Some—and they are usually well-informed persons—affirm that personal pique was

chiefly responsible for his action. That is slender consolation, and at any rate such an explanation demands great credulity.

All sorts of rumours are published by Tokyo journals with regard to a sale of War Bonds by the Japanese Government in London. Nothing seems to be trustworthy except that negotiations for such a sale are in progress. Details as to this person or that person being engaged in the undertaking, or as to the rate obtainable must be dismissed as pure conjectures. What appears certain is that it having been found impossible to obtain money at home, as originally contemplated, for carrying the *post-bellum* productive undertakings to completion, the Cabinet has chosen to go abroad rather than incur the loss of suspending the works.

CHINA'S NEW FOREIGN OFFICE.

The *N.-C. Daily News* on July 29th translated the Imperial decree authorising the establishment of the new Ministry of Foreign Affairs, which is to take the place of the old *Tsung-li Yamen*. The seniority of the new Ministry is also fixed, the Ministry ranking before the Six Boards. The decree, which is dated July 24th, is as follows:—

As this Government is making a revised treaty with Foreign Powers the first thing to be considered must be the perpetuation and cultivation of friendly relations with them. To do this much depend upon the ability and talents of the officials chosen to undertake the duties of members of a Ministry of Foreign Affairs. The *Tsungli Yamen* used to do these duties for many years, but the members appointed generally had posts in other departments of the State and therefore could not devote their entire time to foreign intercourse. Hence we have now decided to establish a special Board (Pu) or Ministry of Foreign Affairs, the members of which shall devote all their time to the duties of this department, which shall take the place of the *Tsungli Yamen* in the future. We hereby further decree that this new Ministry of Foreign Affairs shall take precedence over the other Six Boards [the Board of Civil Appointments has hitherto been considered the Senior department of the Six Boards—*Translator*] and that the following shall constitute the officers of the said Ministry:—Prince Ching, First Order, to be Comptroller-General; the Grand Secretary of the *T'ien-ko*, Throne Hall, Wang Wen-Chao, to be Vice-Comptroller-General; Chü Hung-chi, President of the Board of Works, to be transferred to the Presidency of the said Ministry; and Hsi-Shou-peng, former Chinese Minister to Korea, and Lien Fang (Manchu), Metropolitan official of the 4th grade, to be Vice-Presidents. With reference to the number of secretaries and scribes, etc., who shall be appointed on the same basis as the other Six Boards, and their salaries, We hereby command the Council of Regency and the Board of Civil Appointments to arrange said matters without delay and report to us.

LI HUNG-CHANG.

The *Chugai Shogyo Shimpo* publishes a telegram from Peking that Li Hung-chang has been taken dangerously ill. The intelligence does not appear to have reached any other quarter and must therefore be received with reserve.

That Li Hung-chang has again been seriously ill seems to be unquestionable. It is now reported, however, that he has recovered, though his debilitated condition and his advanced age make great calls upon the care of his nurses and attendants.

During operations with a military balloon near Schlusselfurg, on an island in the Neva, twenty-one miles east of St. Petersburg, on July 17th, the balloon exploded and blazed up. One person was killed and twenty were injured, several fatally.

THE LATE EMPRESS FREDERICK.

A correspondent writes:—Victoria Adelaide Maria Louisa, Princess Royal of Great Britain and Ireland, but better known under her later title of Empress Frederick of Germany, was undoubtedly the cleverest of all the children born to the late Queen Victoria. Much of her high courage and intellectual acuteness she inherited from her father—a man of sterling worth, but little understood or appreciated in his adopted country—and on the foundations of a firm character was built up a truly remarkable education for a woman in the early-middle period of the Victorian era. The fate of the father in respect to popular dislike followed the daughter, but to her lot was added bitter persecution, the depth and far-reaching qualities of which were unknown in England until the publication of Prince Bismarck's Life and Letters. How unjustly Bismarck hated the noble Englishwoman his letters fully show, and they also tell of the thousand petty schemes which he set on foot to render her life a continual bitterness. Her last few years were filled to the brim with bitter sorrow, for the light of her life went out when the noble Emperor Frederick died, and the estrangement between her and the Emperor William grew more intense as the shadows deepened, an estrangement which the German nation seemed to share. Altogether it is a melancholy picture, that of a high-souled, intellectual, broad-minded, noble-hearted woman, too advanced in her ideas and theories for the circles in which her lot was cast, persecuted unmercifully in the hey-day of her early married life; insulted in the streets of her husband's capital in her middle age; neglected and ignored as she lay dying. Her happiest hours undoubtedly were those of her girlhood before she received the sprig of "white heather" from the gallant Prince Fritz.

Japanese newspapers unanimously publish sympathetic notices of the death of the Empress Frederick. The paragraphs are brief but strongly worded, except in the case of the *Nichi Nichi Shinbun* which publishes an article of some length containing an account of the deceased lady's career, and declaring that the mourning caused by her death is fully shared by the Japanese nation.

On the 7th instant the Emperor and Empress of Japan addressed a message of profound condolence to the Emperor and Empress of Germany.

Aus Anlass des Ablebens Ihrer Majestät der Kaiserin und Königin Friedrich findet am Sonntag, den 11. August, Vorm. 10 Uhr in der Deutschen Kirche (Kojimachi Nakarokubanchō 28) ein Trauergottesdienst statt. Pfarrer Haas wird die Gedächtnisrede halten.

THE YUSEN KAISHA.

It is now affirmed—by the *Nippon*—that there is no truth in the alleged purpose of the little coterie of shareholders who are said to be discontented with the methods of the Nippon Yusen Kaisha. The object of the malcontents is not to obtain increase of dividend. That they are credited with such an aim, says our contemporary, is a deliberate attempt to bring obloquy on their agitation. What they want is reforms—a sifting of the company's employes so as to get rid of the old and incompetent; the abolition of sinecures; reduction of rates of freight on the North-China line; the abolition of foreign agencies and the establishment of branches presided over by Japanese; a change

in the Company's method of treating its patrons, and so on. In short, the *Nippon* would have the public sympathise with these agitators as men of highly moral and prudent purpose, whereas journals of established credit like the *Nichi Nichi Shinbun* and the *Kokumin* take a very different view of the movement. We are not by any means sure that the matter deserves so much notice as it is receiving. The explanation seems to be that the Nippon Yusen Kaisha being eminently successful, has attracted the attention of some envious persons.

KOREA.

The Treaty of 1876 between Japan and Korea provides that in case of Korea being threatened with famine she may impose a veto upon the export of rice for food and other grain. But in the Treaty of 1883 the words "and other grain" are omitted and "rice for food" is alone inserted. Therefore it is alleged that in attempting to extend her embargo to beans, Korea is manifestly acting *ultra vires*.

Admiral Togo took advantage of the presence of the line-of-battle ship *Shikishima* at Jinsen to entertain at luncheon on the 4th instant a large party of prominent Korean statesmen, as well as Mr. Hayashi, the Japanese Representative in Seoul. His Imperial Highness Prince Kacho, who is serving on board the *Shikishima*, was also present.

In a communication to the Chemulpo Chamber of Commerce, by way of reply to a representation made by the Chamber, Mr. Hayashi, Japanese Representative in Seoul, justly points out that since the treaty empowers Korea to put an embargo on the export of rice in times of scarcity, no objection from a conventional point of view can be raised by Japan. But the general question of the advisability of such restrictions so far as the interests of Korea herself are concerned, and their economical propriety demands serious consideration, and will be strongly presented to the Seoul Government. An interesting point made by Mr. Hayashi is that although the Korean authorities are authorized by treaty to veto the export of rice, they are not authorized to forbid sales of the grain to foreigners within the country, as they seem to have been doing.

THE INTERNATIONAL EXCHANGE.

The *Nippon* and the *Hochi* are busily engaged reviving the story of an agreement between Russia and Japan on the basis that the former should withdraw all opposition to the latter's supremacy in Korea, and that Japan, in exchange, should become a consenting party to the permanent occupation of Manchuria by Russia. This tale is now supplemented by a rider to the effect that many Russian officers are endeavouring to bring about such an *entente*; that France also has interested herself in the matter; that the French Minister in Tokyo has become an open advocate of a new triple alliance in the Far East, and that several Japanese statesmen are beginning to lend an ear to the proposal. None of the conclusive reasons militating against any such scheme has been weakened since the *canard* last occupied a brief place in public attention. The *Hochi* and the *Nippon* will not even have the satisfaction of creating a momentary sensation.

SIR ALFRED GASELEE.

Sir Alfred Gaselee stayed at the Kyoto Hotel while in the Southern capital. He visited the Governor of Kyoto, and proceeded to Fushimi for the purpose of offering flowers at the grave of Lieut.-Colonel Hattori, who fell at the capture of the Taku Forts. Sir Alfred left Kyoto on the 1st for Tokyo. He will be entertained to-day by the Minister of State for War.

Sir Alfred Gaselee arrived at Shimbashi at 10.48 a.m. on the 2nd instant. He was met at the station by Baron Kodama, Minister of State for War, Lieut.-General Viscount Terauchi, Major-General Fukushima, Colonel Shiba, Colonel Oi and others. Sir Alfred proceeded at once to the Imperial Hotel.

Lieut.-General Sir Alfred Gaselee devoted his brief sojourn in Tokyo to professional work. On the 3rd instant, he not only witnessed the manoeuvres of some companies of the First Division and the Guards, but also visited and carefully inspected the Koishikawa Arsenal. In the evening he was entertained by the Minister of State for War at the latter's official residence. Such work is trying in such weather as we are now having. The General was entertained at tiffin on the 3rd instant in the Koraku-yen, Field-Marshal Marquis Oyama being his host. Sir Alfred left Tokyo for Nikko and Chusen-ji at 9 a.m. on Sunday.

Sir Alfred Gaselee dined with the Minister of State for War on the evening of the 3rd instant, and proceeded to Nikko on the 4th. Lieut.-Colonel Churchill came from Karuizawa to meet him in Tokyo, but the British Charge d'Affaires remained in Chusen-ji, where he will receive the General.

THE "SADA YAKKO" CRAZE.

London is still a bit crazed over Madame Sada Yakko, the erstwhile geisha-girl of Shimbashi, and the dramatic writer in the *Saturday Review*, who signs himself "Max" institutes, in all seriousness, a comparison between her, Madame Sarah Bernhardt, and Madame Réjane. It would surprise him, we have no doubt, were he to be told that the clever little *dansseuse* no more represents Japanese theatrical art, as seen on the stage of the Kabukiza and exemplified by Danjuro and Kikugoro, than did Gilbert and Sullivan's "Mikado." This is what "Max" has to say about the little lady from Tokyo:—

If I, Paris-like, were called on to decide which of these three goddesses were most admirable, the apple would (I think) be adjudicated to Sada Yakko. But there would be a long, embarrassed pause before the award, and after it I should beg the empty-handed couple not to treat it too seriously, it being merely impressionistic, and in no sense judicial. "This lady from Tokio," I should insinuate, "may not be nearly so gifted as either of you who come from the city named after me. She may be reckoned by her compatriots as positively plain, positively clumsy, and quite unintelligent. In point of her art she may be accounted 'a stick.' But for me, an accidental, a simple shepherd on Mount Ida, somehow she surpasses both of you. It is, doubtless, because she is so remote from my understanding—because her face is a mere inscrutable oval, and her gestures have for me no meaning, and to her gait I know no parallel—that I (deeming fair her face, and fair her gait and gestures), have set her thus above you. She is new to me, and you (daughters of the Latin race) know the tag 'quidquid novi.' She is mysterious to me, and 'omne ignotum' you remember. And now, excuse me, I must herd my sheep, which have strayed sadly during this arbitrage." So, bowing inclusively as I shouldered my crook, I should away to my work. But perhaps, ere I had taken many steps down the mountain-side, I should hesitate, halt, look round, and, as a rider to my judgment, bid Sada Yakko let Réjane and Sarah take each a bite of the apple—Réjane, a big bite; Sarah, a small one.

INSURANCE.

The Meiji Seimei Hoken Kaisha (Meiji Life Insurance Company) has raised its maximum insurance upon one life to twenty thousand *yen*. Writing recently upon this subject, we said that the limit of risk taken by Japanese companies was five thousand *yen*. That was an error. We now find that there are four companies which have hitherto been willing to accept a risk of ten thousand *yen* on one life, the general rule, however, being five thousand. In the Meiji, which has now doubled its limit, probably in consequence of the prospect of foreign competition, the average life risk is about 370 *yen*. It is stated that owing to recent depression in business circles, the number of small policy-holders—from 100 *yen* upwards—has diminished, whereas there has been an increase in the number of persons insuring for a thousand *yen* and upwards. The *Kyosai Seimei* (Mutual Assistance Life) has raised its minimum from 100 *yen* to 200 *yen*.

NOTES ON CURRENT EVENTS.

A telegram from London says that Japanese securities have begun to appreciate, the quotation on the 1st instant being £102 6s. 9½d. for the five-per-cents.

A sharp contest is going on in Tochigi prefecture for the seat rendered vacant by the death of Mr. Hoshi Toru. The Liberals and Progressists have each put a candidate into the field, and the *soshi* are *en evidence* as usual.

The new Dutch Cabinet was gazetted on the 1st instant. Its principal members are:—

Dr. Kuyper, President and Minister of Home Affairs.

Baron Van Lynden, Minister of Foreign Affairs.

Several Japanese Orders have been conferred by the Emperor on foreigners. Five, from the First Class downwards, have gone to subjects of Turkey; three, from the Third class downwards, to Italians; and one, a fifth class, to a Captain in the French Army.

The party of Japanese officers and sailors who are to bring out the torpedo-destroyer *Shirakumo*, will leave Yokohama on the 10th instant for London by the Nippon Yusen Kaisha's steamer *Kawachi Maru*. The *Shirakumo* is being constructed at Messrs. Thornycroft's yard.

A curt telegram from London says that the Japanese officers and sailors who recently proceeded to England for the purpose of taking over the *Mikasa*, have had a hearty reception in London. There are no details, but the message suggests that "the man in the street" may be awakening to the value of Japan's friendship from a British point of view.

The last of the line-of-battle ships ordered under the *post-bellum* programme, namely the *Mikasa*, which is building at Messrs. Armstrong, Whitworth and Company's, was expected to be ready in October, but circumstances involving some delay have arisen, and the ship is not expected to be finished before the end of the year, or possibly next spring.

A German naval officer has been arrested at Nagasaki for taking photographs of six places within the fortified limits. Nagasaki seems to be a species of trap. Its beautiful scenery attracts every artistic person with a

camera, and then comes trouble. It does appear most incongruous that fortifications should be planted among scenic gems like those of Japan, but nature having fashioned the country in an æsthetic mould, the beauty-loving foreigner must exercise a harsh degree of self-restraint.

The tea trust is not destined to materialize, it would appear. It has expired in a seemly manner; that is to say, instead of perishing suddenly it has been quietly entombed under investigations. The last public news of its condition was that its fate had been placed in the hands of a committee of inquiry, and now the announcement is made that it will never emerge from the Committee's keeping. It seems to have received its death blow from the alleged discovery that the American merchant who chiefly interested himself in organizing the trust was a bankrupt speculator.

The Prince Imperial's son is said to be a lusty baby. There has been no occasion for the doctor's services hitherto, and the little lad's consumption of milk is reported to have attained a highly satisfactory standard. Strange to say, the little Prince is still in Tokyo. Apparently arrangements have not yet been completed for carrying him to Nikko out of the oppressive heat now brooding over the capital. How vastly these great people's chances of growing up strong and healthy would be increased if forms and ceremonies could be sacrificed to common, every-day prudence!

Viscount Yoshida Seifu, son of the late well known Viscount Yoshida Kyonari, has taken action against two money-lenders, Mr. Uyeno and Mr. Kawakami, and two others, charging them with conspiring with two Frenchmen to obtain possession of his, Viscount Yoshida's, house and land, under pretence of having lent to him a sum of eighteen thousand *yen*. Viscount Yoshida denies the receipt of any such sum. To foreigners such an incident seems scarcely conceivable, but the explanation is that the two persons to whom the money is said to have been handed had Viscount Yoshida's power of attorney and his seal. In one sense the affair appears to be another example of the dangers incidental to the Japanese system of dispensing with signatures and employing seals only.

While, on the one hand, the work of exploiting the kerosene wells of Echigo is proceeding vigorously, and the number of companies engaged in the operations has reached 67, with a nominal capital of 15,729,460 *yen* and a paid-up capital of 5,228,425 *yen*, there is prospect of a very heavy import of oil next month in anticipation of the increased duty to be levied from October 1st. Japanese journals estimate the quantity to arrive at 800,000 cases, of which the Standard Oil Company imports 300,000 cases American oil (Chester Brand) and 150,000 cases of the Russian Anchor brand; Messrs. Samuel Samuel and Company import 250,000 cases of the Anchor, and Messrs. Jardine, Matheson & Co. a hundred thousand cases of the same. If these figures be correct, five hundred thousand cases of Russian oil are to arrive against three hundred thousand cases of American.

We read in the *Fiji Shimpō* that out of the ships representing the first and second sections of the Japanese *post-bellum* naval programme, those already constructed and handed over so that they now form an actual part of the Navy, are 3 line-of-battle ships;

6 first-class armoured cruisers; 3 second-class cruisers, and 12 torpedo-destroyers. Those remaining to be received are 1 line-of-battle ship (the *Mikasa*); 1 torpedo-depot ship (the *Chicaya*, which recently made her trial trip and had a collision with a torpedo gun-boat); 2 third-class cruisers (now under construction, one at Yokosuka and one at Kure); 8 torpedo-destroyers (4 building in England and 4 at Yokosuka). All will be finished by 1904. The torpedo boats—over 80—forming part of the programme—are now in course of construction, and 30 will be ready for service by the end of this fiscal year. Great progress has also been made with the docks planned in the programme, the Sasebo Dock being now ready to receive ships up to twelve thousand tons. The naval station at Maizuru will be finished this year.

We observe that a periodical called the *Voice*, published in Tokyo, offers to supply the *Japan Times* "to any address in Japan or the Orient where there is a Japanese post office, postage free" for 5½ *yen* yearly. How is it done? The paper is to be posted 3 times a week. Therefore the postage alone would cost 1.56 *yen*, leaving only 3.94 *yen* as the price of the journal. That is what the *Voice* calls "our price." It further offers to supply the *Japan Daily Mail* at "our price," but in the case of the *Mail* "our price" is not arithmetically stated. Can it be that the *Voice's* advertisement refers merely to copies of the *Times* received as exchanges? If so, we congratulate our contemporary on its ingenuity.

The *Chingai Shogyo Shimpō* says that the Treasury holds the following bonds which have been bought by it on occasions of issuing domestic loans or which would already have been offered for sale in connexion with public works had there been any prospect of finding a market:—

IN THE DEPOSITS BUREAU.	Yen.
Old Bonds 5 per cent.	40,200
Consols 5 per cent.	739,400
War Bonds 5 per cent.	255,500
Five per cent. Bonds	49,813,300
Four per cent. Sterling Bonds.....	9,467,600
Formosan Public Works Bonds.....	1,500,000
Total	61,816,000
IN THE INDEMNITY BUREAU.	
Four per cent. Sterling Bonds (held in London).....	10,966,831
Industrial Bank Debentures	1,546,270
Grand Total	74,329,104

There are signs of a decided improvement in the money market. Within the past few days the prices of all securities have shown marked appreciation, Osaka as usual setting the example. This change is attributed, first, to the exceptionally fine weather which has virtually placed the rice crop out of danger, and justified a forecast that the yield will be at least equal to the average; secondly, to good prospects of silk sales, and thirdly to an inflow of specie which has been going on for some time. Prices still rule high in the rice market, however, probably because of the bad crop prospects in China and Korea. There have been large sales of new silk in Yokohama, and it is thought that if Japanese holders were so disposed they might effect extensive transactions, the yield this year being comparatively small and the stocks in Europe and America low.

It has probably happened to every newspaper editor to be accused again and again of giving utterance to views which he never thought of entertaining, and when he has denied that he wrote anything of the kind,

he has been silenced by the rejoinder, "Oh, but you did. You must have done so, for I read it." The controversy between Father Ligneul and Mr. Snodgrass recalls that experience. Mr. Snodgrass accuses the Roman Catholics of worshipping the Virgin Mary. Father Ligneul, himself a Roman Catholic, denies the accusation. But Mr. Snodgrass is not one whit disconcerted. "You must worship her," he retorts, "for you yourselves admit that you adore her." A matter-of-fact sort of person might be inclined to think that the Roman Catholics are better qualified than Mr. Snodgrass to say what they worship and what they do not worship. But Mr. Snodgrass is not matter-of-fact. A matter-of-fact sort of person might also be disposed to think, if he is a father, that he adores his wife and children, but does not for that reason worship them. For the rest, these squabbles can not fail to conduce greatly to the success of Christian propaganda in Japan.

A double suicide which occurred on the 1st instant at Kanakura has attracted some attention. It was caused by the old trouble, love. The man, Suda Toichi, had been instructor of book-keeping in the Keiogi-juku and Secretary of the Tokyo *Koshingo* (intelligence bureau), both of which posts he recently resigned. The woman, Saito Chiyo, was of good family and the possessor of considerable property. A few years ago, she married Ito Rokubei, a cabinet merchant, the man being adopted into the family of his wife. Three children were born, but the union appears to have been unhappy. The wife endeavoured unsuccessfully to persuade her husband to agree to a divorce, and finally she ran away to join her lover Suda, carrying with her a sum of 1,500 yen. Legal proceedings were then instituted by the husband, and the guilty pair, seeing no hope of escape, committed suicide by hanging themselves from the bough of a cherry. An exceptional feature of the affair was the remarkable deliberation shown by the unhappy couple. Each had the face covered with white cotton cloth, the man tied his feet together and the woman bound cotton cloth about her waist to prevent any derangement of her garments.

The notorious Mr. Oi Kentaro, reputed leader of *soshu* and maintainer of the doctrine that no foreigner should be called as witness in a law suit since foreigners can not be trusted to speak the truth, appears to be struggling to emerge from the obscurity to which his previous courses condemned him. The idea is that in Mr. Hoshi Toru's removal from the scene Mr. Oi Kentaro sees an opportunity for the successful exercise of his peculiar talents. The footstep upon which he proposes to raise himself again into prominence is the labour question, but Tokyo journals affirm that his real purpose is to form a party and start another whirlwind in the arena of politics. It is added that Mr. Kono Hironaka has been visiting Mr. Oi Kentaro since the latter came to Tokyo, and that the visits have been contrived so as to avoid observation. Mr. Kono never riding to the rendezvous in his own jinrikisha but always taking a hired vehicle. A few years ago, Mr. Arai Shogo received the nickname of *akai-ketto* for muffling his head in a red blanket when calling at the residence of a certain Minister. Mr. Kono Hironaka will probably receive some new appellation in connexion with the latest development. The *funmin* says that the expenses of the projected Oi coterie are to be defrayed from the proceeds of a coal-mine owned by Mr. To-

yama Man (or Mitsuru) in Kiushiu. Mr. Toyama himself is reported to be a *Soshi* leader. So they are all "foxes from the same hole," as the Japanese proverb says.

NEW BOOKS.

China and the Allies, by A. HENRY SAVAGE-LANDOR. London, Wm. Heinemann; Yokohama, Messrs. Kelly and Walsh, Ltd. Two volumes.

MR. LANDOR'S second volume does not strike one as being so interesting as his first. Perhaps it is that the siege of the Legations, with which it principally deals, is described at second hand, and lacks the verisimilitude which even Sir Claude McDonald's official despatches, precise and matter-of-fact though they be, give to that grim time. To anyone who has had to read several of the "siege diaries" which have already seen the light in print, many discrepancies and needless mistakes are discoverable in Mr. Landor's narrative. Surely, by the time his volume was passing through the press access could have been had to the British Minister's despatches to the Foreign Office, and by consulting them alone the author would have been prevented from perpetrating several of these slips. The account of the American, Russian and Japanese attacks on the gates of Peking also lacks the lucidity which one expects in a volume of such pretentious style. Mr. Landor is much too anxious to impress the world with his own bravery in keeping ever in the fighting line, and there are other faults of manner which detract from the value of his work. The description of the Imperial Palaces and the Forbidden City is very interesting and the numerous illustrations he was able to secure with his camera are a great help in elucidating the text. But the best thing of all is Bishop Favier's own account of his heroic defence of the Pe-tang Cathedral. It redeems the whole volume. Over 3,000 Chinese converts had gathered within the Cathedral precincts by the end of May, not one of whom was a fighting man. Only 30 French marines, under Sub-Lieut. Paul Henry, and 10 Italian marines could be spared to help the good Bishop and his Fathers. Yet this small band kept the enemy at bay from June 12th till the 16th August! They were insufficiently armed at the outset, but by making several sorties they captured some additional rifles, stores, ammunition, a quantity of powder, and a field-gun. The Chinese converts after a time were drilled into a company of spearmen 500 strong and they did very good work indeed. The attacks on the Pe-tang seem to have been delivered with even more vigour than the assault on the Legations, the Boxers and Chinese troops thinking no doubt that the small garrison would soon be over-powered. On one day alone 536 shells were fired into the Cathedral, and it is computed that during the 24 days of continuous bombardment the buildings defended by the heroic garrison were hit by 2,400 shells and cannon balls. The beautiful Cathedral, with its wealth of stained glass and statuary, and all the houses in the compound were reduced to shattered ruins. Mines were freely used, and with disastrous effect, and by July 30 the original 40 marines had dwindled to twenty-three, commanded by a corporal, the gallant Lieut. Paul Henry being shot that day:—

The long expected relief did not arrive, and on August 1 we had provisions for only six days. We had to reduce our rations to one-half, that is to say, four ounces of food per day per person. This would have brought us to August 12, but on August 8,

seeing that there was no immediate hope of being freed from our anguish, we had farther to reduce by half our already meagre allowance. Two ounces of food a day, that was all. And what food! The leaves, roots, and bark of trees, unripe fruit, and even flowers and grass were devoured by the starving crowd. Our improvised spearmen, unable to carry their weapons any longer, lay half dead of hunger on our verandah. When the Boxers came again several times to attack us, scarcely twenty-five of our spearmen out of 500 were able to drag themselves to defend our barricades. The evening of August 14 we still had two days' rations of two ounces each.

The Japanese, as we know, relieved these heroes, on August 16. One more quotation and we must leave the book. It is Bishop Favier who is speaking:—

Our attempts to communicate with the Legations and the outside world failed, and, alas! with disastrous results. Our first messenger, who volunteered to bring a message, was seized by the Boxers on leaving our compound. He was skinned alive. The skin and head were hung outside our main gate. During 60 days we neither sent nor received a single message, nor did we have a single day of truce, the hatred of the Boxers being shown in a fiercer way towards us than upon the Legations, probably because the cowardly crowd knew that we were weaker. During the siege the park of Pe-tang received over 400 bodies of men, killed under fire, women and children who died of hunger or in explosions of mines, shells, or fire rockets.

Verily can Mr. Landor call Bishop Favier "the greatest of all the heroes of the Pe-tang"—and, we add, of Peking.

Sidelights on the March, by H. F. MACKERN: London, John Murray. Yokohama, Messrs. Kelly and Walsh, Ltd.

THIS book, written by an American photographer, is composed in an easy, flowing style and describes the famous march of Lord Roberts from Paardeburg to Pretoria. The writer is a devoted admirer of the great Field-Marshal, a lover of Tommy Atkins, the volunteer, and the line officer, but an unsparing critic of the staff-officer who, too often, acts like a Jack-in-office. Mr. Mackern avoids any description of the fighting, except where necessary to make his story complete, preferring to give instead the experiences of war-correspondents and others in South Africa. One gathers a good idea of the hardships, as well as the occasional pleasures, of such a life, while glimpses are given of the heroic manner in which the British soldier faced the situation all though. Mr. Mackern has something to say with regard to the behaviour of Tommy Atkins on the march to Pretoria:—

As we approached a house, women would congregate at the door with expressions on their faces, half of doubt, half of fear, as though they did not quite know what to expect from the hosts which were sweeping down upon and past them. As a rule their confidence would be regained as one "Tommy" after another came up with ever the same enquiry: "Please, marm, 'ave yer got any bread?" at the same time digging into his pocket in a threatening manner. The first to come would at times succeed in obtaining the coveted prize, but most would go on empty-handed, only to renew their efforts at the next farm-house. I have seen farm-houses inhabited by women and children, and protected by the white flag, passed by 20,000 men without so much as a chicken being touched, unless the owner were willing to part with it, and it were paid for. Again, I regret to say that some looting was indulged in, the particular case I have in mind being perpetrated by some Irregular Horse, an action unworthy of brave men calling themselves "Soldiers of the Queen," and which would have met with condign punishment had it ever reached the ears of the Commander-in-Chief. But as a set-off to this I am quite willing to risk the statement that in the last hundred years no territory has been swept over by an army in which there has been greater magnanimity shown, or where there has been less personal insult or injury?

The book is illustrated by many photographs taken by the author.

The Wise Man of Sterncross, by Lady AUGUSTA NOEL: London, John Murray, Yokohama, Messrs. Kelly and Walsh, Ltd.

This novel is decidedly above the average in merit, though at times full of sad undertones. Its writer wields a graceful pen, her English throughout being unimpeachable, while her plot is clever and well-conceived. The story opens in a little fishing village on the Yorkshire coast and for a good half-way through the book few characters beyond those living in the hamlet are introduced. Foremost among them is Mrs. Shirley, the vicar's wife, who, having eloped from her father's house when quite a girl, and taken with her a family heirloom of considerable value, which she sold to provide funds for her wedding journey, devotes the rest of her life to expiation of her sin and restitution of the value of the jewels. It is a life-long task and has disastrous consequences for her and all that come within the narrow circle of her influence. Another personage is a Mr. Denys Godolphin, a man who had moved in the best society in his youth, but growing tired of the shams and unrealities of the world, and having also a lack of determination to carve out a place for himself in the world's broad battlefield, retires altogether from the public stage to the shelter of a Yorkshire coast village there to cultivate a garden and meditate among his books. But he is no misanthrope, especially after he makes the acquaintance of Too-True, otherwise Ermytrude Shirley, the surviving daughter of the Rev. Mark and Mrs. Shirley. He sees her grow from early childhood till womanhood is reached, superintending her education and building up within her a character most loveable and good. With the passage of years the story takes us to London and other places and of course lovers appear for Too-True, and deeply absorbing is the struggle for her hand. One feels, on putting down the book, deeply sorry for Mrs. Shirley at the utter futility of her life's struggle; and though Chris Morland, True's first lover, is by no means a likeable youth, still a better fate might surely have been worked out for him by our authoress. "The Wise Man of Sterncross" can be recommended as a book of some merit, giving promise of even better things.

PROGRESS OF JAPAN'S FOREIGN TRADE.

(COMMUNICATED.)

The following is the result of investigations made in the Finance Department with regard to Japan's foreign trade:—

The foreign trade of Japan reached the amount of 10,000,000 yen for the first time in the 21st year of *Meiji*, and for several years in succession since that time the yearly increase averaged some 10,000,000 yen. In the 30th year, however, the total rapidly increased, reaching the sum of 380,000,000 yen and in the 33rd year it showed the enormous aggregate of 480,000,000 yen. From the existing state of the country, there seems no doubt that foreign trade will continue to develop and that it presents a most hopeful future. Let us now consider in what directions principally this trade has expanded of late years. In the past 13 years, the increase of exports was 7.33 times for Asiatic countries, 1.68 times for Europe, 2.45 for America, and 3.81 for Australia, Hawaii and other places. The imports from Asia increased 4.57 times, from Europe 3.17 times, from America 11.11, from Australia, Hawaii and other places 17.34 times. The increased export as shown above is chiefly due to the extraordinary expansion in the export of cotton, coal, and matches, and of *kombu* and other sea products to China; copper, *habu-*

late, cotton yarn, coal, matches, camphor to Hongkong; *habutae*, coal, matches, straw-plait, and silk handkerchiefs to British India; and copper to Germany; raw silk and *habutae* to France; raw silk to Italy; tea, rice, camphor, raw silk, *habutae*, silk handkerchiefs, *ji-mushiro* (straw mats), porcelains, faience, straw braid to the United States; tea, &c., to British America. The increased import is chiefly as follows:—Raw eggs, pulse, sugar, cotton yarn, hemp, oil cake from China, sugar from Hongkong; indigo, and cotton from British India; pulse, and rice from Korea; dried fish, petroleum, and oil cake from Asiatic Russia; sugar from the Philippines; with respect to European countries, railway engines, luggage-cars, spinning and other machinery, various sorts of iron, cotton yarn, printed cotton, satin, cotton-piece goods, Italian cloth, flannel, wool, yarn, crape, camel cloth from England; crape, camlets from France, various sorts of iron and wool from Belgium; sugar from Australia; watches and clocks, camlets, and crape, from Switzerland; flour, steel and iron, petroleum, cotton, &c., from the United States; lead, wool, &c., from Australia.

"FU" AND "KEN" EXPENDITURES.

The following table shows the comparative expenditures of *Fu* and *Ken* during the 25th and 30th fiscal years, prepared by the Home Department in accordance with the Budgets of *Fu* and *Ken* for the 34th fiscal year. The yearly increase of public debts, as shown below, is, indeed appalling, says the *Nippon*. Attached to the above is given the rate of increase for the past ten years from the 25th to the 34th year of *Meiji*, and the proportion per head of the population:—

<i>Fu</i> and <i>Ken</i> .	25th year.	30th year.	34th year.	Rate of increase for the past ten years.	Amount due per head.
Tokio	1,283,120	1,596,575	1,918,917	1.50	1.26
Kioto	448,965	1,708,339	1,656,595	3.91	1.77
Osaka	803,748	1,589,642	2,384,908	2.91	1.81
Kanagawa	346,440	774,219	775,953	2.22	.99
Hio-go	646,345	1,396,124	1,938,231	2.91	1.10
Nagasaki	250,498	374,242	897,466	3.51	1.09
Niigata	763,332	2,669,487	2,672,512	3.51	1.47
Saitama	475,319	852,016	1,268,132	2.61	1.08

For the purposes of the above calculation the population is that of the census of the 31st year of *Meiji*.

A Japanese junk laden with coal, in charge of two *senso*, left Senju station for Yokohama, about noon on Wednesday. When near Omori bay she capsized and sank. The *senso*s were rescued by another boat.

FATAL ACCIDENTS IN YOKOHAMA.

A fatal accident occurred on Monday morning at Sakura-michi, which runs at the back of the Bluff, past Messrs. Boehmer's towards the village of Aizawa. Ishii Toyokichi (aged 16) employed in the grain shop kept by Kasakawa Kinzo at Matsukagecho Nichome, Yokohama, was drawing a cart laden with several piculs of rice and bran down the steep decline, when he lost control of the vehicle. The cart struck a telephone post and the force of the blow smashed the bar which held the shafts together, at the same time crushing in the lad's abdomen. Ishii fell to the ground and the rice tumbled all over him. He was dead before the police could arrive on the spot. The wonder is that there are not more fatalities along this particular stretch of road.

A Japanese boy about 15 years old, bathing in the creek near No. 88, dived in and dashed his head violently against the bottom of a junk, yesterday afternoon. He was rendered unconscious. In a few minutes he was brought ashore and seen by Dr. Hall and a Japanese physician, but life was found to be extinct. He left his clothes, a hat, and umbrella on shore.

A boy named Kamejiro, son of Kawai Takejiro, living at Hanabusacho, Yokohama, accidentally shot himself with a pistol belonging to his father on the afternoon of the 31st ult.

Satsu, a young girl, employed in a shop at Sumiyoshicho, Yokohama, while carrying a baby belonging to her mistress strapped on her back was knocked down on Yatozaka, by a foreign vehicle. The girl was badly injured about the head and is not expected to recover.

SEEING FOR THEMSELVES.

The *Southern Daily Mail*, Portsmouth, publishes an interesting story from its naval correspondent with the Mediterranean Squadron, which indicates the manner in which Messrs. Yerburgh, M.P., and Arnold White, M.P., members of the Committee on Naval Victualling, made a unique experiment in order to discover whether the Navy rations are sufficient for Jack aloft:—

When the Mediterranean Fleet left Malta, Messrs. Yerburgh and White accepted the invitation of Lord Charles Beresford to take a trip on H.M.S. *Ramilius*. Instead of enjoying the luxury of the Admiral's table, however, with a devotion to duty that was little less than heroic, the M.P.s decided to live upon Navy rations for a few days. As the squadron was supposed to be in a state of war, the hon. members were unable to augment the allowance with supplies from the canteen. They were presumed to be piped out to scrub decks at 5.30, but presumption in this respect was sufficient without the reality. But at 6.30 they were duly handed a pint of cocoa and piece of bread or biscuit. At 12 they had their allowance of salt "horse," salt "junk," soup and bully, or whatever was the fare for the day; and at four o'clock had their pint of tea and another chunk of bread and biscuit, and after that had to fast until half-past six the next morning.

Admiral Fisher got wind of what they were doing, and signalled chafing messages from the flagship. In response to his query as to how they liked it, they replied, "Both Mr. Arnold White and Mr. Yerburgh are rather hungry, and begin to hold strong opinions on the rations question, especially as the canteen is closed, this being war time." The Admiral signalled:—"As the preservation of the lives of Mr. Arnold White and Mr. Yerburgh is of supreme importance to the British Navy, and consequently to the preservation of the British Empire, the Commander-in-Chief is of opinion that they should be taken off their present low diet and released at once from holystoning decks and scrubbing canvas gear (which they have been presumably doing since 5 a.m. on a pint of cocoa and 1 1/2 lb. of biscuit), and sent on board the *Renown* to lunch with the Commander-in-Chief at 1 p.m."

"We are fasting, but firm," said the hon. gentlemen in reply, though they admitted that the prospect of a good lunch on the flagship was most alluring. Other good-humoured messages were exchanged, the Admiral congratulating the M.P.s on the courageous spirit that association with the Navy had developed in them.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

Dr. Inoue Tetsujirō has contributed a long article to the *Taiyō* entitled "Signs of Religious Change," in which the learned professor repeats what he has said elsewhere at still greater length. Dr. Inoue deplores the manner in which religious zealots dispute over points that in his, the doctor's, opinion are quite unimportant. He argues in favour of more union and thinks that even Christianity, Buddhism and Confucianism can find a common meeting place, and might with advantage sink all their differences. Since the leaders of thought among Christians, Buddhists and Confucianists have always thought otherwise and still continue to think so, it would perhaps serve no useful purpose to follow Dr. Inoue through pages of advice on this subject. It seems to us as it will to other readers of such articles that the difficulties of the real situation are not fully apprehended by the writer, and that he regards as feasible what centuries of history have proved to be practically impossible with human nature constituted as it is. Dr. Inoue discusses the recent troubles in China and their connection with Christianity. He thinks that the missionaries have not made a sufficient use of Confucianism as a basis for their own teaching. He says that the importance attached to 仁, benevolence, humanity, love, by Confucianism finds its counterpart in the love preached by Christianity, and that constant public recognition of this fact would go far to remove the hostility felt in China against a foreign creed. Dr. Inoue is of opinion that there is no essential difference between the Chinese conception of deity as expressed in the terms Jōtei (上帝), Tentei (天帝) and Ten (天) and the term God among Christians, and that hence those missionaries who have magnified what discrepancies there are between the Supreme Being as known to Christians and the Supreme Being as known to the Chinese have acted unwisely and created unnecessary hostility. The prejudice and narrow-mindedness of religious people in this twentieth century constitute a great hindrance to religious propagandism. It can only be removed by greater intellectual development among believers. Religious antipathy is stronger than race antipathy even. In the cruelties perpetrated by European troops in China both religious hostility and race hatred figured very conspicuously and the address of the German Emperor to the outgoing troops read like the language used by crusaders in old times. All this shows a deplorable state of ignorance, blindness and bigotry. The part played by our troops, continues Dr. Inoue, who are regarded by Europe as Pagans, formed a pleasing contrast to the doings of some of the Christian allies. Our men may be said to have acted out the Bushidō and to have shown its superiority to the principles on which Christian soldiers acted.

The tendency of the age is undoubtedly in the direction of abolishing all special creeds and of establishing spiritual principles that are valued by all earnest-minded persons. The spirit and feeling that lie at the root of real religion are the same everywhere and in all time. Those who possess these should unite on all occasions.

Of what will the religion of the future mainly consist? asks Dr. Inoue. Of morality chiefly, undoubtedly. The sanction for the morality practised will in every case be a subjective one. Though there can be no objection to rational religious ceremonies, they cannot be considered essential in any way to the efficacy of religion. Religion shows its power in its influence on life and conduct. Spiritual impulses are in the heart, and the man who has them acts differently from other men. That he should connect himself with the representatives of historical religious systems is quite unimportant. Neither do the professors of well-known creeds possess any advantage over such an individual. The sole value of religion is in its life and power over the mind of the person who possesses it. Whether the future creed of educated people shall be called morality or religion is a matter of little importance. It will certainly consist of the best elements of historical ethics and historical religion. Japan is in close

communication with the rest of the world and most of the old creeds have their advocates and representatives here. Let us make a judicious selection. Let us take what is worthy and superior from the various systems of religious thought with which we come into contact and construct something that shall suit current thought and the spiritual needs of the nation.

On the above subject a recent number of the *Tōkyō Maishū Shinshi*, expresses itself as follows: Dr. Inoue's proposal sounds plausible, but it is impracticable. A religion that shall suit philosophers like the learned doctor and at the same time be comprehensible to the middle school graduate or even to the unlearned artisan is by no means an easy thing to construct. The principle of taking what is common to all religions and rejecting what is distinctive is not one that can be safely followed. It is with religions as with so many other things, it is the particulars in which they differ from all sister creeds that make them so highly prized by those who accept them. To level down differences in order to obtain union is the way to produce something very insipid and very lifeless. Take the great systems of civilisation known as the Grecian, the Roman, the Hebrew and the Indian. Does not the highest value of each consist in those points on which it differs from other systems? It is the distinctive character which things bear that gives them a relish and a charm not found in the generalities which result from the process of paring and trimming recommended by Dr. Inoue. Religion is not a thing to be manufactured to order in any such fantastic fashion as is recommended by Dr. Inoue. The amalgamation proposed will never be effected. Christianity and Buddhism are both old creeds and there have been abundant opportunities for uniting them into one form of faith, but it has not been accomplished for reasons that it would take too long to state here, but which are apparent to everyone who has studied the creeds at all closely. Among the historical religions the one which shows the most life will prevail.

The *Kokumin Shimbun* publishes a report of the tenth general meeting of the Red Cross Society held at Ueno on July 9th and furnishes a short history of this prosperous association, from which we cull the following facts. The society began its work in this country 24 years ago, when Saigō Takamori was in arms against the Government. It was discovered at that time that the manner in which the wounded were treated on both sides was very brutal and, chiefly owing to the interest in the matter taken by Messrs. Sano Tsunetami, Ogyū Kō, and some others, a society bearing the name of the 博愛社, Hakuaisha, was formed which did excellent work among the wounded on both sides. After the war referred to above it was decided to turn the society into a permanent institution. In November, 1886, it formally joined the Red Cross Society of Europe and signified its allegiance to the conditions laid down in the Geneva Convention. In its very early days the Hakuaisha only had 38 members. In the year 1887 the membership was 2,193; but in the year 1897 it had increased to 455,638 and in June of this year the figures given are 758,321 and the money annually subscribed and realised by the society amounts to 2,500,000 yen. Its success is largely due to the munificence of the Imperial family, which dates from its inauguration. The Emperor contributed 1,000 yen to the Society in 1877. The Empress subscribed 300 yen a year from 1883 to 1886. When the Society adopted its new form in 1886, the Emperor and Empress gave 5,000 yen a year towards its expenses, and in 1888 endowed it with a capital of 100,000 yen and subscribed another 100,000 yen towards the erection of hospitals and the like. In 1889 their Imperial Majesties agreed to subscribe 5,000 yen a year for ten years towards the maintenance of hospitals and presented to the society 3,000 *tsubo* of land. Another 5,000 yen every year was subscribed for general expenses, and to this an annual sum of 4,500 for the special treatment of patients was added. Thus it is seen that the Society's pecuniary position to-day is principally owing to the magnificent manner in which it has

been treated by Royalty. As regards the work the Society has done, only one of the striking feats accomplished by it can be given here. During the China-Japan war in China and Korea it dealt with 64,445 cases; 38,022 patients were treated on board various ships. The need of properly equipped hospital ships was felt at this time and later on the society spent a million yen in the construction of two vessels of this class called the *Hakui Maru* and the *Kōsei Maru*, which did excellent service on the coast of China last year. The Red Cross Society is now by far the largest society in Japan and it does much to show foreign countries what is the prevailing sentiment in this country in regard to works of benevolence.

The *Tōkei Shūshi*, in order to show that the extent to which Buddhist teaching influences the lives of religious devotees, compiles a crime catalogue in which the sects to which the criminals belong are given. The following table shows the proportion of criminals in each sect:

	First Offences.	Second Offences.	Totals.
Tendai	112	75	187
Shingon	734	319	1,053
Jōdo	507	222	729
Rinzai	193	84	277
Sōtō	486	262	748
Obaku	—	—	—
Shin	1,557	898	2,455
Nichiren	782	708	1,490
Ji	1	1	2
Totals..	4,372	2,569	6,941

The next table gives the proportionate strength of each sect as regards number of temples, rectors and adherents and the proportion of criminals to the total number of believers:

Sects.	No. of Temples.	Rectors.	Parishes, etc.	Believers, as estimated.	No. of believers in charge of each rector.	Proportion of criminals per 1,000 believers.
Tendai ..	231	190	34,650	103,050	574	1.7
Shingon ..	502	303	84,300	252,900	643	4.1
Jōdo	511	449	70,650	229,950	512	3.1
Rinzai ..	242	197	36,300	108,900	552	2.5
Sōtō	386	325	57,000	137,700	534	4.3
Obaku ..	19	15	2,850	8,550	570	—
Shin	238	191	42,450	127,350	666	19.3
Nichiren ..	401	360	60,150	180,450	501	8.2
Ji	16	13	2,400	7,200	553	0.3
Totals..	2,651	2,133	397,650	1,156,950	—	—

According to the above table, comments the *Tōkei Shūshi*, the greatest number of believers under the charge of single rectors is found in the Shin sect and the fewest in the Obaku sect. The general rule seems to be that where the number supervised by single rectors is largest there the proportion of criminals is greatest. In the case of most of the sects the number of persons guilty of second offences is much less than those convicted of first offences, but in the case of the Nichiren the decrease is comparatively slight. There is little doubt that the standard of the Nichiren and the Shin adherents is considerably lower than that of the other sects and this to a great extent accounts for the amount of crime committed by them. Yet the fact remains that of all the sects the Shinshū is first in the matter of education and holding preaching services and in general activity. That notwithstanding this, their record is a very bad one as regards crime, is a phenomenon that needs explanation.

The *Fukun Shimpō* publishes a report of an address delivered in the Kojimachi Ichibancho Church by Mr. Kataoka Kenkichi, the President of the House of Representatives, of which the following is the gist:—Christians must show more decision in their intercourse with their fellow-men. There is no denying that in whatever society he may find himself the Japanese Christian can not altogether feel at ease. Is he a member of a political party, or a partner in a house of business? His presence is regarded as somewhat damping to the society he is in. But the Christian must be prepared to put up with this discomfort for the sake of the cause he is anxious to promote. If professing Christians will be always thinking of their own comfort and popularity they had better settle down to an ordinary worldly life and no longer give out that they have a higher ideal to follow.

than is set up by the majority of their fellow-men. Those who aim at becoming high-class gentlemen must expect to find themselves somewhat uncomfortable in certain circles. (*Hinkaku yoki shinshi taran to hosseba kanarazu kyūketsu no kanjuru ten naki wo yasu.*) Take the warrior of olden times. Did he not feel uncomfortable in the presence of ignorant peasants and money-grubbing traders? Was not the very sword that he wore nicknamed *kyūketsu-bō*? Was not the etiquette that the old *samurai* had to observe most elaborate and strict? Was not the whole code of morals and life known as the Bushido so difficult to perform that one sang of the *bushi* :—

*Toreba u shi;
Toraneba hilo no kazu narazu
Sutsukeki mono wa
Yumi-ya nari keri.*

"To become a warrior involves great anxiety, but not to become one spells obscurity. Is there anything that should be so resolutely rejected as the warrior's weapons"? And yet there were thousands of men who gloried in the thought that they were living a life above the level of the majority of their fellow-men. Can not we Christians show that we are actuated by the resolution of the warriors of the pre-Meiji era that gave us constitutional government and a number of other benefits? The age in which we live is one that calls for great sacrifices, great fortitude and boldness on the part of those who aim at raising the nation to a higher level. Chicken heartedness is not to be tolerated at such a time as this.

The *Tōkyō Maishū Shinshi* has an article entitled "Belief in a future state and this present life," in which the writer cites the fact that a great many books dealing with the immortality of the soul have appeared recently in England and America as a proof that there is a new interest in this subject among Anglo-Saxons generally. The writer then goes on to comment on the indifference of the Japanese mind to this subject and of the lukewarm attitude of many professing Christians to all questions connected with the future life. There are not a few that quote the words of Confucius, "I know not life, and how can I know death?" as a proof that nothing can be known about a future state of existence. But such sayings should not be allowed to prejudice people against inquiry. That Western belief in a future life has resulted in increased religious earnestness and in the practice of virtue in this life cannot be denied, and the failure of Japanese to recognise this should excite pity instead of calling for commendation as it usually does.

The following scraps of news appear in the columns of the *Tōkyō Maishū Shinshi* :—The decrease of Buddhist temples is said to be most marked. 188 years ago, that is in the 5th year of the Shōtoku period, there were 39,387 temples in Japan. According to an investigation made three years ago they had decreased to 71,947; even including those known as *hutsudō*, the number did not exceed 110,000. This means a decrease of about 1/3 in the course of 200 years.

The alliance between the Unitarians and what are called the New Buddhists has for some time past been very close. They preach in each other's places of worship and work hand in glove in a number of enterprises. There seems no reason why they should not unite and form one efficient body. This course they are strongly recommended to follow in some quarters.

In response to inquiries the following recent statistics bearing on the numerical strength of the five great Protestant Churches carrying on mission work in Japan have been published :—

Churches.	Societies Re- presented.	Branch Churches.	Members.	Money Subscribed last year. Yen.
Kumiai Kyōkai (Con- gregationalist)	1	72	10,578	31,809
Kirisuto Kyōkai (Pres- byterian)	7	71	10,847	27,633
Seikō-kai (Episcopal- ian)	5	80	7,976	11,233
Methodist Kyōkai	6	129	6,330	22,648
Baptist Kyōkai	2	29	2,101	2,665

* His trousers also were called *kyūketsu-bukuro*.
—(WRITER OF SUMMARY.)

The number of foreign missionaries attached to each body is given as follows :—Congregationalists, 62; Presbyterians, 156; Episcopalians, 256; Methodists, 152; Baptists, 64. In the Presbyterian membership statistics given above infants are included. How far this is the case with other churches is not stated.

The *Tōkyō Maishū Shinshi* writes on the great difficulty of instructing believers with the population constantly changing as it does in many places. It states that according to statistics published by the Kumiai Kyōkai last year, out of 10,214 members no less than 3,792 are marked as absent in the Church Rolls. The number of members given by the churches is out of proportion to the number of baptisms recorded. There is no doubt a great falling off, and in many cases entrance to a church is no sign of serious belief. The great want of the time is the devising of some means of instructing the hundreds of Christians who have been baptised on the strength of professed belief, but who have no adequate idea of what is required of a follower of Jesus Christ. The *Tōkyō Maishū Shinshi* lays stress on several points connected with this subject in the following terms. A very large number of professing Christians seems to us to be labouring under serious misapprehensions. (1) There are those who attach undue importance to the ceremonies of the church and attribute to them an efficacy which they do not possess. If it were true as the Catholics and others believe that baptism has the power of regenerating the heart and of insuring salvation to those to whom it is administered, then the receiving of subsequent instruction would become a matter of minor importance. We ascribe no such miraculous power to baptism, and can never regard entrance to the Church by its means as involving final salvation from all danger. Exclusive reliance on the efficacy of the church's rites is responsible for much indifference as to the necessity of receiving instruction from those who are qualified to teach. (2) There are again Christians who seem to think that deep religious faith can be obtained suddenly. They think to enter the innermost recesses of the kingdom of God at a leap (*hito-ashi tobi ni shinkō no takaki ni tasshi ubeshi to naru kotonari*). They fail to perceive that years of instruction and study are needed to enable the mind to get a firm hold of the truths of religion. (3) There are not a few Christians whose conception of the essence of religion is entirely mistaken. Some regard religion as consisting of intellectual assent to the Church's teaching concerning God, Christ, the future life, &c., and having given their assent to certain doctrines they are satisfied. Others are of opinion that religion consists principally of feeling. They say that the gospel is comforting to them, that to believe in Christ and future rewards makes them happy and there is nothing more that they need. These are evident misunderstandings of the real nature of religion, which, though it has intellectual and emotional elements, is chiefly concerned with will and conduct. A sanctified will, acting on the habits of daily life, produces what is called character, and it is in the formation of this character that real religion shows itself. For the production of men and women of superior character much instruction is needed.

† Abbe F. Ligneul's pen is still busy. Three short books recently published by this indefatigable missionary lie before us. The first is called *Bunmei no Bushi*, the second *Kemmei* (賢義), and the third *Seigi* (正義). In the preface to the first of these works M. Ligneul tells us that he regards the old Bushido as a good stock whereon to graft new ethical shoots. The following chapter headings will give some idea of the nature and scope of the book. (1) Bushidō to Yamato-

† The meaning is not that the warrior's life should be shunned, but that according to the dictates of ordinary human nature a life that requires so many sacrifices and so much self-denial would never be adopted. The words are evidently put into the mouth of an ordinary man of the world, whose ideal is somewhat low.—(WRITER OF SUMMARY.)

‡ These figures are certainly incorrect in several instances.—(WRITER OF SUMMARY.)

damashii. (2) Bushi to Jimmin. (3) The spirit of the Bushidō of the present time. (4) Utilitarianism and Morality. (5) Bushido and modern Japanese. (6) Bushidō and Civilisation. (7) The Japanese people and the spirit of progress or high aspiration. (8) Japanese power as recognised by the world. (9) The Bushido is the same in the East and the West. (10) The warrior spirit and Japanese young men. (11) Since there were *bushi* in old times, why should they not exist to-day? The two other books mentioned above form a part of a series of short works on philosophic ethics suited to the Japanese which M. Ligneul is preparing. Man's progress and civilisation, says M. Ligneul, have as their foundation five distinct qualities, namely: (1) Intelligence; (2) Integrity; (3) Courage; (4) Thrift, or a skilful use of means. Each of these topics M. Ligneul makes the subject of a short treatise, which for lucidity and conciseness leaves nothing to be desired. M. Ligneul's works are all to be obtained at the Sansai-sha, Kanda, and at other booksellers. They exist in a sufficient number to form a small library by themselves, more than thirty little volumes being already in circulation, which treat almost every subject connected in any way with religious belief and practice, including a discourse on Hell and the teaching of the Roman Catholic Church thereon.

Mr. Ukita Kazutami in the pages of the *Kyōiku Kōhō* has elaborated at great length his views on the requirements of the age as regards moral education. He has published no less than seven articles under the title *Trikoku Shugi no Kyōiku*. The gist of his argument stated in a few words, is that the nations which are committed to Imperialism possess certain moral qualities not possessed to the same extent by the Japanese, and that Japan's defect in this respect unless remedied by means of education will place her at a serious disadvantage in her competition with the West. This, as will be seen, is an essentially utilitarian argument. The moral qualities referred to are extremely useful, therefore they must be cultivated. But the same may be said of most of the moral teaching of various schools of thought. The quality of the results produced by any ethical system, including Christianity itself, is deemed a sufficient recommendation for it. We now proceed to give an outline of Mr. Ukita's long essay. The growth of Imperialism is no doubt to be attributed to a variety of causes, economic and moral. But one fact connected with it is worthy of note. The countries that aim at expansion are full of the spirit of independence and thorough believers in their own capabilities. They have educated themselves up to the position they expect to occupy in the world. Strong patriotism prevails among the expanding nations, and although "Love Your Enemies" is a motto found in their religious and moral text books, it is not observed in practice. But international law is universally respected among civilized countries, and it is agreed that whatever growth of national power takes place it shall be subject to certain conditions. The game of "take all you can" then has its rules and there are certain moral qualities and defects in the players that make some win and others lose. Of this game the nation as a whole is very ignorant. It is by judicious teaching that a new generation of competitors is to be formed. Speaking generally, our education hitherto has laid too great stress on submission and obedience, and has not encouraged the independent go-ahead spirit so prominent among successful western nations. And in putting his finger on this defect and devising steps to remedy it the late Mr. Fukuzawa showed great discernment. His "independence and self-esteem" doctrine is suited to the times and nothing that Dr. Inoue or anybody else says against it is worthy of confidence. Hitherto our education has consisted far too much of simply pumping knowledge into students without paying any attention to the development of the mind and the character. The whole system is nothing but the preparation of lads for certain examinations. When they have passed these and obtained degrees they are left to drift in whatever direction the currents near them happen to set in a pitiable, haphazard fashion. Things are not done in this way in a

country like England. There character is more highly thought of than mere intellectual sharpness. It was the father of Edward VII. who when distributing prizes at Wellington College many years ago, gave directions that the best prize was not to be given to the boy with the highest marks, but to the boy of the most exemplary character. England's success as a great colonising Power is no accidental affair, no matter of luck, as some would represent. It has its roots in the character of the people, and it is vain for us to try and imitate England without laying the foundation of character in our educational system that England possesses. We are not going to qualify ourselves for competition by the mere increase of schools and universities. A new system of ethics must be introduced, the ethics of freedom, of independence, and self-reliance. A certain pettiness of spirit that clings to us has to be got rid of. Mr. Fukuzawa recognised this. His articles on Count Katsu's action I thought very foolish. His interpretation of the teaching of the Bushido on this occasion was certainly wrong. But, on the other hand, I have no sympathy with Dr. Inoue's attack on Mr. Fukuzawa either on this or other points. If Mr. Fukuzawa erred on one side, Dr. Inoue erred still more on another. His raid against the Mita ethics is nothing but conservative prejudice. It is on the establishment of the principles that Mr. Fukuzawa insisted on that the whole future progress of the nation depends. And what Dr. Inoue has written on this subject is flippant, shallow and irrelevant. To represent the Bushido as teaching mere submission is to show a misconception of its real character. Though the writers of this school did not make use of the terms *dokuritu* and *jison* (independence and self-respect), that the spirit which actuated them and their many followers was no other than this is apparent to anybody who has the power to look beneath the surface of things. That the warriors under the Tokugawa regime should for 250 years have been controlled without the application of any elaborate penal laws shows the spirit of that code of honour which controlled all their actions. Every true *samurai* was brimming over with self-respect and independence of spirit, and when either of these was threatened he quietly died by his own hand. This was no such slavish submission to the will of others as is preached by narrow-minded Japanese patriots, but a conscientious conviction that to each individual there is a path of duty and honour which may not be deviated from even an inch; that loyalty to it is the only loyalty worthy of the name. . . . I am an advocate of enlarging the scope of the Bushido, so as to make it suit the requirements of the age. The Imperial University has become far too exclusive an institution. Its connection with the material and moral welfare of the nation is too remote. It has developed into a mere academy of learning. Its scholars do not mix with the world and make their influence felt as they might do. I am in favour of popularising the Universities and making them more subservient to the great aims of the nation. In our schools I should like to see religion introduced freely. Religious tolerance should be taught as well as race tolerance. In a word our educational system needs broadening, so as to make it cosmopolitan as well as national, and we should aim at not only receiving benefits from foreigners but of conferring them. It is a good thing for a nation to realise that it has something to impart to those to whom it is indebted for many benefits. To respect ourselves and respect others, this is the spirit we should inculcate.

NIRVANA.

We talk and work, we come and go;
And, then, the close of all we do
Is gentle Sleep.

We gather up some little store;
Yet, when 'tis ours, we want no more
Than dreamless Sleep.

We praise and blame, we smile and frown,
Then all our weary lives sink down
In endless Sleep. *The Academy,*

AMERICAN TOPICS.

American and Danish capitalists propose to start a direct steamship line from Christiania and Copenhagen to Chicago.

Lieutenant Gillespie, who was twice breveted for gallantry in the Philippines, is named as the probable successor to the late Mr. Adalbert Hay's Consulship at Pretoria when Mr. McKinley resolves to fill it. The salary, it is said, will be doubled, as an inducement to Lieutenant Gillespie.

The U.S. State Department has received the amount of the American indemnity for the claims against Turkey, \$95,000, through the American Legation at Constantinople. These claims are principally based on losses suffered by the American missionary and educational institutions in Turkey, notably those at Harpoot and Marash, but there are a number of individual claims, such, for instance, as that of the family of the unfortunate cyclist, Lenz, the Pittsburg man who was killed by Turkish soldiers while attempting to go around the globe on his wheel.

Chicago broke all its traditional heat records on July 10th. The thermometer went higher than before in the twenty-nine years' history of the official Weather Bureau, and the city sizzled and burned under the oppressive heat. One hundred and two degrees and a fraction over was the high point reached. The big books in the weather tower have only one other record which deserves to compare with this. Back in 1887, on July 16th, the register showed 100 degrees. Before and since then until July 10th last, and going back to 1872, there were just nine days in all the years when it was as high as 98.

It was revealed at the annual meeting of the stockholders of the New York City and Suburban Homes Company that this organization, while being in purpose and result charitable, is in fact founded on business principles. The company builds and rents model tenement houses, its idea being to make a beginning, at least, toward mitigation of the evils of tenement house living and at the same time to earn a fair interest on the money put out. The report of the company for the year showed that it has now more than \$2,000,000 invested and that it is able to earn and pay dividends of 4 per cent. after allowing for all expenses in the way of interest and taxes and proper charges for depreciation.

Arrangements which have a great deal of importance for the wholesale grocery trade, and which excite much attention in the Pacific northwest, are now in progress in relation to the salmon-canning industry of the Pacific coast. It is proposed to combine under one organization something like thirty concerns engaged in this industry in the Pacific states and the territory of Alaska. The new company will be known as the Pacific Packing and Navigation Company, and will have an authorized capital of \$25,000,000. There will be issued, however, only \$6,500,000 each of common and preferred shares, together with about \$3,000,000 6 per cent. debentures, or a total capitalization of \$16,000,000.

Whenever the United States are prosperous immigration is active. Nearly, if not quite, double the number of immigrants are coming to the United States now than came in 1898. For the fiscal year ending June 30, 1898, the total number of immigrants was 229,233. Last year's record showed an influx of 448,572 new-comers. The figures for the fiscal year ending with the close of last June are not yet out, in all probability they will exceed those of the fiscal year of 1900, as 435,319 reached U.S. shores from abroad during the eleven months ending with the close of May. Over one-half of that number came from Austria-Hungary and Italy, the former contributing 101,510 to the population and the latter 119,544.

Vessels built in the United States and officially numbered by the Bureau of Navigation of the Treasury Department during the fiscal year ended June 30, number 1,173 of 401,265 gross tons,

compared with 1,058 of 305,677 gross tons for the previous fiscal year. The whole tonnage built has been exceeded only twice in the States—in 1854 and in 1855—when the maximum, 583,550 tons, was attained. Geographically, vessels were built as follows: Atlantic coast 739, of 109,948 tons; great lakes 105, of 153,138 tons; Pacific coast 151, of 46,105 tons, and western rivers 182, of 11,094 tons. Increase over last year on great lakes 53,362 tons, Atlantic coast 30,372 tons. During the calendar year 1900 Great Britain launched 664 steel steamers of 1,432,600 tons and Germany completed 63 of 213,984 tons, nearly all of which were for ocean trade.

With the mustering out of the three regiments at the Presidio in San Francisco, the volunteer army raised after the war with Spain, under the act of March, 1899, turns in its colours and passes into history. It was a comparatively small force, its maximum being 35,000, but it was gallant and effective in its services in the Philippines. The prophets of pessimism said that half of the volunteers would never come home, save in their coffins. But the climate of the Philippines did not have such terrible effect on the stamina of the volunteers as these prophets predicted. The very forty-third regiment which did a great deal of "hiking," fighting, and sweltering, lost only sixty-nine officers and men from all causes out of the 1,300 it took to the Philippines. With the mustering out of the last of the volunteer regiments our military establishment is almost thirty thousand smaller than it was a year ago, which does not look much like militarism.—*Transcript.*

At the annual meeting of the Ebbw Vale Steel, Iron, and Coal Company, the Chairman said American competition in the steel and iron trade had during the year been exceedingly severe and distinctly aggressive. The Americans, with their protective duties, could well afford to send their surplus stock abroad and sell it either at cost or at considerable loss. Technical instruction and the use of labour-saving appliances were suggested as remedies, but when the thing came to be placed upon its fundamental basis it would be proved that it was the American tariff which stood between English manufacturers and their competition with America on a fair and equal footing. Another danger menacing the iron and steel trade was the colossal combination on the other side of the Atlantic known as the Billion Dollar Trust. Its undoubted if not its avowed object was to dominate the steel trade of America, and to control that of the rest of the world. A retaliatory import duty on finished steel might be adopted.

Senor Federico Errazuriz, President of Chile, who had been in feeble health for more than a year, is dead. Dr. Federico Errazuriz was born at Santiago in 1850. He studied for the law and took his degree in 1873, but having little taste for the legal profession, and possessing large estates, he devoted his attention principally to improvements in agriculture. In 1876 he was elected Deputy to Congress for the Department of Constitucion, and, being re-elected in 1879, continued to represent that department until 1889, when he was chosen as Senator for the Province of Maule. Ten years ago when the conflict between the late President Balmaceda and the Congress assumed alarming proportions, Senor Belisario Prats was summoned by the President to organize a Ministry, and to Errazuriz was confided the difficult and ungrateful post of Minister of War. In this capacity he displayed remarkable tact and energy. In 1891 Senor Prats' Ministry resigned, and when the revolution broke out soon afterward Errazuriz at once declared himself on the side of the revolutionary party. When the contest ended in favour of Congress he took the foremost part in proclaiming the necessity of a policy of "forget and forgive." He election as President in June, 1896, proved popular with all classes of Chileans, and his watchword of "Peace and Progress" met with general respect. He is the second member of his family to be President of Chile, as his father held similar office from 1871 to 1875.

"Never in the history of American colleges,"

observes the *Chicago Record-Herald*, "have they experienced such a shower of benefactions as in the month that has just closed"; and it goes on to prove its statement by giving the following list of benefactions announced at recent commencements:

Washington University, St. Louis	\$5,000,000
Brown	2,000,000
Yale	1,667,000
Harvard	1,462,075
Syracuse University	533,000
Beloit	350,000
Princeton	320,000
Cornell	310,000
Columbia	231,507
Miliken University	150,000
Vassar	120,000
Smith College	101,000
Teachers' College	100,000
Williams	80,000
Kenyon College	50,000
University of Illinois	50,000
Fargo College	50,000
Whitman College, Washington	50,000
McKendree College, Lebanon, Ill.	50,000
Lafayette	30,000
Bethany College, Lindsborg, Kans.	25,000
Fairmount College, Wichita, Kans.	25,000
Drury College, Springfield, Mo.	25,000
Tuskegee	25,000
Middlebury	12,500

Total\$12,817,082

EUROPEAN TOPICS.

The find of "gold" at Leith is now stated to be what is called golden mica, a mineral so called because of its resemblance in colour and lustre to the precious metal.

The United States Consul-General at Frankfurt reports, says the *Board of Trade Journal*, that the Russian Government has decided to remodel the harbour works at St. Petersburg and Cronstadt, to conform with modern requirements. The Consul-General adds that it is also contemplated to separate the naval from the commercial harbour. Cronstadt will become a naval port only, and will be closed to merchant vessels, while St. Petersburg will be the commercial harbour. On the Black Sea, the commercial harbour at Sebastopol will be removed to Feodosia.

Barrow-in-Furness, states the *Liverpool Mercury*, is emulating Darlington in placing on a pedestal what was up to last year the oldest working locomotive in England. It is one of the old "copper-nobs," and was built for the Barrow-in-Furness Railway Company by Messrs. Bury, Curtis, and Kennedy, of Liverpool, in 1846. It worked 54 years on the Furness Railway Company—first of all as a passenger and goods engine, and in later years for shunting purposes. It is now being erected outside the Central Station at Barrow, where it will be protected from the weather by an ornamental iron and glass covering.

Some time ago a Russian officer, stationed in Helsingfors, declared at a dinner party in St. Petersburg that the Finns were a most curious people. "We—the Russians—have tried various means to provoke disturbances, but all in vain." The host, himself a Russian, appealed to his guest whether he did not think that, after making such a statement, the company would be better pleased if he would kindly retire. This incident, says the *Finland Bulletin*, illustrates the two sides of Russian life and character—the cynical attitude of a certain clique on the one hand, and on the other hand the intolerance of such sentiments in decent Russian society.

The youthful king of Spain has witnessed his first bullfight. Describing the scene, the Madrid correspondent of the *Gaulois* says the toreros engaged were of the highest renown, and included the celebrated Mazzantini, who made a welcome reappearance after a retirement of several months. Eight bulls were slaughtered, and as each was about to be killed, the matadors addressed according to custom, a short speech to the president of the arena, who, in this instance, of course, was the King. Mazzantini, in his address, admirably summed up the sentiments of the vast concourse

of spectators, when he trusted that the reign of the King would be prosperous and happy. His Majesty subsequently presented each of the matadors with a gold cigar case set with jewels, that of Mazzantini, "premier epee," being of especial value and beauty.

In the House of Commons on July 15th the Financial Secretary to the Treasury, detailing the progress of the Pacific cable, said that several sectional cable houses already have been constructed or were being erected at the various places. The survey had been sufficiently completed over 100 miles of the proposed route, and the manufacture of the cable would begin that week. Mr. Chamberlain said landing sites had been selected on Queensland, New Zealand, Norfolk island and at Vancouver, and that the cable board was satisfied as to the ability of the contractors to complete the work by the end of 1902.

Prince Edward of Cornwall and York appears to be a born orator. We read in the *Woman at Home* that a children's party was held in the neighbourhood of Sandringham, at which he was present, and during the course of the evening the hostess, to his delight, bestowed a toy sword upon her little guest. "You must thank her very nicely for your present," said the Duke of York, who was standing by. To everyone's surprise, the little Prince mounted upon a chair and gave forth gravely, "Ladies and gentlemen, I thank you very much for my beautiful sword: I shall always value it and always wear it." The Duke, who himself dislikes nothing so much as to make a speech, burst into a hearty laugh. "Little wretch!" he exclaimed, "Why, he speaks better than I do!"

Lord Kitchener, who has just entered on his fifty-second year, has been connected with the British Army for exactly thirty years. After he joined the Royal Engineers he was engaged for a number of years on useful but unexciting work on the Palestine Exploration Staff, and on the survey of Cyprus. He made his first acquaintance in Egypt in 1882. Lord Kitchener, who has contributed to *Blackwood's Magazine*, and has a partiality for the works of the late Sir Walter Besant, who was an old friend, has never in his career made a speech of any length. Oxford and Edinburgh conferred academic honours on the South African Commander-in-Chief when Sirdar, and in November, 1898, along with the Marquis of Dufferin, he received the freedom of the Scottish capital; these honours he acknowledged in a few sentences.

Mr. Austin Dobson resigned on July 15th the post of principal of the harbour and fisheries department of the Board of Trade and retired from the civil service. He entered the Board of Trade in 1856 and had been in continuous service forty-five years. He is entitled under the rules of the department to a pension for the remainder of his life. Mr. Arthur Balfour has interested himself in obtaining for Mr. Dobson an additional pension from the Crown "for his distinguished services to literature and his eminence as a poet." This second pension amounts to £250, being equal in amount to the one granted to Matthew Arnold. This is the first pension from the Crown given during the present reign for literary services, and is a well-deserved honour and reward.

The first meeting of the trustees of the Carnegie fund was held in Edinburgh on July 15th. Lord Elgin, who presided, read a letter from Mr. Andrew Carnegie announcing that he had signed the deed placing \$10,000,000 at the disposal of the trustees. "Although the dividends on the stocks will not be available until autumn," says Carnegie, in the course of the communication. "I have made arrangements for the payment of scholars' fees from the beginning of the next university term. I believe the conditions of the gift insure a sufficient standard of merit, and I hope the honest pride by which my countrymen are distinguished will prevent claims from those who do not need assistance. To further mark my personal belief as to this matter, I have arranged that the trustees may receive funds

from others to be administered along with my donation. I believe this to be a valuable clause, since my experience with young men indicates that men are glad of the opportunity later in life to repay advances thus received, although these are free gifts. I hope the trustees will gladly receive any such contributions and that this will foster the spirit of manly independence so dear to the Scot.

Three years ago the Wesleyan Methodists of England undertook to raise one million guineas as "a thank-offering for the blessings they had received as individuals and as a Church." It was a big undertaking, but it seems likely to be carried to a successful conclusion. We gather from the *Methodist Times* that the amount actually paid or definitely promised to date is £846,874 7s. That, as our contemporary says, is an enormous sum, and if no more were got, it would be the largest special amount ever raised in so short a time by any Christian Church. But the fund must be closed at the end of the year, and a bold effort is to be made by the Methodists to get in the £150,000 odd still required to complete the million. No doubt it will be got, and this particular Twentieth Century Fund will be brought to a triumphant close and will rank as in its way an unparalleled enterprise. It is certainly a most striking example of what voluntary effort can accomplish, and is not without its lessons.

The much discussed meeting of Liberals called by Sir Henry Campbell-Bannerman, the Liberal leader in the House of Commons, with the object of ascertaining whether he still retains the confidence of the party, was held at the Reform Club, London, on July 9th and resulted in the adoption of a vote of confidence in the leader of the party. All factions of the Liberals attended. The Liberal-Imperialists, headed by Mr. H. H. Asquith, were there almost to a man, but Sir Henry Campbell-Bannerman and Sir William Vernon Harcourt were the only two who received any marked recognition on entering. The crowd watched the arrivals and greeted them with cries of "How's your friend Kruger?" The Imperialists said that they would not be associated with any anti-national policy, but the gathering was harmonious and seems to have resulted in a temporary clearing of the air. In the course of his speech Sir Henry Campbell-Bannerman met the Imperialists so far as to say the war must be brought to a victorious conclusion, but he thought the Liberals ought to insist on amnesty in the settlement. While the country had the sword in one hand, it ought to have the olive branch in the other and show a disposition to come to terms with an enemy that had fought so bravely. Mr. Asquith expressed the highest appreciation of the qualities of Sir Henry Campbell-Bannerman, but at the same time he regretted that the Liberal leader in the House had not been more outspoken in a policy of honest difference. Mr. Asquith then supported the resolution of confidence in Sir Henry Campbell-Bannerman.

A QUARANTINE EXPERT.

Among the passengers on the steamer *Nippon Maru* was Dr. J. J. Kinyoun, Federal quarantine officer at San Francisco. Dr. Kinyoun, in the course of an interview at Honolulu, said:—

I am on a long journey. I expect to visit Japan, China, the Philippines, and possibly India. It is my mission to study in all these countries the various diseases against which it is desirable to establish quarantine regulations. No one so well understands the handling of a disease as the natives of a country in which that disease is at times epidemic. While, of course, I will pay particular attention to the plague I should also spend much time investigating other diseases and the handling thereof.

I shall go first to Japan. The Japanese are well up in the matter of handling contagious diseases and much can be gained by a study of their methods. From Japan I will go to China and from that country I will go to the Philippines, where I expect to find a great deal to engage my time. Not only is there the plague in the Philippines, to a great extent, but, in that country, there is a form of dysentery which calls for especial attention on the part of the quarantine authorities of the United States.

THE MITCHELL ASSAULT CASE.

A Japanese stoker named Shirozawa Fusahei, formerly employed on the Toyo Kisen Kaisha's liner *Nippon Maru*, who was accused of assault on Mr. William Mitchell, Chief Engineer of that vessel, was sentenced on Wednesday in the Yokohama Chiho Saibansho to six months' major confinement. The trial took place before Judge Kano and Associate Judges Ianno and Mabuchi. Procurator Sudzuki conducted the prosecution. The reasons appended to the judgment showed that the accused had knocked against Mr. Mitchell with a box which he was carrying on his shoulder, that Mr. Mitchell fell, and on rising struck the stoker, who then bit his foot and arm.

YACHTING.

The racing on Saturday consisted of contests for the 17-raters and the 12-raters. It may as well be said at once that the latter was by far the more interesting of the two, though in the larger class the handicaps made the awarding of the prizes rather close.

Wettinge, as soon as the boats came on a wind outside the harbour entrance, began to draw out a lead; she was first by a long way at the Mandarin Bluff mark, at the Breakwater mark, and at the Lightship and had opened up a tremendous gap at the harbour entrance. *Wettinge* adhered to the time-honoured fashion of beating up under the Breakwater. *Devonia* stood out into the harbour and apparently profited by the move, another instance of the vagaries of flood tides in the harbour. The times were:

	Finish. h.m.s.		Finish. h.m.s.
<i>Wettinge</i>	4.09.55	<i>Edair</i>	4.20.55
<i>Benito</i>	4.19.38	<i>Devonia</i>	4.19.15

Benito thus wins the first prize on handicap and *Wettinge* the second prize on club time allowance. *Wettinge* also takes two record points and *Devonia* one. This, however, is subject to a protest by *Devonia* that *Wettinge* had not left her moorings when the first gun was fired.

Five 12-raters started but one gave up in difficulties and came home. There was a southerly breeze of sufficient strength to tease the boats and gybing was at times quite an adventurous process, especially for the only one that sailed single handed *Madelaine* (Mr. S. Kuhn). By twice tacking up to the pier the latter did so well that on the finish of the second leg she headed *Titania*, and a close race ensued over the remaining leg. Kuhn pursued his former tactics but W. Carst hung on to him and in the result after some frantic tacking at the barge *Titania* finished a mere couple of feet ahead of Kuhn, who worked his boat most creditably. The times:

	h.m.s.		h.m.s.
<i>Vero</i>	3.43.10	<i>Madelaine</i>	3.40.51
<i>Lorna Deane</i> ...	3.43.50	<i>Titania</i>	3.40.50

NEWS OF THE WEEK.

England won the Elcho Challenge Shield at Bisley this year.

Mr. Arnot Reid, late of the *Strait Times*, has died in Scotland.

The *Malay Mail* hears that Mr. Gilbert Whyte has resigned the managership of the Raub mines.

The Japanese training cruisers *Itsukushima* and *Hashidate* arrived at Hakodate on the evening of the 5th inst. from Otaru.

Remarkable marksmanship took place at Bisley on July 13th, when 25 highest possibles were made in the *Daily Graphic* competition.

Sakurai Sennosuke (73) living at Nishi Hirayama-cho, Yokohama, was run over by a train near Hirato-bashi, Tobe-machi, on the morning of the 7th inst.

The Yokohama Waterworks authorities have intimated that they will further suspend the supply of water between 8 a.m. and 5 p.m. daily from Sunday until further notice, owing to the in-

sufficiency of the reservoirs. The water had already been similarly cut off for the week ending on Saturday.

Mr. Minakami Hiromi, Superintendent of Yokohama Custom House, will leave for Yechigo on the 5th instant, on a visit of inspection of the kerosene oil fields.

Further news is to hand of the phenomenal wheat crop in Manitoba. The farmers there require 20,000 men to get in the harvest and are offering high wages for them.

A burglar entered the residence of Count Mayeda, at Shinsakamotocho, Shitaya, Tokyo, on the night of the 31st ult. and stole two gold watches valued at yen 400.

A gas engine exploded in the machine factory kept by Kanegaku Taijiri, at Shikoku-machi, Mita, Tokyo, on Wednesday morning. A workman named Nagai Sengi was badly injured.

Ito Haruhiro, a pick-pocket, living at Tobe, Yokohama, was arrested by the police on a charge of stealing a gold watch while travelling on a tram at near Uyeno on the 6th inst.

Suzuki Masazo, third son of Masaki, living at Hatsunecho Ota, Yokohama, confessed to the Tobe police on the morning of the 6th inst. that he set fire to his father's house the previous night.

Kato Shima, a fencing teacher of Azabu Police station, while fencing with a student at Viscount Watanabe's residence at Nakacho, on the afternoon of the 5th inst., fell down and died suddenly.

A man named Takanashi Hyoyemon, belonging to Chiba Prefecture, had a valuable tobacco pouch and a gold watch valued at yen 500 stolen from him at the Toryukan Hotel, Oiso, on the morning of the 9th instant.

The libel suit brought by Mr. J. H. Ranger against Mr. P. B. Clarke, in connection with the management of The Maples, Ltd., was fixed to take place on Thursday but on the application of defendant's Counsel, Mr. Sato, was postponed to the 10th.

Fire broke out in a dry-goods shop occupied by Kawabe Tomijiro, at Minami Shinagawa, Tokyo, early on the morning of the 7th inst. An employee named Tomekichi was burnt to death and his corpse was found between some boxes upstairs.

Messrs. J. Helm and R. Ward had a bicycle race on Friday evening at the Cricket Ground for a real Panama hat. Mr. Helm only covered two out of the three laps constituting the course and so Mr. Ward won triumphantly.

We have to acknowledge receipt, from the local Agent, of a copy of the one hundred and twenty-first half-yearly report of the P. & O. Steam Navigation Co., the main features of which we have already reproduced.

Shinkawa Kametaro, a native of Nara, was arrested by the police on the morning of the 5th inst. on a charge of stealing two important books from a room of Viscount Kuroda's residence at Kogaicho, Azabu, Tokyo, on the 3rd inst.

In the Yokohama Ku Saibansho on Saturday morning, probate was heard of the will of the late Mr. Arthur O. Gay, of Messrs. Walsh, Hall & Co., No. 2-B, Yamashitacho, Yokohama. Witnesses were examined but the proceedings were conducted *in camera*.

A farmer named Hatsushiba Jihei, living at Yamabe-mura, Sambu-gori, Kazusa, murdered his younger brother named Heisuke on the night of the 30th ult. by cutting his neck with an axe. He then attempted to hang himself but was arrested before he could succeed.

Matsumoto Kichitaro and Yasutaro, rich farmers living at Nakamura, Minami Kawachigori, Osaka, have arrested by the Osaka Local Court, charged on suspicion with attempting to kill their eldest brother Yoshitaro on the night of the 31st ult.

Poison was administered, but the man recovered after medical treatment. The men had quarrelled about their inheritance.

A telegram to the *Osaka Mainichi* from London says that the British Naval manoeuvres have shown the existence of inadequate provisioning arrangements. The same paper also hears that an eminent French tactician has pronounced the submarine boat an efficient defensive weapon.

In consequence of the death of the Empress Frederick, the men-of-war in Yokohama harbour half-masted their flags on Wednesday morning, the British cruiser *Pique* also hoisting the German ensign at half-mast. Both the *Pique* and the German flagship *Furst Bismarck* fired minute guns.

Namura Takeo (16) living at Kami Rokubanchō, Tokyo, fought a duel with another man named Yano Tomoe (18) living at Shimo Nihanchō, in front of the British Legation on the night of March 27th and killed him. The Tokyo Criminal Court on the morning of the 6th inst. passed sentence of one year's imprisonment with hard labour.

A telegram received by the *Fiji Shimpō* from Chiba Prefecture on the 7th inst. states that a riotous disturbance took place at Ichihara-mura, Ichihara-gori, in the same prefecture, that day. The mob attacked a land-owner's house and burnt it down; the people then destroyed the crops in the fields.

The N. Y. K. steamer *Hiroshima Maru*, which had been quarantined at Keelung for a week owing to the outbreak of plague on board, arrived at Yokohama on the 3rd inst. The quarantine authorities, however, deeming further disinfection of the steamer necessary, ordered her to proceed to Nagaura on Thursday morning.

At a meeting held on July 18th, the Chairman of the Eastern Telegraph Company, Sir John Barry, announced that in conjunction with the post office authorities the directors of the company were formulating a scheme to enable the public, by means of a code, to cable to the Far East for about one penny a word.

It has been announced in Berlin that the German government has definitely abandoned its plan to establish a bureau of commercial information as an imperial institution, but it is willing to advance money for a private bureau of this nature. Four commercial attaches will soon be sent to the German consulates at Sydney, Shanghai or Yokohama, and two to European cities.

The full-rigged ship *Commodore T. H. Allen*, outward bound with 8,000 cases of oil for Hong-kong, was discovered to be aground and on fire just outside of Sandy Hook on July 18th. Word was telegraphed to New York and a number of tugs and fireboats went to her assistance. She was later pulled off, towed inside the Hook and anchored near the shore. Late at night she sank in seven fathoms of water.

The Russian battleship *Imperator Alexander III*, at the launch of which two naval officers were killed and three injured by the falling of a flag-staff, was begun on Sept. 5th, 1899, and her dimensions, etc., are:—Length over all, 398 ft.; between perpendiculars, 376 ft.; beam, 76 ft.; mean draught, 26 ft.; displacement, 13,516 tons; engines, 15,800 I.H.P.; capacity of coal bunkers, 1,250 tons; speed, 18 knots.

The first boat races of the Nippon Butoku Kai took place on Biwa Lake on the morning of the 3rd inst. The following were present:—Mr. Oura Kenbu, Superintendent of the Metropolitan Police; Mr. Kinoshita, president of the Kyoto University; Viscount Watanabe Noboru, H.E. Kawashima Jun, Governor of Shiga; Captain Shimamura, and several teachers and students of various schools numbering altogether 300 persons.

Several hundred farmers of Arai-mura, Banshu, attacked a paper mill belonging to the Mitsu Bishi Company in the same village on the 6th inst. Several workmen of the mill were injured.

The Company recently removed the paper mill from Sannomiya, Kobe, to the Komogawa and the waste water from the boilers was poured into the stream which flows between Arai-mura and Takasago. This angered the farmers who used the water for their farms.

It is a somewhat curious circumstance, notes the *L. and C. Express*, that Sir Claude MacDonald and Count Cassini, who had many a diplomatic tussle in Peking, should be fellow passengers on the same vessel from New York. Sir Claude and Lady MacDonald were homeward bound on leave from Tokyo, and Count Cassini was proceeding to St. Petersburg to consult his Government on commercial differences between the United States and Russia.

The Norddeutscher Lloyd Company have just ordered six large steamers to be built in German yards. The Vulkan Company, of Stettin, will be commissioned to build two steamers to be christened *Gneisenau* and *Schleswig*, two steamers named *Roon* and *Scharnhorst* will be built at Geestemuende, and the Schichau yard of Dantzig will build the *Zieten* and *Seydlitz*. All the ships will be twin screws of from seven to eight thousand registered tonnage.

A statement prepared at the U.S. Internal Revenue Bureau shows that the total receipts from the War Revenue act from July 13, 1898, the date the act went into effect, to May 31, 1901, amounted to \$310,053,363, as follows: Schedule A (documentary stamps), \$108,722,674; schedule B (proprietary stamps), \$13,922,138; beer, \$97,117,971; special taxes, \$14,095,636; tobacco, \$47,274,780; snuff, \$2,697,818; cigars, \$9,180,027; cigarettes, \$3,818,991; legacies, \$8,966,420; excise tax, \$2,652,982; mixed flour, \$21,536; additional taxes on beer and tobacco, \$982,385.

Sir Thomas Lipton said on July 16th, that the results of the trials between the two *Shamrocks* in the Firth of Clyde had given him every confidence in the challenger and had undoubtedly stamped the challenger as the fastest yacht on the English side of the water. Sir Thomas said he thought the *Shamrock II* was able to beat the *Shamrock I* by eight minutes in a thirty-mile course, and he therefore believed she had a good prospect of success against her American competitor. Mr. Watson said the challenger had done all he expected of her. The *Shamrock II* was to sail for New York on July 25th.

In the Yokohama Ku Saibansho on Aug. 6th judgment was given by Judge Tanuma for defendant in the suit brought by the Singer Sewing Machine Manufacturing Co. against Yendo Fuji. As may be remembered, this case arose out of the attachment of property belonging to a Frenchman named Eugene on the application of the defendant in this case. Plaintiffs prayed the Court for a release of the attachment on the sewing machine, which they alleged had been lent by them to Eugene on the hire-purchase system, and therefore should not have been included in the attachment. The Court dismissed the petition.

Count Gabriel Kepezev, a first lieutenant in one of the Hussar regiments, says a dispatch to the *Daily Mail* from Budapest, has been formally degraded in Szegedin before the whole regiment. He made a bet that he would cut off the right ear of one of his best friends, Caspar Kanyo, with his sabre. He then approached the unsuspecting Kanyo and slashed off the ear. Kanyo shot at Kepezev with his revolver, but missed him. Then, turning to the mirror and seeing himself without the ear, he turned his revolver against himself and fell dead. The colonel in degrading Kepezev warned the officers of the regiment against debauchery and drunkenness.

A remarkably able and significant letter from the Dean of Ripon appears in *The Times* on the English birth-rate. It is a startling fact—as his statistics prove—that it is declining there at a much quicker rate than in France. Last year only 29 children were born per 1,000, as against 35 in 1875—a loss of 249,900 children for each year. Though the excess of births over deaths in Eng-

land was 8.5 greater than in France at that time, it is now only 6.8. We notice the loss less because the death-rate has decreased and immigration has increased. The Dean of Ripon makes it an affair of conscience, and, while referring to the important moral side of family life, appeals to the nation against this diminution in the numbers of our race.

A terrible accident occurred at a festival which was being held at Mutsui-mura, Koza-gori, near Fujisawa, on the night of the 4th inst. The grounds of the Suwa shrine are thrown open to the public on the 3rd and 4th August every year and theatrical performances dealing with subjects of history, the ancient gods, etc. take place. In the evening kerosene oil lamps slung on bamboo poles are used to illuminate the place. One of these lights going out, a man started to replenish the oil, but as he was doing so, the lamp exploded setting fire to the kerosene tin he was holding. The man's hands were burnt, and he immediately threw the tin down among the crowd, with disastrous effects. Three boys were burnt to death and thirteen badly injured.

The following have been elected officers of the Nippon Red Cross Society:—President: Count Sano Tsunetami; Vice-Presidents: Viscount Okyu Tsune and Baron Hanabusa Yoshitada; Directors: Baron Ozawa Takeo, Viscounts Matsudaira Josho, Nagasaki Shogo, Shimizu Shitoshi, Hirayama Narinobu, Kuroda Tsunashiko, and Sawa Sei; Members of Committees: Viscount Yenomoto Buyo, Barons Shibusawa Yeichi, Ishiguro Tadanao, Suematsu Kencho, Hashimoto Tsunatsune, Marquis Nabeshima Chokudai, Mr. Tomita Tetsunosuke, Marquis Kuroda Naganori, Mr. Shimaji Mokurai, Baron Suzuki Daisuke, Baron Matsudaira Masanao, Mr. Ariga Choyu, Count Kujozume Kakyō, Mr. Homma Kiyoo, Mr. Yamakami Kaneyoshi, Mr. Kasawara Mitsuo, Mr. Saneyoshi Yasuzumi, Mr. Omori Shoichi, Count Matsudaira Naosuke, and Mr. Tokugawa Kaiin.

The through train between Shimbashi and Kobe, leaving the former station at 12.30 p.m. was changed to start at 12.20 p.m. after August 1st, running at an increased speed, so that it may reach Kobe about an hour earlier than heretofore, and be connected with the express train on the Sanyo Railway, which proceeds to Ikan leaving Kyoto at 6 a.m. Passengers desiring to undertake a direct journey from Tokyo to Kiushiu will therefore find it much more convenient to avail themselves of the above than to take the train leaving Shimbashi at 6 p.m. Changes have also been made in the time table for the Shimbashi-Yokohama trains as follows:

Down trains leaving Shimbashi	
Former Schedule.	Altered.
12 noon	11.50 a.m.
12.30 p.m.	12.20 a.m.
1.10 p.m.	1.00 p.m.
3.00 p.m.	2.50 p.m.
Up Trains.	
12.20 p.m.	12.15 p.m.

CORRESPONDENCE.

THE GOVERNMENT AND FOREIGN BANKS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of Monday, a doubt is raised as to the correctness of my assertion that foreign banks are excluded from Government business, and you imply that the policy of the Treasury in this respect is beyond criticism.

It must be admitted that in recent years all Government business has been given to a Japanese bank. The one exception is the last foreign loan, but a customer who only bestows his patronage when he cannot obtain his requirements elsewhere must always expect different terms from the one who is a regular client, and in this may possibly be found a reason for the comparative failure of the loan referred to and for that "aloofness" which you so much deplore. Why should foreign banks display any interest in purely Japanese finance? The Government, or the Treasury, gives all its plums to its own protégée, making the latter a subsidized competitor above and beyond considerations of a commercial character. Were the Japanese bank in question a financial power outside Japan, it might justify its benefactor by drawing assistance from abroad in times of need; but this apparently it cannot do, and we can safely

say that, during the financial crisis, it did nothing to relieve but a great deal to aggravate the situation.

In considering this view of the subject, it should be remembered that every gold *yen* exported practically reduces the note circulation by three *yen*; that the export of gold in 1900 and early 1901 was due to the persistent underbidding of the Japanese bank, and that without this competition it is unlikely that coin would have left the country to anything like the same amount.

If this subsidized competition were, to some extent, removed by the Treasury giving a share of its business to foreign banks, is it not likely that the latter would have an interest in assisting Japanese finance, not only passively but actively, whereas now they have no such inducement.

The gist of the matter is that, in this world, "All things are double, one against the other." The Japanese Government cannot expect to obtain the endorsement of foreign banking institutions unless in some way it makes it worth their while. This is the point which appears to escape the attention of all Japanese professing a desire to obtain the benefits of foreign capital for their country. There must be give as well as take; tit for tat; measure for measure.

Yours faithfully,

THE WRITER OF THE ARTICLE.

Yokohama, August 7, 1901.

STRANDING OF THE "KINSHIU MARU."

The N.Y.K. steamer *Kinshiu Maru*, (Capt. Horton) which stranded on Quelpart, arrived at Shanghai on July 29th. From an outward view, said the *Shanghai Mercury*, there does not appear to be as much as a plate of her dented, and within the ship a slight, a very slight leakage, in one of the holds, is the only thing to remind her company that she has been ashore. A little paint, perhaps, is scratched off her sides, but there is nothing in her appearance to tell the spectator of the peril in which she has so lately stood.

It appears that the ship grounded at 11.30 a.m. on the 20th July, close to McDougall Point, Quelpart Island, about ten miles to the south of Beaufort Island. The weather was very foggy and heavy rain was falling at the time. As soon as the Captain found the ship to be ashore the boats were lowered and soundings were taken all round. There was no panic; nobody shouted or screamed and the most perfect order and discipline were maintained both at that time and throughout the anxious days that followed. These remarks apply to the people fore and aft, to the passengers as well as the crew; to the firemen as well as the sailors, to officers and men alike. It was ascertained by the lead that there was deep water astern; that she had gone right over a bank and was lying with her head S. W. by S. on a soft, firm bottom with her forward end pretty well afloat. The Chief Officer (Mr. Lapraik) in company with the Japanese purser, went ashore in one of the ship's boats to try and find out the vessel's exact whereabouts. On the beach they met a few Japanese fishermen and pearl-divers who informed them that the place where the steamer was stranded was to the south of Pearl Bay, but they were unable to locate the spot on the chart. With this information the boat returned to the ship.

While the Chief Officer was away, the crew had been busy getting the spare anchors ready for running out, an operation in which the men were afforded invaluable assistance by four European sailors who happened to be on board among the passengers, and who in this crisis and in all the events that followed, lent splendid aid to the Captain and others.

Two of the spare anchors were run out on the port quarter and the ship's engines were used in trying to work her off, but the effort though made repeatedly, proved useless. The tide was falling and it was soon perceived that nothing could be done until it made again.

At 11 o'clock that night (the 20th) they once more hove on the anchors and backed and filled again and again, but to no purpose. Fortunately it was ascertained that the ship was making no water and this, coupled with the calm weather, gave everybody courage to work with a will. The crew and the engine-room staff continued to behave magnificently; there was not the slightest trace of excitement or disorder, and although it was known that there were several thousand cases of liquor on board, which could be easily got at, no one ever breathed a syllable about tampering with it. The freight-clerk had been sent away in a Korean fishing boat to Mokpo to telegraph the fact of the accident and ask for assistance. The natives of the island showed the utmost friendliness and disposition to help all through, and the Governor of the place sent presents of vegetables and fowls on board with the request that the Captain of the steamer should make demands for whatever aid he required and the intimation that it would be freely rendered. The Japanese fishermen and pearl-divers were also most anxious to be of assistance.

At daylight on the morning of the 21st the ship took a heavy list to port, so heavy that Captain Horton deemed it advisable to get the passengers and mails ashore in case of accidents. This work was engaged in by all hands and accomplished without a hitch by the end of the forenoon. It was then considered necessary to jettison some of the cargo and shift some more of it from No. 3 to No. 1 hold, for which work a number of Korean boats and coolies were engaged. The jettisoned cargo consisted of 800 packages of matches, consigned to Hongkong, 51 barrels of acid consigned to Shanghai, and a few other smaller packages. The list being by this means somewhat reduced, another attempt was made next tide to work the steamer off, but to no purpose, and during the succeeding three days all the efforts that were put forth had the same disheartening result. The freight-clerk, having, as mentioned, telegraphed from Mokpo for assistance, the steamer *Wakanoona Maru* was despatched from Moji on the evening of the 24th to render help, but as events proved, her aid was not necessary, the stranded vessel getting off ultimately by her own exertions and steaming away from the island before the *Wakanoona's* arrival, so that the latter vessel was never even seen by the *Kinsu Maru*. During the latter part of the operations also the Japanese gunboat *Tsuyoshiki* stood by, but her aid was not invoked by Captain Horton.

On the afternoon of the 24th the *Kinsu's* people ran out an anchor on the starboard side and hove on that but without effect, and the vessel remained fast till next day when she was floated by the expedient of passing the wire hawser over the bow and heaving.

NEW SHALLOW DRAUGHT GUNBOATS.

The British Admiralty have added to their fleet of shallow draught gunboats two new ones, specially built for use on the rivers of China or Africa. The contract was let to Messrs. Yarrow and Co., of Poplar, who have already built a flotilla of six similar boats for his Majesty's Government. The latest are named the *Teal* and the *Moanthen*, and Messrs. Yarrow had to meet some exceptional requirements. They had to obtain a speed of 13 knots, or 15 statute miles an hour burning wood fuel only, carrying a load of 40 tons on a draught not exceeding 2ft. 3in., all the machinery and fighting spaces being protected by rifle-proof plating. The result is that the two vessels named, which are just completed, constitute a special type. The *Teal* was taken for a trial trip down the river on the 22nd June, among those on board being the Turkish Ambassador, Admiral Sir R. H. H. Molyneux, Vice-Admiral Morant, Captain Schelling (French Naval Attache), Commander Schwarz (Austrian Naval Attache), Commander Kawashima (Japanese Naval Attache), Captain T. Matsumi (Japanese Chief Naval Constructor), Sir H. S. Maxim, and Mr. Yarrow. The gunboat is 160ft. long, with 24ft. 6in. beam. She is propelled by twin-screws revolving in tunnels—a reversion to an old system—so arranged that, although the propellers do not pass below the bottom of the hull, they are of a large and efficient diameter, and work in solid water. Doors are placed immediately over the propellers, so that they can be examined or removed without difficulty while the vessel is afloat, thus avoiding resort to a dry dock. The official trials showed that she was fully up to official requirements, and her speed was very high. The hull is built entirely of galvanised steel. It is sub-divided into ten water-tight compartments, each being floatable and independent of the others. This system of construction was introduced by Messrs. Yarrow and Co. in 1883, when they built for the King of the Belgians the stern-wheel steamer *Le Sauter* for exploring the Congo. After *Le Sauter* was built the advantage of this system of construction was recognised, and it was adopted in the case of the *Albatross* and *Herald*, built for the British Government for the French and Russian Governments. The benefit of this section system of construction is that it enables the vessel to be put together while afloat, thus avoiding the tedious process of riveting up and launching in distant parts, where skilled labour may not be obtainable.

The main deck is of steel, covered with corticine. Above is an upper or battery deck, extending for about half the length of the vessel, on which are counted two 6in. quick-firing guns and six Maxims. Above the battery deck is the awning deck, from which are swung the hammocks for the troops. The battery deck is completely housed in, and spacious quarters are thus formed for the Europeans. The sides of the vessel, as well as the cabin accommodation and the bulwarks round the battery deck, are throughout of chrome steel by Cammell, and the plates are of sufficient thickness to be proof against rifle fire, point blank, at close quarters. A conning tower is placed forward on the battery deck, and is also rifle proof. The general fittings of the gunboat are very complete, including accommodation

for the native crew, and a specially-fitted sick bay. The officers are accommodated in a cabin between the main and battery decks loop-holed for rifle fire. The forward portion is divided into a wardroom and Commander's cabin, and fitted up for the officers, the after portion being adapted for eight petty officers. Passing through these cabins are ammunition hoists, so that there is a direct passage from the magazines below to the battery deck, under cover and protected from shot. The machinery consists of two sets of compound surface condensing engines, running at an average of about 300 revolutions per minute. Steam is supplied by two of Yarrow's patent straight tube water tube boilers. Forced draught is provided for by means of a steam fan in the stokehold, and although this was not required during the official trials no doubt it will be found of great value when only wood fuel is to be obtained of a very inferior character or green. Four rudders are fitted, and the steering can be done either by hand or steam. During the run, when the wider part of the river below Tilbury was reached, some tests were made of the steering capabilities of the *Teal*. She proved an exceptionally handy boat, time after time cutting her own wake. She will be taken to pieces and despatched to her station in sections.

EARL RUSSELL'S TRIAL.

Earl Russell, arraigned at the bar of the House of Lords on July 18th on the charge of bigamy, pleaded guilty after lengthy arguments against the jurisdiction of the court. The trial was carried on with all the quaint medieval ceremonies. The arguments lasted one hour. Both the Earl and the Countess (Mrs. Somerville), through their counsel, pleaded that they did not know they were doing wrong, but had acted on the best legal advice obtainable in Nevada.

The Peers reached their decision after a consideration of the case, lasting twenty minutes. Earl Russell was sentenced to three months' imprisonment as a first-class misdemeanant.

ANCIENT CEREMONIAL IN FORCE.

The scene in the Royal Gallery, temporarily converted into a court of justice, when the Lord High Chancellor, Lord Halsbury, who had been appointed Lord High Steward for the occasion, took his seat upon the dais and the quaint ceremonial began, was most picturesque. The hall was a magnificent blaze of colour, produced by the robes of the Peers, the academic robes of the Judges and the brilliant uniforms of his state officers. Although the House of Lords was not represented in its full strength, about 200 of Earl Russell's peers attended his trial and made an imposing array as they filed into the hall, two by two, from behind the throne. Lord Salisbury, the Premier, brought up the rear of the procession and was almost unnoticed as he took his seat near Lord Halsbury.

Immediately beneath the dais sat the ten Judges in their gorgeous robes, surrounded by a phalanx of lesser legal luminaries. On either side of the Judges were ranged five benches filled with Peers, whose ranks were distinguishable by the varying number of rows of ermine and gold lace on their scarlet mantles.

The benches reserved for Peers were amply filled, while the space allotted to distinguished strangers was crowded with the diplomats and their families, including the United States Ambassador, Mr. Joseph H. Choate, and the Secretary of the United States Embassy, Mr. Henry White.

Mollie Cook, otherwise Mrs. Somerville, Earl Russell's present wife, entered the hall by ticket and sat facing the benches occupied by members of the House of Commons. She was accompanied by a young woman dressed in gray and wearing a hat trimmed with cream lace. Mollie Cook appeared no more concerned than the other witnesses of the interesting scene.

NEVADA JUDGE PRESENT.

Among the witnesses who entered the hall was Judge Curler of Nevada, who took a seat beside the clergyman who married Earl Russell to Mabel Scott, his first wife.

The court was formally opened with a series of quaint ceremonies and the exchange of stately phrases prescribed in the ancient legal procedure.

Beside Lord Halsbury, in his Earl's robes and a wig, stood General Sir Michael Biddulph, gentleman usher of the black rod, and Mr. William Henry Weldon, the Norroy-king-of-arms, in a resplendent tunic.

"Our sovereign lord and King," shouted the Norroy-king-of-arms, "charges and commands all manner of persons to keep silence on pain of imprisonment."

Another official, on bended knee, handed the commission to the Lord High Chancellor, who, while handing it to another kneeling clerk, said:

"Let all be uncovered while the commission is read."

After the necessary ceremonies, Earl Russell was

conducted to the bar. He calmly surveyed his Judges and Peers. Then a clerk of Parliament cried loudly:

"John Francis Stanley, Earl Russell, come forth and surrender to bail or forfeit recognizance."

"HOW SAY YOU, MY LORD?"

Then Black Rod, bedecked with medals and in uniform, approached the bar, which was raised as the Earl drew near, and surrendered Earl Russell. Upon reaching his appointed seat, Earl Russell stood leaning against the table and then made obeisance three times to the Lord High Steward. He remained with bowed head until the latter addressed the accused. Then the indictment was read by the clerk, who concluded with these words:

"How say you, my Lord, guilty of felony, or not guilty?"

Before Earl Russell could answer his counsel objected to the indictment on the ground that the alleged offence was committed outside the dominions of His Majesty, King Edward. During the course of the technical and tiresome argument by the Earl's counsel the prosecution summoned Judge Curler into the bar to confer on certain points raised in counsel's argument.

After the reply of the prosecution to the argument of counsel for the defence Earl Russell, in a voice scarcely audible, pleaded guilty. His counsel then addressed the House in mitigation, urging that the accused had acted on the best legal advice obtainable in Nevada, that the offence was merely technical and that no harm had been done. Lord Russell addressed the House in the same strain, saying the decree received in the United States gave special sanction to a new marriage.

Earl Russell said he proposed to remarry Mollie Cook as early as possible. Concluding, he said he placed himself in their Lordships' hands, that he had acted in ignorance and with no intention of wilfully defying the law.

The peers retired to consider their verdict. When they had reassembled the Lord High Steward called for the prisoner. The whole House rose to its feet when the Lord High Steward proceeded to deliver the judgment. While the crime could not be passed over, said the Lord High Steward, there were several mitigating circumstances. In consideration of and as a result of these their Lordship had unanimously declared that justice would be satisfied by his being imprisoned in Holloway prison for three months as a criminal in the first degree.

THE SPLIT IN THE LIBERAL PARTY.

Mr. Asquith, presiding on June 20th at the South Essex Liberal dinner at the Liverpool-street Station Hotel, London, denounced in strong terms the pro-Boer resolution passed at the Queen's Hall on the previous night, and emphatically protested against it being called a pronouncement of the Liberal party. They were met there, he said, under circumstances unexampled in the history of the party. He had been asked in addressing them to ignore recent events, and prophesy smooth things. He would be glad to do so, but, in his judgment, that would be a grave dereliction of duty, both to the party and to the country. If he spoke strongly and plainly he hoped, without egotism, he had some little claim to be listened to.

For ten years he had sat in the inner councils of the Liberal party, and served under four successive leaders, with each of whom he had worked loyally and cordially. He could honestly say that he had endeavoured amid all embarrassments to strive for harmony, where friction could be averted, and for the reconstitution of a united Liberal party, which he still believed to be the supreme and capital need of the country and of the Empire.

A CHALLENGE ACCEPTED.

Since the beginning of the war there had been differences of opinion as to its cause, but he had hoped that in so far as related to events of the past, they would all be content to leave them for the judgment of history. In the last six months his primary object at every Liberal meeting had been to preach union and ingeminate peace. He had hoped this would bear fruit, but it appeared that some persons would not have it so; for only last week a challenge had been deliberately, and even defiantly, thrown down, which it would be impossible for any body of self-respecting men to receive in silence. The suggestion thus made that Liberals who held his (Mr. Asquith's) views were schismatics was a legitimate cause for resentment. It was not true that Liberals who thought with him had changed their views. They did not repent of them and they did not recant.

LITTLE ENGLANDISM REPUDED.

They still held that the war would bring no advantage to the Empire, and that it was not desired by the people, but because they held that blood and treasure were being spent, not in a criminal adventure, but in order that there might arise out of chaos a free, federated South African Dominion, were they to be told that they were apostates? He knew no authority

ty in the Liberal party which could pronounce such a sentence. They remained Liberals to the core, and when outside distractions were over they would resume the struggle which the party made against every form of inequality and social injustice. He said this because they could not have real reunion except on terms of mutual tolerance, and because he wished it to be understood that such declarations as those quoted at the Queen's Hall were not an authoritative expression of the Liberal party (loud and prolonged applause).

LORD MILNER VINDICATED.

There were friends of his who thought there should be unconditional surrender to the Boers, but while he had a voice to protest against it that should not go forth to the world as the opinion of the Liberal party. Their opinions of the origin of the war should not, however, cripple their criticism of the way it was conducted. He thought farm-burning a grave military blunder, and also that there should be no difference between the food given to wives and children of combatants and that given to those of non-combatants. But in his opinion there was no ground for a general charge of inhumanity on either side. From long knowledge and intimate acquaintance he could say that Sir Alfred Milner—Lord Milner—was a most humane man (cheers and groans). The debate on concentration camps on Monday night was premature, because they were uninformed, and for that reason, and because they disapproved of the temper and spirit of the debate, he and a number of his friends did not vote for the motion. Absolute independence, he declared, could not at present be granted to the Boers in any circumstances, but the policy of the Liberal party was for the eventual constitution of a free, federated South African Dominion on the lines of Canada and Australia.

THE CORNISH LANGUAGE.

There has lately been some discussion about the Irish language, a subject of profound interest, not only to patriotic Irishmen but to philologists. Happily there is no danger of either the Irish or Welsh dying out. Both show a healthy vitality. The Erse is enjoying a revival—more or less artificial, it is true, but nevertheless important. There are thus a considerable number of Britons who have the privilege of being bilingual. There is no reason why the matter should have any political significance. The study and preservation of Erse was recommended, more than a century since, by so sturdy a patriot and Tory as Dr. Johnson. That Welsh is flourishing is proved by the number of newspapers published in it, and is soon experienced by the English tourist. But the Scotch Gaelic is fast dying, Manx is almost dead, Cornish may be said to have been long dead and buried. Not so long, however, as history reckons time. It is easier to deal with the Celtic language than with the Celtic race, for where language is concerned we can at least reach some finality. The Irish is usually classified as pure Goidelic, or Gaelic, while the Cornish, like the Welsh, was Brythonic. Seeing that both Wales and Cornwall were mainly held by Goidels at the time of the Roman invasion, the fact that their language ultimately became Brythonic must have been the result of later immigration caused by the Saxon invasion.

There is great resemblance between the present-day Breton dialect and old Cornish, and between the two peoples; and this is amply accounted for by history. If it be true, as sometimes stated, that Breton men can go into the cottages of Welsh peasantry and make themselves understood, men from the same part would have been even more easily able to do so in Cornwall two centuries since. But two centuries ago Cornish was already dying. It was the Reformation and the reign of Queen Elizabeth that struck its deathblow. The rising on behalf of Popery known as the Western Rebellion was, in some sense, unconsciously a last racial struggle. The Cornish, though now so heartily Methodist, clung to Catholicism with a tenacity still exemplified by the Irish; and they resisted the imposition of the English Service-book. One reason, they asserted, was because some of them understood no English—"We will have our olde Service of Matten, masse, even-song, and procession in Latten as it was before. And so we, the Cornyshe men, whereof certen of us understande no Englysh, utterly refuse this newe Englyshe." It was a great misfortune that no Cornish Protestant thought fit to translate the Book of Common Prayer. There was not even a Cornish Bible. The English Bible and Prayer-book killed the old Cornish tongue, but they did not win the Cornish to Anglicanism. It has sometimes been said that the typical Celt must either be Catholic or Nonconformist; but the colour of truth which this saying receives from Wales, Ireland, and Cornwall, is rather the result of circumstance than race.

It was natural and fitting that the Land's End should have been the last home of the Cornish language. In Elizabeth's reign it was still known even so far

east as parts of Devonshire, the Teutonic-Latin blend which we know as English having not yet quite prevailed in this district of "West Wales." Yet only two centuries later was buried Dolly Pentreath, known as the last person who could converse in the old speech of the Duchy. Some faint traditional knowledge of the tongue lingered, however, even after her day; in fact, only ten years since there was living at Zennor, near St. Ives, an old man who understood a good many Cornish words, more particularly place-names, which he had learned from his father. At the present moment, though relics of Cornish are preserved, there is no living scholar who can be said to understand Cornish; though, with a knowledge of kindred Celtic dialects, these relics can readily be translated. The grave of Dolly Pentreath is at St. Paul, commonly known as Paul near Mousehole, and its inscription is as follows: "Here lieth Dolly Pentreath, who died in 1775, said to have been the last person who conversed in the ancient Cornish, the peculiar language of this country from the earliest records, till it expired in the eighteenth century, in this parish of St. Paul. This stone is erected by the Prince Louis Lucien Bonaparte in union with the Rev. John Garrett, vicar of St. Paul." Then follows the text, "Honour thy father and thy mother: that thy days may be long in the land which the Lord thy God giveth thee"; and the Cornish rendering thereof: "Gwra perthi de taz ha de mam; mal de Dythionw behwz hyr war an tyr neb an arlath de dew ryes dees." In this it is easy to detect the almost universal words for father and mother, "dad" (taz) and "mam"; while Dythio for God is clearly allied to the Greek Theos, the Latin Deus. The existence of Latin words in old Cornish—and there seem to be a good many—does not prove that the Romans ever occupied Cornwall, which we have no proof of their having done at all; it simply means that these words had become a part of the British speech before the Britons were driven to seek refuge in this western extremity of their land. There is the same goodly supply of Latin to be found in Welsh. It was impossible that the Romans could occupy Britain for so long without leaving lingual traces; they really left many. A further epitaph was written for Dolly, though the writing of it would seem to disprove the assertion that she was the last to speak Cornish. The epitaph, however, may have been compiled solely from a literary knowledge of the tongue; it is as follows:—

Coth Doll Pentreath cause ha deau;
Marow ed kledys ed Paul plica:—
Na de an egloz, gan pobel bras,
Bes ed egloz-hay coth Dolly is.

The translation of which is: "Old Doll Pentreath, one hundred and two, dead and buried in Paul parish. Not in the church with great people, but in the churchyard old Dolly lies." Here it is very easy to recognise "egloz" and "pobel" as Latin; while "hay," signifying yard or enclosure, may perhaps explain the affix "hay" which we meet in many English place-names, and which is generally understood to mean field or meadow. In 1768 Daniel Barrington visited this old Cornish woman. "I desired to be introduced as a person who had laid a wager that there was not one who could converse in Cornish, upon which Dolly spoke in an angry tone for two or three minutes in a language which sounded like Welsh."

It is said that as late as 1678 the rector of Landewednack preached to his parishioners in Cornish; and a few years earlier another clergyman had to administer the Communion in Cornish, because the elder of his people did not understand English. It would seem that the popular old song, "Where are you going, my pretty maid," was originally Cornish; certainly a version of it exists in that tongue. Borrow, who had a genius for philology, though by no means a safe guide, translated a Cornish versified tale, which embodies a proverb that he quotes in his "Wild Wales." The proverb is "Take heed lest ye leave the old road for the new road." There are many similar survivals of Cornish, but the most plentiful traces of the tongue are in place-names, and these are of course the most permanent. All visitors must have noticed that many place-names of Cornwall are quite unlike those of other parts of the kingdom. Many of these names are simply dedications to Celtic saints. The prefix "Lan" always means church, or rather "enclosure," just as Llan does in Wales. "Pen" is headland; thus Penzance, "holy headland." Porth, possibly connected with the Latin portus, means "bay" rather than our present signification of port. "Carn" is simply cairn; "dinas" is fort or castle; "men" is stone or rock; "pol" is pool. Exactly similar names are to be met with much further east; thus, we find a Penpol in Cornwall, near Land's End, and a Penpolle in Gloucestershire, both meaning "head of the pool" or water. "Tre" is identical with the Welsh tref, and signifies habitation or settlement; "nans" or Nan means valley, like the Welsh Nant. It is remarkable indeed what few Teutonic place-names are to be found in Cornwall. The old Celtic names have had wonderful vitality, and may

they still maintain it. That the language should have died is regrettable, though it would be still more regrettable nowadays that any Briton should be educated without a knowledge of English. It is a great thing to give a man two languages—almost like giving an added sense.—*The Globe*.

NOTES FROM HOME PAPERS.

An "Albergo Popolare," built on the model of the Rowton Houses and to be conducted on the same principles, has just been completed in Milan, and is to be opened soon. The building with its fittings has cost about £26,000. It contains 530 bedrooms, the charge for which will be 4d. or 5d. a night.

Mr. A. J. Evans, the well-known English archaeologist, who has for some years been conducting investigations in Crete, has officially informed the Cretan Parliament that he possesses indisputable proofs, supported by inscriptions of high antiquity, that he has discovered the palace of Minos, regarding the construction and ornamentation of which he gives numerous details. The inscriptions are said to date back 600 years before the cuneiform writing of Assyria and Persia.

The Ultramontane party in Bavaria has just sustained a notable defeat. An attempt has been made by the Clericals to coerce the Government into cancelling the appointments of two headmasters of public schools who had contracted mixed marriages, and bound themselves to bring up their children as Protestants. The Regent's Ministers have stood firm in their adherence to the constitution, by which religious liberty is guaranteed to all Bavarian subjects. They decline either to cancel the appointments objected to or to pledge themselves not to sanction similar ones in future.

In the course of the work of restoration of the old church of St. Peter of Montmartre, now being carried out under the direction of M. Sauvageot, the workmen (says the *Paris Siecle*) discovered a tombstone of the twelfth century, having a figure carved on it. The head, which is encircled with a Royal crown, appears to indicate that the stone in question covered the tomb of Queen Adelaide, wife of Louis VI., and foundress of the Abbey of Montmartre, into which in 1153 she retired, and where, a year later, she died and was buried.

The *Moniteur de la Flotte* gives the following summary of vessels under construction for the French Navy:—Four battleships, 14 armoured cruisers, one protected cruiser, 24 destroyers, three sea-going torpedo-boats, 24 smaller torpedo-boats, and 25 submarines, in all a total of 95 vessels. An interesting feature of this list is that it shows that with the French, as with us, the armoured cruiser has practically superseded the protected type of vessel. With regard to the small craft, also, destroyers are rapidly taking the place of the ordinary torpedo-boats, of which France possesses a large number, for the most part practically useless.

The memorial that is to be erected to Richard Wagner in Berlin is attracting a great deal of competition. Over a hundred sculptors have entered their names and are forwarding designs. Of these, the first ten will be selected, and each sculptor will receive a fee of £75 and an invitation to compete again. The three best of the final designs will receive prizes of £125, £75, and £50. The result should be that a monument really worthy of the great composer will be erected. Wagner's name is one of which Germans have every right to be proud, and honour should be given to whom honour is due.

While some excavation for a railway cutting was being carried out close to Amesbury, a place of great antiquity within two miles of Stonehenge, several skeletons which probably belong to the Bronze Age were unearthed. The skeletons were found some four feet underground on part of the circumference of a circle about 60ft in diameter. The bodies lay lengthways round the circle at regular intervals. At the feet of some were found wrought iron nails similar to hobnails, with the ends clinched. A small vase and other broken pottery, a ring, and a bronze bracelet—the latter being on the arm bone—were also found.

Referring to the statement that Lord Milner, as being only a naturalised British subject, cannot sit in the House of Lords, the *Law Journal* says the Naturalisation Act now in force, that of 1870, provides that a naturalised British subject shall in the United Kingdom have all political and other rights and privileges of a natural-born British subject. Further, it must not be assumed that a person born abroad is never a natural-born subject. The general common-law rule is that persons born in British territory are natural-born subjects; persons born out of it are aliens. The effect of certain Acts passed in the reigns of Anne, George II., and George III. was,

however, to make the children and the grandchildren on the son's side of every man who by the common law was a British subject themselves natural-born subjects, although born abroad.

A happy man, says the *Paris Figaro*, is M. Weckerlin, librarian of the Paris Conservatoire. Under the will of the Baroness Nathaniel de Rothschild, there have been left to the institution "quelques autographies musicaux," and these have turned out to be eight manuscripts by Chopin. The MSS. include a Berceuse, the First Waltz; three other Waltzes of more recent date; one dedicated by Chopin, "A Mademoiselle Charlotte de Rothschild, hommage, Paris, 1842, F. Chopin"; also a Nocturne; and, finally, the MS. of the celebrated Waltz in D flat. Previously the Conservatoire possessed only two examples of Chopin's MS.

H.M. battleship *Formidable*, which has taken over three years to build and complete to her present stage, has at length successfully accomplished all her steam trials and likewise the trials of her torpedo and gunnery equipment, and will now be brought forward for commission as quickly as possible. Her steam trials have consisted of one run for 36 hours continuously, with the engines developing one-fifth of their maximum power; another run of 36 hours, with the engines working at four-fifths of their maximum power; and a trial of eight hours' duration at full power. At her last run a mean of 15,500 horsepower was developed, which is 500 in excess of the amount specified in her contract; and with this power the speed of the ship at load draught was 18.15 knots per hour, which is a very respectable speed for a battleship of 15,000 tons burthen. It may be remembered that on the conclusion of the first trial, at one-fifth power, some alterations in the steam joints of her pipes and her boilers were considered necessary. The succeeding trials have passed off without a hitch in the working of her engines or boilers. These will now be opened out for examination, to determine their acceptance from the contractor, and the vessel probably be ready for commission within the next three months, but could be used at once if an emergency arose. The trials of her large 12-inch guns were of more than usual interest, as they are fitted with a new design of hydraulic machinery for working them, and an improved system for the supply of their ammunition. In addition, they are of greater penetrative power than the earlier types of 12-inch guns, due to the circumstance that a larger charge of cordite is used, whereby the muzzle velocity of the projectile has been increased.

THE POSITION IN KOREA.

A German merchant, who has recently returned from Korea, gives, in a Berlin paper, the following account of the situation there:—Japan, Russia, and England are actively striving at present for political influence in Korea. This can only be gained, however, by someone on good terms with the leading families, from whom the Ministers, members of the State Council, and the higher officials are drawn. It is just the same there as in China. The influential people pass the examinations, the leading nobility receive all the remunerative posts. The Imperial Inspector-General of the Maritime Customs, Mr. McLeavy Brown, is the only foreigner on intimate terms with those influential people. He is in Seoul what Sir Robert Hart is in China; and whoever can supplant him would most probably have the game in his own hands. The Japanese and Chinese are by far the most numerous amongst the foreigners in Korea. There are about 4,000 Japanese in each of the three large treaty ports, but only about 1,000 Chinese, and only 100 Americans and Europeans. Apart from the German Customs officials, Germany is only represented by one firm at Chemulpo.

The open and secret struggle of the nations in Seoul is exclusively for the post of Inspector of Maritime Customs. The Japanese have probably the least chance of obtaining their wishes in this respect, as for several centuries they have completely alienated the sympathies of the Koreans by repeated attacks, and aroused their deepest indignation in 1894 by the murder of the Queen. She belonged to the powerful family of the Min, and was loved both by the nobility and the people alike, though she was too independent for the Japanese.

England works there, as elsewhere, as quietly as possible. Russia is the most impetuous in her wooing. She wants war ports in Korea, which, in view of the impracticability of the mountain ranges dividing Manchuria and the Shengking from Korea, and the want of an intermediate port between Port Arthur and Newchwang, on the one side, and Vladivostok on the other, would afford her a convenient base for operations directed against Japan. Her endeavours to obtain Masampo, which would meet her wishes, have hitherto failed. The best thing for all the Powers interested in Korea would be to agree upon a course of policy adapted for the general advantage of all—which would be easy enough with a little goodwill all round.

LORD ROSEBERY'S MANIFESTO.

A London telegram of July 17th said:—

Lord Rosebery has issued a manifesto on the divisions in the Liberal party. It is contained in a letter to the City Liberal Club, which had invited him to deliver an address. He disclaims any desire to re-enter politics, but speaks out "under the remarkable character" agreed upon by Liberal members of the House of Commons of "hearty and undisputed allegiance to the leader and complete liberty of action to dissent with regard to the one vital question before the country."

The Liberal party can become a power, he continues, only when it shall have made up its mind on the "imperial questions which are at this moment embodied in the war." After asserting that "the whole empire has rallied to the war," he discusses the attitude of the Liberal party. "What is the attitude of the Liberal party?" he asks. "Neutrality and an open mind. Now I contend that this is an impossible attitude and spells impotence. No party can exist on such conditions."

He declares that the difference would not cease to operate when the war is over, because "statesmen who disassociate themselves from a nation in a great national question, such as the war in which we all strive to suffer together, disassociate themselves for much longer than they think." He considers that the severance is a "sincere, fundamental and incurable antagonism of principles with regard to the empire at large and our consequent policy." As there is this "honest and irreconcilable difference on questions of the first importance," he sees no favourable issue. Lord Rosebery concludes with a gloomy touch.

"It is a matter of sorrow and anxiety," he says, "to see a weak Government faced by a weaker opposition at a juncture of foreign hostility and international competition which needs all the vigilance, power and agility at our command." He believes that Great Britain is at a crisis which may have unlimited effects upon its future.

Lord Rosebery's pronouncement is considered by the *Daily Telegraph* as "severing the last connection with a hopeless opposition." The *Daily Chronicle* says: "It is destined to have a profound effect upon the country, pointing to the formation of a National Liberal party, numerous materials for which are scattered within easy reach."

The *Daily Chronicle* asks if Lord Rosebery will

take his part toward realizing the desired end. The *Daily News* regards Lord Rosebery as "standing outside the vineyard and throwing stones at the workers." Going on to analyze the letter, the paper defines it as a "deliberate and mischievous effort to prevent re-union."

The Conservative newspapers generally commend the paper. The *Times* calls on Lord Rosebery to "place his great abilities at the service of the country by throwing himself, heart and soul, into the work of converting the Liberal party to the policy in which he believes. It alludes to his "singular advantages—birth, ability and nationality—for playing an important part at a critical time."

A SERIES OF COINCIDENCES.

The following story from India appeared recently in the *Pull Mail Gazette*:—

Three subalterns, stationed at an outlying post of a large garrison, being dissatisfied with their quarters, decided to rent a certain bungalow, prettily situated near the river, but which had for some years stood empty. Before the arrangements were fully completed, an aged fakir called on the officers. He begged that the house, which was built on "sacred" ground, might be left, as heretofore, unoccupied; but as no very convincing arguments as to the alleged sanctity were forthcoming, and the native was unable to suggest any other disability, his request was refused. Thereupon the fakir became as one possessed, and concluded a torrent of fierce abuse by pronouncing a curse. "Within this year," he cried, "all three of you shall die a violent death, and the house itself shall be destroyed." These words being in the nature of threat, put the matter beyond compromise. Not one of the subalterns would, from that moment, hear of any other residence.

After maintaining for several weeks a watch against assassins the soldiers, being healthy, fearless young Englishmen, forgot all about the prophet of evil, until an accident occurred one day which awakened a sense of uneasiness. The senior of the three, an expert polo-player, was killed in an inter-regimental match; and still sunset next evening the shadow of the grim Presence lay heavy on the darkened bungalow.

But the Briton is not imaginative, and confidence soon resumed its habitual sway. The two remaining men lived as usual, arguing that such a mischance might overtake any one. It was nearly six months later that the second blow fell. The junior subaltern was out hawking, when his horse put a foot into a hole and fell, flinging his rider violently to the ground. He was picked up with a broken neck.

The surviving officer, a brave man, admitted that the incidents affected his nerve, and gave up dangerous sports; but he refused the leave that was proffered him, urging that no soldier could allow an impalpable dread to drive him from the performance of his duty. The year passed slowly on to its last week without further incident, and the vague fear, thus calmly faced, had almost died away.

On the 28th December the sole surviving member of the ill-fated mess, when sailing in a small boat, was overtaken in a sudden squall of wind. Being a strong swimmer this was of no great moment, but in some inexplicable manner he became entangled in the steering gear, and was drowned before a horrified spectator could get help to him.

Finally, on the last night of the year, a frightful storm flooded the river, and the bungalow itself was swept away.

The London paper says that the facts are in themselves easy of verification, and the whole of the circumstances are well known to the officer commanding the district, whose word is not to be disputed. At the same time, it would be necessary for the names of those concerned and the place where the incident took place to be published before the story could even be examined, while it does not appear that the series of coincidences has any connection with the menace of a fanatical priest.

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

	Air	Temp.	State of	Remarks in
	Max.	Min.	Lake.	General.
Sunday, 28th	78°	61°	75°	Fine...
Monday, 29th	78°	59°	75°	Fine...
Tuesday, 30th	76°	62°	76°	Fine...
Wednesday, 31st	76°	65°	76°	Fine...Heavy shower at 5 p.m.
Thursday, 1st	77°	62°	78°	Fine...
Friday, 2nd	79°	67°	78°	Fine...
Saturday, 3rd	78°	68°	79°	Fine...Shower during night.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

AMERICAN STEEL STRIKE.

Shanghai, August 2.

The American steel strike is still unsettled.

UNREST IN THE BALKANS.

The Times, reviewing the situation in the Balkans, says that unusual anxiety is displayed at Vienna.

BOERS INVADE NEUTRAL TERRITORY.

A Boer commando with two guns has entered Portuguese territory in search, it is believed, of supplies.

THE SINEWS OF WAR.

Shanghai, August 3.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, speaking in the House of Commons, declared that he believed the sums voted on account of the Boer war will suffice until next January, and possibly until the end of the present financial year.

THE THIBETAN MISSION.

The Thibetan Mission has left Moscow on its homeward journey.

A BARBAROUS THREAT.

Lord Kitchener says that Kritzinger has notified General French that he intends to kill all the natives in British employ, armed or unarmed.

BRITAIN FORE-ARMED.

The House of Commons has authorized the expenditure of six million pounds sterling for naval and six millions for military works, including a break-water at Malta and increased coaling facilities for the Fleet. The military works consist largely in the erection and reconstruction of barracks.

DEATH OF MRS. ST. JOHN BRODRICK.

The wife of Mr. St. John Brodrick; Secretary for War, has died suddenly. (Mr. Brodrick married, in 1880; Hilda, daughter of the 9th Earl of Wemyss.)

CHINESE TARIFF PROPOSALS.

Shanghai, August 4.

Lord Cranborne, Under Secretary of State for Foreign Affairs, says that proposals have been made to include in the Chinese five per cent. tariff articles now imported free, except rice and cereals.

KRITZINGER'S THREAT.

The Government has cabled Lord Kitchener to inform Kritzinger that anybody carrying out his threat will be court-martialled and executed.

GERMAN CHINA SQUADRON.

The homeward bound German China squadron has arrived at Cadiz, where it was met by Prince Henry of Prussia.

SOUTH AFRICAN AFFAIRS.

Shanghai, Aug. 5.

In the debate on the Colonial Estimates, Mr. Chamberlain said that he believed the military situation to be more hopeful than it has been for a long time past. He was convinced that the country will support the Government in giving generous terms as soon as the war is over. The motion to reduce the Colonial Estimates was negatived, and the vote was adopted by 141 to 54. The Commons have adjourned.

EMPRESS FREDERICK WORSE.

The Kaiser has abandoned his proposed visit to Homburg, and is going to Cronberg owing to a change for the worse in the Empress Frederick's condition. All the other children are hastening to her bedside.

A FLAG OF TRUCE.

A later telegram says that two Boers have arrived at Kroonstadt with a flag of truce and a letter from Steyn.

EMPRESS FREDERICK SINKING.

The Empress Frederick is sinking.

DESTROYER WRECKED.

The torpedo boat destroyer *Viper*, fitted with turbine engines, has struck a rock near Alderney, and is a total loss. The crew were saved.

[This is evidently the vessel referred to in the French telegram.]

ACCIDENT AT A RUSSIAN LAUNCH.

At the launch of the Russian battleship *Alexander* a violent gale overthrew a flagstaff, which killed two naval officers and injured five others.

THE EMPRESS FREDERICK DEAD.

Shanghai, Aug. 6.

The King goes to Cronberg to-day. A later telegram says the Empress Frederick is dead.

THE THIBETAN MISSION.

The effect of the Thibetan Mission to St. Petersburg is already noticeable in the eagerness of the Chinese to renew the Manchurian negotiations.

THE CHINESE TARIFF.

The Times says that the new Chinese tariff begins on October 1st.

THE LATE EMPRESS FREDERICK.

Shanghai, August 7.

The end of the Empress Frederick was quite quiet. She was conscious to the last.

THE ACCESSION OATH.

The House of Lords has read the King's Accession Declaration a third time.

CHINA'S NEW TARIFF.

The English Government has approved of the China tariff proposals mentioned on the 3rd inst.

ENGLAND AND GERMANY.

The English and German press refer to the common mourning for the Empress Frederick as again uniting the two peoples.

SOUTH AFRICA.

Fouche has attacked the Aliwal refugee camp, and all the 689 male refugees, with the exception of four, declined to join his commando. The peace movement is spreading rapidly among the refugee camps and in the Orange River Colony.

THE LATE EMPRESS FREDERICK.

Later.

The death of the Empress Frederick has evoked widespread sympathy for King Edward and the Kaiser Wilhelm. The Australian parliament has voted addresses of condolence.

CHINA.

Sir Ernest Satow has notified his colleagues that England is unable to sign the China protocol. The reasons are not stated.

NAVAL MANŒUVRES.

The British naval manœuvres have concluded with an important battle off the Lizard, the result of which has been referred to the umpires.

(RECEIVED AT THE LEGATION OF FRANCE.)

RUSSIAN MISSION ANNIHILATED.

Saigon, Aug. 3.

It is telegraphed from St. Petersburg that the expedition to Thibet under the command of Lieutenant Kozlov was attacked by 2,000 Tangoutles and succumbed after a desperate resistance.

LONDON AND LORD ROBERTS.

The London Chamber of Commerce has voted a donation of 500,000 francs (£20,000) to Lord Roberts.

FRENCH SAHARA.

Saigon, August 4.

The Maroc will recognise the *fait accompli* in Southern Algeria, and open new regions in the Sahara to French commerce. An *entente* will render possible the construction of a railway in the south-east.

PEKING.

The evacuation of Peking is officially fixed for August 15th.

ACCIDENT TO BRITISH TORPEDO-BOAT.

An English torpedo-boat sank during the manœuvres at Portsmouth. The crew were saved.

M. DOUMER.

At Port Said M. Doumer received a visit from the Consul and the authorities of the Canal Company.

AFFAIRS IN NORTH CHINA.

Saigon, Aug. 5.

The greater part of the French troops have left Peking. There remains in Peking only a detachment of 500 men as a legation guard. There are 1,300 at Pao-tung-fu. The Boxers are waiting in the neighbourhood of Peking for the departure of the Europeans in order to re-enter the capital.

THE BRITISH NAVAL CASUALTIES.

Saigon, Aug. 6.

In the course of the British Naval Manœuvres in the Channel a torpedo-boat struck the rocks and a torpedo-boat-destroyer ran down another. These accidents caused damage to all the boilers of the vessels concerned.

THE EMPRESS FREDERICK.

The Empress Frederick is dying. The King of England has started for Cronberg.

(RECEIVED IN TOKYO.)

CHINESE INDEMNITY.

The draft of the Agreement with reference to the Indemnity is now being prepared by Japan, England, Germany and France. It will be finished in a few days and submitted to the Chinese Plenipotentiaries. England maintains that the amended tariff should go into operation from the date of the conclusion of the Agreement, but America is said to suggest some delay.

NORTH CHINA.

According to intelligence received last month from Shashi, as the Chinese Emperor and the Empress Dowager are to return *via* Honan, various preparations are now being made to repair the roads, railways and telegraphs *en route*. The chief of telegraphs at Shashi says that a line of telegraph from Keifong to Honan (about 127 miles) is now in course of construction, partly because it will be required in connexion with Their Majesties' return and partly for general uses.

THE CHINESE INDEMNITY.

The Conference of Foreign Representatives was to meet in Peking on the 5th inst. for the purpose of discussing the draft prepared after the last meeting on the 27th of July.

The first of the five periods in which the Indemnity is to be paid commences in 1902 and ends in 1940. The second begins in 1911 and ends in 1940. The third begins in 1915 and ends in 1940. The fourth begins in 1916 and ends in 1940. And the fifth commences in 1932 and ends in 1940.

The amount for the first period is 75 million taels, and the payment in the 5th period will be the smallest of all. The original total of the Indemnity was 450 million taels, but in consequence of loss by exchange and the prolonged stay of the troops, that sum is found insufficient by 15 millions. The Powers have therefore decided that their claims shall be reduced *pro rata*.

(FROM THE "NORTH-CHINA DAILY NEWS.")
SICKNESS IN THE HONGKONG GARRISON.

Hongkong, July 26.
There were two deaths on Sunday morning among the British troops caused by heat-stroke and fever. The percentage of sickness and fever amongst the troops is remarkably high, there being sixty cases in hospital, several very serious.

MOVEMENTS OF REAR-ADMIRAL BAYLE.

The French Admiral returned yesterday from a visit to Canton, and is leaving for the north in a day or two.

THE STAYING OF THE PLAGUE.

Hongkong, July 27.
For two consecutive days, to noon on Friday, there have been no new cases of plague or deaths.

THE SUBMARINE DREDGER.

The *Canton River* was safely brought to the Kowloon Dock on Friday afternoon.

THE PLAGUE.

Hongkong, July 31.
There were no fresh cases of plague or deaths to noon on Tuesday.

DEPARTURE OF ADMIRAL BAYLE.

The French flagship *Admiral Charner* left Hongkong for Taku on Tuesday.

THE PROGRESS OF PRINCE CHUN.

Singapore, July 31.
Prince Chun arrived yesterday. He was officially received by the Hon. C. W. S. Kynnersley, C.M.G., the Deputy Governor, under a royal salute from Port Canning.

Thousands of Chinese, including a deputation of the leading merchants, assembled at the wharfside, and an address was presented by the Straits Chinese.

The Prince, in a touching reply, said that their address showed that they had not forgotten their mother country. He did not doubt that they enjoyed good government under British rule, and would be as loyal to that rule as to their mother country.

His Highness landed and returned the official visit of the Deputy Governor and dined privately with him. He afterwards visited the Chinese temple, where he received a deputation.

His Highness re-embarked in the evening and sailed to-day for Penang.

Chinatown was illuminated and decorated yesterday in his honour.

THE PLAGUE.

Hongkong, July 30.
One case of plague among Europeans, that of a child, was reported on Monday.

Hongkong, August 1.
There were two fresh cases of plague and two deaths among the Chinese in the 24 hours up to noon on Wednesday.

ARRIVAL OF H.M.S. "ECLIPSE."

H. M. S. *Eclipse* arrived from home yesterday.

MYSTERIOUS DEPARTURE OF BRITISH MEN-OF-WAR.

H. M. ships *Daphne*, *Eclipse*, and *Pygmy* left this morning for an unknown destination. The naval authorities refuse to give any explanation. They subsequently arrived at Amoy.

(FROM THE "SHANGHAI MERCURY.")
GREAT FIRE AT FOCHOW.

Fochow, July 26.
Besides the hong of Messrs. John Gittins & Co. and Messrs. Gilman & Co., mentioned in my former telegram as being destroyed by the fire, I have now to report the destruction of the business hong of Hedgie, Schlee, R. R. Westall, Cave-Thomas & Co., Odell & Co., Ramsay, Chartered Bank, and considerable Chinese properties. The fire is subsiding.

(FROM THE "OSTASIATISCHE LLOYD.")
NEWS FROM THE NORTH.

Peking, July 20.
To-day full agreements as to the main points of the indemnity question having been reached between the Foreign Ministers, it is expected that the entire negotiations will very shortly be completed.

Peking, Aug. 1.
A Committee consisting of the representatives of

Germany, Great Britain, France, and Japan, and presided over by the German Minister, Dr. von Mumm, is now working on a final protocol, which embraces all the results of the negotiations until now.

NEWS FROM ET'ROPE.

Berlin, July 28.
The draft of a new tariff for the German Empire, which has been published by the Chancellor after consultation with the Ministers of Finance of some of the leading States, proposes to considerably enhance all duties tending to protect agricultural products, while the duties for the protection of industrial products remain almost unchanged. Until now the Bundesrath has not dealt with the matter. There is great dissatisfaction with the proposals in Russia, where the Press is unanimous in condemning the economical policy on which the tariff is based, and expresses the conviction that both the Bundesrath and the Reichstag will throw out the proposals of the Chancellor.

The former French Minister at Peking, M. Pichon, has arrived in Paris. He expressed his conviction that order has been permanently restored in China. He laid special stress upon the concord and comradeship existing between the French and German troops, and spoke rather heartily of the work done by the Commander-in-Chief of the Allies, Count Waldersee.

The Press of St. Petersburg announces that the German Emperor and the Czar will have an interview at Danzig. The Czar has accepted an invitation of His Majesty the Emperor to be present at the grand manoeuvres, during which the Army and Navy will act together on a very large scale.

The French Government announces that Lieutenant-General Voyron, Commander-in-chief of the French Expeditionary Corps, will leave China on the 15th of August.

According to a message from President McKinley free trade has been introduced between the United States of America and Porto Rico, where a civil government has also been established.

The Brooklyn bridge is settling down; all vehicular traffic has been stopped.

Berlin, July 28.
The Commander of the German expeditionary corps, Lieutenant-General von Lessel, has arrived in Peking, to bid farewell to the German Minister. He stays at the German Legation. General von Lessel intends to start from Shanghai homeward by the mail steamer *König Albert* on the 17th of August.

Berlin, July 31.
Count von Waldersee visited on his way home the city of Algiers and exchanged visits with the officials of the French colony. Replying to the welcome extended to him, the Field-Marshal pointed out that the friendly relations that have been lately developed between the Germans and the French, especially in China, have grown exceedingly.

The Emperor of Austria in an official communication, has thanked the chief of the Austrian-Hungarian squadron, Count Montecucoli, for his successful achievements in China during the last year, and wishes the squadron a safe return home.

In San Francisco an extensive strike has taken place amongst the harbour labourers.

The late Prussian Minister of Education, Dr. Bosse, is dead, aged 69 years. Also the late Austrian Minister of Justice, and former President of the House of Representatives, Desider von Szilagyi.

ROMANCES OF SIBERIA.

There are two nations which think much more of their great men than do the other people of the world. These two are France and Russia. If the various affinities between France and Russia were more generally understood, the perplexity would not be so widespread concerning the persistency of the alliance between Gaul and Slav. This extraordinary appreciation of native genius is only one of the many points in which the two races wonderfully resemble each other. As this is not an article on international psychology, I only point to the strange fact. The Imperial rulers of Russia have all been like the first French Emperor. Napoleon cared not how lowly was the origin of any man of great ability. He instantly singled him out for distinction and steadily promoted him. In aristocratic Russia, the common people have enjoyed no such chance; but the history of that country abounds in illustration of the same principle of national development, through the free hand allowed to individual talent, enterprise, and courage.

The idiosyncrasy of one born leader of men after another has in every generation marked the process of Russian expansion. The Satraps of the Czars will live in history with imperishable honour. They have been the real makers of the mighty Empire. From the Little Russia of Kiev, which was the germ of the Greater Russia of Moscow in the fifteenth century, the process of expansion proceeded by stages which have been interrupted by halts, but

which have been as regular and continuous as the growth of the British Empire. Indeed, British and Russian expansion have been strangely parallel, and they will continue to be so. An impelling and mysterious destiny renders this inevitable.

We need not at this moment concern ourselves with the growth of European Russia, though that is in itself a remarkable historic romance. Asiatic Russia is the creation of a series of wonderful lieutenants of the Czar. The record of the crossing of Siberia by the Cossacks would make a thrilling, realistic novel. Some day some writer will thus use it as a thesis. But before the Cossacks had accomplished that feat a marvellous leader had immortalised himself. One day in August, 1584, a Tartar discovered in the river Irtysh a corpse which was conspicuous by its rich coat of mail with a golden eagle on its breast. It was the body of the renowned and dreaded "ataman" Yermak, the founder of the Russian Empire in Asia, who rose to wealth and power from the humblest origin and from the meanest occupations and unlawful pursuits, for he was in reality a Volga robber and pirate in an age and a land of freebooters. For his raid into Siberia and his earliest conquest he had to ask forgiveness of the Emperor. Ivan the Terrible easily forgave him. He was the first man who realised the vast potential destiny of the Slav race, and no name is more honoured in Russia, next to that of Peter the Great, than that of the ablest adventurer the nation ever knew.

The early Cossacks were nearly all river sailors. It was in after centuries that they became the most wonderful horsemen in the world. They gradually acquired their equestrian skill in warfare with the Tartars, their constant antagonists. The greatness of the Russian Empire in Asia was chiefly gained by gradually superseding the sovereignty of the Tartars. One most singular chronological aspect marks in the most definite and regular style this process of Slav expansion. The immense expanse of Northern Asia is divided into vast sections by four grand rivers—the Obi, Yenisei, Lena, and Amur. Each of these riverine tracts has occupied a century in the work of conquest. Russia pushed up to the Obi in the sixteenth century, that aggression being the brilliant work of Yermak. Tobolsk was founded on the banks of the Obi, and then began the subjugation of the Ostiaks and Samoyedes in the great region of Yeniseisk further east. This went on right into the seventeenth century. By the middle of the eighteenth century the Lena was reached, and it remained for the great Muraviev, father of the recently deceased statesman, to add to the Czar's dominions the magnificent realm of North Manchuria, now called the Amur Government, which brought the Empire up to the much-prized and beautiful Amur River. That was the greatest achievement of Russia in the nineteenth century.

Long and ferocious wars have been waged in almost every part of Siberia between the Russian pioneers and the native tribes. The regular armies of the Czar have had comparatively little to do with the steady and gradual subjugation of the vast regions. There has never been any very long halt between the Ural and the Pacific. The worst difficulties and the hardest conflicts were in the districts north and just east of Lake Baikal. In the vast realm beyond this point, the Cossack Elisei Buza greatly distinguished himself by his long explorations and his discoveries, including that of the silver mines in North-Eastern Siberia. Rough and cruel has been the treatment of many of the native tribes by the Cossacks at various times. Indeed, the expansion of Russia in Asia is one of the most terrible and protracted tragedies of history. Multitudes of Cossacks perished. Massacres of natives in each century were intermittent. Siberia has been a land of blood and fire to an extent only understood by those who have made its history a study. The career of Vladimir Atlasoff, the discoverer and conqueror of Kamchatka, is itself only one of the series of these personal romances.

All this expansion has been regularly effected by the efforts of four classes—pioneers, priests, merchants, and soldiers. These always follow in that order. The explorers, with little bands of adventurers, settlers, and petty traders go first. But when they have borne the preliminary hardships, the great missionary Russo-Greek Church never fails to forward the proper consignment of priests. We can always tell which country Russia means to subjugate. The priests appear and the fact is settled. There have been Russian priests and Greek churches in Manchuria for many years, and those who understand Russia, knew that this signified that the Czar must rule Manchuria, no matter what all the rest of the world might think, say or do. If anybody wants to make up his mind as to the certain fate of both Korea and Palestine, let him simply form a deduction from similar data amply supplied in those countries, especially in Palestine.

U.S. TRADE WITH PACIFIC COUNTRIES.

Statistics of the foreign commerce of the United States for the last fiscal year disclose the fact, remarks *Bradstreet's*, that the only countries of the world to which an increase is not shown in American exports are those of Asia and Oceania. While the figures indicate increases of \$100,000,000 in exports to Europe for eleven months ending with May, \$10,000,000 to North America, \$6,000,000 to Africa, they show an apparent reduction of about \$25,000,000 in the United States trade with Asia and Oceania. This reduction, however, is more apparent than real, according to the Chief of the Treasury Bureau of Statistics. Statistics of exports to the Hawaiian Islands are not included this year, owing to the fact that the islands are now considered a customs district of the United States. Exporters decline to furnish the information formerly supplied under the law. A careful study of the exports to the Hawaiian Islands, however, justifies the assertion that the total for the year will be fully \$20,000,000, which, if added to the total of the exports of other Pacific islands and countries, would bring the total to within \$4,000,000 of that of last year.

Another factor entering into consideration is the decrease in American exports to China, which have fallen about \$6,000,000 below those for the preceding year. This decline is admittedly due to the conditions which existed there during the first half of the fiscal year—the time of the Boxer uprising—and would be of itself more than sufficient to explain the remainder of the shortage. There is, however, still another factor which must be taken into consideration. Japan took from the United States during the fiscal year ending in June, 1900, an enormous oversupply of cotton, the total for the year being \$12,712,000, as compared with \$5,775,000 in the fiscal year preceding. As a result there was an abnormally small purchase of cotton during the fiscal year just closed, the total for the eleven months ending with May last being \$2,889,241, as compared with \$12,699,148 in the corresponding months of the preceding fiscal year. Of all other articles besides cotton Japan has taken from the United States her usual supply. To sum up, therefore, the apparent falling off in exports to Japan is the result of abnormal overpurchases of cotton in the preceding fiscal year. In China the partial suspension of purchases from the United States has been merely temporary, and trade is now being resumed in its normal proportions. In the Hawaiian Islands the apparent reduction is entirely fictitious, due to the absence of official statistics, while the actual volume of exports to the islands has increased and not decreased. To other parts of Asia and Oceania the figures of the year show an increase:—To the Philippines \$1,500,000; to British Australasia, \$2,000,000; to the East Indies, \$2,000,000, and to Asiatic Russia a slight increase over the corresponding months of 1899; but something below the figures of 1900, in which year the total was above the normal.

Taking the world at large, a comparison of the growth of the export trade of the United States with that of other nations shows that America made the greatest increase in the fiscal year just ended. During the portion of the year for which figures are available the increase in exports from the United States has averaged \$9,000,000 per month; that of the United Kingdom, \$3,000,000 per month; Russia, \$3,000,000; France, \$2,000,000; Canada, \$2,000,000; Austria-Hungary, \$1,000,000; and Mexico, \$1,000,000. On the other hand, Germany showed a loss of \$2,000,000 per month, Spain a loss of \$2,000,000 per month and Belgium a loss of \$1,000,000 per month.

LATEST SHIPPING.

ARRIVALS.

Gaelic, British steamer, 2,690, Wm. Finch, 1st Aug.,—Hongkong via ports, and Kobe, 31st July, Mails and General.—O. & O. S. S. Co.
Jupiter, British steamer, 2,199, James Reid, 2nd Aug.,—Hakodate, 30th July, Kerosene Oil.—Standard Oil Co.

Poritan, British steamer, 2,628, J. M. James, 2nd Aug.,—New York via ports, and Kobe, 31st July, General.—Jardine, Matheson & Co.
Alacrity (4), British Despatch Vessel, 1,700, Com. Craddock, 2nd Aug.,—Wei-hai-wei.
Sithonia, German steamer, 3,239, Burmeister, 2nd Aug.,—Hamburg via ports, and Shanghai, 29th July, General.—C. Illies & Co.
Hakui Maru, Japanese steamer, 1,419, S. Tsuji, 2nd Aug.,—Shanghai, via ports, 27th July, Mails and General.—Nippon Yusen Kaisha.
Fushiki Maru, Japanese steamer, 1,110, N. Nielsen, 2nd Aug.,—Kamaishi, 21st July, General.—Nippon Yusen Kaisha.
Pique (8), British cruiser, 3,600, Capt. H. C. Reynolds, 3rd Aug.,—Kobe, 2nd Aug.
Toloni Maru, Japanese steamer, 1,396, Y. Tamuke, 3rd Aug.,—Kobe, 12th Aug., General.—Nippon Yusen Kaisha.

PASSENGERS.
ARRIVED.

Per British steamer *Gaelic*, from Hongkong via ports:—Mr. A. W. Bain, Miss Hoeh Jin Chin, Capt. J. Whittle, Mrs. J. Whittle, Miss B. Whittle, Miss M. E. Melton, Miss R. Machado, Lieut. Hartmann, Lieut. Busse, Capt. H. Richelot, Lieut. Wunder, Mrs. F. Smyth, Mr. G. G. Hubbard, Miss M. Palmer, Miss Morgan and amah, Mr. J. B. Radigan, Mr. A. Rock, Mrs. A. Rock and amah, Rev. T. C. Winn, Mrs. T. C. Winn and amah, Miss Mary C. Winn, Master Merle C. Winn, Miss A. E. Garvin and amah, Mr. R. Forshaw, Capt. S. Tomioka, and Dr. C. P. Bagg, U.S.N., in cabin. For San Francisco:—Mr. T. V. Halsey, Mrs. T. V. Halsey, Mr. J. E. Galbraith, Mrs. J. E. Galbraith and child, Mr. D. Craig, Mr. M. Lukban, Mr. A. Tazon, Capt. M. B. Roberts, R.A., Lieut. H. M. Beasley, R.A., Miss M. J. Wilson, Mr. Max Kerkovins, Mr. M. Wolli, Mr. M. Tenebaum, Mrs. A. S. Devin, Mr. T. Noble, Miss Julia Leavitt, Miss Julia A. Winn, Mr. George H. Winn, Miss I. M. Worth, Dr. G. D. Costigan, U.S.N., Mr. J. R. Gillingham, Mr. Chen Chin Tao, Mr. Yu Ching Yung, Mr. Wu Kin Ling, Mr. Chang Yu Chuan, Mr. Wong Chung Yu, and Mr. Hu Fung Chao, in cabin.

Per Japanese steamer *Hakui Maru*, from Shanghai via ports:—Rev. J. Hind, Mrs. Hind, Mrs. Allen, Mrs. C. W. Harris, Mr. Reynier, Capt. Anderson, Major C. Shrapnell, Mr. H. T. Paul, Mrs. Halworthy and 2 children, Mr. L. D. Abraham, and Mr. T. Tojo, in cabin; Miss Illison, Mr. T. Tong, and Mr. T. Hattori, in second class; 34 Japanese, 6 Chinese, and 1 European, and 1 European, in steerage.

Per Japanese steamer *Nippon Maru*, from San Francisco via Honolulu:—Mr. S. Togo, Mr. S. Yokota, Mr. Leon Brock, Mr. A. L. Thomsen, Dr. W. W. Keen, Dr. R. F. Weir, Mrs. R. F. Weir, Mr. F. von Hohmeyer, Miss D. Keen, Mr. F. H. Kingman, Mrs. F. H. Kingman, Mr. H. T. Goseliner, Mr. K. Otsuki, wife and 2 children, Miss F. Keen, Mr. Geo. Bedinger, Dr. J. J. Kinyoun, and Miss Alden, in cabin. For Kobe:—Mr. J. G. Smith, and Mrs. J. G. Smith, and 2 servants, in cabin. For Shanghai:—Minister E. H. Conger, Mr. G. W. Drollette, Miss M. S. Reeves, and Mrs. Ida Baker, in cabin. For Hongkong:—Dr. L. H. Fales, Mrs. L. H. Fales, Mrs. Gran Cohen, and Mrs. Daisy Wilson, in cabin; Mr. T. Osawa, Mr. F. E. Russ, Mr. B. C. Gleason, Mr. Fung Kang, Mr. A. Graber, Mr. Jos. Perry, Mr. G. A. Owen, Mrs. Owen, Mr. G. Owen, Mr. C. H. Heisinger, and Mr. W. Ballard, in European steerage.

Per French steamer *Oceanic*, from Marseilles via ports:—Mr. F. Lehmann, Mr. A. Cabourer, Mr. Sauz de Vlorr, Mr. Takenouchi, Mr. Uyen Uloh, Mr. Ch. Chase, Mrs. Hagen and 3 children, Mrs. H. M. Callins, Mr. D. W. Salter, Mr. and Mrs. H. Sillem, Mrs. N. Hland, Capt. Condon, Mr. and Mrs. Bates and child, Mr. Arthur Van Nierop, Mr. Mandl and boy, Mr. J. H. Denison, Mr. D. B. S. Morris,

Mrs. M. Bernheim, Mr. and Mrs. Boule Adam, Mr. Albert Loch, Major Von Linsten, Com. Von Breden, and Mrs. Frique and amah, in cabin.

Per Japanese steamer *Kaga Maru*, from Seattle, Wash.:—Mr. F. Tanno, Miss E. C. Ekstrand, and Miss C. M. Ekstrand, in cabin; Mr. K. Yendo, in second class; 11 Japanese, in steerage. In Transit:—Mr. J. J. Connell, Mr. Moritz Thomsen, Mr. E. S. Young, Mr. F. B. Jagersole, in cabin; 9 Japanese, 13 Chinese, and 2 in American steerage.

DEPARTED.

Per British steamer *Gaelic*, for San Francisco via Honolulu:—Mr. Werner Atsheimer, Lieut. H. M. Beasley, R.A., Lieut. von Bonninghausen, Mr. M. G. Vander Burg, Mrs. C. Carroll, Mr. Hu Fung Chao, Mr. Chang Yu Chuan, Dr. G. D. Costigan, U.S.N., Mr. John Cowan, U.S.N., Mr. D. Craig, Capt. H. Credner, Mrs. A. S. Devin, Mr. James E. Galbraith, Mrs. James E. Galbraith and child, Dr. O. Garlipp, Mr. J. R. Gillingham, Mr. T. V. Halsey, Mrs. T. V. Halsey, Lieut. Hennsdorff, Mr. E. J. Van Hoboken, Mr. Max Kerkovius, Mr. Farnz Kyll, Miss Julia Leavitt, Mr. Wu Kim Ling, Lieut. Lippert, Mr. M. Lukham, Mrs. Lyon, Lieut. Mansfield, Mr. Victor Marshall, Mr. H. J. Martin, Mr. W. J. Martin, Dr. G. F. McComb, Mr. T. Noble, Prof. A. A. Nyland, Lieut. Reuss, Capt. M. B. Roberts, R.A., Mr. A. Taizon, Mr. Chen Chin Tao, Mr. Wong Chung Wai, Mrs. B. Williams, Miss M. E. Wilson, Mr. J. H. Wilterdink, Miss Julia A. Winn, Mr. George H. Winn, Mr. Max Wolff, Miss I. M. Worth, Mr. Wong Chung Yu, and Mr. Yu Chin Yung, in cabin.

Per Japanese steamer *Hakuni Maru*, for Shanghai via ports:—Mr. K. Kataoka, M.P., Mrs. Sealon Norman, Mr. Ayao Komuro, Mr. Oki, Mr. Y. Murota, Mr. Robert Berger, Mr. M. Yoshida, and Mr. T. Moran, in cabin; Mr. and Mrs. I. Ise, Mr. Deniakow, Mr. D. Miyasaki, Mr. and Mrs. T. Ueno and two children, Mr. and Mrs. B. Ebrah, and Mr. Y. Akawa, in second class; 44 in steerage.

White Refined	9.30 to 10.60

EXPORTS.

RAW SILK.

Quotations remain as last reported, being called the turn dealer, and there has been some speculative buying at these figures. The market, however, is

fictitious; consumers do not enter at this level and with renewed court mourning in Europe the aspect of the trade is not brilliant, and we should have lower prices here in the near future.

QUOTATIONS.

SKIN TORTURES

And Every Distressing Irritation of the Skin and Scalp Instantly Relieved by a Bath with CUTICURA SOAP

And a single anointing with CUTICURA, the great skin cure and preserver of emollients. This is the purest, sweetest, most speedy, permanent, and economical treatment for torturing, disfiguring, itching, burning, bleeding, scaly, crusted, and pimply skin and scalp humours with loss of hair, and has received the endorsement of physicians, chemists, and nurses throughout the world.

beautifying the skin, scalp, hair, and hands. No other foreign or domestic toilet soap, however expensive, is to be compared with it for all the purposes of the toilet, bath, and nursery. Thus it combines in ONE SOAP at ONE PRICE, the BEST skin and complexion soap, the BEST toilet soap and BEST baby soap in the world.

Complete External and Internal Treatment for Every Humour.

Consisting of CUTICURA SOAP, to cleanse the skin of crusts and scales and soften the thickened cuticle, CUTICURA Ointment, to instantly allay itching, inflammation, and irritation, and soothe and heal, and CUTICURA RESOLVENT, to cool and cleanse the blood. A SINGLE DAY is often sufficient to cure the most torturing, disfiguring, and humiliating skin, scalp, and blood humours, with loss of hair, when all else fails. Sold throughout the world. Aust. Depot: H. Towns & Co., Sydney, N. S. W. So. African Depot: LERNON LTD., Cape Town. * All about the Skin, Soap, and Hair, free. POTTER DRUG AND CHEM. CO., Sole Props., Boston, U.S.A.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 17TH, 1901.

DEATH.

On June 20th, at Belfast, Ireland, Rev. HUGH WADDELL, formerly of Azabu, Tokyo.

SUMMARY OF NEWS.

A JAPANESE Post Office was opened at Nankin, China, on the 8th inst.

A HAILSTORM passed over Uyeda-machi, Nagano Prefecture, on the 10th instant.

MARQUIS YAMAGATA left the capital for Kyoto on the morning of the 8th inst.

MAJOR-GENERAL FUKUSHIMA left the capital for Saitama on the afternoon of the 11th inst.

MR. MOCHIZUKI JIRO, of the *Keizai Zasshi*, died at his residence in Akasaka, Tokyo, on the 9th inst.

THE training cruisers *Isukushima* and *Hashidate* left Hakodate for Yokosuka, on the 12th inst.

TRAFFIC between Hiroshima and Ujina was suspended on the 8th inst. owing to damage to the road.

HEAVY rain and a thunderstorm occurred at Kyoto and Matsuyama between 3 and 4 p.m. on the 13th inst.

An employee of Mr. Nakamura Ukichii, a merchant at Satsuma-bori, Osaka, is being searched

for by the police on a charge of having forged his employer's name to a cheque for yen 1,220.

MAJOR-GENERAL FUKUSHIMA YASUMASA intends travelling abroad again and will leave Japan in a few days.

OVER twenty men were arrested by the Isezaki-cho police on Aug. 10th, on a charge of conducting a lottery.

THE Hamamatsu Rice Exchange at a general meeting of shareholders held on the 9th inst. decided to dissolve.

THE steamer *Takasago Maru* towed by the *Oni Maru*, passed Shimomoseki for Kobe on the morning of the 8th inst.

A DAILY newspaper entitled the *Nisshu Dokuritsu Shimbun* was published in Miyazaki Prefecture on the 7th inst.

IN the Moji Primary School on the 10th inst. 77 boys and 98 girls were found to suffer from sore eyes (*torahome*) out of 969.

TWO bodies, one of a man and the other of a woman, were found on the sea beach at Haneda, Tokyo, on the afternoon of the 9th inst.

AN explosion of dynamite took place near a mine at Ikuno, Asakigori, Hyogo Prefecture, on the 5th inst. and eight men were injured.

By fault of a pointsman a train collided with a building at Nagasu station on the Kiushu Railway on the 11th inst., and one man was injured.

FIRE broke out at Sumiyoshicho, Niigata Prefecture, shortly after eight o'clock on Monday morning. Over fifty houses were destroyed.

A NEWSPAPER called the *Gakusei Shimbun* (*Students News*) will be published on September 10th. It will be edited by Mr. Cho Renkan of Kashu.

TRAFFIC between Shiriuchi and Numazaki is expected to be reopened on the 14th inst. The line was interrupted by an earthquake a few days ago.

THE trouble between the salmon cannery and the fishermen at Vancouver, to which reference has already been made in these columns, was settled on July 10th.

By a collision between a passenger carriage and a goods wagon at Kanagawa station on the night of Aug. 9th, one coolie was killed and another injured.

EMIGRATION from Germany by way of Bremen during the six months which ended June 30th, 1901, reached 65,742 as compared with 55,821 during the corresponding period of last year.

THE Chinese residents of Yokohama dressed their places of business on Monday in preliminary celebration of the birthday anniversary of the Emperor of China, which took place on Aug. 15th.

CORPORAL KOZUKA TAKICHI, of the Imperial Body-guard, committed suicide by *seppuku* in a house of ill-fame at Utsunomiya on the morning of the 8th inst. He had broken barracks for some days.

MATSUSHITA MASATARO, employed at Fukutomi-cho Sancho, Yokohama, was arrested by the Isezaki-cho police on the 7th inst. charged with setting fire to his employer's house on the night of the 4th inst.

A STUDENT was murdered in a Nagasaki boarding house on Aug. 9th. The murderer, also a student, attacked the other man with a short sword while he lay ill, and then gave himself up to the police.

THE Nippon Shosen Kaisha's steamer *Buyo Maru* arrived at Nagasaki on the 11th from Shanghai. On her way across she signalled a disabled sailing ship of the Standard Oil Company and rescued the crew. The ship is much damaged.

ON the 14th July, when H.M.S. *Eclipse* was a few miles off Colombo and slowing down, a blue-jacket at work on deck accidentally fell over-board. Several life buoys were thrown out to the man, who suddenly disappeared. It is supposed he must have been caught by a shark.

A COOLIE attempted to murder the mistress of his employer at the woman's house in Yokosuka early on the morning of Aug. 11th, but was stopped by her lover who, wresting from him the axe with which he had attacked her, inflicted severe injuries on the assailant. Both were taken to the Miura Hospital.

A CHINESE boy named Bun-hun (16), living at No. 175, Yamashitacho, Yokohama, was arrested by the Kagacho Police on the 12th inst. charged with having stolen a purse containing two 10 yen notes and a silver ring belonging to a cook at Messrs. Raspe & Co's. The ring he gave to another Chinese boy.

A COMMITTEE which was recently appointed by the directors of the firm of Messrs. Samuel Allsopp and Sons, Limited, brewers, to make an investigation of the properties, investments, and loans connected with the firm, have announced a shortage estimated at £1,500,000. The directors advise that the ordinary capital should be drastically reduced.

MATSUI KIKUNO, along with her husband Toshitaro, ill-treated a foster daughter named Shizuye and eventually the child died in a bath-room in the middle of November last. Both were arrested on suspicion of murdering her. Toshitaro hanged himself in jail some months ago, and the Tokyo Local Court on the 8th inst. sentenced the woman to six months' imprisonment with hard labour.

A MAN named Koyama Kamehiko, staying in a boarding house, at Hiroomachi, Tokyo, attempted to commit suicide by throwing himself before a train near Ueno on the night of the 9th inst. He was rescued by the police who kept him in the station till noon the following day. The same night he jumped over a bank and received hurts from which he died at Hamazakicho, Shiba.

THE late Herr Steinitz asserted that chess-players are generally long-lived, but a comparative table in the *Deutsche Schachzeitung*, computed on seventy-five lives of prominent men in each of the various pursuits, gives the average life-time in years as follows:—Chess-players, 56.78; musicians, 60.82; poets and literary men, 65.48; astronomers and scientific writers, 67.21; great generals, 70.06.

THE annual report of the Directors of the Sun Insurance Office, London, of which the local agents are Messrs. Robison and Co., shows that premiums received during 1900, less re-insurances, amount to £1,070,556, being an increase of £42,919. The sums insured, after deducting the amounts re-insured, exceeded £4,500,000, and the losses paid and outstanding to £630,385, or at the rate of 58.88 per cent. on the premiums received.

THE MANCHURIAN QUESTION.

The Tokyo press begins to write again in a vehement strain about the Manchurian question, to which public attention has been re-directed by the statement of *The Times* that the Russian Government has approached China with a demand for the conclusion of some definite convention, and by the intelligence that two Russian head-quarters are to be established and two Governors of Manchuria appointed. This recrudescence of discussion does not involve any new arguments. Noticeable, however, is an impression that the South-African trouble having now been nearly settled, England is likely to take up the Manchurian problem more vigorously. All Japanese writers seem to be agreed that this country can not consent to see an immense region like Manchuria pass under the control of a Power which would certainly pursue an exclusive policy there, shutting out Japanese trade and industry. There appears to be an idea with regard to England that she does not place much reliance upon the sincerity of Japan's resolution to pursue a stalwart policy in the Manchurian business, but we should think that the difficulty would rather be England's unwillingness to pursue a stalwart policy herself. If, however, Russia persists in attempting to conclude a secret treaty with China, the four Powers, Germany, Japan, America and England, are tolerably sure to remonstrate. Assuming the integrity of Russia's purposes, an assumption which her repeated declarations justify, it is hard to understand why she should decline to proceed in a perfectly frank manner. Reticence and secrecy would justly engender suspicion.

It is thought probable that if Russia renews with China the negotiations about Manchuria after the conclusion of the peace treaty now on the eve of signature, the St. Petersburg statesmen will require China to assist in preventing the wholesale influx of Chinese immigrants into Siberia. Wide tracks of Chinese territory having been devastated during the recent war, their inhabitants must find some new field of employment, and Siberia with its large resources and new means of communication is pretty sure to tempt them. The Amur district already has 150,000 Chinese inhabitants, and China could send twenty millions to Siberia without missing them at all.

It is telegraphed from Peking to *The Times* that the Russia Representative in that city has intimated to the Chinese Government the necessity of resuming the negotiations about Manchuria so soon as the peace conference is concluded. M. de Giers bases his intimation on the alleged fact that the previous objection of the Powers to Russia's Manchurian Convention was directed not against the Convention itself, but against Russia's carrying on simultaneously joint negotiations as a member of the union of Powers and independent negotiations on her own account. After the conclusion of the joint negotiations there will be no longer any basis for such an objection. *The Times* calls M. de Giers' statement "very incomplete," and writes as follows:—

The Powers objected to the Manchuria Agreement for many reasons, and the most important of these reasons will remain of full force and effect after the Chinese have agreed to the indemnity proposals. Amongst those objections—even if we may assume that the preposterous extension of the Russian claims to Mongolia and Turkestan will not be revived—the destruction of the former State organism in a wide portion of the Chinese Empire, the practical partition of that Empire by the substitution, in fact if not in name, of Russian sovereignty for Chinese, and the preferential treatment intended for Russian trade in

breach of the subsisting treaty rights of other nations may be mentioned. This country, as Lord Lansdowne has said, is not disposed to criticize in a carping or pedantic spirit any reasonable arrangements Russia may desire to make for the protection of her legitimate interests in Manchuria. But, as the deputation which lately waited upon the Under-Secretary for Foreign Affairs showed, members of Parliament on both sides of the House are keenly alive to the greatness of our stake in the Chinese Empire and quite resolved that those interests shall not be sacrificed by excessive devotion to what Lord Cranborne calls a policy of "courtesy and reserve." Courtesy is always admirable, but it is felt in many quarters that excessive reserve in the vindication of our plain rights is liable to be misconstrued by some persons as an invitation to fresh encroachments.

The main lines of our policy are perfectly clear. We shall offer no opposition to an agreement for the future administration of Manchuria which is fairly designed to protect the admitted interests of Russia and for no other purpose. We are ready to see Russia conclude with China any arrangement which can fairly be brought within the language used by Count Lamsdorff to Sir Charles Scott when describing the former negotiations. The Russia Minister then formally disclaimed any intention of seeking under the guise of a guarantee any acquisition of territory or any actual or virtual protectorate. On the other hand, we shall object now, as we objected before, to anything resembling a new edition of the agreement which Russia attempted to conclude at the time when these assurances were given. That agreement, according to the unofficial versions of its contents, which were the only versions Russia ever allowed the world to see, was not limited to Manchuria, but affected a great part of Central Asia reaching close to the borders of our Indian dominions; it was not temporary or provisional, as Count Lamsdorff had declared it was, and it included provisions which were, in Lord Lansdowne's words, "clearly derogatory" to our treaty rights in the Chinese Empire.

Japanese public opinion, if we may judge from the utterances of the press, is becoming more and more excited about Russia's attitude in Manchuria. It is recalled that Russia's history does not warrant the world in placing implicit confidence in her adherence to international agreements. She has again and again declared that her occupation of Manchuria is only temporary, but the steps she is taking to organise a system of government there do not suggest any transient purpose, and her persistence in seeking to make a special convention with China seems to indicate an intention inconsistent with her public interpretation of her programme. She can not be allowed to absorb Manchuria, and nothing short of absorption will be the outcome of the situation if she herself is to be sole judge of what is meant by the so-called restoration of peace and good order.

Such is the gist of articles in the *Kokumin Shinbun* and the *Nippon* which come by way of supplement to articles previously published in other journals. It is plain that Russia's insistence upon a Manchurian Convention with China is a perplexing factor in the complication. Why should Russia want such a Convention? She is in Manchuria. She has only to remain there. No one is in the least degree likely to disturb her if she merely keeps quiet and applies herself to putting down the fitful resistance of the inhabitants as well as to administering the affairs of the region in a competent manner. But when she begins to agitate for Conventions, she shows pragmatical uneasiness so obviously inconsistent with wise diplomacy that the nations justly wonder what she means. Probably the answer is that she wants a pretext. She has given so many public assurances of ingenuous intentions that her hands are effectually tied by her own asseverations. But she does not wish to remain with tied hands, and the best way to loosen the bonds would be to place the whole matter on a different footing, namely, the footing of a Convention. By the aid of a Convention a definite agreement would be substituted for her own embarrassingly

emphatic disavowals of sinister design, and she would be able to shape her course in accordance with Peking's concessions instead of St. Petersburg's professions. If that analysis of her purpose be correct, it is easy to understand that she will keep the terms of the Convention secret until its ratification is an accomplished fact, and it is also easy to see that the other Powers interested will strongly object to such secrecy.

TOKYO OVER-HEAD RAILWAY.

The works on the Tokyo over-head railway are making very slow progress. It was originally planned that the railway should be carried this year from Shinsen-za, its point of departure, *via* Karasumori-cho to Eiraku-cho, but so much difficulty is experienced in connexion with the foundations in the moat near the Imperial Hotel that the work is not now expected to get farther than that place this year. Heavy piles, 36 feet long, have to be driven, and cement having been laid above them, the foundation is finished with brick. Such operations can not be entrusted to contractors. There are also most wearisome delays in obtaining official permits either from the Home Office or the Tokyo Municipality—delays only too familiar to the citizens of Tokyo, where the most insignificant matter, if it gets into the hands of officialdom, is condemned to long procrastination.

It is now proposed to abandon temporarily the project of building an overhead line of railway between Ryogoku and Honjo, and to construct an ordinary railway instead. This road, 77 chains long, is intended to connect the metropolitan system with the Sobu line which runs to Chiba Prefecture. A charter to build an elevated railway was obtained some time ago, on condition that the work should be completed within three years. The cost was to be 1,200,000 *yen*, and of that sum 800,000 *yen* has been spent in acquiring land only. The Company finds a difficulty in getting money to continue the work in accordance with the original scheme, and application has been made to the authorities to permit the building of an ordinary line on condition that it is converted into an elevated one within the space of 7 years. It is to be sincerely hoped that permission will not be given. If such a change of programme be allowed in the case of one railway, the same privilege can not be withheld from another, and thus, in addition to the nuisance of the present tram cars, Tokyo would be harassed by trains rushing through its streets and immolating a number of victims every year at level crossings.

GENERAL VOYRON.

Lieut.-General Voyron and his staff reached Tokyo on the forenoon of the 12th instant, and proceeded to the Imperial Hotel. Arrangements have been made for various entertainments in honour of the distinguished officer. He was met at Shimbashi station by Lieut.-General Viscount Terauchi, Chief of Staff, Major-General Fukushima and others. Lieut.-General Voyron was received in audience by the Emperor on the 13th inst.

Lieut.-General Voyron and his suite were entertained at luncheon by Lieut.-General Viscount Terauchi at the villa in the grounds of the Koishikawa Arsenal on the 14th instant. The Minister President of State and many distinguished officers were present, as was also the French Representative. General Voyron and his staff left Tokyo on the 15th instant.

RUSSIA AND THIBET.

In spite of the announcement telegraphed to the world that the mission of the Lama Derzhieff to Russia had no political significance, the reception given to it shows that some Russians, at all events, did assign to it a political meaning. The Mayor of Odessa, where a considerable demonstration of welcome was made to the visitor from Thibet, said that he hoped the sojourn of the Lama in Russia might serve as the seed of future relations mutually advantageous to Thibet and Russia. The *Novosti* also spoke of the mission as one "of great political importance," and affirmed that measures were taken by the British authorities in Ceylon to prevent the Lama and his party from boarding the Russian volunteer-fleet cruiser *Tamboff*, but that these obstructive tactics were unsuccessful. It is more than doubtful whether the *Novosti's* information on this subject has the slightest basis of fact.

A German newspaper, echoed by a leading Austrian contemporary, gives an estimate of the dangers threatening England in the direction of Thibet. The following is the estimate, but it will be read, of course, with all reservation:—"It is probably true that the present mission and the exchange of amenities between the Tsar and the Dalai Lama bodes no good to Great Britain. The Dual Alliance is working in every possible direction against British interests. One of its first plans after the alliance was concluded consisted in cutting off British India from its *Hinterland* by establishing communication between the French and Russian possessions in Tongking and Central Asia across Yun-nan and Tibet. In this way not only India, but also Burma and Siam would be prevented from trading with China and the north, while Siam could easily be absorbed by France. It appears that the immediate object of Russia is to establish a protectorate over Tibet. The present confused situation in China is in any case favourable to the Russian scheme. The Dalai Lama may prefer the protection of the mighty Tsar to that of the weak Emperor of China. When France has secured a firm footing in Yun-nan, and Russia in Tibet, the Franco-Russian chain will extend from the Baltic Sea to the Gulf of Tongking, and it will be possible for the two allies to prevent trade between China and the British possessions in Asia. It will also enable them to combine in any eventual operations, either to the north against China or to the south against India."

CHINESE AFFAIRS.

Tuesday, Aug. 13.

In what manner Prince Tuan and General Tung Fu-hsiang are really occupying themselves, it is very difficult to say. The *North-China Daily News* in its issue of the 5th instant, publishes the following perplexing paragraph on the subject:—

Instructions have been received here by local mandarins from Hsian, where the news first published in these columns of the restlessness of Prince Tuan and his henchman, Tung Fu-hsiang, has apparently lately arrived, to deny in toto the report of their march with large bodies of followers south-eastward and north-eastward, respectively, in the direction of Taiyuan. People in the Central and Southern provinces are therefore asked to give credit to the Hsian declarations in regard to Prince Tuan and Tung Fu-hsiang, the gist of which may be translated as follows:—"In the first place, when the Imperial edict cashiering Prince Tuan and banishing him to Chinese Turkestan was issued last winter, Tuan, who happened then to be in the vicinity of Lanchow, the provincial capital of Kansu, at once proceeded north-westward for his

place of exile, namely, Urumtsi, or Tihua, as it is at present called in Chinese, the provincial capital of Chinese Turkestan and Ili. Prince Tuan, however, fell ill whilst passing Mongolia, en route. [Note:—There is the great Imperial highway between Lanchow and Chiayükan, the western extremity of the Great Wall, which exiles have to take invariably when en route to Chinese Turkestan; Mongolia being out of the route entirely. Translator.] He (Prince Tuan) is still an invalid, but a special Imperial edict has been since sent to him commanding him to "start for Urumtsi the moment he has recovered sufficient strength to travel." According to Chinese precedent an exile has always had to wait upon the convenience and wishes of the authorities in charge of him as to when to stop and when proceed, a certain date being set for the arrival of the exile at his destination, failing which those in charge of him are punished.

With regard to the so-called "ex-General," Tung Fu-hsiang:—"Instead of being at the head of his wild Kansu followers and Mussulman adherents sweeping over the north-eastern and eastern frontiers of Kansu bound for Shansi's provincial capital, as reported, the latest petitions from the district magistrate of Kuyuan, Kansu, declare that Tung Fu-hsiang is still quietly residing in that city and has not left that place since his arrival there in the winter of 1900. Statements to the contrary, therefore, must be taken as baseless rumours unworthy of credence." So much for this denial of the Reactionaries of Hsian. As a matter of fact, Kuyuan is the headquarters of the Provincial Commander-in-Chief of Kansu—Tung Fu-hsiang's original post. If reports are untrue and Tung is still there, then he is still Commander-in-Chief and not cashiered at all.

Shanghai had climatic experiences in July similar to those of Japan. The rainfall during the month was 12.06 inches, the average for the previous 19 years having been only 5.75 inches, and the average maximum and minimum of the thermometer were 84.87° F. and 74.09° F., respectively whereas the corresponding figures for 1900 were 88.63° and 82.76°.

The peace plenipotentiaries, Prince Chin and Viceroy Li, are said to be taking steps for the establishment of a school of industry in Peking, their hope being to rescue from vagabondage and brigandage many of the persons now comparatively destitute in the metropolitan province.

The *Shanghai Free Press* has the commendable and rare courage to remonstrate against treating the Chinese as barbarous rebels because they endeavour to stem by force the wave of foreign aggression. It is indeed true, as our contemporary says, that did any European Power experience at China's hands even a fraction of the masterful treatment that China has long been receiving at European hands, Chinese subjects within the dominions of that Power would have a rough time. But of what use, after all, these reflections? It is for China to do as Japan has done, or to go under. International morality and altruism have no practical place in the account.

Work having been stopped on the fortifications on Liukung-tao, which is an island in Wei-hai-wei harbour, the local Chinese became convinced that the place was to be handed over to Germany, so largely does that Power bulk in Chinese imagination. Of course the true reason is that Wei-hai-wei is likely to be transferred to the Admiralty, and the military authorities are consequently "marking time."

The typhoon which threatened to sweep over Japan from Nafu, visited Shanghai on the 5th and 6th instant and did a great deal of damage, overturning a number of old houses along the native city moat and at Sinza, injuring several people and tearing away embankments in various places.

Thursday, Aug. 15.

According to reports sent from St. Peters-

burg to Tokyo journals, some of the Russian newspapers are awaking to the fact that Japan received just a trifle too little consideration at the hands of Germany and Russia when these two Powers, having united in 1896 to turn her out of the territory she had conquered in Manchuria under the pretext that the presence of a foreign State on the Asiatic Continent would be a menace to the integrity of the Chinese empire, then, within four years, appropriated for themselves important positions on the same Continent without taking the least trouble to consult Japan. That was indeed one of the most unscrupulous examples of flouting ever witnessed in international doings. Russian journals are now making the discovery. But the quaint feature of their enlightened mood is that they suggest the propriety of correcting the mistake of 1896 by repeating it, *mutatis mutandis*, in 1901. They counsel the surrender to Japan of Korea provided that the Tokyo Government offers no opposition to the appropriation of Manchuria by Russia. No other Powers count for anything in the Manchurian and Korean questions, we presume.

The *Osaka Asahi* publishes the text of a proclamation issued by the Russian Authorities in Newchwang warning Chinese subjects against carrying complaints to merchants and missionaries instead of laying them before Russian officials. It is further intimated that any neglect of this notice will be severely punished. The *Asahi* puts a somewhat strained interpretation upon this order, but without admitting that there is any intention on Russia's part to erect a barrier between non-Russian nationals and Chinese subjects, it must be confessed that the proclamation is a very significant indication of the secondary position to which the Russian Authorities seek to relegate the foreign Consuls. Probably there is some explanation not apparent on the face of the facts.

RELIGIOUS FAITH OF THE BOERS.

The practical faith that some of the Boers, including ex-President Kruger, entertain as to the ultimate intervention of God on their behalf, is well illustrated by the following story which the commandant of a refugee camp in South Africa sends to *The Times*:—"Not long ago, two Transvaal women ('black cabbies') came to see me about some trifle and fell to discussing the situation of affairs. One said, 'I have lost all hope. Let the English take the land, and let us get back to our homes. I should like a round-robin, signed by all the women in camp, to be sent to our husbands on commando, begging them to submit, and end the war. Otherwise, I should like the English to send us bodily back to our own people on commando to be looked after. They could not feed us, and they could not see us die of starvation, and that would be the means of ending the war. The other women replied, 'I would not sign such a document. I am not without hope even yet. My old man is on commando, and knows better than I do, and I would not ask him to surrender if I could find him. Besides, do you know that when Paul Kruger went to Europe the ship was enveloped in Egyptian darkness for 12 days and nights? Thus the Lord tried his faith. On the 13th day the ship sailed into a calm sea and bright sunshine. This miracle was performed for our guidance and instruction. I tell you I have not lost hope that we shall still regain our country.'"

KOREA.

Saturday, Aug. 10.

The Korean Government shows no disposition to abandon or modify its attitude with regard to the veto on the export of cereals. Neither has it given any satisfactory reply to Mr. Hayashi's remonstrance against the general unwisdom of such prohibitions. This question is apparently destined to remain a source of trouble.

Several Tokyo newspapers concur in attributing to Russia the design of immediately opening negotiations—one paper alleges, indeed, that she has already opened them—with Japan on the basis of an exchange between Korea and Manchuria, each empire agreeing to stand aloof and offer no obstruction to the other's proceedings in the indicated district. It is quite curious to observe the assumed accuracy with which the *Niroku* formulates this story. It undertakes to set forth serially the proposals that Russia has submitted to the Powers on this subject, but as each item on the list consists of a string of asterisks, varying only in number, followed by some fragments of constructive phraseology that would fit any predicate, the *Niroku's* readers are left just where they were, except, perhaps, that the more credulous of them receive an impression of mystery. It is certainly the acme of sensational journalism to publish skeleton sentences and leave readers to fill in the details according to their fancy.

The commencement of work on the northern section of the Soul-Fusan Railway is to be officially celebrated on the 15th inst., when a representative of the Emperor of Korea will attend. It is stated that the land required for construction purposes on that part of the road has already been handed over by the Korean Government. The date for commencing operations on the southern section has not yet been fixed, but an early day will probably be chosen. Thus the work will proceed from both ends simultaneously.

Wednesday, Aug. 14.

No success seems to have attended the attempts of the Japanese Representative in Soul to procure the withdrawal or postponement of the prohibition as to the export of cereals. Mr. Hayashi appears to have asked for one of three things: first, that the veto should be rescinded; secondly, that its operation should be deferred until harvest time, and thirdly, that it should not go into effect for a month. All these proposals were negatived by the Korean Government, it is said, and the prohibition goes into force on the 26th instant. Neither has any satisfactory answer been obtained to the contention that it is *ultra vires* to extend the prohibition to all cereals instead of limiting it to rice alone. That point awaits further discussion. The only useful result of Mr. Hayashi's remonstrances is that the Korean Government has promised to instruct the provincial authorities not to oppose the purchase of rice for food by the crews of Japanese fishing boats.

It need scarcely be said that this action on the part of the Korean Government continues to be denounced by the Japanese press. The *Fiji Shimpō* is particularly emphatic. It declares that a temporary check to diplomatic remonstrance must be regarded as final in such a matter. The progress made by agriculture in Korea during recent years is mainly due to the opening of a new market for her cereals owing to exports. It would be most injurious to her interests that this progress should now be checked by blundering officialdom. Then there

is the fact that it has become habitual for Japanese merchants to make advances to Korean farmers on the security of the latter's crops. The merchants by whom such advances were made this year are now placed in a very awkward position. The *Fiji* supplements these editorial utterances by a cartoon indicating that Russia is using France and Korea to harrass Japan in this matter.

GERMAN NEWS.

The German press appears to have resumed its campaign of virulence against England in connexion with the conduct of the South-African war. Anonymous letters and articles have been published in Holland charging the British troops with all sorts of brutalities, and these letters and articles are accepted by the German press as conclusive evidence. The *Vossische Zeitung*, for example, declares that the behaviour of the British in South Africa is no better than that of the Turks in Bulgaria and Armenia, and says that England will be for ever disgraced if her people look on in silence while her "hiring troops perform deeds of savagery among the free Christian people of the Boers, while the farms of men who are defending their independence are burned to the ground, their wives and daughters outraged, and their old men and children driven together and left to die of hunger and of all manner of disease." The German press has certainly done everything in its power to create bad blood between its country and Great Britain throughout the South-African war.

It is to the concentration camps that the German newspaper alludes when it speaks of old men and children driven together and left to die of hunger and of every manner of disease. Undoubtedly there has been suffering connected with these camps. But it has been clearly shown that no alternative offered, except to leave the Boer women, children and old people in the abandoned districts where the crops had been trampled under foot and the houses destroyed. That would have been to leave them inevitably to a slow and lingering death. The resource of concentration camps was deliberately chosen as the best means of minimizing suffering which could not be altogether averted.

At a meeting of the German Colonial Council held in Berlin on the 27th of June, Herr Volsen suggested the advisability of appointing to posts in the administration of German East Africa young merchants having a knowledge of languages and practical acquaintance with the colonial institutions of other countries. Dr. Stuebel, Director of the Colonial Department, replied that such appointments had already been made and that he was ready to continue the experiment. Certainly the wise practicality of the Germans is much to be admired.

The failure of the Leipziger Bank was followed by a sharp run on all the banks in Leipzig and Dresden, but they had prepared for the panic and were able to meet it successfully.

The liabilities of the Leipziger Bank were 92 millions of marks and it had nominal assets of 111½ millions. But these assets included 80 millions which depended on the relations of the Bank with the Treber-Tracknung Company of Cassel, so that little hope was entertained of realizing more than a small fraction of the 80 millions. The *Vossische Zeitung* comments thus upon the incident:—

"The German commercial world has been suffering for more than a year from the effects of a grave crisis. The output of mineral ore and of coal has declined to an appreciable extent. Several of the furnaces have been damped down, and in the case of other establishments the stock of raw iron is constantly increasing at a great rate. In one branch of industry after another business is declining. Foreign trade is at present decreasing. Building operations are at a standstill. The numbers of the unemployed are growing. Capital seeks in vain for profitable investments. These are bitter experiences, but they are the natural reaction from the way in which the upward tendencies of the market were exaggerated, and they are not altogether undeserved."

The Berlin correspondent of *The Times* gives the following explanation of the Leipziger Bank's failure:—

The chief cause of the ruin of the Leipziger Bank was the manner in which it had engaged itself with the malt residuum drying company in Cassel, a concern which has for some years been regarded with suspicion in financial quarters. The company was founded in 1880, and at first confined itself to the purpose for which it was established. After a few years, however, it began to extend its operations, and founded a number of branches, which were not managed as part of the original undertaking, but by financial operations, such as the founding of dependent companies. Its share capital was increased from 150,000 marks to 8,400,000 marks, and it became involved in the affairs of companies which were established in Hamburg, Vienna, Nantes, Genoa, and other places. Most of these undertakings, which were begun on a large scale, failed to justify the expectations which were cherished in regard to them. The reputation of the Cassel firm suffered in consequence, but the directors were able to retain the confidence of the shareholders. This was apparently not so difficult as it might otherwise have been, for the majority of the shares were held either directly or indirectly by the Leipziger Bank, which seems to have identified its interests with those of the directors.

The general impression in Germany seems to be that this disaster will not stand alone. There will be no material improvement of the present trade depression before the autumn, it is thought, and in the meanwhile a number of weak and unsound concerns will go to the wall. The only consolation offered is that which was recently made much of in Japan's case, namely, that the disappearance of frail enterprises will have the salutary effect of strengthening public confidence in those which survive.

Herr Möller, the new Prussian Minister of Commerce, speaking at a banquet given in Berlin on June 26th by the firm of Messrs. Siemens and Halske and the Allgemeine Elektricitätsgesellschaft on the occasion of the visit of the Institution of Electrical Engineers, made an interesting comparison of the special characteristics of the commercial spirit in England and Germany. "The English," he said, "had advanced from experiment and had first reaped the fruits of being the most practical European nation. The Germans, on the other hand, had begun by excessive devotion to theory; but in time they too had become practical, and they were now reaping the benefit of their experience as well as of their intelligence. In the days when he himself resided in England the English were first in commerce and industry and other nations were nowhere. Now things had been to some extent equalized, and he ventured to say that it would not be altogether to the disadvantage of England that prosperity should not be her exclusive possession, for excessive national prosperity was not an unmixed blessing." In another part of the same speech, Herr Möller said that in spite of their commercial competition with each other, Germany and England might well unite in the spirit of the German Emperor's warning in guarding against the dangers to their commerce and industry which menaced them from the Far East."

The Supreme Court of Justice in Berlin has found that Weiland did not act with any cri-

mal intent to injure the Emperor when he threw a fishplate at His Majesty. Weiland, after careful examination by a committee of medical experts, was unanimously declared irresponsible for his acts. Thus the affair assumes the character of an accident, not of an attempt to murder.

THE EARTHQUAKE.

On the 10th instant at 3 a.m. a severe earthquake was felt in Awomori Prefecture. There were over 20 shocks, and much damage is said to have been done to godowns and dwellings, as well as to the railway. Particulars are not yet to hand.

The earthquake in Awomori prefecture seems to have developed its greatest force at Hachinohe where 4 houses were thrown down and 200 injured. Next in order of damage was Shichinohe, which had 70 houses injured. There were no lives lost, nor does it appear that any one was injured. Between Shiriuchi and Numazaki the railway track suffered so much that the passage of trains had to be suspended. It will be seen from the map that the shock struck the part of Awomori where the railway runs nearest to the sea coast on the extreme north-east. There can be little doubt that the centre of disturbance was in the bed of the ocean, as has so often been the case with earthquakes in the north of Japan. The region of greatest force included Awomori and the south-eastern part of Hokkaido, but found its southern limit at the borders of Iwate prefecture. The injury to the railway resulted from the breaking down of embankments between the line and the sea, and the consequent inundation of the track. A very short time will suffice to repair the damage on the section of the road—19 miles and 5 chains—where the shock developed destructive violence. Residents of Tokyo are doubtless aware that two shocks were felt in Tokyo almost simultaneously with the disturbances in the north, one being between 5 and 6 p.m. on the 9th; the other between 3 and 4 a.m. on the 10th. The former of these shocks corresponded with a somewhat severe disturbance in Riku-u; the latter, with the Awomori phenomenon. The Seismological Bureau reports that from the afternoon of the 9th until the morning of the 10th there were 16 shocks in Awomori and 7 in Tokyo. The Bureau is convinced that the origin of the disturbance was a land-slip.

The Awomori earthquake caused most injury at Hachinohe, which evidently lay in the direct line of the shock. Nearly every house in the village is said to have been more or less injured, and it now turns out that, contrary to the original report, there were two persons wounded, a man and a woman.

NEWSPAPER METHODS.

Is a newspaper justified in re-publishing a scandalous story the complete falsehood of which has been established? Take an example. Certain Tokyo journals, notorious for their disregard of truth, for their rascally assaults upon the reputation of private individuals, and for the black-mailing carried on by members of their staff, publish a story charging one of the leading ladies of Japan with an act of treason and her husband with murdering her. The tale is a villainous fabrication from beginning to end, and its falseness is speedily demonstrated. Had an

English journal of Yokohama any right, moral or legal, to re-produce the story after it has been proved unworthy of credence? It appears to us that the sin of the local English journal is even more heinous than that of the Japanese journals, for whereas the latter may have believed the tale when they admitted it to their columns, the former admitted it with full knowledge of its falsehood.

It is something to find that the *Japan Herald* has the grace to become excited when convicted of republishing villainous slanders after their falsity has been exposed. The *Herald* becomes also abusive, but that was inevitable, and it further professes to regard itself as an object of special aversion to the *Japan Mail*, upon which comfortable estimate of its own importance, we congratulate it. The position it now takes—so far as we can discover from its somewhat perturbed defence,—is that a journal is entirely justified in publishing a libel provided that it simultaneously publishes a contradiction. That is a very pretty canon of newspaper conduct. It is appropriately accompanied in the same issue of the *Japan Herald* by a jubilant reminder to the public that since a Japanese Procurator has declared the *Herald* to be "a potent force for evil" as a disseminator of libels, it must also be a potent agency for advertising puffs.

MINING PRIVILEGES.

It is stated that since the Mining Law was amended so as to permit any juridical person composed of foreigners to engage in mining enterprise in Japan, some European and American capitalists have been turning their attention to the subject. They find, however, that the foreigner has to pay a special tariff for everything in Japan, for transport, for hotel accommodation and for labour, which handicap militates against the success of their enterprise. Professor Wakayama and Mr. Nakai Yeijiro are reported to be taking steps to organize an association having for its object the facilitating of foreign enterprise in this line and the introduction of foreign capital, but there is evidently a strong party opposed to the granting of mining privileges to individual foreigners. The officials of the Department of Agriculture and Commerce are believed to be in favour of withdrawing all restrictions, but many of the mine-owners think that if foreigners come in with cheap money and fine machinery, they will gradually become masters of the situation. Of course it is futile to talk of foreign capital being invested in Japanese mines so long as the Japanese law places obstacles in the way, and if Japanese mine-owners are too timid to advocate the removal of such restrictions, there need not be any further discussion of the subject.

Connected with this subject of foreign capital, the *Asahi Shimbun* reports that many Japanese in the Kwansei districts—Osaka, Kyoto, &c.,—have been making strenuous efforts to obtain money from the Russo-Chinese Bank or from individual foreigners on the security of land, buildings and machinery. The applicants are cotton-spinning, coal-mining and paper-making companies, and they want aid to pay off debts and for the purposes of working capital or to buy machinery. But neither the Bank nor the foreign merchant finds the security good enough, and no one is profiting by the movement except the broker, who does not hesitate to raise false hopes in the breasts of applicants in order to get his own fees.

STEADFAST FAITH.

A whole page of *The Times* is required to reproduce an Appeal made by the Council of the Imperial Protestant Federation of the United Kingdom "to the Protestants of the British Empire" against removing from the King's Oath the Declaration against Transubstantiation. What the Roman Catholics complain of is that the Declaration is couched in offensive terms, since the doctrine of transubstantiation is there denounced as "superstitious and idolatrous." But the signatories of the Appeal—and they represent 27 Protestant organizations in England, Scotland and Ireland—contend that the Roman Catholics aim at nothing less than the total abolition of the declaration and that no revision of it would satisfy them, their real object being to remove all obstacles to the occupation of the British Throne by a Roman Catholic. The signatories further point out that whereas the Roman Catholics denounce as an insulting remnant of hated fanaticism the retention of the terms "superstitious and idolatrous" in the Declaration, they themselves perpetually offer much more flagrant insults to the whole body of English protestants. For example, Cardinal Vaughan affirms in his recent Pastoral Letter that the declaration is an "outrage against our Lord Jesus Christ," which is assuredly a most unjust and insulting charge to bring against the sincere and earnest folks that are defending the Declaration; Monsignor Motler, speaking on May 7th as chairman of the "Bradford Catholic Union," alleged that when the King read the Declaration, "he had been compelled to swear that which he could not in his heart believe to be true," and in text books published by Roman Catholics and widely used in England, it is said that the Protestant Religion "was made, not by Jesus Christ, but 1,500 years afterwards by a wicked man called Luther who broke his vows to God and confessed that he made the Protestant Religion to please the Devil and spite the Pope"; that "Protestantism and Nationalism are only mongrels, and when united together they produce a cur much given to snarling at things divine"; that a man might as well be a Pagan as a Protestant and that all means of holiness have been destroyed in the Protestant Church. The drafters of the Appeal, having quoted these Roman Catholic comments, declare that they are willing to grant liberty of speech to Roman Catholics but that they are "determined, God helping them, to retain it for themselves at any cost," and they announce their motto to be "No Papal Gag in the Mouth of the King of England."

Apparently the House of Lords has dealt with the situation by means of a compromise. It has retained the clauses declaring that transubstantiation and adoration of the Virgin are contrary to the Protestant faith, but it has expunged the obnoxious adjectives "superstitious and idolatrous." We confess that such a change of forms seems to us highly desirable. The King's Declaration ought not to contain one word needlessly offensive to any section of his law-abiding subjects. His Majesty has a right to announce his own religious belief in any terms that seem fitting to him, but he has not a right to apply opprobrious epithets to the religious belief of persons who do not share his creed.

"THE TIMES" AND THE "JIJI SHIMPO."

The *Jiji Shimpō* frankly admits the justice of *The Times'* criticism that the three things needed to facilitate the introduction of foreign capital are some improvement of commercial morality in Japan, the concession of fuller powers to foreigners associated with Japanese enterprises, and the simplification of the Commercial Laws. Our Tokyo contemporary makes the confession with shame, but nevertheless makes it, that commercial morality in bad in this country. The *Jiji* is perplexed, however, by the *The Times'* allusion to the Commercial Code, for that body of laws having been compiled in accordance with the best Occidental Standards, ought to be secure against criticism. Perhaps, says our contemporary, the London journal alludes to vexatious delays on the part of officials charged with the duty of giving effect to the Code; or perhaps the Code being compiled in accordance with models furnished by Continental Europe, does not suit the Anglo-Saxon. It appears to us (*Japan Mail*) that what *The Times* refers to is the restrictions imposed by Japanese laws upon the ownership of real estate by individual foreigners, upon their ownership of mines, and upon their ownership of shares in State railways or steamship companies subsidized by the Government. There is a measure of inaccuracy in attributing all these restrictions to the Commercial Code, but *The Times* speaks of "commercial law," not of the "Commercial Code," and an English writer would naturally apply the former expression to all regulations of the nature we have enumerated. "Simplification," in the sense of *The Times'* editorial, means the removal of all vexatious restrictions.

In connexion with this subject the *Jiji* calls attention to the fact that cheques are not received by an official department—central or local—in payment of taxes or other public charges. It is necessary to hand in ready money. That is a somewhat unenlightened style of procedure. Our contemporary denounces it, and we are inclined to agree that officialdom should adopt a more accommodating attitude.

THE ALLEGED FRAUD IN TOKYO.

Further particulars are published by Tokyo journals about the so-called fraudulent loan of twenty-five thousand yen on the security of Viscount Yoshida, M. Henri Fouque being implicated in the affair. According to journalistic accounts, it would seem that the transaction was of the nature of those often laid to the charge of Mr. Hiranuma Senzo, namely, a pretended loan for the purpose of getting ultimate possession of the property pledged as security. But that is a very incorrect version, we believe. So far as we can learn, the whole affair was managed with perfect good faith in its early stages. The money was required for the purpose of exploiting an industrial enterprise started by a French engineer, well known in Japan. Had the latter returned to this country from France at the time originally fixed, there would have been no difficulty, but the unexpected postponement of his arrival compelled M. Henri Fouque and his associates to start the enterprise in a manner not contemplated at the outset. Money being required, Viscount Yoshida was asked to give security by mortgaging certain property, which he consented to do on condition that he became a beneficiary in the enterprise. It would seem, however, that the Viscount failed to inform his parents and guardians of the proceeding, and the

latter were thus induced to regard it with suspicion, being instigated by an enemy of the person principally engaged in arranging the loan. Proceedings have consequently been instituted against the parties to the loan, but, if these particulars be correct, it is not probable that the case will go beyond the stage of preliminary examination.

TOLSTOI.

The most recent news that has reached Japan regarding Count Leo Tolstoi speaks of his health as being considerably shattered, and that death may be expected at any moment. In the *July Idler* Mr. Andrew D. White, the United States Ambassador to Germany, writes very interestingly about some recent walks and talks he has had with the Russian poet and philosopher. He thoroughly believes in Tolstoi's sincerity and genius, but found himself constantly at issue with him in his opinion. Tolstoi spoke with disapprobation of travel, and Mr. White fastens on this, observing: "Of all distinguished men that I have ever met, Tolstoi seems to me most in need of that enlargement of view and healthful modification of opinion which come from observing men, and comparing opinions on different lands and under different conditions. This need has been all the greater because in Russia there is no opportunity to discuss really important questions."

In Tolstoi, says Mr. White, we see a man who, born in and on Russia, is a narrow and fantastic teacher, and a man of genius denouncing all science, and commending what he calls "faith"; urging a return to a state of nature, which is simply Rousseau modified by misreadings of the New Testament; repudiating marriage, though himself most happily married, and the father of sixteen children; holding that Æschylus and Dante and Shakespeare were not great in literature, and making of some obscure writer a literary idol; holding that Michael Angelo and Raphael were not great in sculpture and painting, yet insisting on the eminence of sundry unknown artists who have painted brutally; holding that Beethoven, Handel, Mozart, and Händel, were not great in music, but that some unknown performer, outside any healthful musical evolution, has given us the music of the future; declaring Napoleon to have had no genius, but presenting Kutusoff as a military ideal; loathing science—that organised knowledge which has done more than all else to bring us out of mediæval cruelty into a better world—and extolling a "faith" which has always been the most effective pretext for bloodshed and oppression.

The long, slow, everyday work of developing a better future for his countrymen is to be done by others far less gifted than Tolstoi. His paradoxes will be forgotten; but his devoted life, his noble thoughts, and his lofty ideals will, as centuries roll on, more and more give life and light to the new Russia.

COUNT DE LUR-SALUCES.

Count de Lur-Saluces left Paris quietly without any demonstration whatever, to undergo his sentence of banishment. The Count's condemnation derives an element of sadness from the facts that he served 25 years in the French Army, and that he may reasonably be regarded as hereditarily a Royalist. It appears that by a legal device the Haute Cour managed to save him from a sentence of imprisonment, which, though of shorter duration than his five years' banishment, would have been a much greater punishment to a man in his position. The Count's address to the Court on his own behalf was this:—

"It seems to me allowable to mention a family recollection, a letter of my great-great-grandfather's at Rossbach, where he had fallen wounded beside his father, who had been killed:—Madame ma Mère. —Blood is nothing when honour has been preserved and I can assure you that my father and I have preserved ours." To-day I turn to my children and repeat to them the same language. I do not speak to

them of blood, because in our day occasions are rare when your own blood or that of others is spilt. But I say to them, 'prison, banishment, proscription are nothing when honour is preserved, and I can assure you that your father's honour is intact.' The verdict which you are about to give matters little to me. I await it with head erect and with a perfectly easy conscience."

M. de Lur-Saluces differed from M. M. Déroulède and Marcel-Habert, with whom his name is generally associated, in this, that whereas they avowedly wanted to substitute a plebiscitary Republic for the present French polity, he wished to re-establish Royalty. There can be no doubt about that, for M. de Lur-Saluces openly avowed his purpose in a speech delivered by him at the commencement of his trial.

The only really interesting fact elicited during the trial was that the military arrangements on the occasion of M. Faure's funeral were slightly altered in deference to the request of General de Pellieux. The arrangements had been made by General Zurlinden, but General de Pellieux seems to have been approached by M. Déroulède and to have thus obtained information that a species of military *coup d'état* was contemplated at the Place de la Nation, whither his brigade was to march for the purpose of breaking up after the procession. The *coup* was to take the initiatory form of a demonstration in favour of General de Pellieux. But the latter informed General Zurlinden of what was in prospect, and Zurlinden agreed that it would be better to disband the troops before reaching the Place de la Nation. It was to this incident, doubtless, that M. Déroulède alluded, when he declared that the failure of his plot on the occasion of M. Faure's funeral was caused by the treachery of a member of the Royalist party, in consequence of which the stations and the order of march of the troops were altered.

RUSSIA AND JAPAN.

The newsmonger has been at work again. On the 23rd of July London received the following information:—

Fragmentary despatches from St. Petersburg tell of unusual activity in the army and navy circles in Russia.

The Czar, according to these telegrams, has ordered the enlistment of 300,000 men for the army and navy, and at naval stations work is being pushed night and day.

An explanation of this military activity is given in a brief telegram from the Russo-Scandinavian press agency at St. Petersburg.

The message states that the Russian Government has ordered the railways to hold themselves in readiness to transport troops on four hours' notice, and that war with Japan is imminent.

The relations between Russia and Japan have been strained to the breaking point for some time. After the Chinese-Japanese war, Russia saw to it that the fruits of victory be withheld from Japan. Her demands for Chinese territory, desirable from a strategical view point, were blocked chiefly by Russia.

Japanese statesmen saw that a conflict with the big European power was inevitable in the future, and Japan, ever since, has been preparing for such a war.

Russia meantime has lost no opportunity of strengthening her position in China. The Boxer uprising gave her a chance to pour troops into Manchuria on the plea that they were needed there to preserve order.

There has been no news recently that the Russo-Japanese issue has become more acute, but Russia's military movements just now indicate that this is so.

It will be observed that the concoctor of this strange tale has at least the ingenuousness to confess that the despatches from which he takes it are "fragmentary." We need scarcely say that, so far as Japan is concerned, there is not a word of truth in the story. Her relations with Russia at the time of the publication of this canard were thoroughly friendly.

THE FRASER RIVER TROUBLE.

The method adopted by the Canadian fishermen to deal with any Japanese who declined to join the union was decidedly drastic. They destroyed the Japanese nets, threw the men's arms overboard, stove in the boats and carried the Japanese to an island where they were marooned. The whereabouts of the island had not been discovered up to the date of latest journalistic advices, but it was known that between 30 and 40 Japanese had been marooned there. Of course there was no idea of starving the Japanese: provisions were to be carried to them at intervals. The Canadian fishermen further allege that in capturing the Japanese they took care to inflict as little injury as possible, but inasmuch as the captures had always to be effected by force, and the fishermen's idea of not hurting a man is tolerably elastic, it is uncertain how far the Japanese really suffered. The origin of the trouble was that the Canadian fishermen wanted better terms than the cannery owners were willing to grant, whereas the Japanese declared themselves ready to work at the old rates. The dispute was settled by a compromise on the 24th of July, the basis of the settlement being that the fishermen are to have 12½ cents. per fish for one quarter of the entire pack and 10 cents for the other three quarters. Doubtless the marooned Japanese were subsequently released and allowed, as well as their comrades, to resume fishing operations. But as they have lost many of their nets and boats they will probably refuse to accept such a simple solution. It is not by any means certain, too, whether Japanese lives have not been lost. We may add that the settlement of the trouble seems to have been due to the arrival of a school of fish rather than to any liberal modification of the views of the disputants. Neither side could endure the spectacle of thousands of salmon crowding unmolested into the river while their usual captors and cannery were disputing on the bank.

BULL-FIGHTING IN AMERICA.

On the 12th of July a genuine bull-fight took place at Omaha and was witnessed by ten thousand spectators. It differed from the displays of a similar kind in Spain merely in the fact that the toreadors and matadors were not allowed to kill the bulls. They were permitted only to pierce the animals' hides with long darts and provoke them to fury. As a general rule it would have been more merciful to kill the animals outright, but when the authorities showed themselves sufficiently pitiless to allow such an exhibition at all, it would have been extravagant to expect that they should pay much attention to the bulls' sufferings. No horses were gored; but they might have been; nor was any toreador killed, though one escaped that fate very narrowly, having fallen under the feet of a bull which turned to gore him when the picadors distracted it with their flags. One bull completely defeated the intentions of his tormentors by walking placidly into the ring, surveying the audience with benevolent eyes and treating the red flags with contempt. But what shall be said of the inauguration of such barbarities in America in the first year of the twentieth century?

It is not generally known that bull fights used to be organized in Echigo once a year, and that they still take place occasionally. They differ radically from the Spanish fights.

Men do not take part in them. One bull is pitted against another and the animals seldom inflict any serious injury upon each other. Nevertheless such sports are most inhuman, and modern public opinion condemns them so far that what was once an annual pastime has now almost ceased to be practised.

CHRIST CHURCH, YOKOHAMA.

The following memorandum has been sent to us for publication:—

TO THE SEATHOLDERS OF CHRIST CHURCH, YOKOHAMA.

On the 29th July a meeting was called by the Trustees in conjunction with the Church Committee, to obtain an expression of opinion as to the best method of filling the vacant Incumbency.

Every Seatholder was notified, and a copy of the Trust Deed was sent to each, but unfortunately the attendance was small and not representative.

At the meeting, it was thought desirable to circulate a list to Seatholders, asking their approval or otherwise, of one or any of the three following courses, viz.:—

- 1st. To invite the Rev. Aubrey Sharpe to accept the permanent position of Incumbent.
- 2nd. To advertise in the Hongkong and Shanghai papers for a Clergyman to fill the position.
- 3rd. To appoint a Committee in England and get it to nominate an Incumbent, with the aid of the Bishop of London.

Before deciding as to the sending out of the list, the Trustees held a meeting, at which the various proposals were discussed, and it was then found that numerous difficulties to any one of the three proposals, presented themselves, which were briefly as follows:—

- 1st. Although the Trustees favoured the appointment of the Rev. Aubrey Sharpe, it was found that under the most favourable circumstances, he could not possibly take up the position for at least 12 months, even if he found that he could accept it at all, so with this uncertainty attached, it was thought useless to take a vote.
- 2nd. Advertising in the Hongkong and Shanghai papers would be a very unsatisfactory way of finding a Candidate, as it would be more than likely that only Missionaries would be available, and much time would be lost.
- 3rd. Referring to a Committee in England would be unsatisfactory, as the old Yokohama Residents live far apart, and with one exception, would be likely to take very little interest in Church matters.

It was therefore decided by the Trustees, not to circulate a notice asking for opinions as to the three courses suggested at the meeting, but to take the matter into their own hands, and ask the aid of the Right Rev. Bishop Awdry, giving him their views as to the sort of man who would be acceptable to the congregation, and asking him to take steps to secure a Clergyman from England.

F. S. JAMES,
JAMES DODDS,
W. F. MITCHELL,
JAMES WALTER. } Trustees.

Yokohama, August 15th, 1901.

A DISGRACEFUL AFFAIR.

A most disgraceful affair is reported from Hawaii by Tokyo journals. It appears that when the *America Maru* arrived at Honolulu on the 25th of July, a Chinese passenger in the steerage was found to be suffering from pest. The ship having been placed in quarantine and the patient removed, an examination of the passengers was made by the health officials. In the case of the white passengers, the physicians merely looked at the face and tongue, but their treatment of the Japanese passengers was very different. Among the latter there were three ladies, one married and two unmarried, in the saloon, and fourteen or fifteen in the steerage. The ladies in the saloon were taken by the doctors into separate rooms and there subjected to treatment which, unless the facts are greatly exaggerated, should lead to the criminal punishment of these so-called officials. We refrain from giving names or details. It is enough to say that such a method of examination can not for a moment be called professional. The women in the steerage appear to have been treated with equal brutality, but their sufferings have not aroused the same amount of indignation. We trust that the Japanese authorities will not be induced to condone this matter in any way. It is probable that the newspaper reports are exaggerated, but even after the utmost deductions have been made on that score, the fact remains that the Japanese lady passengers were examined in a manner quite different from that adopted towards the European and American passengers. It is against discriminations of this kind that the Japanese should persistently and uncompromisingly protest. Experience must have taught them that submission produces no good result. Submission does not enter into the foreigner's canons of conduct. If an European or an American lady were subjected to any such indignity in a Japanese port, the world would ring with her complaints and with the protests of her countrymen.

THE WEATHER.

Monday, Aug. 12.

Nothing could be more unfortunate than the predictions recently uttered by the meteorological authorities. Their latest feat in this line was perhaps the most conspicuous, for they announced on the 9th instant that the warm, bright days of the *dayo* would recommence on the 10th, and when the 10th arrived, people rose to find rain and a chilly atmosphere. However, the records of the Observatory are interesting as showing the singular variations of temperature that took place lately. On the 5th instant the reading of the thermometer was 96.1° F. On the 7th, it was 65.1° F., a difference of 31°; and on the 8th the record was 63°. Thus in three days the thermometer fell 33°. Such violent changes must be very trying to delicate folks.

Friday, Aug. 16.

Kyoto had the good fortune to be visited by a deluge of rain on the afternoon of the 13th, rain so heavy that all traffic had to be stopped, including that of the electric trams. On the other side of the account is to be set the fact that the rain was accompanied by thunder and lightning of exceptional force. One person was struck and killed during the storm, and of two workmen who proceeded immediately afterwards to repair a telegraph instrument, one lost his life and the other was severely injured. Nagano prefecture

had a similar visitation on the 30th of July. The storm was accompanied by hail, which caused much damage to the crops, some of the hail-stones having been as much as 3 inches in diameter (?).

Since it is now confidently reported that the *post-dryō* weather has "taken up," and that a spell of warm days may be expected, we shall perhaps be justified in looking for a change soon, as facts have this year shown a perverse disposition to contradict forecasts. The Nafa storm which, instead of coming on to Japan, turned westward and entered China by the Yangtze Valley, is still wandering in unknown regions. No one can tell what has become of it, or when it may recur and carry out a part at least of the programme it seems to have originally had in mind. When China becomes sufficiently enlightened to have meteorological observatories, it will be possible to substitute certainties for the conjectural forecasts with which the public has now to be content. We should then know, for example, exactly what has become of the Nafa-Shanghai storm and where it is now committing devastation.

A STRIKE.

The cargo hands of the Nippon Yusen Kaisha, to the number of some four hundred, went on strike on the 13th instant. Their demands, briefly stated, were that men hitherto rated at eighty per cent. for purposes of hire should be raised to 100 per cent.; that extra pay given on account of exceptional work, should be handed over at once, and that the emoluments of the hands should be raised. The company seems to have agreed to the last demand but to have refused the two first, and the result was a strike which, of course, caused much inconvenience. It is alleged that the matter is likely to be quickly settled, but there is no denying the fact that strikes are destined to be a feature of business operations in Japan as they are in the West. Japan has one advantage, namely, that her people are generally ready to accept a compromise. It is not within our experience that in matters of either politics or business a Japanese ever shows himself altogether unreasonable.

NOTES ON CURRENT EVENTS.

On the 8th instant the Minister of State for Education conferred the degree of *hakase* of civil engineering on fifteen experts. We omit their names.

It was announced on June 25th by the *Odessa Novosti* that the railway north of Port Arthur would soon be finished, and that it would then be possible to travel by the Siberian line direct from Moscow to Port Arthur.

Admiral Gervais, in an order of the day issued when he was appointed to the command of the Mediterranean Fleet, called upon the fleet to "make a further step toward the preparation of that future of which we dream, and the hope of which thrills our souls."

Several Japanese are said to have suffered severely by the recent fire at the Antwerp custom house. Some lost goods that they had purchased after the French Exhibition, and some lost their personal effects. Tokyo journals write as though there had not been any insurance, but that is scarcely credible.

Odessa is to be at last enlarged. For 20 years the need of increased accommodation

has been felt by vessels frequenting the port whence such large quantities of grain are shipped, principally by British companies. An extensive enlargement of the port is now projected, and the place has been visited by Prince Khilkoff for the purpose of considering the plans *in loco*.

Military opinion in France seems to be distinctly tending towards reduction of the period of service with the colours from 3 years to 2. The Army Committee of the Senate has pronounced in favour of that change. It would be an immense boon to the people, and as to its wisdom from a military point of view, we may assume that French experts have given the matter full consideration.

Glasgow University recently conferred an LL.D. on Professor Sakurai Joji. This is the first instance of such an honour being paid to an Oriental scholar by a British University. It is stated that Professor Sakurai received quite an ovation at the ceremony, the learned men assembled in Glasgow at the time being evidently pleased at the new departure and glad to welcome a Japanese student to their ranks.

Ten persons have been arrested in Tokyo for forging revenue stamps. Among the number there are two secretaries of the Department of Communications, a barrister, a person connected with the Tokyo Law School and an official holding the seventh-class grade. They are said to have forged stamps to the value of twenty thousand *yen*, but the fraud was discovered before many of the stamps had gone into use.

The Naval Museum in Paris has added an interesting object to its collection. It is the tent used by the Dowager Empress of China on her journey to Tong-ling. The Mandarin of Ki-chau presented it, last November, to Colonel Laurust Cherlonchen, who was engaged in operations near the eastern Imperial Tombs. Such, at any rate, is the account given of its manner of coming into French possession. It is of yellow silk embroidered with gold and silver.

We read in the *Jiji Shimpō* that in deference to the advice of his medical attendants Marquis Ito has determined to make a trip to America. The object of this step is the sea-voyage, which, it is expected, will prove beneficial to His Excellency's health. Hence the Marquis will not spend more than a week or ten days on shore in America. It is probable that he will put off his proposed lecture tour to the north until his return.

Telegrams announce that on the morning of the 9th instant Asama-yama showed an extraordinary access of eruptive violence, ashes being ejected in large quantities over a considerable area of the surrounding country. The people are said to have been much alarmed. Possibly this phenomenon may be connected with three distinct shocks of earthquake felt in Tokyo on the 9th and the night of the 10th.

Mr. Joseph Cook, the celebrated lecturer on temperance, died at his residence, Cliff Seat, Ticonderoga, N.Y., in the beginning of July. He was only in his 64th year. The illness which ultimately carried him off made its appearance in 1895, when he was travelling and lecturing in Australia, and thenceforth he never recovered his health. In Japan, which he visited in 1882, Mr. Cook delivered twelve lectures which won many followers for his doctrine of total abstinence. He was undoubtedly a man who accom-

plished much in the cause of humanity, and whose comparatively early decease must be widely mourned.

'Tis said that a newspaper should always seem to be quite sure of its facts and inferences. The *Hongkong Daily Press* adheres to that principle. It calls Prince Tuan "nefarious," and General Tung Fuh-shang a "barbarian," and it says, "that there exists a plot to attack and kill the Emperor on his way back from K'ai-fung, there is no doubt whatever." What has Tuan done to merit the epithet "nefarious," Tung to deserve that of "barbarian," and what evidence is there which removes all doubt of the regicidal plot?

A very imposing ceremony took place in the German Church, Nakaroku-banchō, Tokyo, on the 11th instant, in memory of the late Empress Dowager of Germany. Their Imperial Highnesses Prince and Princess Komatsu represented the Emperor and Empress, and among these present were the Minister President of State, the Ministers of State or their representatives, and many other prominent officials, numbering about 150. A German Naval band assisted and the church was beautifully draped and decorated. The Rev. H. Hass performed the service.

In recently describing the progress of the post-bellum ship-building programme, Tokyo journals stated that the torpedo-boat section of the scheme was the most backward. It is now explained that the building of these craft has been slow owing to the method pursued, namely, the importation of material from abroad and its construction in this country. Things have moved rapidly of late, however, and there are now over 40 torpedo-boats actually on service. The full number of 71 will be completed, it is said, by the end of the year. It was originally proposed to have 20 fourth-class boats, but that idea has been abandoned, and all the boats are of the third or a higher class.

The Japan Railway Company held its half-yearly meeting on the 8th instant in the rooms of the Seinen-kai, Viscount Soma in the chair. A sum of 3,000 *yen* was voted for the family of the late Mr. Mori, who was killed at the Usui Pass, and the following accounts were read and passed:—

Net profits for the half year ended	Yen.
June 30th.....	2,582,248
Brought over from previous account	507,677
Total.....	3,088,925
To Legal Reserve	129,112
To Liquidation of Debts, &c.	21,789
Losses	2,436
Rewards to officials	90,370
Dividend at the rate of 10 per cent. annually	2,284,852
	2,528,559
To Special Reserve	200,000
Carried to next account	361,365

Here is a point to which the attention of the Railway Authorities may be advantageously drawn. A few days ago two foreigners purchased second-class tickets at the Yokohama station for a journey in the direction of Yokosuka. The day being Sunday, crowds of people were proceeding to the sea-side and, as usual, the accommodation provided was insufficient. The travellers, finding no room in any second-class carriage, entered a first-class, and were thereupon required to pay the difference of fare. They remonstrated, declaring that they would willingly go second-class if room were found for them. The reply of the porter was that they must

do one of three things:—Pay for a first-class ticket, or enter a third-class, or wait for the next train. Is that really the rule which the porters are required to enforce?

When the project of inaugurating a lottery in Formosa came upon the *tapis* originally, it was proposed to amend the Japanese Criminal Code, which penalizes lotteries of all kinds. Then some officials suggested that a better plan would be to enact a special enabling law operative in Formosa only. That idea also seems to have been now abandoned, and it is thought wiser to revert to the original proposal of amending the Criminal Code. Baron Kodama, Governor-General of Formosa, is understood to be very desirous of establishing a lottery. He seems to think that nothing can check the propensity of the Formosan Chinese for this kind of excitement, and he says that they waste 4 million *yen* annually in the Macao lottery. His plan is to raise a revenue of one million by means of a lottery in Taipei, and to apply the proceeds to works of charity, sanitation and so on. But the papers which publish the Baron's opinions do not explain how the evil of legalizing lotteries in every part of the Japanese empire is to be avoided, for that would be the obvious result of changing the Criminal Code. We presume that the point is receiving due attention, for certainly to legalize a vicious habit throughout the entire empire in the interests of the Formosan Chinese alone, would be poor policy.

It is stated that the Kwansei Boyeki Kaisha, which failed somewhat disastrously last spring, will be resuscitated. The company was always believed to be sound, and certainly it had excellent opportunities. But it engaged in business on a somewhat reckless scale, and could not hold the reins of the horses it had harnessed. Osaka and Nagoya, however, are reported to be considerably inconvenienced by the want of such a company, and as Baron Shibusawa is interesting himself actively, resuscitation will probably become an accomplished fact.

In the *Sphere* we find a picture of "the Emperor of Japan and his family," including the Prince and Princess Imperial, and the four little Princesses Tsune, Kane, Fumi and Yasu. The picture appears to have been taken from a painting, for the portraits show a woodenness that is never seen in a photograph. The likenesses are unmistakable, however.

When the South-African war broke out, the great question was, what force might the Boers be expected to put into the field. Judged by statistics their army should not have numbered much more than thirty thousand. But, as a matter of fact, they succeeded at one time in putting nearly the double of that force in the field. How was it done? A partial explanation may be found in an item of news from St. Helena. It appears that of the 4,700 prisoners now on the island, only 17 per cent. are Transvaalers and Orange Free Staters. The rest are Scandinavians, Germans, Italians, Russians, Irish, &c. The number of Scandinavians is said to be surprising, and many of them hold master's and mate's certificates, they being deserters from ships. The inference is that about one half of the Boer army consisted of foreigners.

The London *Sphere* is just sufficiently behind the times to publish in its issue of July 6th, a portrait of Mr. Kato Takaaki as Minister of State for Foreign Affairs. It

accompanies the portrait with this paragraph:—"The Japanese Minister for Foreign Affairs, Mr. Komei Kato, is quite a young man to occupy such a position. It is interesting to compare his portrait with that of Baron Iswolski, the new Russian Ambassador at Tokyo, who was recently in Italy." A Russian "ambassador" in Tokyo is a novelty, but the portrait is an excellent likeness for all that, and so is the picture of Mr. Kato.

Three representatives of the Mormon creed have arrived in Japan, and are believed to contemplate the establishment of a mission in this country should they see a favourable opportunity to do so. Such an addition to the sects already established here could be dispensed with.

The Fifth Division organized an imposing ceremony at the Shokonsha in Hiroshima on the 14th instant, in memory of those that lost their lives in the Chili campaign. Ten thousand *yen* were spent on the affair, but the greater part of the money seems to have been sent to the families of the deceased.

The owner of the *Kaiso Maru* is reported to have entered a suit against the United States authorities for the loss of his vessel. The *Kaiso* was a sailing ship of 325 tons. Chartered by two foreigners in Kobe, she proceeded to a port in the Philippines, and there encountered such difficulties that the master, becoming desperate, sold her by public auction for a mere song. It is claimed that she was purchased by the Italian Consul at the place, who immediately sent her to sea under charter, though the main objection made to her by the local authorities had been some alleged unsoundness of hull. The point raised is that her foreign charterers in Kobe were privy to the whole affair, and that there was a deliberate scheme to get possession of her. It is hard to believe anything of that kind.

A keen contest took place in the First Election District of Tochigi Prefecture in connexion with the choice of a member of the Lower House in succession to the late Mr. Hoshi Toru. This struggle had been spoken of as likely to be very close, some persons predicting that the votes would be nearly equally divided. But the result did not bear out that forecast. Mr. Mochida, representative of the *Seiyun-kai*, obtained 2,233 votes against 1,063 cast for Mr. Yokobori, the Progressist candidate, Mr. Hoshi's old opponent.

The *Chugai Shogyo* says that the Siamese Government recently applied through Mr. Inagaki Shimesu, Japanese Representative in Bangkok, to have a war-vessel built by the Japanese Naval Authorities, but as the latter do not take orders from the public, they were obliged to refuse. Since, however, the Siamese are anxious to avoid the expense of getting the vessel out from Europe, it is probable that her construction will be entrusted to the Mitsui Bishi Dock at Nagasaki or to the Kawasaki Yard at Kobe. She will be a small vessel of five or six hundred tons, so as to be available for river service.

Posthumous honours, in the shape of an increase of official rank, have been conferred on the officers and officials who lost their lives in the Chinese complication, namely, Major Hattori, Captain Takehisa, Lieut. Kochiyama, Mr. Ando Tatsugoro, Mr. Narahara, Mr. Kojima, Mr. Sugiyama and 54 others.

The light-fingered gentleman who entered the room of an English naval officer in Ko-

on the 11th instant and carried off a purse containing upward of 60 *yen*, has been apprehended. It appears that he proceeded to Oiso, and was having a high time on the proceeds of his escapade, when the police interrupted him.

Elections for the first local assembly opened in Hokkaido have just taken place, the northern island having been brought within the communal system by a law enacted in the last session of the Diet. The elections resulted in a sweeping victory for the *Seiyun-kai*. Its candidates are said to have been successful in every district.

For several days the Yokohama silk market has been in a state of great activity. Large sales have been reported, the figure for the 14th instant being over a thousand bales.

DEATH OF MR. KING KINGDON.

We regret to announce the death of Mr. King Kingdon, eldest son of Mr. N. P. Kingdon, one of the oldest residents of the port. The deceased gentleman, who was of somewhat delicate constitution, caught a cold some months ago, which settled on his lungs and was accompanied by a distressing cough. In a spasm of more than ordinary violence it appears that Mr. Kingdon burst an aneurism of the heart early on Wednesday morning and of course no assistance could have been of the slightest avail.

Mr. Kingdon who was 34 years of age, was born in this country, and was sent to England for his education. He took a high place in Marlborough and later at King's College and his studies having been directed to his adopting the career of a civil engineer he spent several years in London and Manchester undergoing the necessary training. Returning to Japan, however, some dozen or more years ago he decided to take up a mercantile occupation and entered the office of his father with whom he was associated till his death.

Mr. Kingdon took an interest in yacht sailing and frequently raced one or other of the yachts in which he and his father were interested. But he chiefly favoured sport on the Negishi Race Course, and was probably the most successful of gentlemen jockeys in recent years. All his races were ridden with admirable judgment and some of his finishes will be recalled by racing men so long as there is a grand stand at Negishi. In private life "King," as he was generally known, was quiet and unassuming, a genial and kindly young fellow who will be missed by all who had the pleasure of knowing him. Deep sympathy will be felt for his wife and family and for his father and brother in their bereavement.

The remains of Mr. King Kingdon were interred on Thursday afternoon at the Japanese Cemetery near Negishi in presence of a large concourse of mourners. The burial service was performed partly at the house No. 16, Bluff and partly at the place of interment by Rt. Rev. Bishop Awdry. The coffin was escorted to Negishi by the following pall bearers: Messrs. J. Eyton, Sr., J. Higginbotham, R. Ward, J. Eyton, Jr., G. Hood, and R. B. McKinnell and by a large company of Japanese and foreigners alike. The chief mourners were Mr. N. P. Kingdon, and the brother (Mr. Arthur Kingdon) with the wife and family of the deceased gentleman. The wreaths and other floral tributes were many and most beautiful.

A man named Kimura Shigeki shot and killed with a pistol his wife's father, Shiraishi Gengoro, at Mototerakoji, Sendai, on the evening of the 10th inst. The murderer was immediately arrested.

ENGLAND IN THE EAST.

ONE need not be in any sense a Jingo to sympathise with and endorse the attitude attributed by telegraph to Great Britain when she declines to discuss the new commercial treaty with China on equal terms with Powers whose tradal interests are microscopic compared with her own. For example, Russia's commerce with China is represented by 10½ millions of taels annually whereas Great Britain's is 160 millions. All the nations of continental Europe, Russia excepted, have an aggregate interest of only 35¼ million taels in China's trade. It comes to this, therefore, that England's commerce with China is three and a half times as large as the commerce of the whole of continental Europe, and fifteen times as large as the trade of Russia. On no conceivable principle of justice can it be contended that Powers so differently circumstanced should be equally represented on a council convened for dealing with the future of Chinese commerce. Already the position is sufficiently flagrant. Not only does England receive an indemnity about one half of that paid to Russia, Germany and France, though she sent as many troops as any of them, but their lion's share of the compensation is to be partly paid by a tax upon the trade in which she has such an enormously preponderating interest. To cap that anomaly she is now to be placed on equal terms with all the other Powers for the purposes of a new commercial treaty. England has shown an excellent spirit throughout this Chinese complication. It is mainly through her exertions and sacrifices in the past that all nations have been enabled to have tradal intercourse with China. She it is that has borne the brunt and heat of the day. Nevertheless she makes no difficulty about allowing other Powers to join hands with her at the eleventh hour. But when it becomes plain that their purpose is to pull her down to a level with themselves and to ignore not only what she has achieved single-handed, but also the enormously preponderating magnitude of the trade she has built up, she owes it to herself to make a protest. The teaching of the immediate past can not be wholly lost on her. At Germany's hands she received the sharpest lesson. Germany entered into a Convention with her for the avowed purpose of guaranteeing Chinese territory against aggression, and then declared, first, that the Convention did not apply to an immense region which is just as much Chinese territory as is the metropolitan province of Chili, and, secondly, that the chief object of the agreement was to grant to her, Germany, equal rights with England in the Yangtze Valley, though she was by no means disposed to allow England's indisputable treaty title to equal rights with Germany in the province of Shantung. Russia's conduct with regard to Manchuria has been an object lesson scarcely less pregnant. She per-

sists in negotiating secretly and independently with China about Manchuria, thereby making it quite clear that she has no intention of regarding Manchuria as a region in whose fate other Powers are qualified to have a voice. It is impossible to place confidence in the good faith of States behaving in such a manner. Each is plainly playing for its own hand at England's expense, and the Cabinet in London does nothing more than its duty when it asserts its obvious rights. There is a rumour now that England has refused to withdraw her troops from Peking until Russia evacuates Manchuria. Of course that is incredible in the face of the fact that the withdrawal is understood to have already commenced. What the story indicates, we think, is a growing conviction in the public mind that England does not intend to be altogether effaced or to be entirely deprived of her old position in the Far East.

CHINA'S MADNESS.

IT is still confidently stated by more than one critic that China was visited by an access of madness when she defied the whole world last year. Probably history's verdict will be that China never did a saner thing. It is true that she invited defeat, inevitable and crushing defeat. But, on the other hand, she gained for herself a new lease of life. That is the net result. China's imminent and really serious peril lay in the aggressive impulses of the Powers acting independently. She had to face the double danger of original and imitative disruption. After her war with Japan she lay at the mercy of every despoiler, and could no longer look for effectual aid in the mutual jealousies of the Powers. Germany, not more remarkable for anything now-a-days than for the prompt decisiveness of her doings in the East, gave to China at Kiao-chow an object lesson which could not be misinterpreted. From that moment it became quite plain that the old game of playing off one Western State against another had lost all efficacy. Instead of exercising a restraining influence, the competition of the Powers merely impelled them to follow one another's bad example. After Kiao-chow, Port Arthur went together with the whole of Manchuria; after Port Arthur, Wei-hai-wei. Had such a process of disintegration been repeated, China's end must soon have come in sight, and that occasions for its repetition would not be wanting, China must have well understood. Her previous outrages against foreign life and property had been easily settled. The payment of a small fine and the removal or promotion of a local official sufficed to dispose of the most importunate foreign suitor in the good old times. But Germany changed all that. Germany demonstrated in the most striking and conspicuous manner, that the murder of a missionary was thenceforth to mean the loss of a province to China, and Russia and England appended a sinister corollary to the

proof by showing that the great European States intended to be rivals in robbery as well as in everything that legitimately makes for aggrandisement. It was a parlous situation for China. Duly apologising for the comparison, we may liken her to a hunted animal which sees its only hope of resistance in getting the mastiffs to range themselves in line and make their assault from a given direction instead of delivering a number of attacks from all directions simultaneously. The public may refuse to credit China with wisdom sufficiently consummate to form such an appreciation of her condition, but the public can not deny that what she has achieved is to bring the nations again into one camp, and to substitute for the programme of fatal promptitude and alert independence inaugurated by Germany, the cumbrous slowness and crippling jealousies of a huge corporation of States. Hereafter there will be no such thing as an assault upon China by any one Power. Whenever punishment has to be exacted for any offence against treaty obligations or international law, the claim will be preferred by the allied nations, and the impossibility of satisfying them all by territorial concessions will put such concessions out of the question. China, then, has gained a new lease of life; very sick life perhaps, but life none the less. That is the result of her so-called madness.

NEW BOOKS.

"*Le Japon*;" essai sur les mœurs et les institutions: Par I. Hitomi.

MR. HITOMI was special delegate of the Government of Formosa at the French Exposition, and he seems to have prepared the volume now before us in connexion with that great enterprise. The evident intention of the work is to bring within easy reach of ordinary readers a general review of Japanese history, manners, customs, institutions, religion, literature and art. It is plain that when so many subjects are discussed within the limits of a single volume, the work must be in outline only, all details being omitted. Mr. Hitomi seems to have realized that fact very thoroughly and to have succeeded in preserving essentials while sacrificing superfluities. His volume—beautifully printed and profusely illustrated—will not occupy the attention of close students of Japan and the Japanese, but can not fail to prove very useful to those that are content with a bird's-eye view. It is a pity, perhaps, that Mr. Hitomi did not set narrower limits to his enthusiastic admiration for his country, and that he did not leave other people to say some of the things which he has taken upon himself to write. Apart from that criticism, however, his book may be strongly commended, and it certainly derives much interest from the fact that it contains the story of ancient and modern Japan told by a Japanese.

The Helmet of Navarre, by BERTHA RUNKLE; London, Messrs. Macmillan and Co.; Yokohama, Messrs. Kelly and Walsh, Ltd.

IN June and July Miss Bertha Runkle's historical romance took the lead of all other books in America for popularity at the book-sellers' counters and in demand

at the public libraries. It is a well-written story and full of stirring interest. As the title suggests, it deals with the times when Henry of Navarre was striving to be over-lord of France, despite the League, and the scene opens just before the King has decided that "Paris was well worth a mass." The teller of the tale is one Felix Broux, an hereditary dependant of the Dukes of St. Quentin, and before he finishes his narrative the reader gets a surfeit of hairbreath escapes and perilous adventures in which the modest Felix plays a fairly prominent part. The only fault we have to find is that the incidents crowd too quickly one upon the other. Hardly is Felix or his master out of one tight corner than they run direct into another tangle of even more desperate straits. But all works out right in the end, the lady is won, the villains are slain, the right cause triumphs, the King comes by his own. Still we cannot help thinking that Felix must have felt the rest of his life to be extraordinarily dull and monotonous after the brilliant and overcrowded days which witnessed his *debut* upon the stage of Parisian life.

On Peter's Island, by ARTHUR R. ROPES and MARY E. ROPES; London, John Murray; Yokohama, Messrs. Kelly and Walsh, Ltd.

THIS is a capitally told story of life in St. Petersburg during the autumn and winter of some year that may vaguely be put down as in the early eighties. We believe it is a maiden-effort, and if so the collaborators are to be congratulated on the result of their joint essay. They have a happy knack of making their characters fit naturally into their surroundings, and the play of national idiosyncracies is extremely well-done. The two villains of the book, Stanislaus Lubinski, a young Pole absolutely without a vestige of honourable feeling in his composition, and Anton Morozof, a millionaire oil-refiner, who stops at nothing to achieve his wretched ends, are somewhat melodramatic yet life-like withal. The heroine, Sasha Lubinski, is a lovable creation and one feels that it is only right that she should be wooed and won by one of the nicest of the male characters upon the very last page of the book. Of course in such a story, the doings of a secret society loom large and some of the most dramatic incidents are woven round the Odds and Evens Society: naturally also, a murder or two have to be encompassed—but it is all told in admirable English and one incident after another fits in so naturally that one puts down the volume at the end with a feeling that a most pleasurable hour has been spent with the men and women who foregathered during that time on Peter's Island.

FRANCE AND SOUTHERN CHINA.

M. Doumer, speaking in the French Chamber on the 27th of June, gave a hopeful forecast of the development of Indo-China. He explained that 250 miles of railway had already been constructed in Tongking, and that three new steamship companies were to be established, making five in all, a result which, considering the proverbial timidity of French capital, he regarded with much satisfaction.

Concerning the proposed railway from Hai-fong to Yun-nan, which is to open up trade with the southern provinces of China, M. Doumer made the following interesting remarks:—

As to the Yun-nan line, it was a work of real

patriotism to construct a French railway into the heart of this wealthy region. He had been blamed for not having taken the census of Indo-China, as if this was his first duty. His first duty was to make peace to reign in Tongking and to put order into the finances. He had, however, tried to calculate the numbers of the population, and he reckoned them at from 20,000,000 to 22,000,000. The methods he had adopted to arrive at these figures he had explained before the Paris Statistical Society. Yun-nan had been devastated by war in 1872, seven millions of the inhabitants having been massacred by the Chinese. These inhabitants were not Chinamen, and they preferred the French to the Chinese. In obedience to his orders the engineers and officers sent to Yun-nan had fully succeeded in ingratiating themselves with the mandarins and in gaining their friendship for France. During the recent troubles in China the French might have remained in Yun-nan. The evacuation was really needless. Yun-nan had a population of from 7,000,000 to 9,000,000, but the country could hold a much larger number.

Some one had spoken of colonies of officials. In Indo-China it was out of the question to have a very large number of French colonists; quality was needed rather than quantity. The Frenchman could be only an overseer or director, but this was not the case in Yun-nan. The country had been called poor. He might reply, "poor as France is." Vegetation was not exuberant as in Tongking. In the cultivated valleys and in the Yun-nan-sen plain, which the line would traverse, the country resembled the district of Limagne in France. Wheat grew as in France, and as the climate was temperate. Frenchmen would be able to live and work in it. Indeed, some had been there a long time. The Bishop of Yun-nan-sen left France with a passport of Louis Philippe, and was still awaiting a railway to get there, but during the long survey there had not been a single case of mortality. The mineral resources of Yun-nan were also considerable. The working of the mines was said to be difficult, but the coal was equal to that of Cardiff. Even the existing traffic would more than cover the cost of working the line. There was thus an economic interest in constructing it. It would open outlets for France in all this region by the merchandise which would be imported and by that which it would divert from the Mong-tse valley. There was a hope, moreover, one day of extending the line, which would thus be an excellent basis of commercial and manufacturing operations.

THE KING'S HIGHWAY.

In last month's *Blackwood's* Mr. Hugh Clifford has a paper entitled "A Halt in the King's Highway," which likens the ocean routes to-day to the old coach roads of a century ago, and conveys a vivid impression of the visit of the Duke and Duchess of Cornwall and York to Singapore, that racial microcosm and most striking example of the development of "the half-way house" of the Empire during the nineteenth century. "For an hour the crowd stands upon the pier—the English, true to their wooden-headed standard of propriety, choked by linen collars, smothered in frock-coats, crowned by silk hats; the Malay rajas in their picturesque national costumes; the Chinese notables in heavy garments shaped like the copes of the Roman Catholic priest-hood; a Siamese prince, resembling a diminutive life-guardsmen dipped in a succession of dye-pots; and half a hundred other curious figures—until the guns from the ships of war begin their salutes. The royal barge, which can show its heels to anything of its size in Asia, rushes up the harbour, with half a dozen launches panting vainly in its wake, passes through the ranks of ordered vessels, and brings up alongside the pier. . . . And what a tremendous thing it is which this Prince and Princess symbolise, as they stand thus upon this unconsidered fragment of the Empire which their subjects have made theirs by inheritance, by the right of bloodless conquest! . . . To the Oriental they speak of an ideal, more material perhaps, but no whit less precious. The strength which knows no fear nor favour; the toleration which is above all prejudice; the justice that may not be bought; the freedom to earn and to possess which in the last fourscore years has changed for them the face of life,—these are the blessings flowing from the system which these 'Rajas from the West' make incarnate!"

PRINCE KONOYE.

Prince Konoze arrived at Newchwang on the 4th instant in the *Takasago Maru*. Great preparations had been made by the Japanese residents—who number 41—to receive him, partly for his own sake and partly because they desired to welcome the re-appearance of the Japanese flag in the harbour. But Prince Konoze defeated all their plans by taking his departure on the morning of the 5th. Such an abrupt procedure caused some surprise. No explanation is given.

An interesting conversation was expected to take place when Prince Konoze met Viceroy Li, for the latter could scarcely fail to put some practical questions which the Prince might have found difficult to answer. But apparently the Viceroy has lost nearly all his old vitality of intellect. He is described as presenting a pitiable spectacle, quite unable to move without assistance, and incapable of even keeping his mouth closed. Thus he appears to have taken little interest in Prince Konoze's visit. At any rate it is not reported that any pointed queries were addressed to the Japanese politician.

GERMAN METHODS IN THE CAROLINES.

Japanese papers have contained of late many complaints about the treatment accorded their nationals in the Carolines by the German authorities. We find in the *Hong-kong Daily Press* a translation of a leading article which recently appeared in the *Ostasiatische Lloyd* giving a description of the Caroline Islands, their government and products. Our Colonial contemporary deals with that portion of the article where the writer points out the methods adopted by the German Governor to bring the commerce of the islands entirely with the control of his countrymen, his intention evidently being to gradually oust all foreigners.

The writer after stating that the chief product of the Islands is copra, of which the whole group produces about 1,500 tons, goes on to say that the commerce even now is almost entirely in hands of the German Jaluit Company, whose headquarters are on Marshall Island, from where the schooners visit the different islands of the group for the purpose of trade. There is also an English company which trades in copra in a small way. Japanese firms had also been established until recently, and were represented strongly at Ponape and the Ruk groupe. But in February of this year all the Japanese traders were ordered away, on the plea that it had been proved that they sold arms, ammunition, and spirituous liquors to the natives.

The writer, continuing, says that it is doubtful if the Japanese will ever again be allowed to occupy their trading station. According to an order of the Governor, published in January, it does not seem probable. This order is as follows:—"Trading stations on the coral islands can only be established after a written permit from the vice-governor. And such trading stations can only be carried on within the limits of the island. If there be more than one station in a group, the trading boundary of each station will be defined by the vice-governor. Trading from place to place, especially through medium of boats, is prohibited on the lower isles."

The writer in the *Lloyd* here naively remarks, that there is no doubt that this order was published with a view to favour the German Jaluit Company, and thereby enable it gradually to gain control of all the copra trade. Even if this looks something like granting a monopoly, it is quite natural that the German government should favour a German firm, and endeavour to get all foreigners out of the young colony, especially as it has been found that the latter always disregarded the laws.

As an additional reason for the above proceeding, the writer states that the trade is so small that if Germans have to enter into competition with foreigners, it would be impossible to do a thriving business.

After going at great length into the expansion of the Jaluit Company, who receive an annual subsidy from the government of M90,000, and a description of the islands, the article con-

cludes as follows:—"If we, like many others, especially General Weyer, consider the Carolines to be so to speak the 'black sheep' among the German colonies of the south sea, we cannot deny that the tendency of the German government to get all the trade of the isles in to German hands, is a good and just one. To split the trade would only mean a loss to German merchants. Even as it is, it will be years before a real profitable commerce can be established. When it is, it will at least benefit solely Germans."

CAMPS OF REFUGE.

Since there has been so much talk about the refuge camps formed by the British authorities in South Africa, the following, which we take from *The Times*, has great interest:—

Under the title of "A Boer refugee camp in Natal," Mr. H. S. Caldecott, the civil commandant of the Boer refugee camp at Howick, Natal, contributes an article to the forthcoming number of the *Empire Review*, which is of special interest at this moment. Writing from the camp last April the civil commandant states that there are under his care nearly 800 women and children besides a few men, who are accommodated in 64 marquees and 30 bell tents, each marquee holding ten and each bell tent five people:—

"The camp is systematically laid out in equidistant rows, lettered A, B, C, &c., each tent having a distinct number corresponding to that in the register which is kept, so that every family can be located in a moment. Cleanliness is a special feature of the camp, and 25 natives are employed all day long in keeping it clean. A box and bucket are set down before the opening of every tent to receive the refuse and slops, and these are emptied twice a day; the nightsoil is removed before daylight every morning and the latrines are daily disinfected. By 10 o'clock in the morning the place is as sweet as a wellordered dairy. Three wash-houses are provided for washing under cover, but many of the women prefer to go down to the river and do their washing on the rocks. Instruction is given both in Dutch and English at the school-house in the camp, and on Sunday religious services are held there by the resident pastor, the Rev. van der Horst. For the express purpose of keeping in touch with the boys, the bigger boys are required to do one hour's work *per diem* in camp-cleaning under the direction of Mr. Spies, the captain of the Boys' Brigade. This work they do cheerfully as a kind of recreation. Dr. Hunter, the resident medical officer, makes a daily inspection, and sends in weekly, or, if necessary, more frequently, reports on the sanitary condition of the camp, mentioning at once any instance of sickness. Slight cases are treated in the local hospital, but the more serious cases are removed to the base hospital. Colonel Martin, R.A.M.C., is the military superior on all medical and sanitary affairs, and Surgeon-General Clerly stands above all. Only this day he made a personal inspection of the camp accompanied by his staff, expressing entire approval of the condition of things as he found them. . . . Capital bathing and fishing is found for the boys and men in the river, and a separate bath-house has been constructed for the women and children. The rationing is carried out by the commissariat department, assisted by the civil quartermaster and his quartermaster-sergeant. The system works smoothly and satisfactorily. . . . The refugees in the camp are not regarded as 'prisoners,' though certain bounds are fixed beyond which they must not go without a permit, and they are required to conform to certain necessary regulation."

The writer details the precautions taken to prevent the introduction of bubonic plague to the camp, and mentions that owing to an outbreak of measles in the camp at Pietermaritzburg intercommunication between the two camps had been stopped for the time being. In short, he says, the medical supervision of the camp is both theoretically and practically as perfect as human supervision can make it. Describing the social life of the camp, the civil commandant says that a noticeable feature is that the Free Staters and Transvaalers do not associate with one another.

YACHTING.

Three 39-raters started on Saturday to race across the Bay for the "Maid Marion" Cup but the wind was insufficient to enable them to finish in time. In point of fact none of them went round the Bandzu Hana mark.

Five 21-raters raced for the "Alpha" Cup, *Edna* finishing at 6.31.40 and *Sodeska* at 6.39.00. The latter had an allowance of 4m. 58s. which only enabled her to take second prize.

THE LATE SIGNOR CRISPI.

The late Signor Crispi, whose death at the ripe age of 82, we chronicled on Tuesday morning, was one of the makers of Modern Italy and last of the gallant band to join the silent majority. Born in Ribera on October 4, 1819, the young Sicilian studied law at Palermo, but was called to the bar at Naples and soon plunged into the vortex of politics and conspiracy which led to the overthrow of the Kingdom of the two Sicilies in 1848. Up to the very close of life he kept up his interest in politics, ever remaining a foremost figure, though out of office. We take the following summary of his career from *Men and Women of the Time*:—

He was one of the chief promoters of the insurrection of Palermo, became a Deputy and General Secretary of War, and for two years was the heart and soul of the resistance offered by the Sicilian people. After the victory gained by the Swiss regiments, Signor Crispi fled to France. In 1859 and 1860 he organised the new Sicilian revolution, landed at Palermo with Garibaldi and his volunteers, and after fighting as a simple soldier became a Minister, in which capacity he paved the way for the annexation of the Two Sicilies to the kingdom of Italy. In 1861 he was returned by the city of Palermo to the first Italian Parliament, in which he took a prominent and influential position, becoming in a short time the acknowledged leader of the constitutional opposition. It was the understanding between Signor Crispi and the old Piedmontese, "third party" which led to the formation of the new Rattazzi Ministry. He was chosen as a Deputy at the election of November 1876 by several electoral colleges, and "opted" for that of Bari. On the 22nd of that month he was elected President of the Chamber of Deputies by 232 votes against 115. The following year the party of "Moral Order" returned to power in France, and the interests of Italy seeming menaced by them, Signor Crispi undertook semi-official journeys in search of allies against the Republic. He was cordially received in London and at Berlin (1877). Some weeks later he became Minister of the Interior in the remodelled Depretis Cabinet, but retired in March, 1878. During the ten following years in which M. Depretis was intermittently in power, he remained one of the leaders and principal orators of the Left. On May 13, 1880, he delivered a speech which was commented on by the European press, and unfolded therein the policy of his party. The Chamber required, he declared, to be directed by a vigorous hand. "Italia Irredenta," the "unredeemed" Italy of the Adriatic coast which is still under Austrian sway, was to be encouraged in its desire to become Italian. Italy was to take a more prominent position in the concert of nations and was to aim at the acquisition of increased influence in the East. After the delivery of this speech he advocated electoral reform and the adoption of the *Scritin de liste*. In March, 1881, he began to attack France in his journal *La Riforma*, and afterwards advocated a German alliance and an increase of the national armaments and defences, and complete military reorganisation. In November, 1883, he declared war against the clerical party as being hostile to modern Italian institutions, and thus completed what he calls the "traditional programme of the Left." After the Italian reverses in Africa in 1887, Signor Crispi asked the Government to vote an extraordinary credit in order to send reinforcements to Massowah. The credit was voted, the Depretis Government again went out of office, and Crispi asked the Chamber to express utter condemnation of the fallen Ministry. This was not done, and in the end Signor Crispi became Minister of Foreign Affairs in a new Depretis cabinet, and after the death of that statesman in July, 1887, succeeded him as President of the Council and Home and Foreign Minister. On October 1 Signor Crispi began paying a series of visits to Prince Bismarck at Friedrichsruhe, the result of which was the entry of Italy into the Triple Alliance. The country was now asked to vote enormous sums for the maintenance of an increased army and navy. Financial crises ensued, and disturbances in Rome and Naples. Crispi became very unpopular, and in September, 1889, two attempts were made on his life in the above-named towns. In 1888 the commercial treaty with France was broken and not renewed, and the relations between the Government and the Papacy became increasingly strained, owing to the anti-clerical legislation of the former. Signor Crispi, however, thought it expedient to go to the country, and after a brilliant electoral campaign, in which he made a great speech at Florence, in November, 1890, containing a declaration of foreign policy and repudiating the Irredentists as hostile to Austria, he brought his party back into power with a majority in the Chamber of 236. The Premier himself was returned by four electoral colleges. Two months later, however, the Crispi Ministry

fell on a question of taxation, the chief Minister having made himself unpopular by his high-handed refusal to consider the necessity of retrenchment in military and naval expenditure. Though out of power, Signor Crispi continued for some time to express his views on political questions at public banquets and meetings throughout the country, as well as in the Chamber, and in December, 1891, made a notable attack on his successor, Signor di Rudini, apropos of the Papal question. But he retired from the strife before the attack had been fully rebutted. In 1892 he gave up the leadership of the opposition, but retained his seat. After the ensuing bank scandals, and the resignation on Nov. 24, 1894, of Signor Giolitti, the Premier who succeeded Rudini, Signor Crispi was again called on to form a Cabinet. He succeeded in forming a Ministry of all parties on Dec. 10, and afterwards called on politicians in general to aid him in restoring the national credit. On May 14, 1895, Signor Crispi gained a victory in the Chamber on the question of the Budget, but in June his Cabinet resigned on the Finance question. They, however, retained office on Baron Sonnino's ceasing to be Finance Minister. Signor Crispi's government nevertheless supported Sonnino's proposed financial reforms, and pledged themselves to effect an economy of 20,000,000 lire in national expenditure in 1895-96. In October 1894 the Crispi government suppressed the Socialist Corporation of Italian Workers, after having taken severe measures against the revolutionary movement in Sicily (February). A series of questions dealing with Italy's relations with England, Austria, and Brazil gave occasion for much anxiety in 1895, and public feeling was intensified by the disastrous results which attended the Government's forward policy in Africa. In the following year Italy sustained her most serious defeat of modern times at the battle of Adowa, and the Crispi Ministry fell almost immediately. At this juncture Crispi entered upon a phase of his public career which, in the case of a less powerful statesman, would have ended in complete political extinction. The Radical leader, Signor Cavallotti, in November, 1894 preferred the gravest charges against his integrity, and subsequently brought them before the Criminal Court, where they finally collapsed, the judicial authorities declaring that the charge of perjury was not substantiated, and that certain other charges referring to a decoration awarded to Dr. Cornelius Herz, whilst appearing to be equally baseless, were beyond the cognisance of the ordinary tribunals. The Chamber after this ignored Cavallotti's reiterated accusations, for no competent person, knowing the great sacrifices which Signor Crispi had made for the cause of Italian unity, attached the smallest value to the charges brought forward. The country adopted the views of the Chamber, and for a few months there was the appearance of a lull in the agitation. But the revelations of the *Banco Romano* scandals raised in a week the whirlwind of national passion. The Directorate of the Bank of Naples, one of the Italian State Banks, had opened in the autumn of 1893 a branch establishment at Bologna, under the management of a trusted employee, by name Luigi Favilla. In May 1896, suspicion having been aroused as to Favilla, a new manager was appointed at the instance of Baron Sonnino, Treasury Minister, and it was afterwards discovered that Favilla had appropriated £40,000 of the bank's funds, had lost £65,000, and had permitted overdrafts to be made to the extent of £80,000. He was arrested in November 1896, as were also several of his accomplices, and in the course of Favilla's examination Signor Crispi was directed under a warrant to appear before the court and deliver to the examining magistrate an account of his financial relations with Favilla. On the next day, March 21, Crispi was re-elected a Deputy of the Chamber, thus regaining an immunity from arrest and prosecution. Nevertheless, Signor Crispi presented himself before the magistrate, and submitted documentary proof of the various sums he had previously obtained from Favilla. However, the examining magistrate, yielding, it is believed, to pressure from the Public Prosecutor and from Signor Giacomo Costa, late Minister of Justice in the Rudini Cabinet, persisted in his suggestions of Crispi's illegal complicity with Favilla, in his report recommended that he be prosecuted for conniving with Favilla in his fraudulent transactions. Crispi, who, it is said, had good grounds for fearing that a fair trial would be denied him, retorted that as the proceedings in question had taken place in the time he had been Italian Premier and Minister of the Interior, the ordinary courts were not competent to deal with the charges, seeing that by Article 47 of the Italian Constitution Ministers are answerable for acts committed during their term of office only to the Senate itself sitting as a High Court of Justice. The important question of constitutional law which this objection raised was carried to the Supreme Court (the Court of Cassation), who held that the Chamber of Deputies alone was competent to decide whether, in the case of crimes enacted by a Minister, that Minister should be impeached before the Senate. As a result of this judgment, the Chamber appointed in December, 1897, a special

committee of five members to make an exhaustive inquiry and to report to the Chamber without delay. The examination of all the documents and persons connected with the Commission, including Signor Crispi and Favilla, was completed in three months, and the committee's report was presented to the Chamber in March, 1898. By a majority of 207 to 7 the Chamber resolved, after receiving the report, of pass to the order of the day. Thus did the Italian Parliament practically endorse the findings of the Commission, and these affirmed that whilst Crispi was not guilty of any criminal offence known to the law, certain irregular practices, both in the way in which he obtained funds for political purposes and in the repayment of loans made to him personally out of State moneys, were deserving of political censure. A motion instituting an impeachment of Crispi was defeated on a show of hands, and the Chamber proceeded to the next business. Although now advanced in years, Signor Crispi continued to follow the varying fortunes of his native land with the keen interest of a true patriot. In the autumn of 1891 he wrote an article on the Anarchist Conference on European Powers for an English newspaper, which attracted some attention. But ill-health now dogged him and he gradually relinquished touch with public affairs.

YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

An Extraordinary General Meeting of the Shareholders of the above Company was held at No. 78, Main Street, at 4 o'clock in the afternoon of Wednesday, Aug. 14th, for the purpose of confirming the Special Resolutions passed at a meeting on the 31st July 1901. Mr. Jas Dodds was in the Chair and among those present were Messrs. B. C. Howard, B. Gillett, C. Giussani, Dr. van der Heyden, Messrs. J. W. Weaver, F. S. James, P. Morris, E. Frazer, W. K. Tresize, and Wm. Friedlander, Secretary.

The Secretary, at the request of the Chairman, having read the notice calling the meeting,

The CHAIRMAN said this was a formal meeting required by law to confirm the resolutions passed at the last extraordinary meeting. The resolutions were proposed *en bloc* by Mr. F. S. James and seconded by Mr. Cowan and he would now read them after which he would put them to the meeting from the chair as having the full approval of the board of directors, all of whom were unanimously in their favour. Mr. Dodds then read the resolutions as follows:—

That the capital of the company be increased to \$130,000 by the creation of 1,300 new shares of \$50 each.

That such shares be offered at the issue price of \$50 per share to holders on the registered list of shareholders on the 31st July, 1901, in the proportion of one new share for each old share held by them respectively, such offer to be made by notice and to be deemed declined unless accepted in writing within fourteen days. Shareholders accepting to take up and pay for their shares on 30th August.

That all new shares not so applied for shall be issued by the Directors at such premium and at such time and manner as the Directors may think fit.

That the holders of new shares be entitled to dividend for the year beginning 1st June, 1901.

That for the purposes of these Resolutions the Japanese yen shall be treated as equivalent to the Dollar.

Those were the resolutions the shareholders passed at the meeting of July 31st and he would now put them before this meeting for confirmation—first, however, asking whether there were any remarks to be made on the subject.

No remarks were made.

The CHAIRMAN then said if no shareholder had any remarks to make he would now put the resolutions to the vote and would ask a show of hands in their favour.

All present voted in the affirmative and the Chairman declared the resolutions confirmed and carried unanimously.

In reply to Mr. GILLET,

The CHAIRMAN said he hoped to have the notices for the new shares out on the following day.

This was all the business and, the Chairman having thanked the shareholders for their attendance, the proceedings terminated.

THE NICARAGUA CANAL.

Much has been written—more must be said, and still further efforts must be made to overcome the opposition to cutting the canal of Nicaragua, says the Editor of the San Francisco *Commercial News*. The overland transportation interests naturally are opposed to the plan, but it is safe to say the long course of education has resulted in causing seventy-five per cent. of the American people to desire the accomplishment of the great work. It will come before Congress again this winter and every friend of the Canal should use his best endeavour to favourably influence legislation. The French Panama Canal Company has never made a practical offer to the United States—always aiming at a minority stockholder's position for our Government, and valuing its property on the isthmus at \$96,000,000 which was valued by the Canal Commission at \$34,000,000, the difference being mainly in useless French machinery. The Columbian Government now offers such control as it can give for a 200 years' lease without sovereignty and a per centage of earnings, and promises to cancel the French concession if the Company does not accept \$34,000,000 for its work. It is unlikely that France will permit the despoilment of her citizens for so large an amount by a Government on the ragged edge of existence and practically bankrupt. And now comes the Governor of the Province of Panama, himself an appointee of the Columbia Government and publishes an official protest against the action of the Bogota Government, stating that such action is a sacrifice of Columbian interests, as a French Company has money on hand to last two years, by which time the work will be so far advanced that money can be had to complete it—the United States therefore, is in a position to buy an international law suit at Panama. The offer, however, places this country in a position to check the avarice of Nicaragua and enables us to make fair terms with one or the other country. Early in the year the American Canal Commission had a boring party at work trying to find a rock foundation for the Bohio Dam, behind which is to be a large artificial lake to furnish lockage water for the Panama Canal, but at last advices the party had not been successful. At Nicaragua a rock foundation for the dam on the San Juan River has been found. Panama Canal depends upon the Bohio Dam and unless a solid foundation is found it is not a work in which any one will have confidence, although the Frenchmen who want this country to take hold say that an earth dam is all that is necessary. The strategic position of the Panama Canal and its doubtful supply of lockage water are disadvantages so decided that no disinterested party would wish to see the United States Government take it up. The various syndicates that have proposed to complete the canal at Panama apparently are actuated by no better motive than obstruction, hoping by diverting attention from the Nicaragua, to indefinitely postpone any canal. The question is a live one and can not be laid aside except temporarily through corrupt or other influences. The time is drawing near when the people of the United States will demand a canal at Nicaragua, and in all probability this will be the great question before the next Congress. Speaking for California, it is only necessary to call attention to the fact that in the past six months millions of dollars' worth of oranges and lemons were rotting in the orchards of Southern California because the overland railroads were unable to handle the product. With an open canal, refrigerator steamships will offer this transportation at about one-quarter the cost and in as short a time as the roads can deliver such freight, beside opening to our people the markets of northern Europe as well as those of our own Atlantic seaboard.

Lord Pauncefote, British Ambassador to the United States, made the following statement in London on July 17th to a representative of the Associated Press: "I am having a conference with the Marquis of Lansdowne, not only about the Nicaraguan Canal, but also with regard to half-a-dozen treaties pending between Great Britain and the United States. These are chiefly concerned with West Indian reciprocity arrangements."

When asked if he thought that there was any possibility of arriving at an agreement regarding the Nicaraguan Canal before Congress re-convened, he replied:

"Yes, I sincerely hope so. We are now in the middle of negotiations, which, although they have not yet reached any tangible result, show good promise. Naturally, I may not disclose the details, but I may say that when I return to the United States at the end of October, I hope to take with me a Nicaraguan Treaty, that will meet the views of both President McKinley and the British Cabinet. There is no use wasting time over treaties which the Senate is likely to refuse. I really believe that the differences of opinion between the two nations are capable of settlement in an agreement fair to both. If I thought that anything could be done before October, I would return before that date, but I do not believe that anything would be gained."

At this point Lord Pauncefote paid a warm tribute to the Americans. "They are the most genial people on the face of the earth. At the first grip of the hand, they have you to their hearts. So long as you do not try to deal in an underhand way, and so long as you do not assume superior airs, they treat you as one of their own, and no one could say more than this."

Reverting to the report that a majority of the Senate favoured a Neutral Canal, Lord Pauncefote said:—"It would be good news if true; I happen to know that Mr. Hay consulted the Senate, both the section supposed to support him, and the section credited with other motives. You may be sure that whatever is agreed upon between the two governments will meet with the approval of the Senate."

When asked if a Joint Commission is likely to sit again in Washington, he replied:—"Yes, I think that it will, although this will not occur until my return. The Joint Commission has threshed out many points of difference between Canada and the United States, although the inability to agree as to the Alaska Boundary, and the sad death of Lord Herschel, appear to nullify the Commission's labours."

"I see that the Boston Chamber of Commerce has petitioned for reciprocity with Canada. This, I regard as a most hopeful sign. It will be one of my aims when I return to the United States, to foster this desire for a closer commercial relationship between the Dominion and the United States. In spite of the trade difficulties of both Canada and Newfoundland in dealing with the United States, I by no means despair of effecting some sort of reciprocity scheme, which, when the Nicaraguan matter has been justly settled and the west Indian Treaties have been arranged, will bring Great Britain and the United States to even a better basis of common understanding than exists to-day."

NEWS OF THE WEEK.

The King's Prize at Bisley was won by Corporal Ommundsen, of the Queen's Edinburghs, who scored 310 points.

We are given to understand that the Mormon Elders who recently arrived in Japan are not staying at Beverley House, No. 2, Bluff.

The swimming races of the Y.A.R.C., arranged to take place on Saturday afternoon were postponed owing to the inclemency of the weather.

We have received from the Yokohama Revenue Administration Bureau copy of a pamphlet containing an English translation of some new laws.

A telegram to the *Fiji Shimpō* announces that the British Government has been defeated in the House of Commons in connection with a Factory Bill.

An explosion of powder occurred in a match factory at Tokuyemoncho, Honjo, Tokyo, on the afternoon of the 14th inst. and two employees were badly hurt.

Fire broke out at Nakamura, Yokohama, in a house occupied by Ibaraki Heizaimon, early on the morning of the 14th inst. but destroyed only one building.

The Interport Cricket Week at Hongkong has been definitely fixed for the 11th-16th November, and these dates have been accepted by Shanghai and the Straits.

The sale of No. 22 of a newspaper called the *Manzai Shimbun* and of a magazine called the *Makurazoshi* was suspended by the Home Minister on the 8th inst.

A coolie named Inouye Rokunosuke, employed at the Takao Coal Mine Fukuoka Prefecture, quar-

relled with his eldest brother, and fatally stabbed him on the 10th inst. He was arrested at once.

The Nippon Yusen Kaisha's steamer *Ivo Maru* will be launched at the Mitsui Bishi Shipyard, Nagasaki, on the 24th inst. Mr. Kato, the Vice-President, will be present.

The Yokohama Chihō Saibansho, on the application of Messrs. Raspe & Co., have declared Kimura Kosaburo, foreign fancy-goods merchant of Tokiwacho, Nichome, Yokohama, bankrupt.

The Osaka Shosen Kaisha's steamer *Yoshiigawa Maru* while on her way to Osaka from Tsushima collided with a sailing ship and sustained damage. She arrived at Osaka on the morning of the 10th instant.

It is reported that a tunnel called Onokubo, Kita Tsurugori, Yamanashi Prefecture, fell in shortly after four o'clock on the afternoon of the 13th inst. Several persons were killed and others injured.

The case of Petersen v. Box was before the Yokohama Chihō Saibansho on Thursday before Judge Kano. At the suggestion of the Judge the barristers engaged agreed to arrange a compromise before Sept. 30.

The trial of the Russian cruiser *Novik*, built at the Schichau shipbuilding yards, shows that vessel to have an average speed of over 25 knots. Probably the "25" here is a misprint, as the *Novik* was not expected to exceed 23 knots.

A youth, aged 18, son of a merchant at Minamino, Shiga, cashed a money order for yen 1,000 belonging to his father and disappeared on the 6th inst. The matter is in the hands of the police.

Several violent earthquake shocks were felt at Yadama-machi, Rikuchu, between 6 p.m. on the 6th and 3.45 a.m. on the 10th instant. The sea rose about 3 feet and people living near the coast fled to the hills.

A London telegram in the *Osaka Mainichi* says that an American journalist has been expelled from Germany for surreptitiously obtaining an advance copy of the new tariff bill. Two subordinate German officials have been convicted of complicity in the affair.

The body of a young woman was found on the beach at Inamuragasaki, Kanakura, on the morning of the 13th inst. It proved to be that of a servant employed by a foreigner in Yokohama. Her name was Honjo Tsuta, and she lived at Kitagata, Yokohama.

The *Osaka Mainichi* has a London telegram which says that war has been declared between Venezuela and Colombia. A Colombian army twenty thousand strong has crossed the frontier, and an engagement has been fought, Venezuela claiming the first victory.

In the race from Gibraltar to Portsmouth for the purpose of testing the qualities of boilers, H.M.S. *Minerva* beat H.M.S. *Hyacinth* completely. The *Hyacinth* burst a tube in her Belleville boiler, while in the English Channel, severely scalding a stoker. The *Minerva* won by two hours; but fog delayed both.

A parliamentary paper issued in London on July 24th gives the number of persons in the concentration camps in South Africa in June as follows: White, 85,413; coloured, 23,498. There were 777 deaths among the whites in the camps, the list including 576 children. The deaths among the coloured persons numbered five.

A jinrikisha man named Kawai Tomigoro living at Nakamura-machi, Ishikawa, Yokohama, was arrested by the Police and sentenced to 3 days' detention on the 10th inst. charged with demanding more than his legal fare and so causing a passenger to lose his train.

Three armed burglars entered a tea-house at Kominato bathing beach, Kitagata, belonging to Sato Danzo, on the morning of the 8th inst. They

threatened Sato's son and demanded money but there being none available they stole a copper pan, some dried-fish and three bottles of Kirin beer.

Murakami Fuji, wife of a *sendo* on board a Nippon Yusen Kaisha's junk, on her way to Yokohama, fell over-board off Omori, on the afternoon of the 12th inst. The body has not yet been found.

The Japanese standing squadron (*Shikishima*, *Asahi*, *Izumo*, *Asama*, *Kasagi*, *Yugiri* and *Sazanami*), and the North China squadron, consisting of the *Chitose* and *Takasago* left Taku for Shan-hai-kam on the 12th inst.

Suzuki Seiji, a native of Shizuoka, was arrested by the Tobe police on the 11th inst. at Kuboyama, charged with stealing various articles valued at yen 320 from houses in Kanagawa and Kamakura during June last.

An inquiry was held on the 13th inst. in the Communications Department as to the collision between the *Ryujin Maru* and *Matsuyama Maru* in Yokohama harbour on May 11th. Captain De La Lande of the *Ryujin Maru* gave evidence.

The steamer *Sual*, at Shanghai on Aug. 6th from Hankow, reported having seen the *Kiang-kwan* still ashore near Tunglin Pagoda, with the *Kawele* standing by her. She also saw the *Take (Tai)* *Maru* still ashore near Christmas Island, with two dredgers at work round her.

A girl named Suzuki Yetsu (13) attempted to commit suicide by drowning at Okagawa, Yokohama, the other day but was rescued by the police. She was employed in a spinning factory at Tokyo up to the end of last month, but had endeavoured to return to her country, Aichi, with another girl. When she got thus far she had only four *sen* left.

Commander Wise, late of the U.S.S. *Monoway*, who has been in ill-health for some time, died at the American Naval Hospital on the Bluff on Wednesday. The deceased had a distinguished career and was in command of the U.S.S. *Monoway* at the battle of Taku, when all the foreign ladies and children were placed under his protection.

A coolie by the name of Ikushima Yoshitaro stabbed another coolie, Kato Sukeichi, on the Bentenbama wharf (western end of the Kobe native bund) early on Thursday morning. The wounded man expired on his way to the hospital. The tragedy arose from a dispute about money matters.

Fukuda Genroku, living at Nara-mura, Ozatogori, Saitama prefecture was arrested by the Police on the 8th inst. for having entered a sake shop occupied by Yamamoto Masukichi, at Akedo-mura, Fukaya-machi, early on the morning of the 2nd inst., and inflicted wounds with a sword on the shop keeper.

Matsushita Tsunesaburo, Matsumiya Seichiro, Takahashi Veichi, Kobayashi Michitaro, Shimizu Heizo, and several other were arrested a few days ago, charged with counterfeiting stamps to the amount of over yen 20,000, consisting of 50-*sen* and 1-*yen* receipt stamps and 5-*yen* register stamps. Yen 5,140 of stamps were found at their houses.

A foreign sailor who has passed under several aliases since his arrival in Yokohama, but finally owned up to the name of David Sullivan, has been sentenced in the Yokohama Local Court to three months' major confinement and six months' police surveillance for stealing several articles valued at 106 *yen* from a Chinaman's house in Yokohama.

Referring to the Berlin telegram which announces the appointment of a successor to Lord Kitchener, the *N.Y. Daily News* says:—It is extraordinary that Reuter has told us nothing about the illness of Lord Kitchener, reported by the *Orientalist Lloyd*, nor the appointment of Lord Lyttelton as his successor. The only Lord Lyttelton, now Viscount Cobham, is not a soldier at all; and if the telegram has any foundation, it

must refer to his brother, Major-General N. G. Lyttelton, C.B., and it would be a somewhat surprising appointment.

The U.S. flagship *New York* will enter Kure dock on the 15th inst.

A telegram in the *Kobe Herald* announces the death at Sugon on August 7th of Prince Henri of Orleans.

A daily newspaper called the *Kita Nippon* commenced publication at Takaoka, Toyama Prefecture, on the 13th inst.

The *Pester Lloyd*, a daily newspaper published at Buda Pesth, is responsible for the statement that in connection with the purchase of Hungarian horses for remounts, in South Africa, the British Government were defrauded to the extent of £275,000. It adds that the contractor supplied horses that were blind and unfit for work.

Madame Latti, who recently attained her fifty-seventh birthday, has for many years held the record for the largest sum that has been earned in a year by a woman. Her highest total for twelve months is \$350,000 gold. Her present London concert terms are said to be £500 a night, but her record for a single performance was £2,000 received in Buenos Ayres.

Orbe Rive, the mother of Motoo, a pawnshop keeper at Hanazaki-cho, Yokohama, attempted to commit suicide by cutting her throat with a fish knife on the morning of the 13th inst. but her son returned to the house in time to prevent her from succeeding in her attempt and sent her to the Kondo hospital.

A Hongkong telegram of Aug. 7th to the *New Press* said:—The Austrian Lloyd steamer *Melomene*, which left Shanghai on August 2, has arrived here badly damaged by the typhoon. Her foretopmast carried away, and she shipped continuous heavy seas which smashed her boat, and wrecked the deck fittings.

An armed burglar entered a Buddhist temple known as the *hachoji*, Hachoji, early on the morning of the 13th inst. and when an old temple keeper named Ogiwara Natsuet called out for help wounded him in the face and arm. The burglar then left without having stolen anything. The old man is not expected to recover.

Some evil-disposed person attempted to capsize a train at Venokido, Saitama Prefecture, a few days ago. A train was about to pass the place when the engineer detected an unusual noise. He stopped the train and found that four sleepers had been removed and laid across the track. Fortunately this attempt at train-wrecking failed.

A man named Torii Etsuzo, who belongs to Nagasaki Prefecture, was arrested at Oiso on 8th August on a charge of having, while in the employ of the Beiyu-kai, Tokyo, stolen a collection book of the Perry monument fund and by means of it defrauded a number of gentlemen of yen 272 as subscriptions. Among his victims were Viscounts Nagaoka, Mishima, and Enomoto, and Baron Shibusawa.

His Majesty's ship *Prince George*, belonging to the Channel Squadron, accomplished a remarkable feat whilst coaling at Portsmouth: 1,206 tons had to be got into her bunkers and this was done at the average intake of 226 tons per hour. By this remarkably smart performance the coaling record for the British Navy passed to the *Prince George*. It was previously held by His Majesty's ship *Mars*, with an average of 203 tons per hour.

There is a passage of curious interest in the will of the late Admiral of the Fleet, Sir John Commerell. He wrote:—“Having had fatal experience of the iniquity of the law in certain cases, when decisions have been given against common sense and justice, it is my directions that my two nieces who are intended to benefit by the death of my child or children mean the two eldest children of my sister at the time this will was made, namely, Edith Bloomfield and Kate

Bloomfield, and I entreat the parties interested in my will not to appeal to the law if any difficulty may arise, but to arbitration. Having been swindled myself by every lawyer that I ever had anything to do with makes me offer this advice to my heirs, executors, and assigns."

In the Yokohama Chiho Saibansho on Friday before Judge Kano the hearing was resumed of the suit brought by Mrs. C. H. Hall against Dr. C. H. Hall claiming maintenance. Mr. Akiyama appeared for plaintiff and Mr. Masujima for defendant. Mr. G. H. Scidmore was examined as an expert and gave evidence as to the law of the State of Illinois. The case was adjourned till the 25th.

A tobacco dealer named Arai Kintaro living at Hiratsuka-machi, Naga-gori, Kanazawa prefecture attempted to committed *shinju* with a woman named Kocho in a house of ill-fame at Fujisawa on the afternoon of the 12th inst. The alarm was given and when the police arrived they found the couple seriously wounded and unable to speak. Both were sent to the Fujisawa hospital. They left five letters in the room.

The Rev. J. D. Liddell of the London Mission and Mr. May, mining engineer, have gone to the district west of Chinchow in Manchuria. To show the extent to which the "door is open," even on the line of railway north of Shanhaikwan built by British enterprise, said the *Shanghai Mercury* of Aug. 9th, these British subjects could not pass Shanhaikwan without a Russian passport, and this was granted them by special favour, and after their being able to prove satisfactorily that they had not the remotest connection with the British military authorities.

The steamer *Katsuyama Maru* arrived at Woosung on Aug. 8th in a very bad state. She was on a voyage from Chefoo to Amoy but was caught by the typhoon off the Hieshan Islands and had to heave to. She was so badly damaged that the captain decided to put into Shanghai for repairs. Her steering gear, the telegraph to the engine-room, and the boats on the starboard side were washed over-board during the typhoon, and the railings and deck-house, etc., badly smashed. It is thought that she will have to be repaired at Woosung as it is feared there would not be sufficient water on the bar for her to pass out, if she went into dock for repairs.

The Russian steamer *Finanzminister Witte*, bound from Moji to Singapore with a cargo of coal, was caught by a typhoon on Aug. 2nd in Lat. 121° and Long. 27° W., twenty-five miles east of Tac Island, two hundred and fifty miles south of Shawsheishan. The water poured over her sides, and she rapidly began to fill. After making every effort to keep the vessel from becoming water-logged, the captain and crew, twenty-four in number, were forced to abandon her in a sinking position, and take to the boats. They all landed in safety on the island, and were taken to Shanghai in the German steamship *Shantung*. The *Finanzminister Witte* was of 713 net tonnage.

On Monday afternoon, says the *New Press* of the 8th inst., a German officer was riding on the race course, on a splendid Australian horse, one of the best in Shanghai. The high wind carried away the rider's hat, and, whether it was that the horse shied at the hat flying by his head, or that the rider in trying to catch the hat may have jerked the bridle, anyhow the animal swerved suddenly and plunged into the ditch on his head. The speed was so great that the sudden turn shot the rider about twenty yards ahead, while the horse pitched head-down into the bank so violently as to break his neck, and never stirred a muscle again but lay with his neck bent nearly double, stone-dead. The officer was bleeding from the nose and mouth, and very badly shaken. The horse was bought not long ago, we learn, for 2,000 marks, or over 700 taels.

Mr. E. T. Bethell, of Kobe, was violently assaulted by *jinkisha* men at Sumiyoshi on Wednesday evening. He wished to ride from Sumiyoshi to the new Boathouse at Mirume, the legal

fare for which is 15 *sen*. After getting into a vehicle and starting, the puller stopped and demanded 25 *sen*. Mr. Bethell thereupon got out and going to the stand asked the other men if any of them would take him. They all declined. Mr. Bethell accordingly took the license of the first *kurumaya* with the intention of seeking police intervention. Another man, who said he was the owner of the vehicle, at this point intervened and in the sequel Mr. Bethell was badly knocked about. He managed to defend himself, and reached the police-box where he was courteously treated and his wounds bandaged. Mr. Bethell says that he was willing to give 25 *sen* as the weather was warm, but he objected to it being demanded of him. Three of his assailants have been arrested.

Baroness Hayashi was "At Home" at the Japanese Legation, London, on the evening of July 3rd, when an interesting programme was supplied by the Japanese artistes now in London. A samisen solo, a song, a dance, a short play, and the "Okagura," another dance, were rendered. In the play Mme. Sada Yacco appeared, when *Jin-goro* and *Kyo-nin-gyo* was given, which is the Japanese equivalent of Pygmalion and Galatea. Amongst the numerous company present were: Baroness d'Anethan, Mr. Matsui, Mr. and Mrs. Matsukata, Mr. Arakawa, Mr. J. Conder, Mr. and Mrs. Watanabe, Mr. Nakai, Mr. Negishi, Mr. and Mrs. J. P. Reid, Mr. and Mrs. A. G. Angier, Dr. Divers, Mr. A. Dioso, and many of the Japanese residents in, or visitors to, London at the present time.

They are not happy with their new fire-engines in Northwich. The horse engines of the brigade were recently converted into steam automobiles, and one evening a call came from a place three miles out of town. A steam motor fire-engine started for the locality, but ere it got outside the city the sparks from the smoke stack ignited a load of hay and a hedgerow in two spots. Other engines had to be called out to extinguish these fires. Moreover, the first engine did not reach its destination without setting fire to more hedges and straw ricks. Finally, on getting to the original fire one of its pipes burst, rendering it practically useless. This must be a specimen of what some engineers call a "fool of an engine." In its efforts to do well it did the very opposite, and eventually came to grief itself.

AMERICAN NOTES.

It is reported from Washington that the U. S. Navy Department has purchased the big floating steel dry-dock which lies in Havana Harbour, from the Government of Spain, for \$185,000.

Arriving at Plymouth on July, 17th the North German Lloyd steamer *Deutschland* made the passage from New York in five days, 11 hours and 5 minutes, at an average speed of 23.51 knots an hour over a distance of 3,082 knots. The vessel's highest day's run was 557 knots. This establishes a new eastward speed record.

The foreign work of Mormons, says an exchange, is now being carried on extensively in Great Britain, Germany, Switzerland, and Sweden. Japan, it is added, is the next country which is to receive attention from the Saints. In July one of the Salt Lake City apostles started for Tokyo at the head of a number of elders. It is said to be the intention of the Mormon Church to carry on work among the Japanese on a large scale. The deputation has already arrived.

"Cresceus," the chestnut stallion owned and driven by George H. Ketcham, of Toledo, won the free-for-all trot at Detroit (Mich.) on the afternoon of July 18th and incidentally trotted the fastest heat and won the fastest race ever made. "Cresceus" won the first heat by five lengths in 2.06 3/4, breaking the racing record for this year on any track, and in the second heat he led by and where from five to ten lengths and finished easily in 2.05 flat, breaking the world's racing record.

Bishop Potter, the Anglican Bishop of New

York, who recently visited the Far East, devoted a portion of a recent address before the University of Rochester to a criticism of missionaries, and brought out a point to which reference has frequently been made in the Far Eastern Press. "I admire," he said, "the noble lives of missionaries in foreign lands, but I am at a loss to account for the disregard of customs of these foreign countries by our missionaries. In some countries a woman who travels unaccompanied is considered an unprincipled person, and yet our woman missionaries disregard this custom, making themselves the scoff and jest of foreigners. When we go to foreign countries isn't it well to learn and conform to the usages of the country where we are?"

The condition of the Brooklyn Bridge is thus referred to in a New York telegram of July 25th:—"No attempt was made to-day to resume a full service on the Brooklyn Bridge, on which several girders were found to be broken yesterday. A ten-minute car service was permitted by the police early to-day, but it could handle but a small percentage of the traffic, and the majority of the persons who live in Brooklyn and come to New York for business were obliged to walk across the bridge or cross the river on one of the ferry lines. Engineers examined the bridge thoroughly to-day and it is expected that full repairs will be made in a day or two. About noon an order was issued stopping all street car and vehicle traffic on the bridge. This caused much inconvenience and delay to business, as the ferries were unable to carry the wagons and carriages which usually cross the bridge."

As a result of the Japanese Buddhist mission to the U.S., instituted a year or so ago, a church called the "Dharma-Sangha of Buddha" has been established in San Francisco, with three branches in other Californian towns. In the San Francisco temple there is a membership of three hundred in the Young Men's Buddhist Association, mostly Japanese. At an English service on Sundays, twenty or more Americans are present, of whom eleven have already been converted to Buddhism, and have openly professed that they "take their refuge in Buddha, in his gospel and in his order."

The report of the U.S. Pension Bureau shows that the expenditures in 1901 were \$138,531,491, an excess over 1900 of \$69,354. The appropriation in four years was \$144,000,000. During the year the pension roll was increased to the extent of 4,305 names, making a total of 997,834. The deaths among pensioners numbered 38,082 in 1901, or 2,275 more than in 1900. The record shows that for the year 45,710 claims were filed on account of the Spanish-American war. Of these 7,086 were allowed and 7,059 were adjudicated and rejected.

Here is another sign of the American conquest of English markets: "A fruiterer in the West End is marking his goods in United States coinage, strawberries, for instance, at 16 cents a basket," says the *London Chronicle*. "This is a trifle superfluous, for most Americans who come over here know perfectly well the value of English money, and of English goods, too. Yet after all, the fruiterer is perhaps only foreshadowing the inevitable. We are having a new coinage, and we might as well accept the situation—call our sovereigns five-dollar pieces, our shillings 'quarters,' our sixpences 'dimes' and our halfpennies 'cents.'"

New York is to have ten weeks of opera next season, and it is announced that in every way Mr. Grau has materially strengthened his company. He will bring it to America and remain six months, travelling from Canada to New Orleans, and west to San Francisco. The present plans include the presentation of several new operas, among them De Sara's "Messaline" and Paderewski's "Manru." As given in the *New York Herald*, the Grau Opera Company will comprise the following: "As sopranos, Mmes. Calvé, Eames, Ternina, Lucienne Breval, Galski, Suzanne Adams, and Fritz-Scheff; contraltos, Mmes. Schumann-Heink, Bridewell, and Homer.

The tenors include Alvarez, Van Dyck, De Marci, Gilbert (a newcomer from the Opéra Comique and Grand Opéra, Paris), Dippel and Salignac. Mr. Grau has also secured Albert Reiss, a new light tenor, who scored an unequalled success in the rôle of 'Mime' at Covent Garden. As baritones Mr. Grau has Scotti, Campanari, Bispham, Muhlmann, and Declery, a newcomer; and as basses Plancon, Journet, and Blass. For conductors Mr. Grau has Flon, Walter Damrosch, and Sepilli. Others who will in all probability be in the company are: Mmes. Sembrich, Sybil Sanderson and Lilli Lehmann, Herr Van Rooy, and last but certainly not least, Edouard de Reszke.

While the Chinese population in the United States showed a noteworthy decrease in the decade between 1890 and 1900, the Japanese element exhibited a still more notable increase. These facts are disclosed by the figures of the last census, a preliminary statement of which has just been issued. It appears that there were, approximately, 89,800 Chinese in the United States proper last year, as compared with 107,475 in 1890. About 75 per cent. of the Chinamen were located in the western states and territories, as compared with 90 per cent. in 1890. The greatest decrease among them was in the state of California, where there were over 26,700 fewer last year than there were ten years ago. In the western states and territories, taken together, there was a decrease of 29,100, while for the states outside of those there was a gain of about 11,500. For the country as a whole there was a net loss of over 17,600. The Chinese have, however, grown more numerous in Alaska and Hawaii. The Japanese, on the other hand, were more than eleven times as numerous last year as they were in 1890, numbering about 24,300 in 1900, as compared with 2,039 ten years before. Like the Chinese, though even to a more pronounced degree, the Japanese tend to concentrate in the western states and territories, where there were 23,360 of them last year, less than a thousand of being credited to other localities. The growth of the Japanese element in Hawaii was far greater than that of the Chinese.

"In view of the great interest that has recently been excited by Gaylord's article regarding the parasite of cancer," says the *Philadelphia Medical Journal*, "some recent work performed in the laboratory of Professor Wyssokowitch may be of interest. Dr. Meser, having observed some lycopodium spores in the interior of a cancer of the skin, which had evidently been derived from the powder that had been used in dressing it, called attention to the extreme difficulty of distinguishing between parasitic bodies and particles of foreign material absorbed from the surface. Konstantinowitch having become interested in these cases, endeavoured to determine just what effects different bodies, such as the spores of lycopodium, would produce when injected into the skin. He found that as a matter of fact, they produced growths not dissimilar from ordinary granuloma, containing epithelioid and giant cells. This is only an additional illustration of the very important part that mechanical conditions play in the development of tumors, an element that was recognized nearly half a century ago by Virchow, and which, in the eagerness to discover parasites or to explain their origin as a result of some disturbance of the embryological mechanism, has been again and again forgotten. The experimental work to be done with regard to tumor formation is very considerable, and it is strange that pathologists have neglected it so much."

EUROPEAN TOPICS.

Over 102,042 war medals had been struck at the Mint in London and issued to Woolwich, to be engraved with the recipients' names, at the year; and it was computed that the out-turn could be continued at the rate of 10,000 per week.

An Imperial decree issued at Berlin on July 29th announced that a scientific expedition under the leadership of Dr. Drygalski will leave Kiel in

August to establish observation stations at Kerguelen Island and at the furthest attainable point south.

A Stockholm message of July 29th said a forest fire in the province of Jemtland, Sweden, had assumed gigantic proportions. Three thousand troops had been ordered to assist the men who were combatting the flames. The hot weather continued.

In the House of Commons on July 4th, Mr. Norman asked the Under-Secretary for Foreign Affairs as to Sir Claude MacDonald having returned home from Japan to Europe at the public expense in a German vessel, and asked whether instructions would be given that in future official journeys from Japan would be made in British steamships. Viscount Cranborne replied that Sir C. MacDonald's travelling expenses would on this occasion be defrayed from public funds. In such cases as this the convenience of the British officials concerned was the principal consideration, and the route chosen by Sir C. MacDonald was the quickest available. It was not proposed to issue any instructions on the subject.

The new turbine steamer *King Edward*, which had been built by Messrs. Denny and Brothers, Dumbarton, for a Glasgow syndicate, has run her official trials on the Firth of Clyde. The trials created great interest, and on board the vessel there were representatives of all the leading railway companies which conduct steamboat services. The *King Edward* ran to Campbelltown and back, a journey of three hours, at a uniform speed of 20 knots. The remarkable feature of the trials was the almost complete absence of disagreeable vibration which is common to vessels with ordinary engines. The new steamer, which is to run regularly on the Clyde between Fairlie and Campbelltown, is the first commercial vessel to be fitted with the Parsons steam turbine method of propulsion.

The Brethren of the Grande Chartreuse, who are now expecting to be dispersed as members of an unauthorised association, under the new French law, have had a history full of vicissitude. The first monastery built by them was destroyed by an avalanche, and the convent built in place of it was sacked by Calvinists in 1562, and burnt down on six several occasions—in 1320, 1371, 1473, 1509, 1592, and 1676. They were also turned out of their home by a decree of the National Assembly in 1792, though Louis XVIII. let them go back in 1816, and gave them £600 to repair their building. The monks have resolved to abandon the actual administration of the liqueur business. A company has been formed for the purpose.

Mr. Kennan the well-known author and American lecturer, who, in 1891, published his "Siberia and the Exile System," the results of an investigation made in Siberia in 1885-1888, which work attracted wide notice and was translated into most of the European languages, has been expelled from Russia. A high Russian police officer called upon him on the evening of July 25th, and informed him he must leave the country by 10 o'clock the following evening. Mr. Kennan was not allowed to leave his room in the interim, but he was courteously treated. This action by the Russian authorities is taken under the law giving the Minister of the Interior authority to expel undesirable foreigners. The notice served upon Mr. Kennan characterized him as "untrustworthy, politically."

There seems to have been a wild uproar in the House of Commons between 1 and 2 o'clock in the morning of July 30th at the conclusion of the debate on the taxation on agricultural property. Conservatives interrupted Mr. Walton, Liberal with cries of "Divide." Mr. William Redmond on point of order called the attention of the Speaker to the interruption, but the Speaker ruled that the point was not well taken. Mr. Walton resumed, but quite inaudibly, owing to the persistent cries of "Divide." Mr. Redmond shouted "Police, Police." The Speaker said this expression was disorderly. Mr. Redmond—"Why don't you keep order?" The Speaker directed him to leave the House, and named him. Mr. Balfour, the Government leader, moved Mr. Redmond's suspen-

sion, and this was carried by a vote of 303 to 71. Mr. Patrick O'Brien persisted in the same point of order, and was in turn named and suspended. The bill was adopted.

It unfortunately appears from the last report of Mr. Hankin, Bacteriologist to the Government of the North-Western Provinces and Oudh, that recent experiments with rat-killing virus have proved a failure. Mr. Hankin writes:—"In 1896 I found that it was innocuous to Bombay rats when administered in food, though capable of causing infection when injected under the skin. My later experiments show that rats in Agra are still more refractory, resisting the virus both when given in food or subcutaneously. I discovered that a minute dose injected intracranially caused generalised infection and death of the animals, but as a series of passages in this way through rats caused no increase in virulence, the observation is merely of theoretical interest. Danysz, the discoverer of this microbe, found that it is only effective in causing a disappearance of rats in about 50 per cent. of the localities in which it has been tried."

The Kingdom of Nepal has undergone a somewhat sensational change of government. It seems that General Deva Shamshere Jung, who succeeded the late Maharaja Sir Bir Shamshere Jung in March last as Prime Minister of Nepal, proved to be very unpopular, and his mismanagement of public business moved the King, on the 26th ultimo, to depose him in favour of General Chunder Shamshere Jung. The change has been accomplished quietly and without bloodshed. The ex-Minister has been ordered to reside at Dhankota, on the Darjeeling border. It was Chunder Shamshere who said to Lady Roberts: "When are the Russians coming? I wish they would make haste. We have 40,000 soldiers in Nepal ready for war and there is no one to fight." This is the man who has now become the real ruler in Nepal. As the new Prime Minister is said to be a staunch friend and admirer of the British, the Government of India have apparently no reason to regret the change.

The new first-class German battleship *Lachringen*, which was launched from the Germania Yard at Kiel on the 12th of June in the presence of the German Emperor, is one of five sister vessels now under course of completion for the Imperial German Navy. One of these, the *Wittelsbach*, was launched at Wilhelmshaven last year, and another, named the *Hetting*, was launched at Danzig on the 6th June; the remaining two vessels of the class are being built respectively at Danzig and Stettin. They are of 12,000 tons displacement, 393 feet 8 inches in length, 68 feet 2 inches in beam, a mean draught of 24 feet 10 inches, and are being fitted with engines to be capable of developing 15,000 horse power, which will, it is expected, give the ships a speed of 19 knots per hour. The boiler installation of each of these ships is to be equally divided between the Schultz type of water-tube boiler and the ordinary cylindrical boiler, the object being that the ships shall perform their ordinary cruising or harbour work with the cylindrical boilers only in use, and that they shall keep the water-tube boilers in reserve either for high speed steaming in conjunction with the cylindrical boilers or for emergency requiring a sudden increase of speed.

A representative of the *Times of Ceylon*, who interviewed some Boer prisoners arriving at Ceylon by the transport *City of Cambridge*, has obtained unequivocal testimonies to the kindness of the British. In reply to a question as to how they had enjoyed the voyage, Landrost Munnik, speaking for his co-officers, was enthusiastic as to the treatment received on board. "And it has been the same all through the war," he added. "Whenever we have met the British soldier—officer or man—we have found him a perfect gentleman in his conduct towards us. We are glad of this, because we consider that our quarrel is not with individuals." Asked to give his opinion of the fighting qualities of the British soldier, Munnik said:—"They have done as no other nation would have done. They have fought against difficulties which people in Europe

never will understand, and never can be made to understand. They are men, and you can take it from me that that is the opinion every man who has fought against them has of the British soldier. Magersfontein showed us what the bravery of the British soldier who walks was. It was grand. Our men mowed them down, but it had no stopping effect, and if any man says the soldiers did not come on, he lies."

THE MAPLES LIBEL CASE.

In the Yokohama Chiho Saibansho on Saturday before Judge Kano and Associate Judges Mabuchi and Shimamura, the hearing of the libel suit brought by Mr. J. H. Ranger against Mr. P. B. Clarke of the Maples Hotel, Limited, came on.

The case for the plaintiff was that at an extraordinary general meeting of shareholders of the hotel held on June 24th, 1901, while sitting as Chairman, defendant spoke of plaintiff as a "downright swindler" and further said that plaintiff resorted to fraudulent means in promoting the change of the organisation of the hotel as a joint-stock company and in raising the capital. As the meeting was open, the reporters of the English journals were present and the statement of defendant was published in full in the *Japan Herald* of June 25th. In consequence, the slanderous speech made by defendant against plaintiff was spread to various parts of the world and had destroyed the plaintiff's credit in business.

After the Public Procurator had been heard, the defendant was called. In reply to the Court he said he remembered the meeting of June 24th of which he was Chairman. He admitted having described the plaintiff as a downright swindler, and having said that Mr. Ranger had sold the hotel's property and not paid in the proceeds, and that the hotel had been defrauded by him in various ways. He had been under the impression that Ranger committed dishonest practices towards the Company and that his acts were fraudulent, and this belief found vent at the meeting. He did not say that Ranger sold the hotel's pump and pocketed the proceeds; he simply stated that as the fraud had been cleverly committed it was not easy to discover it. The case was adjourned.

On Wednesday afternoon, Mr. P. B. Clarke, acting Manager of the Maples Hotel, Ltd., was further examined in the Yokohama Chiho Saibansho in the suit for libel brought against him by Mr. J. H. Ranger.

Judge Kato asked defendant to whom he referred when he stated, "we are not able to get hold of the man who swindled us?" Defendant replied that he did not know; it might have been one man or more. He had nobody in particular in his mind when he used the words. Defendant was then examined at some length in regard to various statements which appeared in the documents submitted to the Court. He was also questioned regarding his letter of retraction which appeared in the *Japan Herald*.

An application was then made by Mr. Sato Hakuai, who appeared for the defence, to summon Dr. Munro, Messrs. Glahn, O. Lord, B. Collaco, W. K. Tresize and Capt. Bishop as witnesses, but after hearing the Public Procurator, who opposed the application, the Court declined to call them. Judgment will be delivered on the 16th inst.

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

	Air Temp.	State of Sky	Remarks in General.
	Max. Min. Lake.	Weather.	
Sunday, 4th	80° 65°	81° Fine...	—
Monday, 5th	82° 69°	81° Fine...	—
Tuesday, 6th	82° 69°	81° Fine...	—
Wed'sday, 7th	68° 66°	82° Fine...	—
Thursday, 8th	68° 56°	82° Fine...	—
Friday, 9th	67° 57°	82° Fine Shower at night.	—
Saturday, 10th	68° 58°	82° Fine...	—

THE BHESANIA-P. & O. CASE.

The following is the text of the judgment given in the above case:—

DECISION.

Plaintiff:—H. B. BHESANIA of C. M. BHESANIA & Co. British subject, residing at No. 72, Yamashita-cho, Yokohama.

SAWADA SHUNZO, barrister,
Counsel for the plaintiff.

Defendant:—PENINSULAR AND ORIENTAL STEAM NAVIGATION CO.

P.P. A. WOOLLEY, residing at No. 15, Yamashita-cho, Yokohama.

AKIYAMA GENZO, barrister,
Counsel for the defendant.

With regard to the suit brought by the above-mentioned parties for the recovery of loss sustained, the present Court gives judgment as follows:

The claim of the plaintiff is rejected.
The cost of the proceedings must be borne by the plaintiff.

FACTS OF THE CASE.

Counsel for the plaintiff states that the plaintiff is engaged in the export and import business in India and Yokohama under the firm name of C. M. Bhesania and Company; that the defendant is a company doing a carrying business with steamers running between Europe and various ports of the East; that the plaintiff entrusted to it for transportation eight cases of indigo marked Δ numbered from 105 to 122 in the defendant company's steamers from Calcutta in India to Yokohama on the 21st of March in the 33rd year of Meiji; that the said goods were first loaded in the ship *Valera* and afterward transhipped to the *Rohilla* at Hongkong; that the defendant's steamer entered the port of Yokohama towards the end of April in the 33rd year of Meiji; that at the time of unloading only seven of the cases were delivered and the remaining one case was left undelivered, for which inquiry was repeatedly made but no definite answer was obtained. To be brief, the defendant is under obligation to pay the damage to the amount of 800 yen since it is quite evident that the said case was lost through negligence on the part of the defendant during the voyage at which time the defendant is properly held responsible for its safe-keeping; it is therefore asked that the Court will give its decision that the amount claimed shall be made good by the defendant. Although counsel for the defendant alleged that by Art. 348 of the Commercial Law the plaintiff, the receiver of the goods, did not reserve a claim against the lost goods, so that the defendant is under no responsibility in the present case, yet as the plaintiff has in his possession the bill of lading, that is the highest proof that the claim is reserved, for a bill of lading is a document which has to be handed over when the goods are delivered in full. Furthermore, in the month of May in the 33rd year of Meiji, inquiry was made for the missing goods, and as they were originally loaded in India, the legal claim should be under the English law which provides no necessity for such proceedings as the defendant alleges are necessary for the reserving of the claim, and if any such necessity exists it must be proved. Counsel for the defendant further alleges that by the agreement the responsibility of the defendant comes to an end at the time the goods leave the side of the ship when they are raised by winches, and therefore the defendant argues that he is not responsible. But in Yokohama imported goods are not allowed to be delivered freely from the ship;—they must pass inspection at the Custom House and after port-dues, tonnage-dues, &c., are paid, the receiver of the goods must produce an application for leave to import and having obtained a permit, the goods are delivered. In the present case the goods passed through this process. Therefore they were not delivered at once from the ship as the defendant alleges in support of his contention that his responsibility came to an end when the goods left the ship, &c.; therefore the assertions of counsel for the defendant afford no reason by which such responsibility becomes void. It is further alleged that in reply to an inquiry the missing bale was said to have been No. 117 and in production No. 4 mention is made to that effect, but in the present case the claim being for one of eight cases that was lost, a mistake in the number of the bale by no means settles the point in dispute.

Counsel for the defendant states as follows:

As the plaintiff says, the defendant had eight cases of indigo entrusted to him for transportation, but the defendant duly advised the plaintiff on the 24th of April in the 33rd year of Meiji of the arrival of the *Rohilla* at this port and at the same time asked the plaintiff to take delivery of the goods 24 hours after the ship anchored, immediately from the ship or from the Custom's agents, Helm Bros, at the Custom-House

hatoba. The plaintiff, however, did not take the goods immediately from the ship, and the whole of the goods having been already received the defendant is under no responsibility to make good the claim of the plaintiff. Supposing for instance a part of the goods was lost as the plaintiff alleges, yet the plaintiff received the other part of the goods without making any reservation of claim at that time. After the lapse of three months from the date of delivery an inquiry was first made about the loss of a part, but the responsibility of the defendant is already void by Art. 348 of the Commercial Law, and therefore the defendant is under no obligation to meet the demand. Although counsel for the plaintiff argues that English law is applicable to the present case and calls on the defendant to prove his case by its provisions the defendant is under no such responsibility. Counsel for the plaintiff says that of the eight cases of indigo the one that was lost was No. 117 marked Δ , but it is evident by the testimony given by the witness Aizawa Takejiro, that No. 117 case was taken by the plaintiff. The present case being a claim for the loss of No. 117, and that case being in actual existence, having been received by the plaintiff, whatever other loss there may have been sustained concerns not the present case. And, further, there being an agreement that the responsibility of the company should end when the goods leave the ship the defendant is not responsible for a claim brought against him. Moreover the value estimated by the appraiser can in no sense be taken as the value of the goods at the place for which they were destined, at the time when they ought to have been delivered. Such being the case, the claim of the plaintiff is illegal in every respect, and should be rejected.

REASONS.

It is agreed between the parties concerned that the eight cases of indigo were carried from Calcutta to Yokohama in the defendant's ship and that they were to be delivered to the consignee, the plaintiff. The place of delivery was thus Yokohama, and as there exists no special agreement between the parties as to what country's law they are to abide by, it is but proper that they should be governed by our law since this is the country where the action took place. Art. 348 is applicable to the owner of a ship, and that article says the responsibility of a transporter comes to an end when the consignee of the goods has received the goods without making any reservation of claim and paid the freight and other charges due on them, excepting when there is any damage or partial loss which could not be discovered on the spot, in which case the receiver of the goods must advise the transporter thereof within two weeks from the date of delivery. Now, that plaintiff did receive seven cases of the goods in question is admitted by the plaintiff himself. At the time when delivery was taken payment of freight for the goods seems to have been made without any objection, and there is nothing to show that there was any objection on the part of the plaintiffs. Therefore it is to be inferred that the freight for the whole of the goods was paid, so that the plaintiff has not only to prove the fact that one case of indigo was actually lost, but also that the reservation of the claim as aforementioned was properly made, or if the damage or loss was not discoverable at the time, that advice to that effect was given within two weeks from the date of delivery. As to this, Counsel for the plaintiff alleges that inquiry was made in the month of May in the 33rd year of Meiji. But this the defendant denies, and as there is nothing to prove it, it can not be taken as fact. Counsel for the plaintiff pleads that the possession of the bill of lading is a sufficient proof of reservation of the claim; but the mere possession of the bill of lading does not reserve the claim. The transporter of the goods has the right to demand the bill of lading at the time the goods are delivered, yet the receiving of the bill is not necessary unless its possession constitutes reservation of the claim in connection with other acts. Thus the mere possession of the bill of lading can not be made to constitute reservation of the claim as required by Art. 348 of the Commercial Law. Again, supposing the case to be one of damage or partial loss not discoverable on the spot, there is nothing to prove that proper notice to that effect was given within two weeks from the time of delivery.

In conclusion, supposing there was a loss of one case of indigo as the plaintiff alleges, it is still impossible to hold the defendant responsible for it and therefore the claim of the plaintiff is illegal, and judgment is given as above.

CORRESPONDENCE.

ASCENT OF FUJI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Accounts of the ascent of Fuji have often been related, and are no doubt stale, but at the risk of your refusing to publish mine, I send you the particulars of a very successful trip.

Three ladies and myself left Tokyo by the 6.20 train last Tuesday morning, and arriving at Gotemba hired a special tram for Subashiri. For this we paid three *yen*, and it took us and our luggage easily. The ride to this place was very enjoyable, and Fuji was seen for most of the journey quite clear of cloud from base to summit. At Subashiri we were met by men from the Yoneyama hotel, who looked after our things and carried them the quarter mile or so which separates the hotel portion of Subashiri from the stopping place of the trams. We arranged with the hotel manager to get us horses for Kawari Yasumi, the station above Umagayeshi, for which we agreed to pay 84 *sen* per animal, the rate according to the official tariff in the hotel, published in Japanese, being 42 *sen* to Umagayeshi. We engaged through the same medium two coolies who were to carry our luggage to the top and down, and act as guides for the descent to Yoshida. These men were to pay two *yen* each. The official tariff already referred to gives the price of a guide for the mountain as 60 *sen*.

We left Subashiri at 2.30 in the afternoon, and on arriving at Umagayeshi, one of the horses, the one carrying the lightest of our party, promptly rolled over, and seemed very bad; as water was scarce at that altitude the bettoes shovelled cool earth round him as a restorative. The bettoes refused to go any further with the other three horses, saying it was not in the arrangement; we offered to pay them the full amount agreed upon provided they gave us a receipt saying they would not go any further. This they refused to do, and offered to take us to the station beyond, with the three remaining horses, provided we gave them a written statement to that effect. This we did, and on arriving at our destination we paid them in full for the four horses. We arrived at Number Two Station at 6.45 p.m., and as we knew there were numerous parties ahead intending to stop at the Sixth, we decided to stop at the Second, as it looked clean, and there was only one other guest. It was well we did, as the next station, Number Five, a long way up, had seventy guests who stayed there. On the Subashiri route I think that the Second Station is the cleanest and nicest to stay at, and the man in charge is very decent. We paid 4.50 for our lodgings. We left Number Two at exactly half-past four on Wednesday morning, and arrived at the top at half-past nine. Not bad considering that from the fifth station up we had to contend with wind of almost typhoon force. We left the top at ten, and were very much afraid at one time that we should be detained at the Eighth, by the wind. We got a new guide to take us to Yoshida at this Eighth, where the road branches off from the Subashiri one for Yoshida, as we found that neither of our Subashiri men, though engaged specially for the journey, knew the road. We paid this additional man two *yen*, which we were very glad to do, considering the threatening state of the weather. I might mention that at the top one of the Subashiri guides demanded two *yen* on account, as he said he owed that sum to the proprietor of this hostel. I refused to give him a cent until he finished his work. On arriving at the eighth station he said he had only been engaged to go to the top, and was rather inclined to give trouble. I appealed to the bystanders as to whether it was likely I should engage a man to carry my things up and then go to the trouble of carrying them down myself. We paid the hut-keeper at the top two *yen* for our short stay.

On leaving the Eighth on the way down no hut on the Yoshida route is struck until you get to the Fifth. After leaving this hut you soon reach the woods, and have a very pretty shaded route. At the Fifth station we met a number of pilgrims who had ridden as far as Subashiri with us the day before, and who were surprised to find we had been up and were now on our way down. They were mostly Tokyo people making the ascent for the first time, and they said the ascent from Yoshida was according to custom the proper one for them to take. From Umagayeshi for the three *ri* to Yoshida we took the springless cart of the place. We were told as foreigners we must take two carts, each to hold two passengers, and pay two *yen* for each cart, or if four got into one cart we must pay three *yen*. This latter we decided on, stipulating we should take our luggage with us, so that we could let our guide and coolies go. These carts take six pilgrims, and the Government tariff nailed up in the vehicle gives the charge at 25 *sen* per head, or say one and a half *yen* per cart, and yet as we were foreigners they would not take us for a cent less than double the proper rate for a cart load.

We arrived at Yoshida about four on Wednesday

afternoon, passing but not stopping at the Sengen temple. There is a very good hotel at Yoshida where foreigners always stop. Our bill for the night was about eight *yen*, though we found all our food except a little rice, a few eggs, potatoes and milk. The landlord is very obliging, and cooked our tinned things for us very nicely. We left Yoshida at 8.30 on Thursday morning and after a walk of about 2½ miles reached Funatsu. Here we crossed the lake in a boat. The charge is 1.20 *yen*. Then a walk of about a mile brought us to Lake Nishino-umi; here we crossed by boat at a charge of one *yen*, thence on over the lava beds, beautifully wooded, we came to the shores of the Shoji lake, where the hotel boat met us and took us over to the Hotel. Mr. Hoshino was very kind, and though his hotel was full, and we came upon him without notice, he put us up and made us very comfortable indeed. The nice large clean rooms, and excellent food, and the kindness and attention of our host were very acceptable. After tea and a plunge in the lake we did justice to the things set before us. Lake Shoji is the prettiest place I have seen in all my travels in Japan. On Friday at 9.30 we left Shoji and after a very beautiful walk with Fuji nearly always in view, we left Lake Motosu, which runs the Shoji lake very closely for scenery, and began our walk for Tambara, which place we reached at six, thence by boat for a mile to the hotel at Yokouchiba. We paid the coolies from Shoji to the hotel two *yen* per head.

On Saturday morning at six, after paying our bill of a little over five *yen*, we started by boat, price five *yen*, down the Fuji river, and reached Iwabuchi at about 11.30, and Tokyo a little before seven on Saturday evening, after a most delightful trip, and never once in the rain until we reached Tokyo.

Had I the trip to make again I should stop at Shoji, and walk over to Motosu, but not beyond, as I do not think the river journey is worth leaving the hills for. The round journey including cost of food, first class to Gotemba and second back from Iwabuchi, cost us 30.22 *yen* per head, for the five days.

Yours faithfully,

FUJI.

Tokyo, August 11th, 1901.

THE H. AND S. BANK.

Following is the seventy-second report of the Court of Directors of the Hongkong and Shanghai Banking Corporation, presented to the ordinary half-yearly general meeting of shareholders to be held at the City Hall, Hongkong, on Saturday, the 17th August, 1901.

To the Proprietors of the HONGKONG AND SHANGHAI BANKING CORPORATION. Gentlemen, the Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance Sheet for the half-year ending 30th June, 1901.

The net profits for that period, including \$1,410,272.65, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts, amount to \$3,479,515.99.

The Directors recommend the transfer of \$750,000 from the Profit and Loss Account to credit of the Silver Reserve Fund, which Fund will then stand at \$3,750,000.

After making this transfer and deducting Remuneration to Directors there remains for appropriation \$2,714,515.99, out of which the Directors recommend the payment of a Dividend of One Pound and Ten Shillings Sterling per Share, which at 4/6 will absorb \$533,333.33.

The difference in Exchange between 4/6, the rate at which the Dividend is declared, and 1/11 3/4, the rate of the day, amounts to \$695,466.67.

The Balance, \$1,485,715.99, to be carried to New Profit and Loss Account.

DIRECTORS.

The Honourable J. J. Keswick, the Honourable R. M. Gray, and Mr. P. Sachse having resigned their seats on leaving the Colony, the Honourable J. J. Bell, Mr. H. E. Tomkins, and Mr. H. Schubart have been invited to fill the vacancies, respectively; all these appointments require confirmation at this Meeting.

AUDITORS.

The accounts have been audited by Mr. F. Henderson and Mr. C. S. Sharp, who offer themselves for re-election.

R. SHEWAN, Chairman.

Hongkong, 1st August, 1901.

ABSTRACT OF ASSETS AND LIABILITIES, HONGKONG AND SHANGHAI BANKING CORPORATION—30TH JUNE, 1901.

Hongkong, 1st August, 1901.

THE FOCHOW FIRE.

In its account of the great fire at Fochow the *Foochow Echo* had the following:

"We learn of many harrowing details which may interest our readers. One we will mention to show what risks the Chinese will run in their greed of gain. On the roof of a small godown beneath the larger building in Messrs. Fraser, Ramsay & Co.'s premises some twenty men were seen by a party of foreign ladies and gentlemen from a close point of vantage, handing along goods by which they hoped to profit, when suddenly the wall of the larger building fell on them. Six were seen to come out, the others probably were killed or were too seriously wounded to move. Certain it is that at an early hour in the afternoon we heard of too many cases of fractured limbs and burnt bodies having been taken to the Fochow Native Hospital. Then the ordinary looters, no doubt a bad lot always present at fires, fared badly at the hands of the soldiers. The whole street was teeming with them. They were shown no mercy, for nothing short of sword cuts in the upper arm would induce them to part with their loot. These gentry will not be so eager to attend fires in the future.

"The Provincial authorities were kind and most helpful not only in sending in soldiers to preserve law and order as far as possible, but in sending in their fire engines ably manned."

From another source we learn that the total loss is estimated at three to four lacs of dollars, of which about \$230,000 falls on the Insurance offices. The Hongkong Fire is said to be in for \$140,000, the China Fire for only \$2,000; the rest falls on Home offices.

TELEGRAMS.

(REUTER'S SERVICE TO THE "JAPAN MAIL.")

GREAT AMERICAN STEEL STRIKE.

Shanghai, August 8.

A general strike of men employed in American steel-works is ordered to take place on the 10th of August.

GREAT BRITAIN AND THE CHINA PROTOCOL.

Lord Lansdowne, speaking in the House of Lords, said that negotiations with reference to Article XI. of the joint note regarding commercial facilities might possibly be transferred to a more convenient place than Peking, i.e. to a conference which would include representatives of the great commercial interests in the East.

THE LATE EMPRESS FREDERICK.

The funeral of the late Empress Frederick takes place on the 13th of August.

The House of Commons has unanimously passed a vote of condolence with King Edward and a vote of sympathy with Kaiser Wilhelm.

THE SOUTH AFRICAN WAR.

Shanghai, August 9.

Sixty-one British columns are now operating in South Africa. Several skirmishes are reported.

General French's operations are beginning to tell on the Boer invaders of the Cape.

Commandant Fouché has recrossed the Orange River going northwards.

FIELD-MARSHAL WALDERSEE.

Field-Marshal Waldersee's reception in

Hamburg to-day was purely military and very quiet.

AFTER THE WAR.

It is stated that all the Boer prisoners, Afrikanders, and Uitlanders will be reinstated in the Transvaal before foreigners are allowed to enter the country.

RUSSIA AND EASTERN SIBERIA.

The Odessa correspondent of *The Times* says that Russia is endeavouring to colonize the Amur territory and intends to plant a Cossack colony on the Chinese border.

KITCHENER'S PROCLAMATION.

Shanghai, August 10.

Lord Kitchener's proclamation providing for stern measures against the enemy has been favourably received in Natal. The terms of the proclamation are unknown.

A SURPRISE IN NEUTRAL TERRITORY.

The London *Morning Post* says that twenty-five of Steinacker's Horse were surprised and captured on the Sabi River.

(Note.—The Sabi River forms part of the eastern boundary of Matabele Land, dividing it from the Gasa Country (Portuguese territory).—*En. J.M.*)

BRITISH PARLIAMENT.

A new closure rule, adopted on Wednesday, enabling the estimates to be voted in groups instead of separately, was applied in the House of Commons yesterday evening.

Estimates aggregating £67,746,838 sterling were voted in three hours, this sum including 45 millions for the Army.

MOURNING FOR THE EMPRESS FREDERICK.

Three weeks' mourning for the late Empress Frederick has been ordered.

BRITISH MINISTER TO KOREA.

Shanghai, August 11.

Mr. J. N. Jordan, C.M.G., late Chargé d'Affaires and Consul-General, has been gazetted British Minister to Korea.

KITCHENER'S PROCLAMATION.

Lord Kitchener's proclamation was issued in accordance with instructions received from the Home Government. It banishes permanently from South Africa, unless they surrender before the 15th of September, all commandants, field-cornets, and leaders of armed bands, being burghers of the late republics and still resisting; also all members of the late governments of the Transvaal and Orange Free State continuing in the field. The proclamation also charges upon the property of burghers not surrendering by the 15th September, the maintenance of their families.

A later telegram says that the papers heartily approve of the proclamation of Lord Kitchener and anticipate that sterner measures will be taken if this is ineffective.

Later.

Lord Kitchener reports that a blockhouse near Brandfort was rushed and captured after severe fighting on Wednesday night.

Kritzinger's commando of 400 men, badly mounted, have crossed the railway south of Conway.

DEATH OF SIGNOR CRISPI.

Shanghai, August 12.

Signor Crispi is dead, aged 82.

THE BIG STRIKE.

The general strike among the iron and steel workers in the United States, declared by the American Steel-workers Association, has begun. The Labour Federation and the Mine Workers Organization are supporting the strikers.

THE LATE EMPRESS.

The remains of the Empress Frederick have been removed from Cronberg to St. Johann's church temporarily. An impressive service was performed yesterday.

ENGLAND AND CHINESE COMMERCE.

Shanghai, Aug. 13.

The delay in the signature of the peace protocol is said to be due to England objecting to Powers with microscopic commercial interests in China enjoying an equal voice with herself on the proposed international tariff revision commission.

THE THIBETAN MISSION.

Shanghai, August 14.

Lord Cranborne states that Count Lamsdorff has informed Sir N. O'Connor, British Minister at St. Petersburg, that the Thibetan Mission is devoid of political or diplomatic significance.

BILLS PASS SECOND READING.

In the House of Commons the Royal Titles and Pacific Cable Bills were read a second time.

KING EDWARD AND WALDERSEE.

King Edward received Count Waldersee at Hamburg and conferred the Cross of the Bath upon him.

FUNERAL OF THE EMPRESS-DOWAGER.

The coffin of the Empress-Dowager was removed from Cronberg on the evening of Aug. 12th, proceeding from the Church to the railway station followed by a princely cortège.

A later telegram says the funeral was of the simplest character, in accordance with the wish of the deceased. Only members of the family and the principal civil and military authorities were present.

IMPORTANT WEST AFRICAN AGREEMENT.

Reuter learns that an important agreement has been concluded between the Government of the Colony of Gambia and a powerful chief, whereby both banks of the Gambia River to the Anglo-French frontier are now British territory.

LONDON TEA MARKET.

Shanghai, Aug. 15.

An attempt by the ring to boycott public tea sales has failed: 19,000 packets of Ceylon tea have been sold by public sale and realised splendid prices; 25,000 packets of India tea were sold on Monday, and only 11,000 packets remain for to-morrow's secret sale.

THE DUCAL TOUR.

The Duke and Duchess of Cornwall and York have arrived at Pietermaritzburg.

FIGHT IN SOUTH AFRICA.

A four hours' fight has taken place on the Fish River between 300 British and 300 Boers, and the latter resisted toughly but were driven from kopje to kopje. One British officer and one private were killed and seven wounded. Commandant Pretorius died of his wounds.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, August 8.

There is a diplomatic conflict between Turkey and France, the latter Power demanding the adjustment of various industrial affairs which are unsettled.

The workmen of the steel factories of Pennsylvania are on strike. Apparently the negotiations between the employers and the syndicate are not successful. It is feared that 100,000 operatives will be on strike by the end of the week.

THE FRENCH BALLOON EXPERIMENTS.

Saigon, Aug. 9.
The aeronaut Santos-Dumont set out from St. Cloud in his dirigible balloon in the morning. He made the circuit of the Eiffel Tower but in returning the balloon struck against a house and fell. Fortunately the occupant of the balloon was not injured.

LORD KITCHENER'S PROCLAMATION.

Saigon, August 10.
A proclamation of Lord Kitchener's announces that Boer chiefs not submitting before the 15th of September, will be banished in perpetuity, and that their property, in common with that of the other combatants, will be confiscated.

CHINA AND NEW TARIFF.

Saigon, August 14.
It is telegraphed from Peking that the Peace Protocol has been signed. The five per cent. *ad valorem* duties will go into force from the middle of October.

(RECEIVED IN TOKYO.)

NORTH CHINA AFFAIRS.

The Council of Foreign Representatives was to have met in Peking on the 6th inst., but has been postponed until the 10th. The subject for discussion is the Protocol, which has now been drafted, and which, after examination, will doubtless be duly signed. After its signature the negotiation of the revised commercial treaty will be at once taken up, the general terms being discussed by the Representatives in conclave, and the details by the Powers independently. It is probable that for the purposes of the latter negotiation Mr. Komura will appoint a substitute, and will himself return to Japan.

There does not seem to be any truth in the statement that England, through Sir Ernest Satow, has declined to sign the Protocol, especially as the date for the operation of the revised tariff has been fixed at October 1st, which suits her much better than its immediate operation. The probability is that when she signified her willingness to acquiesce in immediate operation, she was influenced by a desire to consult the general convenience.

The talk about an exchange between Manchuria and Korea on the part of Russia and Japan is merely laughable.

General Voyron left Taku on the 8th inst. and is expected to reach Yokohama on the 12th. He will be accompanied by nine staff officers and will probably remain four days in Tokyo.

THE NORTHERN FISHERY.

A telegram from the Commercial Agency in Vladivostok, dated the 9th instant, says that the operation of the fishery restrictions proclaimed by the Governor-General of the Amur has been postponed until the 1st of January, 1903.

THE CHINA SITUATION.

The Representatives held a meeting in Peking on the 10th instant, and probably approved the protocol.

It is possible that the operation of the revised customs tariff, which was to have taken effect from October 1st, will be again deferred. It is said to be certain that the method of *ad valorem* duties will be changed to specific.

THE CHINESE PROTOCOL.

The Foreign Representatives met in Peking on the 12th instant, the principal subjects of discussion being the agreement with

reference to the Indemnity and the question of the duration of the veto upon the importation of arms. It is believed that the points were disposed of and that the Representatives appended their signatures, though no official notice in that sense has yet been received. [Reuter's version of the facts is probably correct.]

It appears to be true that until Russia withdraws her troops from Manchuria, England will not withdraw hers from Peking.

THE HAWAIIAN SCANDAL.

No official information has yet been received with regard to the alleged outrage in connexion with the medical examination of Japanese passengers in Hawaii.

NEW STEAMSHIP SERVICE.

The project of opening a line of steamers between Chefoo and Wei-hai-wei has long been on the *tapis*, but the financing of the enterprise seemed difficult. The officer commanding the British garrison at Wei-hai-wei has now granted a subsidy to the Higo Kisen Kaisha, and that company commenced the service on the 2nd instant with the *Seim Maru* (147 tons). There will be a service each way weekly, and the fare is 4 *yen* first class and 1 *yen* third class.

(FROM THE "N.-C. DAILY NEWS.")

THE ROBBERY OF NOTES FROM THE HONGKONG BANK.

Singapore, Aug. 2.
The trial of the Bank prisoners has been postponed to the next assizes, to permit of the attendance of the witnesses from India.

THE EXCITEMENT AT AMOY.

Hongkong, August 5.
H.M. flagship *Glorie* arrived at Hongkong from Amoy on Sunday afternoon, with Vice-Admiral Bridge on board.

The *Glorie* took the Admiral up at Fushan, where he arrived from Shanghai in the *Albatross*. On her way to Hongkong the *Glorie* met H.M.S. *Eclipse*, and received the information that a man-of-war was wanted at Amoy. The *Glorie* accordingly turned into Amoy, and found everything quiet. On her way she met the French flagship *Amiral Charner*.

BAD WEATHER AT HONGKONG.

There was typhoon weather in Hongkong last night.

THE GLORY STRUCK BY LIGHTNING.

Hongkong, August 6.
During a violent thunderstorm on Sunday night, the Marconi signalling apparatus on H. M. flagship *Glorie* was struck by lightning and wrecked. Two-thirds of the apparatus have been detached and will be temporarily refitted before the *Glorie's* departure for the north on Saturday.

THE PLAGUE.

Hongkong, August 7.
There was one fresh case of plague on Tuesday, a European boy, aged fifteen.

Captain Stavers, a well known China coast skipper, has contracted bubonic plague.

VICE-ADMIRAL BRIDGE'S MOVEMENTS.

Vice-Admiral Bridge, R.N., inspected our Naval Yard yesterday.

THE GOVERNOR'S WIFE GOING HOME.

Lady Blake is leaving for London to-day in the R. M. S. *Empress of China*.

THE PLAGUE.

Hongkong, August 8.
There have been three fresh cases of plague and three deaths among Chinese to noon on Wednesday. There are now only three European plague patients at the hospitals, all doing well.

NAVAL MOVEMENTS.

The Austro-Hungarian cruisers *Kaiserin Elisabeth* and *Zenta* left for home yesterday.

CONSULAR CHANGES.

Consul James Scott has been transferred from Swatow to Canton, and is succeeded at Swatow by Mr. W. Holland from Ichang.

(FROM THE "OSTASIATISCHE LLOYD.")

NEWS FROM THE NORTH.

Peking, Aug. 2.
With the consent of the Diplomatic Corps, 3,000 regular Chinese troops will arrive here between the 4th and 6th of August. They will be quartered about twenty (20 miles) from here.

Peking, Aug. 4.

Major-General von Trotha left Peking to-day. The staff of the German commander being withdrawn. The Battalion "Foerster" will remain here until the 9th, when it will also depart, leaving here Battalion "Montgelas" only as Legation guard.

NEWS FROM EUROPE.

Berlin, Aug. 3.

The condition of the health of the Empress Frederick gives cause for much anxiety. His Majesty the Emperor on receiving the unfavourable news of the health of his mother returned at once from his trip to Norway, hastening to Kronberg, where also the other children of the Empress Frederick are going. The Emperor has also countermanded his intention to take part in the festivities at Hamburg on the occasion of the expected return of Count Waldersee, and has ordered the Crown Prince to represent him on this occasion.

Berlin, August 5.

Her Majesty the Empress Frederick, passed away this evening at 6.15 o'clock, at Kronberg.

Berlin, August 6.

On the occasion of the death of the Empress Frederick the whole country has been ordered to go into mourning for six weeks.

The balance of the finances of Germany for the year shows a deficit of 1,932,567 marks.

Count von Waldersee has arrived at Heligoland.

Berlin, August 7.

The funeral of the Empress Frederick will take place on Tuesday, the 13th instant.

The *Kitchenerian* published to-day a leader in Memoriam of the Dowager Empress, in which many deeds of her life are given, which will endear her memory to the German people for ever.

It is reported from Cape Town that Lord Kitchener is very ill.

LONDON DOCK DUES RAISED.

Berlin, August 8.

It is reported from London that the India Docks are raising the tonnage dues from 1s. 1d. to 1s. 8d.

VENEZUELA.

In Venezuela a state of siege has been proclaimed.

U. S. STEEL STRIKERS.

The general strike of the steel-workers will break out all over the United States to-morrow, when 100,000 labourers are resolved to lay down their work, until the steel syndicate has accepted their terms.

COUNT WALDERSEE'S RECEPTION.

The arrival of Count Waldersee, although the country is in mourning and consequently no music allowed, was still very impressive, and rather enthusiastic. The Crown Prince, who was to welcome the Field-Marshal home, had also gone to Kronberg. The Emperor's aide-de camp, General von Wittich, received the Count in the name of the Majesty, who also sent a telegram thanking the Field-Marshal heartily for his services and conferring upon him the *Ordre pour le Merite*. The Prince Regent of Bavaria honoured the Count by conferring the Order of St. Hubert upon him. The Senate of Hamburg gave him the freedom of the city.

LORD KITCHENER'S SUCCESSOR.

Lord Lytton has been appointed to succeed Lord Kitchener as Commander-in-Chief of the British troops in South Africa.

DEATH OF AN ITALIAN GENERAL.

The Italian General, Oreste Barriertieri, who retired into private life after the unfortunate expedition to Abyssinia, has died.

SPAIN, ENGLAND, AND MOROCCO.

A report published by many of the European newspapers, that Spain and England have entered into an agreement as to the future of Morocco, is denied peremptorily at the proper quarters.

THE WAR IN SOUTH AFRICA.

London, July 16.

Lord Raglan, in the House of Lords, said that a committee of ladies was being formed to visit the Boer refugee camps in South Africa. Meanwhile written reports had been requested, and Sir Gordon Sprigg, in a speech at Capetown, said that in order to hasten the responsible Government, immigration of loyalists from Great Britain and the rest of the empire to the Transvaal and the Orange colonies would be promoted on a large scale.

Communications are proceeding between Lord Kitchener and the Cape Ministry which it is hoped would hasten the conclusion of warfare.

The *Daily Mail* understands that Lord Kitchener's new plan provides for the return of 80,000 troops early in autumn, including the whole of the troops lent by India; and 50,000 selected housemen divided into three corps will operate against the three leading Boer commandos. There is no question of abandoning any portion of the communications.

Since the 8th instant, 32 Boers have been killed 34 wounded, 307 taken prisoners, 140 surrendered, 218 rifles, 15,870 rounds of ammunition, 445 waggon and 4,625 horses captured.

YOKOHAMA: SATURDAY, AUGUST 24TH, 1901.

BIRTH.

At No. 205, Bluff, on the 15th inst., the wife of WILLIAM CAMPBELL, of a Son.

SUMMARY OF NEWS.

THE Health Department at Manila have started a raid upon rats.

THE American Military Hospital at Nagasaki was closed on the 17th instant.

MARQUIS SAIGO accompanied by his family arrived at Gifu on the 18th inst.

OVER one hundred police-constables left Shimonoseki for Formosa on the 19th inst.

HEAVY rain and hail fell at Nagano shortly after four o'clock on the afternoon of the 18th inst.

AN old woman known as Tanita Suma, ninety-eight years of age, at Takayama, Hida, died on the 11th inst.

THERE are at present ten foreigners in the Nagasaki gaol at Shindaikumachi, the offender under-

going the heaviest sentence being a Russian sailor, who is serving six years' imprisonment for robbery with violence.

THE ship *Albania* with 58,000 cases of Standard oil has arrived at Manila after a voyage of 311 days from New York.

AN EXPLOSION of fire-damp in the Oyabumine, at Yugeta-mura, Tagawa-gori, Fukuoka Prefecture, on the 15th inst. injured one coolie.

CAPTAIN PORZELIUS, of the Hamburg-America liner *Sibiria*, was fined \$250 at Singapore for infringing the Sunday Working Ordinance.

PRINCE SHIMAZU Tadashige gave a garden party at his residence in Kagoshima on the 15th inst. at which over six hundred persons were present.

A LONDON telegram to the *Osaka Mainichi* says:—Colombia has invited the mediation of the United States Government in the difficulty with Venezuela.

THE Americans are reported to be at last preparing to occupy Mindoro, an insurgent island of which an American deserter, Arthur Howard, is quasi-Governor.

ON Aug. 8th General Suillon took over the command of the French brigade of occupation in China on the departure of General Voyron, Commander-in-Chief.

BARON MOUNT-STEPHEN announces a gift of £40,000 to the Presbyterian Church of Scotland, the income to go to the ministers of Aberdeenshire and Banffshire.

AN old woman carrying on her back a child, fell down the long flight of stone steps at the Hachiman shrine, Negishi, Yokohama, on the 15th inst. Both were badly injured.

A FIGHT occurred on the Tamagawa between 30 fishermen of Tamagawa-gori and 90 fishermen of Hachioji on the morning of the 19th inst. Two men were injured and five arrested.

MR. HARA TAOKYO, son-in-law of a well-known artist, Taki Kwatei, died of consumption on the 17th inst. He received medals from the Paris Salon and other fine art exhibitions in Europe.

AN infant, foster son of Uchiuni Chugoro, now serving on the Japanese war vessel *Tatsuta*, who lives at Tanoura, Yokosuka, fell into a water tub in the kitchen and was drowned on the morning of the 18th inst.

YONEHARA IKUTARO, formerly employed by the Tokyow Water Works, was arrested by the Kojimachi police on the 18th inst. charged with stealing several hundred pipes from the water works at Kajibashi, Kanda.

THE U.S. cruiser *Newark* reached New York 46 days out from Hongkong. She is believed to have made the quickest trip for the distance of any man-of-war, her average speed being 14½ knots throughout the voyage.

SHINOWARA HIDEJIRO, a native of Aichi, was arrested by the Isezakicho police on the 17th inst. at Atsugi, on a charge of stealing several articles and moneys valued at several thousand yen from hotels in Hakone and Oiso during July.

THE Abbots and priests of the temples at Kamakura, to the number of 80, said masses for the repose of all those who have died in the vicinity of the beach, on the afternoon of the 18th inst., at Yuigahama, Kamakura. Marquis Nabeshima,

Barons Matsudaira Masanao, Kusumoto Masataka and families, Mr. Kitaoka Bunpei and Mr. Kotama Junichiro, and over 600 persons were present.

AN explosion of gunpowder, which was to have been used in a theatrical performance at a restaurant called the Nakamura-ro, Onomura, Hamana, Yenshu, took place on the 17th inst. One man was killed and six men were injured.

MR. YASUKOCHI, councillor of Osaka-fu, was robbed of a gold watch and several articles while staying in an hotel at Fujimichi, Kojimachi, Tokyo, on the night of the 17th inst. He reported the matter to the police the following morning.

OWING to the out-break of rinderpest at Hyogo Prefecture, the Metropolitan Police issued a notification on the 15th inst. prohibiting the import of cows, sheep, and pigs into Tokyo, and at the same time sent quarantine officers to the Shinagawa and Shinjuku stations.

A WORKMAN named Ito Fusajiro living at Chiyozakicho, Kitagata, Yokohama, employed at Messrs. Fraser, Farley and Varnum's box factory, had his right leg cut severely by the machinery, on the afternoon of the 14th inst. He was sent to the Rokkaku Hospital.

A PORCELAIN dealer named Kuroda Sadajiro, living at Tokiwacho, Yokohama, who was gambling with several men next door to his house on the afternoon of the 14th tried to escape when the police raided the place. He jumped into a back garden and had several ribs broken.

A GIRL named Urushi-mura Mino (15) employed in a house at Yaraicho, Ushigome, Tokyo, was arrested by the police on the 15th inst. charged with having stolen a purse containing yen 10.50 belonging to her employer on the 10th inst. She bought hair ornaments and clothes with the money.

IT seems practically settled, says the *United Service Gazette*, that Lord Kitchener is to succeed Sir Power Palmer as Commander-in-Chief in India in March next, and it is understood that the noble and gallant Lord has already hinted to a few officers that he may require them next year.

THE body of a man was found under Awoumibashi, near the Jinpuro, Kanagawa, early on the morning of the 19th inst. The police found wounds on the head and face and other marks of ill-usage on the body while the clothes were weighted with stones. It is conjectured that the poor fellow was beaten to death and then thrown into the water.

A SHAMPOOER's apprentice named Ishii Torakichi (20), living at Honmoku, Yokohama, attempted to commit suicide by drowning at Minatobashi, near the Cricket Ground, early on the morning of the 19th inst. He was rescued by a *sendo* and handed over to the Kotobukicho police. The ill-treatment of his master is said to have driven him to take the step.

A FARMER named Harada Fukuzo, living at Nagaimura, Miura, Kanagawa Prefecture, attempted to murder a woman named Yamada Tama of the same village on the night of the 18th inst. He waited to see her leave her house and followed her to a public bathhouse. After the bath he stabbed her on the head and face with a knife. The man was arrested at the back of his house at midnight.

THE CHINESE QUESTION.

Saturday, Aug. 17.

It is difficult to ascertain exactly what has happened to the Peace Protocol. That it has not yet been handed over to the Chinese Plenipotentiaries is certain—or, at least, it had not been handed over up to the date of latest advices. But the question whether it has been signed at all is what perplexes the public. We are ourselves disposed to believe that it has been signed, and such seems to be the conviction in Japanese official circles. On the other hand, persistent rumours come of opposition from Great Britain's side. One telegram attributed to her the objection that she could not agree to approach the negotiations for a new commercial treaty on an equal footing with Powers whose trade interests in China are comparatively microscopic; another—received on Thursday evening—said that she had insisted on inserting in the Protocol an article providing that until the payment of the Indemnity was concluded, China must pledge herself not to make any territorial concession to Russia. Is either of these rumours credible? We are disposed to answer in the negative. England has always given practical acknowledgment to the principle that in commercial dealings between the West and the East, the Occidental Powers should stand on the same footing. If she consents to go into a conference where all the Powers are represented, it is improbable that she would demand any differentiation such as the telegraph attributes to her. She may indeed have advocated the advisability of independent negotiation, but that would be a somewhat different story. Again, as to the alleged objection about a territorial concession to Russia, it is evident that the insertion of such a clause in the Protocol would be a sort of constructive admission that concessions would not be opposed after the payment of the Indemnity was concluded. Diplomatically speaking, the device looks clumsy. Yet there can be no second opinion that if Russia takes advantage of the union of Powers and if she prefers under their aegis any claims arising out of the recent complications, she is bound by every principle of good faith not to go behind them by making an independent claim on her own account, above all when it is a claim where satisfaction would impair China's ability to discharge the responsibility she has incurred to the Powers jointly. These considerations are so obvious that they may well have found expression at the council-board in Peking. The sum of the matter is that while we can not speak with any certainty as to what England has actually done, it seems pretty evident that she is doing something.

We hear nothing direct about the views formed by Prince Konoye during his tour in China. Probably he has not yet had time to arrive at any conclusion. Indeed it is not easy to see how a tour of a few days in a huge empire like that of China could enable a stranger to form an intelligent opinion as to her capacities for self-preservation. There is, however, in Prince Konoye's train, a gentleman named Kuga Minoru, editor-in-chief of the *Nippon* and a distinguished publicist. To him is attributed the statement that China is quite helpless. He is supposed to have made this assertion to a newsagent in Peking, not as an interpretation of Prince Konoye's opinion, but as a summary of the view he had himself formed since his arrival in China. If

that is Mr. Kuga's idea, it may reasonably be supposed to be Prince Konoye's also, in which event the question arises, what will become of the *Kokumin Domei-kai*? Will it be dissolved on the Prince's return from China? Will its leaders frankly admit that they have hitherto been trying to support a broken reed, and that nothing remains except to drop the curtain upon this stage of some-time vehement agitation?

Monday, Aug. 19.

It is now explained, though not on unquestionable authority, that what Great Britain really asked for at the conference in Peking was that a permanent committee should be appointed to receive and pay out the installments of the Indemnity—to manage everything connected with it in fact—in order to secure uniformity of procedure throughout. That proposal met with opposition from Germany and France and was not actually brought forward for general discussion. Japan then suggested that pending the final settlement of the Indemnity none of the Powers should be at liberty to commute its claim in exchange for some other concession from China. But that proposal also did not reach the stage of open discussion, having encountered opposition from the outset. It will be perceived that both suggestions were animated by the same purpose, though Great Britain's was the more subtle of the two. Both sought to guard against the danger of any Power—probably Russia was specially in view—hereafter abandoning her monetary claims in consideration of territorial concessions from China. If the signatories of the Protocol were sincere in their often expressed desire to preserve the integrity of the Chinese empire, they would probably have no hesitation in agreeing to such a pledge. But it would seem that they desire to preserve their hands free against all contingencies. Of course the sum of the matter is that the Chinese problem is to remain as unsettled as ever.

Tuesday, Aug. 20.

Lieut.-Colonel Aoki, who succeeded Lieut.-Colonel Shiba as Military Attaché of the Japanese Legation in Peking, has been offered and has accepted the duty of organizing a Chinese police force for Peking. We presume that this appointment has been made by the Powers, and that it is merely preliminary to the resumption of municipal administration by the Chinese themselves.

It is now alleged that China is to sign the Peace Protocol on the 20th inst. If that be the case, it must be presumed that, in spite of all contradictory rumours, the Protocol has already received the approval of the Foreign Representatives.

There is a report that the departure of the foreign troops from Peking will not take place as soon as was anticipated. It will be remembered that the 15th of this month was named as the day for a general commencement of the evacuation, but that programme is now said to have undergone some modification. There will doubtless be a corresponding modification of the plans of the Hsian Court.

This hesitation on the part of the foreign troops is prophetic of what is likely to happen when the question of finally withdrawing the Chili foreign garrison has to be faced. And certainly it must be faced one day or another, for no person imagines that the Powers of the world intend to permanently retain a military force in the Chinese

metropolitan province. Something may happen to change the whole situation and to deprive Peking of the appellation "Chinese capital," Chili thus ceasing to be the metropolitan province. But failing that event foreign troops can not remain there indefinitely, and who will be the first to step down?

Mr. Nakamura, Permanent Under-Secretary of the War Office, furnishes some curious copy to the *Asahi's* Tientsin correspondent. The latter writes that whereas the instructions given to the Japanese troops hitherto quartered in Chili were to avoid every semblance of a quarrel with foreign troops, and to yield a point rather than dispute it, even though right were on their side, the new order conveyed by Mr. Nakamura is that when their title is good they are not to concede anything. That is probably a very crude version of Mr. Nakamura's message.

Mr. Nakamura has taken passage on one of the ships of the Standing Squadron which recently visited Korean waters under the command of Admiral Togo and steamed to Chefoo. He embarked at Tongku, and will be carried by the Squadron to Shanghai-kwan, whence he returns overland to Tientsin, the Squadron continuing its voyage round the Gulf of Chili.

The Peking-Shanhaikwan Railway is now in British hands, but the managing committee includes a German officer and a Japanese officer. The rolling stock on the line consists of 58 locomotives and 980 cars, but the traffic involved in the withdrawal of the troops is so heavy that not so much as one carriage is available for ordinary uses. Great Britain, after considerable negotiations, is reported to have obtained possession of the station near the Temple of Heaven, and she is now endeavouring to bring about the transfer to herself of all the buildings within the station inclosure, several of which were erected by foreign Powers. In this attempt she is receiving the support of the Japanese. The Council of Foreign Representatives had shown a strong disposition to decide against England's obtaining the Heaven Temple station.

There appears to be some difference of opinion above the destruction of the Shanhai-kwan forts. The council of officers is in favour of destroying them, but Russia objects, and is said to have proposed that the southern portion should be handed over to her for the purposes of barracks. This intelligence is very vague and scarcely credible in its present form.

Wednesday, Aug. 21.

There is no longer any doubt that the Peace Protocol has received the approval of all the foreign Powers and that it is now in the hands of the Chinese Plenipotentiaries, who are expected to give their consent immediately. There is every prospect, therefore, that the joint signature of the Protocol will take place this week. As for the difficulties placed by rumour in the path of signature, they are to be regarded simply as conjectures inspired by a delay for which the public was not prepared. England's proposal that a committee of banks should be appointed to receive and distribute the Indemnity met with no opposition, and was adopted, but Japan's suggestion that the bonds should contain a clause similar to that inserted in the foreign loan bonds already issued by China—namely, a clause providing against the commutation of the debt for any

other form of consideration,—did not find favour, though it does not appear to have been actively opposed by any Power. Certainly the introduction of such a clause would seem to be very necessary, and it is to be hoped that its absence will not ultimately prove a source of regret.

In July, 1900, forty-six foreigners were killed in Taiyuan-fu in the province of Shansi, including severed Protestant missionaries, their wives and children, two Roman Catholic Bishops, three Fathers, and seven Sisters of Charity, to say nothing of the Chinese Christians massacred at the same time. The terrible event has now been almost forgotten except by those whom it closely concerned. On the 18th of last July, a memorial service on an imposing scale was organized at the scene of the massacre, the local officials cooperating and eight foreign missionaries taking part. The mourning procession was guarded by soldiers and every effort seems to have been made by the officials to invest the display with an element of sincerity. But the *North-China Daily News*, commenting on the service says:—"We should like to call special attention to the fact that while all these demonstrations of regret for the past are so far satisfactory, it must be remembered that little or nothing was done until after the Germans forced the passes in the Great Wall. It is true that in December last orders were given to collect the remains of those who were massacred, but remembering that they had been exposed to the ravages of wolves and dogs for five months it is little to be wondered at that but few were found. All that was done subsequently was practically due to the initiative of the expectant Taotai, Shen Tun-ho, who has on several previous occasions shown his friendliness to foreigners, for which he was a few years ago banished to Kalgan. But for his presence and influence Protestant Missionaries would probably not be now at Taiyuan."

Governor Yuan is credited with a scheme for reorganizing the Chinese army. The gist of his plan—which is said to have already obtained the approval of Viceroy Li and Prince Ching—and which will be submitted to the Court on the latter's return to Peking—is that the Japanese Army system should be taken as model, the Chili troops being regarded as Imperial Guards and made the nucleus of the whole army. No doubt some programme of that nature is greatly needed in China, but the question is how the new army is to be equipped. Apparently Great Britain's proposal to interdict the importation of arms for two years has been adopted by the Powers and inserted in the Protocol, so that unless the Chinese Government is already supplied, or intends to disregard the Protocol from the outset, there must be a difficulty in equipping the force. Of course the interdict can not be enforced, and might have been omitted from the Protocol with great advantage, but it was not omitted, and that China should be projecting extensive schemes of armament before the ink on the veto is dry, shows clearly the futility of the embargo idea.

The latest news about the return of the Imperial Court to Peking is that it will leave Hsian on the 6th of October. If that programme be carried out, their Majesties may travel very comfortably, for October is a delightful month in China. Their absence from Peking will thus have extended a little over a year. But it is to be noted that

the Chinese themselves are now beginning to talk of the return being postponed until next spring.

It is reported from Manchuria that Russia has of late been pushing on the work of railway construction with great vigour, and that the line between Teh-rin (near Newchwang) and Harbin will be finished in the course of September. Admiral Alexieff is to travel over the new route, for purposes of inspection, in a few days.

Thursday, Aug. 22.

It appears that the Chinese Plenipotentiaries have not found anything objectionable in the Peace Protocol, or, at any rate, that they appreciate the expediency of accepting all its conditions, and that the Viceroy Liu Kun-yi and Chang Chih-tung, to whom the Protocol was submitted, are agreed as to the necessity of signing it. But rumour adds, that the two Viceroy's insist on the advisability of not losing this opportunity to come to some definite understanding about the evacuation of Manchuria. They do not say, apparently, how that end is to be attained, nor, indeed, will their reticence surprise any one, for unless some of the Great Powers are resolved to take up the Manchurian question, and to obtain from Russia an agreement setting a clear time limit to her occupation, it is quite hopeless to expect that she will make a retrogressive step on her own initiative and volition. If China attempts single-handed to negotiate with Russia on this subject, the result will be to fix the Russian fetters on Manchuria not to loosen them. Meanwhile telegrams from London say that Russia is building a railway to the Korean frontier and that she is commencing the construction of forts at Newchwang. It is impossible to reconcile such doings with any genuine intention of evacuation.

A subject so prolific of possibilities for newsmongers as the return of the Imperial Court to Peking will surely be exploited for all it is worth pending the accomplishment of Their Majesties' journey. The latest story is that the Governor of Honan has received orders to repair the old palace at Kai-fong for the Imperial accommodation, which is interpreted to mean that Kai-fong is to be the new capital. But Kai-fong lies in the direct route from Hsian to Peking, and the most reasonable interpretation of the order seems to be that Their Majesties intend to utilize the old palace for the purpose of a rest *en route*.

The Taku Forts are not to be destroyed. The news does not surprise us. We have repeatedly expressed the opinion that no valid reason exists for their destruction. So long as the line of communications between Peking and the Sea is to be held by foreign troops, the Forts can serve only as useful aids. In Chinese hands they would be a menace, but with a foreign garrison they will be a pledge for the security of the line. It will not be too late to destroy them when the time comes—the Greek kalends—for withdrawing the Foreign garrison from Chili.

It has been decided to confer orders of the fifth or sixth class upon all the Japanese civilians who passed through the siege of Peking. They number about twenty.

Friday, Aug. 23.

There is news that Sir Ernest Satow has reminded the Chinese Plenipotentiaries of the necessity of inflicting the stipulated punishments in the case of local officials before the British troops are withdrawn

from Peking. We cannot identify the name given in the telegram, but it appears not improbable that there is question of the official who was Sub-Prefect of Tai-yuan at the time of the massacres last year and of the magistrate of Shou-yang-hsien. This Sub-Prefect was the man who ordered that four foreign missionaries, two ladies and two gentlemen, should be brought before him in chains, and then thrust into the common prison. Instead of being punished, he was promoted to a new post at Ping-ting-chow, whence he fled on the arrival of the German troops at the passes of the Great Wall. The magistrate of Shou-yang was also among those whose execution was demanded by the Powers, yet he was still in office at the time when the eight missionaries passed his post who recently went to Tai-yuan to attend a service in memory of the forty-six martyrs of that city. There may be differences of opinion as to the justice of demanding the execution of these officials, but the demand having been made and acceded to by China, it would certainly be unwise not to hold her to her promise. To leave the matter where it stands now would be to encourage similar breaches of engagements in other directions.

THE MORMON MISSION.

Tuesday, Aug. 20.

The *Niroku Shimbun* has an amusing cartoon about the coming of a Mormon Mission to Japan. It represents the "Apostle" and his followers grouped in one picture as saints with halos round their heads, and in an adjoining medallion three prominent Japanese gentlemen, celebrated for the ardour of their sentiments towards the fair sex, are shown eagerly advancing to welcome the advocates of polygamy. A vast number of fair but frail mortals of the gentle sex, reduced in the picture to lilliputian dimensions—a true representation, doubtless, of the importance they possess in some folks' imagination except as ministers to selfish pleasure—are seen following in the wake of the welcoming publicists. The *Niroku's* perception of the class of people likely to rejoice at the coming of the Mormons is probably shared by the majority of observers.

Wednesday, Aug. 21.

The *Fiji Shimpō* has a strong article warning its countrymen against regarding the Mormons as representatives of Western civilization. They have in fact been cast out by the civilized west. What the *Fiji* apprehends is that the advent of propagandists of such a sect to Japan may be regarded as a species of sanction by persons who naturally have a mind to the sexual excesses which used to be associated with the Mormon creed, and which are still openly approved by its apostles. Unfortunately Japanese ethics are very defective in the matter of extra-marital relations. The law permits only one wife and does not recognise concubinage, but many persons virtually practice polygamy though ostensibly they are monogamous. Things are gradually mending in that respect. Society is beginning to blame instead of to condone, and there can be no doubt that a real reform will be effected before long. Under such circumstances the preaching of a belief in the propriety of polygamy can not but retard Japanese progress, especially when the preaching is under the guise of Western civilization.

THE HAWAIIAN OUTRAGE.

Saturday, Aug. 17.

Tokyo journals write in scathing terms about the alleged outrage committed by Hawaiian sanitary officers at the examination of Japanese ladies, passengers by the *America Maru*. It appears, however, that one of the ladies, Mrs. Okabe, wife of the Japanese Assistant-Consul in Hawaii, though at first she shared the indignation of her fellow-passengers, subsequently changed her view, and maintained that the sanitary officials had not exceeded their duty. If that be a fact, it will greatly weaken the Japanese case. But the main question will remain, were the Japanese passengers subjected to an examination differing in process from that pursued with regard to the foreign passengers. It may be urged, not unreasonably, by the sanitary authorities that since Asiatics are more vulnerable to the plague virus than Europeans or Americans, a different form of examination is justifiable and even necessary. But such an examination as that said to have been conducted could not have been necessary under any circumstances. No physician would have ventured to adopt such procedure in the case of an American or European lady. What makes the matter worse is that the Hawaiian officials appear to have admitted that they confounded steerage with first-class passengers, and that had they recognised that ladies were in question, they would have treated them differently. That is an interesting admission in truth. Do the Hawaiian officers imagine that because a Japanese woman travels in the steerage, she has parted with her modesty and become a fitting subject for gross outrage? What is improper in the case of a first-class passenger is equally improper in the case of a steerage passenger. If any such explanation has been offered, the officials stand self-condemned. But it may turn out that the incident has been greatly exaggerated. No official report has yet been received, and its absence goes to indicate that cardinal importance was not attached to the affair by the Japanese Consul in Honolulu.

Tuesday, Aug. 20.

It need scarcely be said that the Japanese press is much disturbed about the Hawaiian affair. Even the moderate *Kokumin Shimbun* urges that the matter must not be treated lightly. It justly points out that the real question is the distinction made by the sanitary officials in their treatment of the white passengers and the Japanese. The explanation offered of the indignity to which the three Japanese ladies were subjected is that, whereas the principal medical officer's instructions had been intended to apply to the third-class passengers only, they were erroneously applied to the saloon passengers also. It is therefore unequivocally admitted by the medical authorities themselves that they set up a distinction between the Japanese and the white people. Nothing of that kind can be endured. The *Kokumin* has entire confidence that the United States Government, if duly approached, will do whatever is right in the matter, but it strongly urges the necessity of vehement remonstrance from this side.

The *Nippon* writes characteristically. It seizes the opportunity to castigate its aversion, the *High-collar-to*, who would have Japan pursue the policy of protection by mimicry. Let the Japanese be always Japanese. Let them not abandon their own manners and customs merely for the sake of

currying favour with foreigners. In the eyes of right and justice there is no distinction of race, or of creed, or of colour. Moreover, the true *samurai* does not pause to consider his own comparative strength when wrong is done to him. He draws his sword and fights against any odds. Even weak women in olden times carried a weapon wherewith to assert their rights. No Japanese need trouble himself because of his nationality. Let him boldly insist on receiving his due and he will get it.

The *Chuo* points out how jealously Western Powers guard their flag and their nationals against every kind of indignity or injustice. It cites the action of England in the affairs of the *lorcha Arrote* and of Don Pacifico, and while not insisting that Lord Palmerston's procedure should be taken by Japan as a model of foreign political methods, it does hold that Japan lacks self-assertiveness and that she might win a larger measure of respect if she insisted on receiving it.

The *Osaka Asahi* is vehemently angry with Mr. Okabe, the Japanese assistant Vice-Consul, whose wife was among the insulted ladies. Mr. Okabe's position and his duty required that he should take up the question with the utmost vigour, yet, on the contrary, he sought to make excuses for the sanitary authorities and to hush up the trouble. It is not the first time that insulting distinctions have been made between foreigners and Japanese. If an unique opportunity to protest against such indignities be neglected, the Japanese will have to thank themselves for the position to which they are relegated.

The *Fiji Shimpō* of Sunday had a cartoon with reference to the Hawaiian affair. A Japanese, apparently a doctor, holds the hand of a figure labelled "Hawaii" and bearing a sign which shows him to be a minor official, and diagnoses the case with the remark "H'm, these grave symptoms indicate anti foreign (that is anti-Japanese) pest." From the head of the Hawaiian official there floats a scene in which Uncle Sam is depicted kicking a Japanese sky-high.

Thursday, Aug. 22.

The Japanese settlers in Hawaii, to the number of about 2,000, have held an indignation meeting and passed nine resolutions condemning in the strongest terms the action of the port medical examiners, calling for the replacement of Dr. Coffey by an expert versed in the modern principles of hygiene, and declaring that not Japanese ladies only, but the Government of Japan also, were insulted by such discrimination. Copies of the resolutions were sent to the President of the United States, to the Senate, and to the House of Representatives.

It is not merely because of the inexcusable character of this incident that impartial onlookers desire to see it handled vigorously but chiefly because the procedure of the Hawaiian authorities and of the people of the Pacific slope towards the Japanese is gradually assuming a character incompatible with the preservation of the sincerely friendly relations that have hitherto existed between America and Japan, and because, therefore, no time should be lost in imposing on that procedure some restraint representative of the true sentiments of the American nation. No one can suppose for a moment that incidents such as the burning out of a number of Japanese settlers in the unceremonious manner adopted last year in Hawaii, or the refusal to allow Japanese bank-clerks to land at Honolulu or San Francisco under the pretext that they were contract labourers, or the sudden embargo put upon the movements

of all the Japanese in San Francisco, were acts having the endorsement of Washington, New York, or other representative States of America. The longer these abuses are left unchecked, the more difficult will it be to check them, and the larger will be the aftermath of resentment.

Friday, Aug. 23.

At the meeting of two thousand Japanese residents held in Hawaii to remonstrate against the action of the medical examiners, three Japanese ladies addressed the meeting, one of them, Mrs. Imanishi, speaking in English. They were not, it need scarcely be premised, the ladies who suffered ill-treatment at the hands of the examiners. What they said may easily be imagined, but the interesting fact is to find Japanese ladies taking their place upon the platform at a large public meeting and receiving an attentive hearing. The women of Japan are getting on.

KOREAN NEWS.

Saturday, Aug. 17.

The Japanese Standing Squadron entered Chemulpho on the 31st of July. It consisted of the *Shikishima* (flagship), the *Asahi*, the *Izumo*, the *Tokawa*, the *Asama*, the *Kasagi*, and two torpedo-destroyers, the *Yugiri* and the *Sazanami*. Two of the squadron are line-of-battle ships, three are first-class cruisers of over nine thousand tons, and one (the *Kasagi*) is a second-class cruiser of 4,900 tons. All these vessels are quite new, so that the Squadron—its total displacement 65,000 tons—represented the finest fighting force ever seen in Eastern waters. Admiral Baron Togo was in command and Prince Kacho was among the officers of the *Izumo*. The Admiral, the Prince and a large party of officers proceeded to Seoul on the 2nd, after having received a brilliant welcome from the Japanese residents of Chemulpho. They had audience at the Palace on the 3rd, when the Emperor, with his own hand, conferred the Order of the Peach on Prince Kacho. Mr. and Mrs. Hayashi gave an entertainment in honour of the distinguished visitors, and what with calls, receptions and audiences the Korean capital presented a lively spectacle during the two days of the Admiral's stay there. On the 4th instant, the Admiral and officers of the squadron entertained about a hundred of the principal officials and personages of Seoul on board the *Shikishima*. The visit of such a squadron to Korean waters must have been an object-lesson of some significance. The Admiral wisely threw the ships open to the public during the days of their stay in Chemulpho, and many thousands availed themselves of the privilege. On the morning of the 5th instant the squadron steamed off for Chefoo, where its appearance can not fail to create great interest.

Monday, Aug. 19.

Prince Konoye and his party arrived at Chemulpho on the afternoon of the 15th instant and proceeded on the following day to Seoul.

The Japanese Representative was to have a third interview with the Korean Minister of Foreign Affairs on the 17th instant, for the purpose of discussing whether all cereals can be properly included in the prohibitory clause of the treaty.

The *Cologne Gazette* affirms that the attempt made by Korea some time ago to

have the Japanese post office removed from Sôul, was inspired by Russia, who aims at annihilating Japan's influence in the peninsular empire. Meanwhile it is said that France is taking steps to have a post-office of her own in Korea.

Tuesday, Aug. 20.

After considerable negotiation Mr. Hayaishi has succeeded in inducing the Korean Government to take the view that rice alone is contemplated by the treaty provision relating to an embargo upon exports in the event of crop failure. That is an important rendering, for the large trade that Japan does in Korean beans would otherwise have been stopped.

Prince Konoye was to be received in audience by the Sovereign of Korea on the 14th instant at 5 p.m.

Thursday, Aug. 22.

The official ceremony connected with the opening of constructive work on the Sôul-Fusan Railway took place on the 20th instant. Brief accounts of the affair are telegraphed from Sôul. The place of the ceremony was Yong-tu-po, which, we presume, is the first station on the line outside Sôul. Representatives of the Emperor were present and Prince Konoye also attended.

It is stated that the Foreign Representatives in Sôul have advised the Korean Government that the dismissal of Mr. McLeavy Brown and his replacement by another foreigner would not be to Korea's advantage. There have been many rumours as to Mr. Brown's removal having been instigated by Russia in order to make room for Mr. Alexieff, but the more credible explanation is that his manner of managing the affairs of the Customs is not congenial to Korean officials who object that such an important source of revenue should be completely removed beyond the range of speculation or extravagant expenditure.

Prince Konoye was received in audience by the Emperor of Korea on the 19th instant. The Emperor seems to have welcomed the Prince very cordially but the details of their conversation are not published.

THE "TSUKISHIMA MARU" FUND.

Some dissatisfaction has been caused by the proposed method of distributing the *Tsukishima Maru* fund, which amounts to 75,000 yen. The plan of division contemplated is to allot 100 shares to the captain, 70 to each of the teachers and educational officers, 50 to the engineers and doctors, 30 each to the students and 20 to the sailors. According to that arrangement the captain's relatives would receive 2,500 yen, and the family of each student would get 700 yen. It is against this latter figure that the parents and relatives of the students protest. They point out that, up to the present, the fate of the ship being uncertain, the salaries of her officers have been duly paid to their families, and that, further, special provisions apply to the case of ship's officers who lose their lives in the discharge of their duties. On the other hand, the families of the students have not received anything. Besides, the avowed object of collecting a fund was to prevent parents from being discouraged by the fate of the students on board the *Tsukishima*, and it would seem that the proposed method of division would be inconsistent with that object.

THE WHANG-POO RIVER.

The Berlin correspondent of *The Times* write as follows under date of July 10:—

It was announced some time ago that a special committee of the Diplomatic Corps in Peking, consisting of representatives of Great Britain, America, Germany, and France, was engaged in considering the question of the navigation of the Whang-poo River, which connects Shanghai with the sea. The *Ostasiatischer Lloyd* stated that the committee had adopted as the basis of its negotiations a report by the Bremen engineer Oberbaurath Franzius, according to which the channel of the Whang-poo below Shanghai could be deepened at a cost of about 4,000,000 taels so as to admit of the passage of vessels with a draught of 27-8ft., a limit which would include the largest new cargo and mail steamers. The German Government has given its representative instructions to discuss the subject conjointly with the British and French Ministers in connexion with the negotiations for peace. It is proposed that the improvement of the Whang-poo channel and the maintenance of that waterway in a proper condition should be entrusted to the interested Powers or to a commission to be appointed by them. The Peninsular and Oriental Company, the North-German Lloyd, and the Messageries Maritimes have suggested that the cost of the enterprise should be defrayed from the Chinese Customs revenue. It would appear that, although the Chinese Government is under an obligation to maintain in a proper condition the waterways leading to the treaty ports, it has, to a great extent, neglected this duty, and has even applied the proceeds of the tonnage and other shipping dues which it levies to purposes entirely unconnected with navigation.

The *Cologne Gazette* takes occasion to deprecate a proposal put forward in 1899 by the Shanghai Chamber of Commerce according to which a permanent local board should be established for the supervision of the Whang-poo waterway. The board, as suggested by the chamber of commerce, would, as regards its composition, be mainly English, and to this the Rhenish organ objects and gives the preference to what it alleges is the proposal of the Minister in Peking, according to which the Powers interested in the Shanghai shipping trade would each obtain an equal share of influence on the board. The Rhenish organ also thinks that the board should consist of expert engineers instead of mere honorary members, and that the cost of the operations should, as proposed by the North-German Lloyd, be defrayed by the Maritime Customs Office out of the proceeds of certain new tonnage dues, and not, as recommended by the Shanghai Chamber of Commerce, by a tax on all the settlements adjacent to the Whang-poo and by an extra transit duty on all goods passing through Shanghai. The value of the preliminary exertions of the chamber of commerce in this matter is acknowledged, but it is pointed out that for 25 years no practical steps have been taken, and that it would be eminently desirable to endeavour to carry out without delay the German plan, which is said to be supported by the Peninsular and Oriental Company and by the Messageries Maritimes, as well as by the North-German Lloyd.

It can not be denied that Germany is bidding strongly for a prominent place in everything connected with the Far East. While we admire her enterprise, we can not but wonder what position she would adopt were her present mood of assertiveness backed by a solid preponderance of interests such as England possesses. If nothing less than equality all round and the lead in many directions will satisfy the Germans now when their trade with China is a mere bagatelle compared with Great Britain's trade, what would satisfy them if the trade conditions were reversed?

THE BETHELL CASE.

It is often difficult to form a clear idea of the incidents connected with the too-common troubles between foreigners and labouring Japanese in Kobe. The Bethell case is in point. What the Kobe newspapers tell us is that a dispute about a fare having occurred between a *jinrikisha*-man and a foreigner, the latter proceeded to take away the former's license, for the purpose of reporting him to the police, whereupon the *jinrikisha*-man resorted to violence and was assisted by a crowd of comrades. How did the foreigner

get hold of that license, we wonder. There may be some special practice in Kobe, but in Tokyo and in all other places with which we are acquainted, a *jinrikisha*'s license takes the form of a piece of metal or wood firmly attached to the body of the *kuruma*. It can not have been possible for Mr. Bethell to carry off such a license unless he shouldered the *jinrikisha* at the same time. And what business or right had he, at any rate, to carry away the man's license? If he wanted to make a complaint, he need only have taken the number of the *jinrikisha*; that is one of the purposes for which numbers are intended. The violent conduct of the mass of coolies was highly reprehensible, but if the owner of the license alone had adopted muscular means of recovering his property, Mr. Bethell would not have had any ground of complaint. Imagine what would happen if a person unable to agree with a London cabby about a fare, proceeded to seize the latter's badge! He would be promptly knocked down. We believe that in 90 cases out of every hundred the origin of these troubles is unwarrantable masterfulness on the part of the foreigner.

THE FORMER KING OF RIUKIU.

Marquis Sho Tai, formerly King of Riukiu, expired at his residence in Iidamachi, Tokyo, on the 19th instant at 7 a.m. in his 57th year. The Marquis was dethroned at the time of the mediatization of Riukiu, and for some time he regarded himself as an aggrieved potentate. But his lot as a Marquis living in Tokyo with a comfortable income must have proved far more agreeable than the hollow state he once enjoyed in his so-called "palace" at Nafa. His fate was characteristic of the times. He received his investiture as sovereign at China's hands, and he counted himself a vassal of the Middle Kingdom, but so little could the big empire do to protect his claim that he died a pensioner of the Japanese Government and a member of the Japanese peerage. His sometime subjects have never shown the slightest disposition to regret the disappearance of the curious dual allegiance professed by them in times past. They are far happier and more prosperous now than they ever were before.

MILITARY AND NAVAL CHANGES.

It is alleged that the Minister of State for War, Baron Kodama, acting with the approval of the Minister President, Viscount Katsura, and the Minister of the Navy, Admiral Yamamoto, is about to submit for the Sovereign's approval a scheme of army and navy reorganization. The chief points of the programme are that the Ministers of the Army and of the Navy, instead of being officers borne on the active list as is the rule at present, may be civilians, the object being that they shall take their full share of Cabinet responsibility in common with their colleagues in the Ministry. On the other hand the project provides that the principal military and naval bureaux which have to deal with strategical questions shall be independent of their Departmental Ministers so far as those questions are concerned, and shall receive their orders direct from the chief of the Head Quarter Staff, namely, the Emperor. These changes are said to have the full approval of officers of the Army and Navy.

GERMAN NOTES.

There is no longer any doubt that Germany has acquired from Spain the right of pre-emption of Fernando Po. It is not a very valuable property, but there are about 140 plantations of cocoa and coffee which are in the hands of half-breeds, Spaniards, Englishmen and a few Germans. The goods imported into the island at present are nearly all Spanish or English, but the expectation is that German goods, if once introduced, will find a market. A committee is being formed in Berlin for the purpose of directing the attention of German merchants and manufacturers to the island.

The report that there will be a speedy publication of the late Prince Hohenlohe's memoirs is contradicted. It appears that the Prince had been for many years in the habit of writing notes of his daily experiences, but he had not yet put them into order when death overtook him, and they can not possibly be published in their present form.

A Moorish mission has visited Berlin for the purpose of conveying an expression of the friendship and sincere affection entertained by the Sultan of Morocco for the German Emperor. The Kaiser received the mission on the 7th of July and spoke very graciously of the purpose of its coming.

The Berlin correspondent of *The Times* makes these interesting remarks about Prince Hohenlohe:—

When Prince Hohenlohe was appointed Chancellor he had reached a time of life when features of character which may once have been strongly marked begin to become indistinct. For the Berliners the age of the Chancellor was the commonest subject of remark, and, adopting the designation bestowed upon him by the Emperor, they usually spoke of the Prince as "Onkel Chlodwig." It was felt in political circles that the Chancellor would have liked to soften the asperities of party conflict by the courtesies of social life. His numerous Parliamentary dinners and *soirées* brought men of all parties together, but in Prussia it is as impossible to blend Conservatives, Liberals, and Clericals as to mix oil and water. Latterly there was something like a feeling of pity for the little old man with the crooked body who sat or stood so patiently in the Reichstag or in the Congress Hall of the Chancellor's Palace listening to the interminable flow of Parliamentary or political talk. But the Prince himself did not consider himself a subject for commiseration. Old age, experience, and his favourite study of philosophy had given him a certain callousness which enabled him to weather with equanimity storms that would have shaken men of far stronger intellect or physique. He was a devoted adherent of Schelling and an insatiable reader of French novels. In times of crisis, when, metaphorically or, perhaps, even literally, his household goods were being packed with a view to his retirement, he was personally quite calm and would discuss historical, literary, or philosophical questions as if Dr. von Miquel and the Reichstag did not exist. This apathy on his part created a corresponding apathy on the part of German public opinion, and though most men regarded him with feelings of good-will, it cannot be said that he was ever popular. Not that he affected the demeanour of a *grand seigneur* who holds aloof from the crowd. On the contrary, with all his political caution, he rather went out of his way to meet people on their own ground, and he might almost have been described in this sense as *le gentilhomme bourgeois*. But, apart from his proved devotion to the German Empire, his opinions were too colourless, his sympathies too restrained, to win adherents of any kind.

Throughout life Prince Hohenlohe appears to have followed the advice he once gave to a young official who desired to succeed:—"Wear black clothes and hold your tongue." No one seemed to know anything regarding his personal leanings in foreign policy. There is not a single recorded expression of his private political opinions about England, Russia, or France. For Queen Victoria he had a great personal esteem, and was deeply gratified by a letter which her Majesty wrote him a few years ago recalling his friendship with the Prince Consort in their student days at Bonn. He expressed on one occasion not long ago a desire to visit England in order to pay his personal respects to her Majesty. Till nearly the

end of his Chancellorship all documents relating to foreign affairs passed through his hands, but no one outside the Government offices knows to what extent he was latterly able to follow the threads of foreign policy. It is believed that he began to complain of the ignorance in which he found himself left regarding the development of the situation in China. He expressed a desire, however, to remain in office long enough to defend the expenditure on China which had been incurred without consulting the Reichstag. But the advice of his friends, which coincided with that which for years had been given him by the members of his own family, induced him to tender his resignation to the Emperor at Wiesbaden last October, when it was instantly accepted.

Some hostile feeling seems to have been aroused in Berlin by the Emperor's refusal to confirm the election of Herr Kaufmann as second Burgomaster of the city. Twenty years ago, Herr Kaufmann was dismissed from the Prussian Landwehr, of which he was then an officer, for having, as president of a Radical Society, supported Radical candidates for the Diet and the Reichstag and played a leading part in the opposition to the anti-Semitic agitation in Berlin. His record does not suggest any other reason for the refusal to confirm his election as second Burgomaster, and German papers are asking whether an officer of the reserve is to be permanently incapacitated for filling any civic post because, at some time of his career, he opposed the Government of the day. It is suggested, however, that the Emperor's attitude towards Herr Kaufmann is dictated, not by the incident of 20 years ago, but by the fact that Herr Kaufmann is a prominent member of the Radical party and was elected to the post of Burgomaster by the slender majority of 8 votes only.

Disasters in the commercial world invariably evoke exaggerated criticism. The failure of the Leipziger Bank and the bankruptcy of the Cassel Treber-Tracknung Company are no exceptions to the rule. Several journals write as though a serious crisis had overtaken Germany, and as though her industrial and trade affairs are in a parlous condition. The Vienna view of the occurrences is thus summarized by *The Times* correspondent:—

I happen to know that in Austrian financial circles serious doubts have been entertained for a long time past as to the soundness of the foundation upon which the remarkable industrial and commercial progress of Germany has been based. It was questioned whether the system was quite capable of bearing the strain of bad times. While fully recognizing the excellent immediate results of the extensive co-operation of the German banks in the development of industry and trade, there was a strong suspicion that these institutions had overstepped the limit of safety and were largely at the mercy of circumstances. Recent events are not calculated to dissipate this apprehension, which unquestionably still exists to a greater extent than finds public expression. Heroic efforts are being made in Germanophile quarters in this country to minimize the evil and to lay the whole responsibility on the shoulders of a handful of unscrupulous Stock Exchange gamblers and of their misguided and criminally negligent victims. Indeed, it is endeavoured to represent it as the purely temporary consequence of too rapid growth, which, although of course regrettable, ought to be regarded as a practically normal accompaniment of exceptional commercial development.

This kind of alarmist writing ought not to appeal to England, where disasters on a far larger scale than that of the Leipziger bank have happened again and again. Prudence in business is an essential trait of German character, and if there has been over-speculation in one instance, the result will be, not disaster, but the learning of a wholesome object lesson.

An example of the remarkable thoroughness shown by Germany in all her enterprises is furnished by her manner of collecting materials for a history of the campaign in China. A circular has been issued appealing

to district commanders to induce possessors of private letters, diaries and notes to send them to the General Staff. These documents will be kept in the archives for 30 years, all access to them being forbidden except to officers of the General Staff who have special permits.

In Prussia and Hesse-Darmstadt a system has been inaugurated of issuing return tickets available for 45 days at one and a half times the price of single tickets. Efforts are being made to induce the other German states to adopt the same plan.

The following very interesting facts about foreign students at German universities are published:—

The number of foreign students who come to Germany in order to obtain a University training or to supplement the training acquired in their own countries has given rise to many complaints. At present there are no fewer than 2,606 foreigners on the books of German Universities. Of these 855 are studying at Berlin, 370 at Leipzig, 232 at Munich, 159 at Heidelberg, 141 at Halle, 140 at Freiburg, and 102 at Göttingen. The rest are divided among the other Universities. The Russians are the nation most strongly represented, and can show at present no fewer than 717 students at German Universities. This fact is explained by the present unfortunate state of affairs in the Russian Universities and by the difficulties which are placed in the way of the higher education of Jews in that country. In addition to the Russians, there are 507 Austrians, 256 Swiss, 157 Englishmen, 323 Americans (mostly from the United States), 154 Asiatics (mostly from Japan), 68 Bulgarians, 50 Dutchmen, 47 Frenchmen, 35 Turks, and contingents from many other nations. In all 7.3 per cent. of the students at the German Universities are foreigners. These figures do not include the numerous foreigners studying at the Technical High Schools.

The large percentage of foreign students is regarded as a very serious grievance in many academic quarters. It is felt to be unjust that so many strangers should reap the benefit of the sacrifices made by the German States for the higher education of their youth. Many professors complain that the majority of the foreign students have not received a preliminary training so thorough as that enjoyed by their German contemporaries, that in this way they bring down the level of University teaching and retard the progress of the classes in which they take part. German students protest that a disproportionate share of the limited accommodation in the laboratories of the Universities and the Technical High Schools is given to foreigners, to the disadvantage of the native students for whom it was primarily intended. The foreign students, moreover, being in many cases more or less ignorant of the German language, absorb a large part of the time and the attention of the professors and their assistants. The native students of the Technical High School of Munich have signed a petition requesting that the question of the admission of foreign students should be reconsidered, and that steps should be taken to put an end to the abuses of the present system.

An impression is evidently growing in Europe that Germany and France are beginning to show a disposition to bury the hatchet, and that a few months hence something like an *entente* will be established between them. The Emperor of Germany has certainly laboured hard to bring about that result. Its effect upon the politics of Europe would be very marked.

German newspapers, among their criticisms of English methods in South Africa, continue to harp upon the ignorance that British officers show of the rules of warfare in exposing themselves needlessly to the enemy's fire instead of seeking shelter as the men are instructed to do and as the principles of modern tactics require that they should do. It is possible that the criticism may have some justice. England has been fighting for the past two years under the eyes of a critical and not over-friendly world, and her success has not been of such a nature as to justify her in resenting fault-finding. It is interesting, however, to note how materially circumstances affect cases. Field Marshal

Von Moltke, writing about the battle of Gravelotte, said:—"Though the war establishment provides one officer to every forty men, in this battle one officer had been killed to every twenty-three; a splendid testimony to the example set by the officers to their brave men." It would seem that when English officers die in large numbers, their fate is ascribed by German critics to ignorance of the rules of war, but when German officers fall numerously, they offer a splendid example to brave men.

THE ELLIOT ISLANDS.

The question of the Elliot Islands seems likely to come again upon the *tapis*. Last year Russia objected to the despatch of an English gunboat thither for the purpose of pursuing pirates, her contention being that the islands were within the area leased by her from China. The British Government was understood to deny the justice of that claim, and the gunboat continued its operations. Intelligence has now been received that two Russian men-of-war have been despatched to the Islands, a significant step, inasmuch as it appears to be dictated by purely political considerations. To the unsophisticated observer it would seem that China is the proper authority to decide whether or no the Islands are within the area leased to Russia. But the incident is another illustration of China's utter helplessness. She sits idly by while other Powers decide what parts of her empire belong to them and what to her.

THE TIENTSIN TRAMWAY.

The Tokyo Tram Company is about to convert its system so as to substitute electricity for horse traction. When that change is made, the greater part of its old rolling stock, will become useless, and the directors have conceived the bright idea of employing it on a line in Tientsin. The necessary preliminaries have been arranged and the position of the route is approximately fixed. But there is one difficulty, namely, that an electric tram-line is projected by a number of foreign residents to run through the foreign settlement. The promoters of this enterprise, headed by Mr. Dettring, are understood to have approached the Japanese with a view to amalgamation, and the Japanese are not unwilling to entertain the proposal if some understanding can be elaborated with regard to the difference in motive power. It is not easy to see what form such an understanding could take.

FRENCH NOTES.

An attempt has been made to introduce bull-fighting into central France, but the Prefect of Seine-et-Oise where the affair was to have taken place, interdicted it. Certainly the modern tendency to extend the area of this brutal sport is very singular. It was introduced recently into the United States with reservations of an unimportant character.

The steps recently taken by France in West Africa have had the result of securing the connexion of the French possessions in Central Africa by way of Lake Chad. France and England alike appear to be extending the sphere of their authority in West and Central Africa.

The new Governor-General of Algeria, M. Révoil, has taken a step which places a large number of the officials of that colony

beyond the reach of the anti-Semitic municipal authority. He has decreed that he himself will hereafter dismiss and appoint the clerks of the courts, the justices of the peace, the notaries, the interpreters and other officials. He has also taken the troops under his own orders, so that his post becomes essentially autocratic.

Under the new Associations Law any religious order seeking to obtain official sanction must engage to submit to the Bishop of the diocese, and must have obtained his approval of the statutes of the order.

An interesting example of liberality and cosmopolitanism has been furnished by the British Chamber of Commerce in Paris, which, having made arrangements for granting certificates to young men for commercial proficiency in French and English, has just given six such certificates to Frenchmen. Each certificate carries a sum of £10 to enable the recipient to visit England.

A French West-African bank has been created which will carry on business in Senegal, French Guinea, the Ivory Coast, Dahomey and Congo. It will have a capital of 1,500,000 francs in 500-francs shares, 1,800 of which are to be taken by the Bank of Senegal which amalgamates with the new concern.

The French Senate has postponed the further discussion of the Labour Pensions Bill in consequence of the impossibility of concluding it before the prorogation of Parliament, and has called upon the Government to seek the opinions of trade unions, both employers and employed, during the recess.

The way was paved for the reduction of the period of service with the colours from 3 years to 2 in France, by the enactment of a law authorizing the payment of a bounty to soldiers and corporals that re-enlist. If this new arrangement proves successful, it will not be surprising to see the period reduced by and by to one year, which would be a most welcome change.

If the votes of the Powers were sought as to which of them succeeded best in the civil government of the region assigned to it in China during the recent campaign, it appears that each would vote for itself in the first instance, but as to the subject of the second vote, all is uncertainty. In his dispatches published in the latest Yellow Book, M. Pichon speaks most unequivocally of the acts of his compatriots. "In the unanimous opinion of both natives and foreigners," he says "our quarter is the calmest and the best governed, and the Chinese long for the maintenance of the *status quo*, having asked not only in Peking, but throughout Chi-li, to be placed under the authority of France. The excellent bearing of the Bailloud Brigade at Pao-ting-fu and in the neighbourhood has won us the sympathy of the inhabitants. Not a day goes by without our receiving deputations of Chinese notables soliciting our protection against the depredations of native malefactors. General Voyron has always considered the demands of the inhabitants. It is impossible not in every way to pay homage to him for his manner of governing the population." Nothing is lost now-a-days by trumpeting oneself, and even the fine sense of art possessed by the French does not appear to rebel against the process. The eulogies bestowed by M. Pichon would not otherwise have been so audible.

In opposing the introduction of an income-

tax in France, M. Callaux, Minister of Finance, after pointing out the special objection that were the tax at once adopted it would have to be based on presumptive assessments, urged that whereas tax-payers have now the least possible contact with the Treasury, an income-tax would involve a constant exchange of information and relations with officials. It is nevertheless apparent that the Chamber was not seriously influenced by that theoretical objection, for it decided that the question of the tax should be discussed in the autumn session.

This Yellow Book shows that M. Delcassé's main, we may almost say his sole, object from first to last was to secure and maintain the coöperation of the Powers. His satisfaction at bringing the nations into line with regard to France's six—afterward eleven—proposals takes the form of a congratulation that the world and the Chinese were thus convinced of the existence of a real agreement among the Powers, and he describes the common guarantee as "a serious ground for believing in the maintenance of a good understanding between the Powers having interests in China and working there to develop them." It can not be denied, we think, that no one emerges from the affair with a reputation more enhanced than M. Delcassé.

The Fashoda incident has been re-opened in Paris by the publication, in the *Figaro*, of certain reminiscences of a biographer of M. Felix Faure. The purpose of these reminiscences is to prove that M. Delcassé was responsible for the inception of the Marchand mission, and that it had no political aim whatever, being purely a scientific tour. But it has been clearly shown that the original responsibility rested with M. Hanotaux and that the mission was part of a great scheme for securing a footing in the Upper Nile region with the object of re-opening the Egyptian question. Amid much controversy and many so-called "revelations" evoked by the Faure reminiscences, the *Débats* makes the following dignified and impartial comment:—

"The truth about Fashoda is, unfortunately, too simple, and requires no revelation as to the conduct of this or that person at a given moment. The country, or, rather, the successive Governments during a fairly long period, undertook an enterprise without taking account of its importance, and consequently of the means required to carry it through. Not for a moment did they, apparently, suspect the inflexibility of the country against which they pitted us. They fancied that they were procuring us the means for beginning a diplomatic conversation in an affair in which only force was in order. They were completely blind to the gravity of the enterprise. Consequently when things were revealed in their true light such was our want of preparation that 60,000,000f. or 70,000,000f. had to be hastily spent in rapid measures of defence, the efficacy of which was, happily, not tested. This decision, taken in one night, to spend 70,000,000f. without the approval of Parliament is by some persons represented as an heroic act; but how could one more ingenuously admit the surprise and disorder inevitably caused by a policy which, however, had been carried on for a long time? . . . A grave fault, but one shared by a large number of men, was committed. These are the facts, and it is worth while looking them in the face, for in the future the same disorder and inconsequence will inevitably result in the worst disasters."

It is noticed that even if the present French Cabinet falls in November when Parliament re-assembles—of which catastrophe there are at present no signs, it will have lasted 2 years and 5 months longer than any Cabinet since 1870.

The French revenue for the first half of the current year was 47 million francs below the estimate, and 60 millions lower than the total for the same period last year.

NOTES ON CURRENT EVENTS.

It is alleged that the Tokyo Street Railway Company has concluded an agreement with the Russo-Chinese Bank for a loan of three million *yen* to be applied to the construction of the line. Mr. Amenomiya appears to have represented the Railway Company in the final stages of the transaction, but Tokyo newspapers allege that Mr. Hoshi Toru had the matter in hand originally, and that he was to have proceeded to Yokohama to sign the contract after the meeting of the City Council at which he lost his life. The Mitsui and the Tokai Banks endorse the note of the Railway Company, receive the money from the Russo-Chinese Bank and superintend its employment. We presume that work will now be commenced on the electric railway. It is a significant comment on the state of the Japanese money market that an enterprise absolutely certain to yield a handsome profit has been deferred for more than two years because a sum of three hundred thousand pounds was not forthcoming.

It appears that the prostrating heat from which we are suffering is to be connected with an unusual display of spots on the sun, which show that an extraordinary degree of caloric has been developed in the interior of the great planet. Something of the kind happens every eleventh year, but there is a special development of solar activity every 35th year, and meteorologists think that we are now in one of the latter periods. They offer the consolation that 3 or 4 very hot summers will probably succeed each other.

In recognition of Mr. M. Kirkwood's long and eminent services as legal adviser to the Department of Justice, it has been decided by the Japanese Government to confer on him the second class order of the Rising Sun. The term of Mr. Kirkwood's engagement in Japan terminates this autumn, and it is understood to be his intention to travel for a time in South America.

There were shown at the Paris Exhibition some specimens of translucent cloisonné enamel by Tesma (?)—we are quoting from Japanese journals and can not be sure of the name or nationality of this expert—which received the highest prize and were universally admired. A specimen of this beautiful enamel was procured for 2,500 francs by Mr. Satoh, Director of the Commercial Museum in the Department of Agriculture and Commerce, and having been shown to Mr. Kawade, a manufacturer of Nagoya, has now been successfully imitated by the latter. Kawade's work is said to be even better than Tesma's. At all events, it is not inferior. We can scarcely imagine that any technical feat in the matter of cloisonné enamel would be beyond the capacity of Japanese experts.

No serious uneasiness seems to be caused in Japan by the news that Russia contemplates a great increase of her Far-Eastern Squadron. The *Fiji Shimpō* discusses the matter in a recent issue, and insists that even though Russia did consummate the purpose attributed to her, the ships would be of comparatively little use in time of war. She has not yet achieved her cardinal purpose of obtaining satisfactory access to southern waters. Vladivostok is frozen for many months during the year, and no human efforts can overcome the natural disadvantages of Port Arthur. Thus Russia may be said to be without dock-yards, and further, she has no coaling stations nor any access to

supplies of coal. To remedy the defects of the position it would be necessary to obtain a port somewhere in the neighbourhood of Fusan; but that is an undertaking not to be lightly consummated.

The *Hochi Shimbun* compares the methods of the International Oil Company with those of the Japanese Companies in Echigo, and arrives at the conclusion that the two can not be mentioned in the same breath, so thorough are the operations and so complete the equipment of the International in comparison with even the largest of the Japanese concerns. Nevertheless, there is not the slightest evidence that the International seeks to assert itself at the expense of its Japanese rivals. Nothing could be more conciliatory and considerate than the methods of Mr. Copmann. His tact and fine sense of justice remove all ground for complaint. The *Hochi* nevertheless renews its assaults upon Mr. Tomita, whose association with the International is greatly injuring the latter's reputation, it affirms.

The *fiji* publishes a telegram to the effect that though there was some talk of Sir Claude MacDonald being transferred to another post, the idea seems to have been abandoned, and it is now confidently stated that he will set out for Japan at the end of November.

We read in Tokyo journals that Japan has imported several of the new carriages with attached engines which Germany and Austria have been experimenting with for some time, together with about 8 miles of rails. This equipment is destined entirely for military purposes.

There is some new trouble in the *Doshisha*. Mr. Hirotsu, who succeeded Mr. Yokoi as Principal of the College, has resigned. So far as we can discover from the somewhat confused accounts appearing in Japanese journals, the faculty of the College are dissatisfied with Mr. Hirotsu and do not consider him qualified for the position of Principal. It is greatly to be regretted that an institution which, under foreign management, achieved such a fine reputation, should have fallen so palpably from its high estate.

War appears to have broken out between Venezuela and Colombia. The news arrived on Saturday and is confirmed by a telegram to the *fiji Shimpō* on Sunday evening to the effect that the United States has demanded Venezuela's reasons for commencing the campaign.

Major-General Fukushima has started for Shanghai, accompanied by Colonel Koyama. A Japanese journal alleges that this step is preliminary to the despatch of a battalion of Japanese troops to Shanghai, the Tokyo Government having decided to take that step in consideration of the fact that Germany and England have a garrison there. But Major-General Fukushima himself explains that he is going to Shanghai merely for amusement and to spend the remainder of the hot weather. "It may be thought strange," he is reported to have added, "that I should choose Shanghai in midsummer as a place of rest, but to me the heat of Shanghai is a mere bagatelle."

Mr. Tanaka, Chief of the Mining Bureau in the Department of Agriculture and Commerce, is represented by the *Chuo Shimbun* as denying that the proposed amendment of the Mining Regulations has anything to do with granting additional facilities to fo-

reigners. It is true that an individual foreigner can not engage in mining enterprise in Japan under the existing law, but a foreign company registered as a juridical person in Japan, does not labour under any such restriction. Mr. Tanaka seems to think that no occasion exists to extend the privilege. We can not agree with him. Every restriction counts in the foreigner's estimate. A company may at any moment find itself reduced to a single member, and then it must either take steps to reorganise under circumstances which may be highly inconvenient, or it must wind up its business, possibly at a heavy loss. Mr. Tanaka must surely appreciate that phase of the question.

The Emperor of Japan has conferred the First Class Order of the Rising Sun on Baron von Richthoven, German Minister of Foreign Affairs. It is understood that this mark of His Majesty's favour is in consequence of the great courtesy and kindness shown by the Baron to H.I.H. Prince Kan-in on the occasion of the latter's visit to Europe last year.

The Bonin Islands seem to have lain within the belt of drought by which so many places have been visited this year. The purser of a Nippon Yusen Kaisha steamer which reached Yokohama on the 19th instant, says that since the middle of May not a drop of rain has fallen on the islands, and that the effect of a hundred days of continued heat has been to parch the crops and nearly destroy vegetation. The people are in straits even for drinking water, and should the drought continue much longer, their condition will become most distressing.

Rice—unhulled—was quoted on the 19th instant in Tokyo at 13.50 *yen* per *koku*, a figure that had not been reached for several years. This has nothing to do with crop prospects. It is attributable to scarcity of grain in the market, and to the near approach of the time when large transfers have to be made according to agreement.

It is announced that telephonic exchanges were opened on the 16th instant from Tokyo to Hayama and to Miyanoshita. The charge to Hayama is 25 *sen*, and an additional 15 *sen* must be paid for summoning to the exchange the persons with whom conversation is to be held. The corresponding charges in the case of Miyanoshita are 30 *sen* and 20 *sen*.

Our readers will remember the recent rumour of Marquis Ito's visit to America. Japanese papers now state that the talk of such a trip arose in connexion with the intention of Yale College to confer its degree of LL.D. upon Marquis Ito, Baron Tajiri and Professor Hatoyama. The Marquis entertained for a moment the idea of being present at the ceremony, but has now abandoned any such intention.

The rice crop is now considered to be beyond future climate influences. The September storms may do some injury, but barring some very abnormal event—such as a wide-spread inundation—the crop will be above the average. A great deal depends upon the rice harvest this year, and the country has to be very thankful.

This in the name of a new weekly newspaper published in New York under the editorship of Mr. Hoshi Hajime. It is printed partly in English and partly in Romanized Japanese, and its avowed purpose is to "make still friendlier the present amicable

relations between the two countries that face each other across the Pacific Ocean, whose vast empire of trade they must eventually divide between themselves." The "Japan and America" is well edited, if we may be allowed to express such an opinion, and gives promise of success. We wish it a full measure of prosperity.

The Standing Squadron made such a brief stay at Fusan where it arrived on the 21st instant, that the inhabitants of the settlement did not find an opportunity to organise a hearty demonstration of welcome, as had been their intention. They therefore adopted the practical course of sending four oxen and thirty barrels of *sake* to the ships as materials for a carouse. The Squadron left for Saseho on the same day.

The Chinese Envoy of Apology, Mr. Na Tung, reached Shanghai on the 20th instant, and was to continue his journey to Japan by the *Suikyo Maru* on the 24th instant.

NEW BOOKS.

Sister Teresa, by GEORGE MOORE: London, T. Fisher Unwin.

MR. GEORGE MOORE found the writing of the life-story of Evelyn Innes so deeply absorbing that ere he was aware of it he had put 150,000 words on paper and then found that he had but half finished his task. So the first part of the voluminous work was given to the world under the title of *Evelyn Innes*, and after the lapse of a couple of years the sequel appears—*Sister Teresa*. There can be no gainsaying the statement that both books are exceedingly well-written, and taken separately do not appear too inordinately long, but we fear the ordinary reader will fight shy of the bulky tome should their author's intention of bringing them out together as one work be realised. *Evelyn Innes* (and *Sister Teresa*) is no doubt a wonderful creation and the analyzing of her varying moods and the reducing to printed words of the doubts, resolves, failures, and successes which result from the hundred and one complexities which go to make up her character, is a stupendous, nay earth-shaking, undertaking from the author's point of view—yet when all is said and done it scarcely seems worth the thousand pages of close print to which it runs.

Evelyn Innes left off at a period in the heroine's life when, tired of her successes on the operatic stage, weary of her *liaison* with Sir Owen Asher, the selfish Hedonist who discovered her hidden talents, and sickening of her love-trifling with Ulick Deane, the fantastic word-spinner and bore of bores, she retires to a convent at Wimbledon and in "retreat" tries to shake off the lures of the world and of her own especial set in particular. The struggle is a very hard and a very long one, her sensuous, pseudo-artistic, full-blooded temperament being all against the austerities and petty miseries of a convent life. The convent, too, is plunged in financial difficulties and to assist the Reverend Mother and Sisters, *Evelyn* proposes to undertake a concert tour through England and Scotland, the proceeds of which are to be given to the Sisterhood. The tour is a success until Edinburgh is reached and then she meets Sir Owen Asher again and a passionate "red-hour" is spent in his company which almost results in her going back to him again, though this time as his acknowledged spouse, for the self-indulgent Baronet had fallen genuinely in love with

her and desires above all things to possess her as his wife. But she resists the impulse of her senses, abandons her tour and hies her back to Wimbledon. Here after a while she takes the veil, taking the name of *Sister Teresa*, and releases the convent from all its debts by giving up to it her entire fortune. But still she does not find that relief of mind and heart which she so ardently longs for. Her magnificent voice is a possession which arouses first the dislike and then the envy and uncharitableness of Sisters less-gifted, and so existence even within the quiet cloisters of a contemplative Order becomes almost as unbearable as the old life of the world to *Evelyn*. She falls ill. The extreme unction is administered, so desperate is her condition, but she rallies after many months, only to find that her faith in some of the essential verities of the Church has weakened and so theological doubts add to the burden of her woe, and she resolves to leave the Convent on the death of the Prioress, whose life is of the frailest. Tormented both within and without, *Evelyn* yet dreads leaving the shelter of the old house at Wimbledon; at last she loses her voice entirely and with this loss ceases the ill-will of the nuns. The death of the Prioress, which soon follows, results in the convent changing its Rule, turning from a Contemplative Order into an active organization in which the teaching of children is an essential feature. The change is beneficial to *Evelyn*, the teaching of music and singing taking her outside of herself, and the book closes leaving the heroine at the age of 45 enjoying a deeper calm than she had ever hoped to realise.

As in the case of *Evelyn Innes*, so with *Sister Teresa*, Mr. George Moore has thrown into his book much strong writing and there are some passages which we would fain not see brought under the eyes of the young and inexperienced. This fault cannot be condoned; it materially mars one of the cleverest books which the author has so far written. Yet it is a decided improvement on its predecessor, for the story is more connected and we have next to nothing of those monotonous monologues by Asher or Ulick Deane which somewhat spoiled the artistic effect of *Evelyn Innes*. *Evelyn Innes*, by the way, has been completely rewritten since its first appearance.

NOTES FROM KARUIZAWA.

(FROM A CORRESPONDENT.)

Karuzawa is crowded with foreign visitors this year. We have heard various estimates of the number here. Probably it does not fall short of 500. Lying 3,270 ft. above the level of the sea, and being one of the driest as well as the coolest mountain resorts within easy access of the capital, we are not surprised at the patronage it receives. The "stalwart pedestrian," of guide-book fame, will find here endless opportunities for the development of muscle. The tennis player will find three courts constantly kept going by eager players, a Tennis Club with some 55 members, and tennis tournaments, both Doubles and Singles, perpetually going. There are, moreover, occasional musical entertainments; lectures on diverse topics, meetings of missionaries held almost every-day; picnic parties and what not. The house accommodation is still miserably inadequate, many of the shanties that shelter families being little better than tents. The two hotels are both quite full and are obliged to turn away would-be guests. The long-talked-of new Mampai Hotel will not be opened till next year, and when opened it will hardly be adequate to meet the demand for accommodation during the hottest weeks of the season. Asama-yama has been joining in the general excitement and bustle of the holiday-makers assembled near its base by sending

out showers of ashes, that fell like rain in the village of Karuzawa itself and far beyond, lumps of burning lava and even large stones. Its great activity has attracted an unusually large number of visitors to its summit.

Among the evening entertainments recently given in Karuzawa, the account of the Siege and Relief of Peking, given by an American Presbyterian clergyman, Mr. Killie, on the 16th instant, who was one of the relieved party, is said to have been very interesting. The lecture was illustrated. One fact stated by Mr. Killie was that the American troops were somewhat late for the fair owing to their obeying orders, while the Russians got in ahead owing to the men taking no notice whatever of the orders of their commanding officers. There are in Karuzawa at present three or four persons who went through the siege of Peking; among them the Rev. E. G. Tewksbury and Miss Sheffield.

On the evening of the 19th the Rev. J. H. Pettee, of Okayama, gave a most interesting account of the founding and general management of the well-known Orphanage in that town. Views of the buildings, pictures of various groups of orphans were shown, and the founder of the institution, Mr. Ishii, was introduced to the audience, whom he addressed in Japanese. It seems from statements made by Mr. Pettee and Mr. Ishii that it was the visit of Geo. Müller, the founder of the great Bristol Orphanage, to Japan in 1887 that suggested to Mr. Ishii and others the desirability of establishing in Japan a Christian orphanage on the same lines as Müller's institution. The first eleven years of the history of the Okayama Orphanage were described by Mr. Ishii as hard sailing against wind and tide. The movement from its infancy was dependent on the charity of a large number of small subscribers and hence at first progress was slow. But from occupying a portion of a Buddhist temple the Orphanage passed on to own quarters of its own and is now in the possession of a Printing House, and various other buildings, in which useful work is carried on. The training given to the orphans is of a kind to fit them for making an independent living later on. At first there seemed to be some little difficulty in getting children to work many of whom had done nothing but beg, but Mr. Ishii coaxed them into activity by composing a spirited working song, which the children were taught to sing as they cleaned rice. In the course of fourteen years nearly 600 orphans have been received into the institution. Together with employees of various sorts there are some 300 inmates in the Orphanage now. There seems to be no fixed rule as to the age at which orphans are discharged. In addition to the general Christian education which the orphans receive, they are well fed, a point to which Mr. Ishii attaches great importance, taught gymnastic exercises, and trained to be neat, clean and punctual in the discharge of their duties. The impression conveyed by the lecture was that the institution is doing excellent work and is worthy of liberal support. Musical performances were given by the Orphanage Band; a sword dance and an imitation nigger dance by students, and an extremely well rendered vocal quartette by Messrs. Howard, Clark, Topping and Pedley. The collection made at the close of the meeting brought in over 150 *yen* to the funds of the institution, and it was stated that an entertainment given to the Japanese in the village together with subscriptions made by Japanese had realised an additional 120 *yen*.

WEATHER AT SHOJI.

Below will be found the weather report compiled at the Hotel, Shoji, last week:—

	Air		State of	Remarks in
	Max.	Min.		
Sunday, 11th.....	72°	66°	81°	Fine...
Monday, 12th.....	74°	68°	81°	Fine...
Tuesday, 13th.....	75°	68°	81°	Fine...
Wednesday, 14th.....	77°	67°	81°	Fine... and rain at 4-30 p.m.
Thursday, 15th.....	77°	68°	81°	Fine...
Friday, 16th.....	78°	69°	81°	Fine...
Saturday, 17th.....	77°	68°	81°	Fine...

COUNT VON WALDERSEE.

THE Emperor of GERMANY is said to have addressed to the Emperor of JAPAN a very courteous message with reference to the visit paid by Count VON WALDERSEE to this country. His MAJESTY sets out by expressing thanks for the invitation given to Count VON WALDERSEE by the Sovereign of Japan and then goes on to say that it must have been a source of unlimited satisfaction to the FIELD MARSHAL to have found such an opportunity for visiting progressive and illustrious Japan; that he will doubtless carry back to Germany sentiments such as those entertained by Prince HENRY after his coming to Tokyo, and that the FIELD MARSHAL assuredly must have expressed to the Emperor of JAPAN his admiration for the discipline and efficiency of the troops placed by His MAJESTY under his—the FIELD MARSHAL'S—command. The Emperor of GERMANY is never wanting in those amenities and courtesies that sit so gracefully on a monarch, and his sympathetic message has doubtless given much satisfaction to the Japanese. But, at the same time, it seems calculated to produce a false impression by suggesting that Field Marshal Count VON WALDERSEE was invited to this country by the EMPEROR as His MAJESTY'S guest during his sojourn in Japan. Unless we are greatly misinformed such was not the case. In consideration of Count VON WALDERSEE'S high rank and in consideration of the fact that Japanese troops had been placed under his command in China, exceptional civility was shown to him, and the Shiba Detached Palace was offered as a place of sojourn during his stay in Tokyo. But he was not the EMPEROR'S invited guest, and in order to be received in audience by His MAJESTY, due application had to be made through the German Legation. The Emperor of JAPAN, in replying to the telegram, expressed thanks for the KAISER'S warm words; said that the visit of Field Marshal VON WALDERSEE had been a source of satisfaction; that it was pleasant to find that his long and arduous duties in China had not impaired the veteran officer's health and that it was to be regretted that he could not make a longer sojourn in Japan.

From Reuter's telegrams it would appear that Count VON WALDERSEE has been speaking in a boastful and aggressive manner since his return to Germany, and that he has been saying that while the names of other nations have sunk internationally Germany's has risen. It is hard to credit such a version of the Field Marshal's utterance, for certainly while in the East the characteristics that distinguished him were kindness and geniality, not gasconade and tactlessness. However, there is no denying the fact that Germany has risen, or that she has deserved to rise, for she displays qualities which, according to all human estimates, make for greatness. As far as Count VON WALDERSEE is concerned, we should have thought that the bad fortune

which brought him so late upon the scene in China as to prevent him and the German troops from taking any part in the military operations, would have disposed him to depreciate, rather than to exalt, the acts of himself and his nationals in that particular instance. Certainly such an attitude would better become a soldier, which fact has been fully appreciated by men like Lt.-General YAMAGUCHI, Major-General FUKUSHIMA and Colonel SHIBA. Their speeches have been models of modesty and self-effacement. Yet, after all, which of us can not sympathise with the pride that swells in the bosom of the German Field-Marshal when he compares the Germany of to-day with the Germany of forty years ago, and when he contemplates the future that lies before her if her splendid progress continues unchecked? A little spread-eagleism is excusable under the circumstances. We can not possibly applaud all the methods adopted by Germany in climbing the ladder, but that she is climbing it rapidly may not be gainsaid, and who shall blame her greatly if, at this moment of eclat, she obeys the familiar principle that no one is so good a trumpeter of oneself as oneself. It is what we English have been doing for many a year. We had the stage all to ourselves once upon a time, and to find another strutting on it now by our side is a little irksome. But Germany merits the music she is making and the pose she is displaying. She will not succeed, we imagine, in elbowing England into the pit, nor is it by any means certain that she herself would welcome such a result.

THE MORMON MISSION.

THE Mormon Mission to whose arrival in Japan we referred in a late issue, has found a champion in one of our local contemporaries, which devotes two columns to setting forth the doctrines professed by Apostle GRANT and his associates. Incidentally the *Japan Mail* is accused of being "altogether inferior in catholicity of sentiment to one of the early Emperors of Japan, who, on learning that some foreign arrivals contemplated introducing a new religion in Japan, inquired how many different faiths already existed in the country, and was told that there might be some forty or so, whereupon he is said to have replied that the addition of one more was a matter of no consequence." The historical confusion betrayed in this reference to an apocryphal dictum of ODA NOBUNAGA is amusing. As to the Mormons, however, the same newspaper gives publicity to a statement by Apostle GRANT:—"We still believe that under certain restrictions honourable men should be allowed to take additional wives with the consent of their first wife." It is our unqualified opinion that such a doctrine is barbarous and damnable. There can be no form of cruelty more inhuman than that which condemns two or more women to be the wives of one man. Genuine affection and all the beauties of home life are banished from a household where such a

state of affairs exists, and the happiness and peace of mind of the women are ruthlessly sacrificed on the altar of the man's selfish concupiscence. Apostle GRANT is good enough to say that "concubinage has never been permitted" by the Mormons. Concubinage, forsooth! What are plural marriages but concubinage? Whatever may have been ODA NOBUNAGA'S arithmetical liberality about the number of religious sects engaged in the propagandism of their doctrines in Japan, he would never have wittingly sanctioned the admission of a sect which preached deliberate disobedience to the laws of the land, and polygamy is strictly forbidden by the Code of this country. The Mormons come to Japan under the guise of Christianity and yet, ignoring CHRIST'S teachings, would carry men back to the days of LUT and of ABRAHAM. Such "apostles" are corrupters of morality and enemies of pure happiness. We are distinctly of the opinion that their preaching should be officially forbidden in this country. The Constitution guarantees liberty of conscience within the limits of law and order, but Mormonism is not within the limits of law since, according to the public admission of Apostle GRANT, its preachers believe in the propriety of a practice which is emphatically forbidden by the law.

GERMANY AND RUSSIA IN THE EAST.

A LONDON telegram to the *Fiji Shimpoo* says that Germany has decided to have a permanent barracks in Shanghai, which intelligence coupled with Reuter's telegram of this morning to the effect that she is about to organise a colonial army, must be taken as indicating a resolve to play a large part on the Far-Eastern stage. Englishmen would of course welcome Germany's impulse of expansion had not her manner of giving expression to it tended hitherto to Great Britain's disadvantage, and were it not quite plain that the exigencies of Germany's European policy will effectually prevent her from offering any opposition to the other aggressively expansive Occidental Power, Russia. British subjects are not, we trust, swayed by petty jealousy in this matter. They have no objection whatever to the growth of the German and the Russian empires, nor does it seem that the intense hostility shown towards England by non-officials in Germany throughout the South-African war has provoked any reciprocal dislike in English bosoms. But Englishmen naturally want to keep the privileges they have already acquired by treaty, and they naturally object to being elbowed out of those privileges by Germany and Russia. When, therefore, they find, in the first place, that Germany construes an agreement for the preservation of China's integrity as no bar whatever to the absorption of Manchuria into the Russian empire and as conferring upon Germany equal rights with England in the Yangtze Valley; in the second, that Germany does not intend to concede reciprocal equality of privileges to England in Shantung, but that

she claims to have acquired there a sphere of influence within which Great Britain's treaty rights are to be ignored; and thirdly that Russia is steadily establishing her dominion over the whole of Manchuria, also at the expense of British subjects' treaty rights of trade and travel—when Englishmen observe these things, they really can not be accused of excessive self-assertion if they begin to regard the expansion of Germany and Russia as facts inuring to Great Britain's disadvantage. If a common basis of agreement could be found in a pledge that no exclusive attribute shall attach to spheres of influence, and that Russia and Germany will sincerely adopt and apply throughout their Far-Eastern territories the same principle of free trade that England has steadily followed, nothing would remain except to welcome German and Russian expansion as a factor making for civilized progress. But German and Russian expansion, so long as it is directed by the motives now inspiring it, is too selfish and too inconsiderate of others' rights to be regarded with satisfaction or even with indifference. Trouble must be the inevitable outcome.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In the *Nichi Nichi Shinbun* Dr. Sakatani Yoshiro, who is connected with the Finance Department, writes on the difficulties of military transport and quotes some interesting facts connected with Korea and Hideyoshi's expedition to that country. The following, are the salient points of Dr. Sakatani's article. We read in Japanese histories of several punitive expeditions to Korea prior to Hideyoshi's time, but we are not told how the necessary military transport was carried out. In reference to the Taikō's commissariat arrangements for the 100,000 men whom he sent to Korea an interesting dialogue between the veteran warrior and Asano Nagamasa, the official who managed the Taikō's finances at that time, is still extant, which runs as follows:—

Asano.—What commissariat arrangements had better be made?

Hideyoshi.—Well, you had better get ready 3 million *koku* of rice.

A.—What shall be done with the rice after it is ready?

H.—Use every transport that is to be had and send it over to Fusan.

A.—After we have landed it, how is it to be protected?

H.—Don't protect it; let it fare as it will.

A.—If we do that the Koreans will capture it all.

H.—Well, isn't that what we want?

A.—But if we lose our provisions, we shall be in trouble.

H.—It is a case of 3 million *koku*. It is not to be carried off in a hurry, nor can it be consumed in a short space of time.

A.—But the Koreans will carry it inland.

H.—If they do that nothing could suit us better. To get the enemy to do all your transport service for you for the amount of rice that they can eat on the road is good enough. By adopting this plan our troops could always find provisions waiting for them as they advanced.

Taking the price of the rice at 10 *yen* a *koku*, the Taikō spent 30 million *yen* in the purchase of food alone. What Hideyoshi predicted actually did take place, and rice that had been carried off by the enemy was repeatedly recaptured by the Japanese. But this happened only during the first stage of the war. Later on the shortness of food repeatedly kept the Japanese from following up their victories. When Konishi defeated the Chinese army at Pyong-yang he was unable to follow the enemy across the Taddon. Konishi's repeated retreats from this place and that were

all caused by the crude commissariat arrangements of that time. This, too, in my opinion was the real cause of the subsequent withdrawal of the troops and the success of the negotiations for peace instituted by the Koreans. It is said and, we think, with truth, that before the arrival of the Korean ambassador with the letter which Hideyoshi tore into shreds before his eyes, several high Japanese officials were strongly in favour of peace. Hideyoshi's tearing the letter was most likely a mere ruse designed to throw the Koreans off their guard and to enable the Taikō to dictate better terms of peace. It was plainly seen that the carrying out of Hideyoshi's original project was quite impossible without making some very elaborate arrangements for transport: and the Taikō was without experience in this line. The letter brought by the Korean ambassador had doubtless been read by Hideyoshi's high officers of state, as would a foreign letter addressed to the Emperor be read by the Foreign Minister now a days, and its contents were known to Hideyoshi before he met the ambassador. Though at the time, the officials who recommended peace were deemed disloyal, we now see that they were foreseeing statesmen. The country had to come around to their view eventually. . . . Though many causes contributed to the downfall of the Taikō's house, Hideyoshi's mismanagement of the funds at his disposal was doubtless the principal cause. The financial straits in which the country found itself at his death were such that discerning minds perceived that, though great as a warrior, he was by no means great as a statesman. Ieyasu was one of the first to see that the Korean expedition was a mistake. It was Ieyasu's skilful manipulation of the country's finances and the steps that he took to consolidate its power that eventually enabled our ancestors to recover from the effects of the Taikō's wasteful expenditure. Ieyasu's foreign policy was a reaction from that of Hideyoshi. The founder of the great Tokugawa Shōgunate perceived the weak points in his predecessor's administration and proceeded to remedy them.

Coming down to later times, it was in the 5th year of *Meiji* that an incident connected with the Koreans was the cause of a whole series of important events in this country. The Koreans fired on one of our men-of-war, the *Unyō Kan*. For this offence it was contended by Saigō Takamori and others that Korea ought to be chastised. It was on this question that Saigō and Okubo divided, and this split led eventually to Saigō's rebellion. In later years time and again this country's finances were influenced in a hundred ways by Korea's action. Our financial connection with Korea from very early days has been most intimate, and we are by no means independent of the peninsula at the present time. Our fortunes seem to be bound up with those of this state in a mysterious way, and even at the present moment a great question is rising connected with Manchuria which, as far as we are concerned, originated with Korea.

* * *

The *Kokumin Shinbun* states that a very rare species of shark was captured off the coast of Chiba in June last, which is now being exhibited at Asakusa. The local name given to the fish is *jimbei-sama*. It is more than 30 feet in length and in many respects quite unlike the ordinary shark. The following account of this fish is from the pen of Dr. Kishikami: This large shark is only very partially known to ichthyologists and, principally owing to the difficulty of catching it and to the frequent lack of facilities for transporting so large a carcass to any distance, no one up till now has seen anything more than a few bones belonging to this gigantic creature. It is recorded that specimens have been found at the Cape of Good Hope and off the coast of California, but one or two jawbones and a few teeth are the only parts of the fish that have been preserved anywhere. The specimen lately procured in this country, then, will certainly prove to be of great scientific value. Owing to the peculiar shape of its teeth, I have named the fish the *Yasuri-same* (the file shark), but a scientific description of it needs to include 5 smooth, slippery lines on its body, and so its

scientific name will be *Gojō yasuri-same*, or *Rhinodon Hentalineatus*. A full description of the fish will shortly be published in a scientific journal.

* * *

The *Nippon Shinbun* publishes some statistics bearing on the position that Japan occupies as regards invention: of which the following is a short epitome: Though Japan has made considerable progress in this line, compared with what is being done in other countries, our efforts appear very insignificant. According to what we have heard from official sources, the financial depression now existing has had no effect whatever on the inventive faculties of our people, and there is at present a very widespread desire to emulate western countries in the matter of invention. The Paris Exhibition last year opened the eyes of numbers of intelligent Japanese as to what is possible in this line. In February of this year a society was formed in Kyōto called the *Hatsumei-Shōreikai* (Invention-promoting-Society), whose aim it is to assist with money and information persons who are engaged in making investigations with the object of discovering some new method of doing things or some new application of old methods. The progress made in the past four years is shown in the following tables recently published by the Patents Bureau connected with the Home Department:—

Year.	Applicants for Patents.	Patents Granted.
1898.....	1,789	293
1899.....	1,915	597
1900.....	2,006	615
1901 (from Jan.-May).....	997	222

Year.	Applicants for the Registering of Designs.	Designs Registered.
1898.....	226	52
1899.....	342	139
1900.....	397	119
1901.....	190	70

Among the above there are of course some very unimportant patents and designs, but there are also some that represent enormous sources of profit to their owners. Among these the rice-hulling machine invented by Amano Rokubei, of Sakai, Senshū, is specially worthy of mention. This machine is now being imported into Korea in large numbers. The profits from the sale of it in one year exceed 10,000 *yen*. By making trunks, enamelled saucepans, and the like,* enormous profits have been realised and the import of foreign articles has in many cases entirely ceased. At Okayama a new process of dyeing straw has been discovered, which brings in a very large sum to those who have charge of the industry, the right to use the patent having been purchased from the owner at 40,000 *yen* a year. An eminent chemist, Mr. Nagai Nagayoshi, has discovered a way of producing a very cheap species of indigo from the leaves of the pepper-plant. This patent he has sold for 70,000 *yen*.

* * *

Various literary organs have of late discussed the principles, the object and the character of the Tōkyō Imperial University. Public opinion differs considerably as to what should be the leading characteristics of the great seats of learning at Tōkyō and Kyōto; some advocating their isolation from the world of politics and business, and others maintaining that their chief design should be to train men for actual life in the world as it exists to-day. The *Nippon*, the *Jimmin* and several other organs maintain that, instead of aiming to be a national institution run on broad lines, for many years past the Tōkyō Imperial University has encouraged learned clanism and cliquism to an unwarrantable extent. This, it will be remembered, was the opinion of Mr. Hoshi Toru. The above-named organs argue that there should be no such thing in existence as what is known as the Akamon-ha, that is, the Daigaku-ha. The spirit of the age is decidedly anti-clannist and a *gakubatsu*, or scholar-clan, is no more acceptable to the nation as a whole than a Sat-chō political combination. There was a time, says the *Nippon*, when a serious attempt was made to manufacture political party agents

* These things are not inventions, but simple imitations of foreign articles.—(WRITER OF SUMMARY.)

among the students of the University. This was during the presidency of the late Mr. Watanabe* Koki. He was a great admirer of Marquis Itô, and during his time most of the students were Itô partisans. But in recent years the most stringent efforts have been made to keep politics out of the University and to promote anti-political party sentiments. The *Nichi Nichi Shimbun* does not agree with this view of the situation. It says that it is a mistake to think that the University is an official factory (*Kwanri Seisôba*), as is constantly affirmed, and some little time ago it published statistics to show that among officials the proportion of university graduates was by no means large. But in reply to this the *Nippon* furnished the following figures:—According to investigations recently made, up to September of last year, the total number of graduates of the University was 4,199. Out of these 295 died; 422 joined the executive as officers; 292 went into the employ of the Department of Justice (became judges, &c.); 714 became technical officers (*gijutsukwan*) in various Departments; 229 doctors took up practice in provincial hospitals; 42 became Government veterinary surgeons. This brings the total to 1,693. In addition to the above, 775 graduates were appointed as teachers in various Government schools, so that to represent the University as an "Official Factory" is not far from the truth. Among the 600 odd members of the two Houses of the Diet there are only 8 graduates of the University. Among the 1,481 registered barristers there are only 112. So we see how poorly the nation as a whole is represented in the University. We do not say, concludes the *Nippon*, that graduates of the University should not become officials, but what we maintain is that the University should serve other purposes than to be a mere training school for officials.

* * *
The *Tôkyô Maishû Shinshi* discusses the question of the stupidity of eldest sons. The Japanese saying *Sôrô no jinroku* (a foolish eldest son) is certainly very old, though its origin is somewhat obscure, but that it embodies a national belief there is little doubt, says the organ we quote. There are, it is considered, three causes for the intellectual inferiority of eldest sons among the better classes. (1) They are the offspring of early marriages, begotten before the powers of their parents are fully matured. (2) They are regarded from the first as the future inheritors of property and hence no pains are taken to teach them how to get a living for themselves. (3) The first-born child is apt to be spoiled by its parents. In reference to early marriages in Japan the following statistics are given bearing on the time of contracting marriage in various countries:—

AVERAGE AGE OF MARRIAGE.			
Countries.	Men.	Women.	
Japan	22 yrs., 10 mos.	19 yrs., 4 mos.	
Russia	25 " 2 "	21 " 5 "	
England	28 " 7 "	25 " 5 "	
America	30 " 9 "	28 " —	
Switzerland	31 " 1 "	28 " —	

Female education is progressing and early marriages are being discouraged, says the *Tôkyô Maishû Shinshi*, so that it is likely that the old saying given above, so often quoted, will soon lose all its significance.

Mr. Higashi Kan-ichi contributes to the *Taiyô* a short history of journalism in early Meiji days; but unfortunately in most cases he has omitted to give dates. From the details supplied we cull the following:—By some it is affirmed that the *Moshiogusa* was the first newspaper published in Japan, but this was rather a magazine than a newspaper, which first appeared about 1868. The first actual newspaper published was Mr. Black's *日新真事誌*, *Nisshin Shinjishi*, which was a daily consisting of four pages about the size of the present *Jiji Shimpô*. The next Journal to appear was the *Yokohama Shimbun*. This was mostly an advertising medium. As a newspaper it was in every way inferior to Mr. Black's

* Mr. Watanabe at one time was spoken of as the *Gakusei Keian*, the students office-procuring agent, so many were the graduates that he helped into office.—(WRITER OF THE SUMMARY.)

organ. The *Nisshin Shinjishi* was first printed at a temple in Shiba called the Genkôji, but subsequently the office was moved to Ginza. Next came the *Nichi Nichi Shimbun*, which was first issued at a small office in Kawara-machi, Asakusa. It was a very poor affair at first, printed on Japanese paper. Then came the *Hôchi Shimbun*, the office of which was at Yagenbôri, Ryôgoku. What afterwards became the *Chôya Shimbun* first appeared as the *公文通誌*, *Kôbun Tsûshi*. It was towards the close of the year 1874 that the *Nichi Nichi Shimbun* enlarged its sheet to about their present size. But the facilities for printing available in this country at the time were so poor that even the following year it frequently happened that the paper only appeared every other day. In those days Mr. Kishida Ginkô was the editor of the *Nichi Nichi*; Mr. Kurimoto Joun, of the *Hôchi*, and Mr. Narishima Ryûhoku, of the *Chôya*. But these papers contained no leading articles at that time, the greatest reserve being necessary to avoid suspension. The writer who may be said to have set the ball of political discussion rolling was Mr. Fukuchi Genichirô. From the time of his connection with the *Nichi Nichi*, newspaper controversy became common and the prospect of opening a Diet soon furnished endless material for comment and criticism. Controversialists were divided as to the wisdom of granting a Constitution forthwith, Mr. Oi Kentarô arguing in favour and Mr. Katô Hiroyuki against, such a course. Both of these writers made use of Mr. Black's organ, the *Nisshin Shinjishi*, for the ventilation of their views. It was this paper that first opened its columns to correspondents. At the time of which we write three magazines of considerable influence were in circulation, the *Hyôron Shimbun*; the *Kinji Hyôron* and the *Meioku Zasshi*. The first of these used such violent language that the authorities found it necessary to issue press laws. These laws originated with the late Viscount Inoue Ki (Minister of Education for some little time) and Baron Ozaki Saburô. One of the results of the operation of these laws was the imprisonment for one month of Mr. Narishima Ryûhoku, editor of the *Chôya Shimbun*, of Mr. Fujita Mokichi, and of many others, in the years 1875 and 1876. There is no doubt that in some respects newspapers have deteriorated in Japan. In early days their editors cared little what the public might think of their articles. They wrote from conviction and they made use of none of the modern artifices for pandering to popular taste such as novelettes, spicy, suggestive paragraphs, slander, personalities, and the like. Fifteen years ago there was a marked distinction between what were called the *Oshimbun* and the *Koshimbun*, but to a very considerable extent this is no longer maintained, even a paper like the *Jiji* descending to the publication of very second-class fiction.

The *Taiyô* has collected and published the views of a number of eminent Japanese on the Manchurian question. We reproduce a few of the more uncommon of these. Dr. Tomizu Hiroto writes in the following terms:—I hope that Japan will take Manchuria and keep it. My reason for saying this is that the political situation at the present time is of a character to render such a policy the only safe one. During the latter half of the nineteenth century the tendency in the West was all in the direction of the swallowing up of small states by large ones and this tendency still prevails. The number of states is gradually diminishing. Many of the small states that are considered independent are by no means safe, and a slight change in the situation of affairs will at once lead to the increase of dominion on the part of the great Powers. It is generally considered that the death of the

* In early days the distinction between a *Zasshi* and a *Shimbun*, a magazine and a newspaper, was by no means maintained, as may be seen by the fact that Mr. Black called his daily newspaper *Shinjishi*.—(WRITER OF SUMMARY.)

† Another proof of the interchangeableness of the terms *Shimbun* and *Zasshi* 25 years ago is the title of this magazine. It was registered as a magazine and escaped censure as such for some time.—(WRITER OF SUMMARY.)
